

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + Make non-commercial use of the files We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + Maintain attribution The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

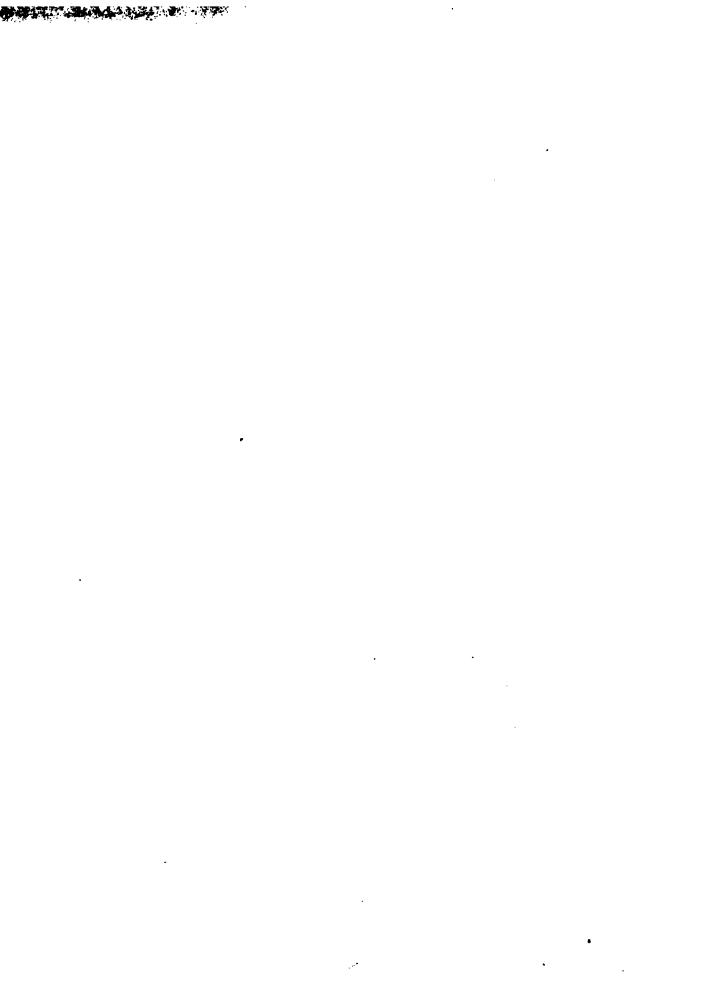

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

ETYMOLOGICON UNIVERSALE;

OR,

UNIVERSAL ETYMOLOGICAL DICTIONARY:

ON A NEW PLAN.

IN WHICH IT IS SHEWN,
THAT CONSONANTS ARE ALONE TO BE REGARDED
IN DISCOVERING THE AFFINITIES OF WORDS,

ANT

THAT THE VOWELS ARE TO BE WHOLLY REJECTED;

THAT LANGUAGES CONTAIN THE SAME FUNDAMENTAL IDEA:

AND THAT THEY ARE DERIVED FROM

THE EARTH,

AND THE

OPERATIONS, ACCIDENTS, AND PROPERTIES, BELONGING TO IT.

WITH

ILLUSTRATIONS DRAWN FROM VARIOUS LANGUAGES:

The Teutonic Dialects, English, Gothic, Saxon, German, Danish, &c. &c.-Greek, Latin, French, Italian, Spanish.—The Celtic Dialects, Galic, Irish, Welsh, Bretagne, &c. &c.—The Dialects of the Sclavonic, Russian, &c. &c.—The Eastern Languages, Hebrew, Arabic, Persian, Sanscrit, Gipsey, Coptic, &c. &c.

VOLUME I.

CAMBRIDGE:

PRINTED AT THE UNIVERSITY PRESS:
FOR RICHARD PRIESTLEY, 143, HIGH HOLBORN, LONDON.

1822.

200 h. 29.

PREFACE.

In my former Work on the subject of Etymology, I unfolded the doctrine of Elementary Language; and I illustrated by a series of examples, how that doctrine might be applied to the discovery of relations, existing between Words, which were before totally unknown. In explaining this Elementary Doctrine, it was shewn, that Consonants were alone concerned in preserving and exhibiting the affinities of words, and that the Vowels were to be wholly removed from our regard, and even rejected from our view. By the establishment of this doctrine I had laid the foundation of a new System in the developement of Human Speech; and every thing was indeed then discovered, which related to the symbolical forms, by which the affinities of Language are propagated and preserved. I was then fully persuaded, that the EARTH was an important object in supplying the First and Fundamental idea, conveyed by words; and I had accordingly announced, that my succeeding Work would probably be dedicated to the consideration of those words, which were connected with our term EARTH, and its numerous parallels, existing in various Languages. Though I was always persuaded of the importance of this object in supplying the Fundamental idea, deposited in words; I did not imagine, that the connection with this object was always to be discovered, or always to be exhibited. I conceived, that we might well be contented with our success in unfolding the secrets of Language, if we were enabled to discover the relation of a series

of

I imagined, that the Original and Fundamental idea could only be occasionally seen, or partially detected. I had certainly never hoped, that I should be enabled to pursue this principle in so wide a sphere of action; through which, as I now conceive, it is capable of being extended. I had certainly never ventured to suppose, that I should be enabled at once to assume this Fundamental idea, this secret masterspring in the mechanism of Language, as the first principle of my System, to which I could readily refer all the other parts of the same machine, however remote and dissimilar they might appear.

The present Work, where the words are examined, which belong to our term EARTH, is established on this principle, and other Volumes are already prepared, which relate to Races of Words under different Elementary characters, and which are constructed on the same foundation. I must request therefore, that the present Volumes may be considered as representing the first part of my Work on the subject of Etymology; and that the former Volume should be regarded only as an illustration of the Elementary Doctrine, on which alone the Art of Etymology is founded; as it relates to the symbolical forms, by which the relations of Language are generated and recorded. I have stated in a portion of this Volume, that my former Work was arranged with due care and diligence; and that the affinities of the words, which were there examined, have been detailed with fidelity, according to the true principle of the Elementary Doctrine. But however successfully those words may have been explained, under one point of view, as relating to each other in their secondary though prevailing idea; the Reader will at once understand, that this mode would not correspond with the new and more extensive plan, on which the present Volume has been prepared. The various parts therefore of the former Work will appear in some future Volume,

when

when the Elementary Character, to which they belong, shall be considered; and the Race of words, which it contains, will again be detailed under the relations before explained, with an exposition likewise of the Fundamental idea, by which that Race is connected with other Races of words, conveying a different sense, under the same Element.—The Title of my Work has been changed from ETYMOLOGICON MAGNUM to ETYMOLOGICON UNIVERSALE, that the pale of distinction between the two publications may be more marked and decided. To each of these Titles some objections may be formed; but as in deliberations of this kind there is no end, and but little profit, we may rest satisfied with a brief appellation, which sufficiently designates the nature and the extent of the performance,

The Introduction of the former Work has been enlarged into an ample Preliminary Dissertation, in which an abundance of new matter will be found, of great and extensive importance, in the contemplation of Languages. In this Dissertation I have considered the Elementary Doctrine more fully; and I have here exhibited a Canon, relating to this Theory, (page 25,) and unfolding to us a wide scene in the affinities of Human Speech, which were before altogether remote, and totally unknown. I have added likewise a series of observations, which are intended to illustrate the additional part of my System, contained in these Volumes; and I have shewn, in a brief detail of acknowledged and familiar examples, the potent operation of the EARTH, in affording various trains of ideas, which appear to be altogether remote from the nature of such an origin. I have moreover distinctly though briefly unfolded the various Elementary Characters, (p. 04, &c.) which supply names for the Earth, &c., and which will become the objects of my enquiry in future Volumes on the origin of Languages. Though no explanation can be more coneise than this detail, on a subject of such vast extent, it must not however

however be considered as superficial; and brief as it may appear, it will save perhaps to the enquirers into Language whole years—I might venture to say,—even ages of misapplied and unsuccessful meditation, on this involved and mysterious question. The Writer may certainly be permitted to make this declaration, when he freely unfolds the painful operations of his own mind on the same enquiry, and confesses, that years of ardent and incessant meditation on this subject have passed away, before he was enabled to form the last results; which are there stated, brief as they are in the narrative, and easy as they may appear in the discovery.

If my Readers should perchance enquire, with some emotions of kindness or curiosity, when the future Volumes of this Work are destined to appear; it may be necessary perhaps to observe, that with them only this secret is deposited, and that the Writer's visible and public operations will be prompted solely by their zeal in the study of Languages, and the pursuits of Etymology.—By strong and unequivocal testimonies of that zeal much may be performed; and I have little doubt, that from this influence the same ardor in the same cause will be communicated to those, who are usually considered as the most important and indispensable agents in the productions of Literature.—Under the propitious auspices of such agents, the Writer may continue to instruct the present age in the Art of Etymology; and he will not fail to join with his coadjutors in applauding the good taste of an enlightened and a liberal Public.

On the appearance of future Volumes, and the probability of future success, time only will decide; but in the publication of the present Work, the Writer has enjoyed a patronage, which he is grateful to acknowledge, and proud to commemorate. By the Syndics of the Cambridge Press I have been relieved from a portion of the burden.

burden, which was attendant on the first Part of this Volume, in their grant for printing its contents; and I shall ever, I trust, retain a just sense of the benefit, which such a Patronage has conferred upon my Work.—Though the Writer has by this event obtained a prize in the Lottery of Literature, he is not wholly exempt from the imputation of that species of indiscretion, which is attached to those, who engage in such adventurous concerns. The Work has materially increased beyond its intended magnitude, from various causes, which could not be foreseen, or could not be prevented; and the Writer has from hence exposed himself to evils, which perhaps at some future time these kind and considerate Patrons of Literature will be pleased either to remedy or to remove. We however, who are the objects of this honourable patronage, must be at least assured, that all, which can be justly asked, will be liberally dispensed; and that the bounty of our benefactors is restrained only by the limits of their resources and the number of their clients.—Before I relinquish the theme of gratitude, I must record with the most lively emotions the zeal of an inestimable Priend, at once ardent and intelligent in the cause of Letters, who has perpetually watched over the progress of these Volumes, and who has never failed to cheer the Writer, amidst the perils of publication, with the most appropriate and efficient consolation.

It has been justly observed, that to perform for the last time any actions, not attended by misery or by guilt, is painful and affecting. Such I feel to be the probable issue of that task, in which I am now engaged; and perhaps the Reader is at this moment perusing the last address, in which I shall ever solicit his attention to a work on Etymology.—To aspire to the martyrdom of Letters, under all its forms and with all its consequences, would be at once a folly and a crime;

and the Student may well be contented with the ordinary privations and disabilities, to which the cultivation of Literature has too commonly condemned its victim, even in the prosecution of its own purposes. But whatever may be the prevailing current of Public taste, or Public curiosity; I may perhaps be permitted to declare, that the fate of Etymology is not finally deposited in opinions and decisions like these. As the Writer is not to be corrupted by the possession of Public favour; so his ardor in the search of truth is not to be extinguished by their rejection, or diminished by their neglect. I shall still continue, in the recesses of my solitude, to meditate, to collect, and to record; and I shall readily resort to that last, though too often delusive topic of consolation, which is so familiar to my unfortunate brethren in the same cause,—that a future age will perhaps receive with complacency, or even with applause, what the present The state of the state of the state of the age may disregard or despise.

PRELIMINARY DISSERTATION.

SECTION I.

(1.)

The writer details the train of ideas, passing in his own mind, by which he was conducted to the adoption of his Theory.—The imperfect state of the Art of Etymology.— Nothing to be performed in this Art, unless the Principles of it can be generalised.—Attempt of the writer to discover some Abstract or Universal Principle.—The most familiar Terms at once present to his view the strongest examples of Uniformity, from which might be expected the adoption of some General Principle, when duly arranged and understood.—This Uniformity consists in the existence of the same Consonants; that is, Consonants of the same power; or, as they are called by Grammarians, Cognate Consonants, which still remain attached to the same words, or to the same or similar ideas, however various in form those words may appear.—The Vowels afford no Principle of Uniformity, or afford no Laws.—In tracing therefore the Affinity of words to each other, conveying the same or similar ideas, the Etymologist must consider only the existence of the Cognate Consonants, and totally disregard the Vowels.

The Writer, who assumes the province of unfolding a new train of ideas, will find various and important difficulties to encounter in the prosecution of his design. It has been perpetually observed, that our minds receive with suspicion and reluctance any new modes of investigating a subject, with which we were before familiar, and of which, as we might imagine, the genuine principles had been already discovered, discussed and established. Even the simplicity of a doctrine may serve to increase the difficulties of the task; as we are unwilling to be persuaded, that an idea so obvious and natural could have eluded

the

the ordinary exertions of our own sagacity. The writer will likewise feel considerable embarrassment in adjusting the due form, which is most adapted to impress the Reader with the force of his Theory. To diffuse what is plain and simple would be to labour in the cause of obscurity; yet the novelty of the subject may perhaps demand a more detailed and ample discussion, though the principle itself should be obvious and perspicuous. As the author will probably explain with more effect, when he unfolds the genuine feelings of his own mind; I shall endeavour to lead the understanding of the Reader through the same train of ideas, which originally conducted me to the adoption of my Theory. The offensive Pronoun, which accompanies the narrative, may perhaps be pardoned; when the purpose, for which it is employed, shall be candidly considered. The detail will be simple—without disguise and without ornament.

I had ever lamented, as others likewise have perpetually done, the imperfection of that Art, which professes to unfold the Origin of Words; and I had long been convinced, that nothing could be effectually performed in the advancement of this subject, till a new arrangement was adopted, totally dissimilar to the former. In devising this new arrangement, I instantly perceived, that the artifice to be employed (whatever it might be) would not consist in discovering a new Principle, which in a subject like this has no meaning; but in applying to new purposes, and in a new manner, a Principle derived from a known—ascertained and acknowledged fact, which was visible on every occasion. Nay, it was on this very circumstance alone—of applying a fact so well known and acknowledged, that my hopes of succeeding in a new System were founded. The reasoning on this occasion was short and conclusive. From a fact thus palpable familiar and universally operating, I inferred the Uniformity of a Principle; and I had learned from the Academic studies of my youthful days, (which are still deeply impressed upon my mind,) that to Uniformity belonged Laws; and that Laws supplied a Theory and a System. I cannot be supposed to mean, that the Laws, which I might conceive to operate on this occasion, would be similar to those, which are subject to the investigation of Mathematical Symbols;

Symbols; but it is easy to understand, that Laws of some kind or other would necessarily exist, which might afford a train of reasoning equally strong and convincing, as that, which is employed in the deductions of Mathematics.

Among the Etymologists, no idea of submitting a race of words to a general law had ever been adopted. One word was supposed to be derived from another single word; nor was there any attempt to discover an abstract or Universal Principle, to which these various separate instances might be referred, and by which they might all be connected with each other. The present state of Etymology I compared with the imperfect art of Arithmetic, which is conversant only with particular cases; and I imagined, that the new mode of generalizing the doctrine of Language, (if any such could be adopted,) might be compared with the science of Algebra. When I reflected on the recent discovery of this simple artifice, by which such wonders are performed; I received fresh confidence, that the Art of Etymology might be advanced by the application of a Principle equally known plain and familiar; and I was taught to consider the discovery or adoption of a new System, which in these days might be attached to the Art of Etymology, equally probable and natural, as the invention of Algebra, which, within these few years, has been added to the art of Arithmetic. Without enquiring into the Algebraic artifices adopted by the ancients, or the cultivation of this science among the Arabs, and the discoveries of Tartalea, Vieta, Des Cartes, &c. we know, that Newton invented or advanced the Binomial Theorem; and we may well imagine the state of this science before the adoption of so important and extensive an operation. The doctrine of Fluxions is founded on another artifice, attached to the Algebraical notation; and thus almost within the limits of the present age have arisen two Sciences, which have brought under our grasp the remotest objects in the system of the Universe.

But the simplicity of the first Principles, on which Algebra is founded, afforded likewise the hope and the prospect, that the adoption of *Principles equally simple*, applied to another subject, might produce consequences equally wonderful and extensive. The datum,

on which Algebra has been established, is simply this, that Equals added to—subtracted from—divided or multiplied by—equals, are still equal to each other. On this principle alone is the doctrine of Algebra founded: The rest is nothing but the adoption of a new and concise language expressing this fact; and in all the various changes and operations of the Equation, with which its wonders are performed, this principle and this only is applied. The ordinary Mathematician, who has confounded others and himself, by attaching to the calculations of Algebra the idea of something mysterious or profound, will be astonished perhaps to understand, that in the highest exertion of his faculties....in the most perplexing moments of his deepest cogitation, it was his duty only to remember and apply this simple principle; and that all his Involutions—Evolutions—Substitutions, &c. &c. were employed for the sole purpose of profiting by this single maxim; and of bringing his various operations within the sphere of its action.

Having seen, that in the forming of any system it was necessary to adopt a known and acknowledged Principle-universally prevailing, I began to consider, 1st, What great—general fact existed; and 2d. Whether it could be applied to any purposes in the adoption of a new theory. I sought for information in those words, which were most familiarly employed; as it is manifest, that if any Uniformity was observed in words so perpetually liable to change from frequent use, I had the strongest evidence for concluding, that such an Uniformity was generally prevailing. FATHER, in English, I perceived to be FEDER in Saxon-VATER in German-PADRE in Italian and Spanish-FADER in Islandic and Danish-VADER in Belgic-PATER in Latin and PATEER, (Πατηρ,) in Greek: in other cases of the Greek Pateer, we have PATER and PATE, (Πατερ-09-Πατρ-09,) and if the changes of the word were to be represented, as it is sounded in different dialects of the kingdom, it might be written Feethir-Fauthir, and in various other ways. In Persian, Father is PADER; and in Sanscrit, PETREE, as I find it represented by Mr. Wilkins in his Notes to the Heetopades, (Page 307.) A more striking Uniformity, we shall instantly acknowledge, cannot well be imagined than that, which is exhibited

exhibited in the preceding terms. We here perceive, though the word FATHER has assumed these various forms, that the difference arises only from the change of the vowels themselves or of their place; but that the Same Consonants, or those which all Grammarians, at all times, have acknowledged to be Cognate, have still been preserved.

In our earliest stages of acquiring knowledge, we learn, that "Inter se Cognatæ sunt, Π , B, Φ —K, Γ , X—T, Δ , Θ ,"—P, B, F— K, G, Ch-T, D, Th; and that these letters are called Cognate, because they are changed into each other in the variations of the same word. Without embarrassing the Reader or myself in this place by defining the identity of a word, I shall appeal only to the ordinary conceptions, which every one has admitted on this subject. All would allow, that Father, Fæder, Vater, Padre, Fader, Vader, Pater, Pater, Pater, Patr, Feethir, Fauthir, Petree, are the same words, or different forms of the same word. Now as Vowels, not the same, or not in the same place, are here adopted; the sameness, (if I may so express it,) of the word does not consist in the vowels, or rather, the Vowels have nothing to do in determining the sameness or identity of a word. We observe however, that the same idea is expressed by the same Consonants, or by those, which Grammarians have considered as Cognate or of the same kind. Now the words Pater and Father, &c. have various senses all related to each other, signifying 1st. The affinity of nature; 2d. The author or producer of any thing; 3d. The founder of a sect, &c. Thus we perceive. that in denominating words to be the same, we mean those words. which are represented by Consonants of the same kind, impregnated with the same train of ideas.

Here then we obtain at once a species of Uniformity, which leads us directly to the hopes of forming a regular System. Even this instance alone would be sufficiently impressive to convince us, that some controlling Principle predominated in Languages, by which they might readily be submitted to the Laws of a general Theory. Words, uttered by the passing breath, we have ever been accustomed to consider as the most fleeting—changeable—inconstant and capri-

cious

cious of all the objects, with which man is conversant: Yet we perceive, that a Word most liable to change and perversion, has remained invariably the same through a period of nearly three thousand years; if we consider only the existence of this word from the time of Homer, without involving ourselves with the remote periods of the Sanscrit Language. This instance, I must again repeat, would be alone sufficient to convince us, that *Uniformity* of some sort perpetually prevailed; and the same fact we shall accordingly find in all the instances, which every Etymological writer will afford us, who has collected the same words, as they appear in different Languages.

Thus Mother becomes in Greek Meeteer, (Μητηρ,)—in Latin Mater—in Saxon Mothor, Meder, Medder—in German Muater, Muoter, Muder—in Spanish and Italian Madre—in Danish Moder in Dutch Moeder; as I find these words represented in Junius and Skinner. In the modern German the word is written Mutter—in the Persian it is Mader, as Mr. Richardson has expressed it—in Sanscrit it is Matree, as it is written by Mr. Wilkins; and in Greek it again appears under the forms of Mateer, (Matho, Doric,) — Meeter, Meetr, (Μητερος, Μητρος.) Again, Brother becomes Frater in Latin; and I shall add the article in Junius, who produces the parallel words existing in various languages: "Goth. Brothar. A. S. Brother, Bre-"ther, Brothor, Brothur. Al. Bruoder, Bruother, Bruder, Pruader. "Cym. Brawd. Cim. Broder. D. Broder. B. Broeder. Sclav. Bratr." In the Persian it is Burauder—in the Galic Brathair—in the Irish Bratair. Our word Brother becomes Brethren; and the Welsh Brawd, which Junius has produced, becomes Frodyr in the plural, as we find it in the Welsh translation of 'Dearly beloved Brethren.' Again, under Daughter, Junius represents the parallel terms in other Languages after the following manner: "Goth. Dauhtar. A. S. Dohter, " Dohtor, Dohtur. Al. Dohter, Tohter, Thohter. Cim. Dotter. D. " Daatter. B. Dochter;" and he then observes, "Inter tot diversas " scribendi rationes nulla est, quæ non aliquod præ se ferat vestigium "G. $\Theta_{\nu\gamma\alpha\tau\eta\rho}$, Filia." We perceive, that all these may not only be traced to the Greek Thugateer, but we may observe that a greater Uniformity and resemblance cannot well be coneeived. The Same Cognate

Cognate Consonants are preserved; and we may understand from our word Daughter, how the changes have arrived. In Daughter we have a record of the G in Thugter or Thugater; though in sound, the G has disappeared, and the word might have been represented by Dauhter, as in the Gothic Dauhtar, &c. Nothing can be more obvious than the cause of these different forms; which arise, we perceive, from the guttural sound of the G becoming faint and obscure. In modern German this word is written Tochter, and in Persian, a Daughter is Dokht and Dokhter, as I find the words represented by Mr. Richardson. I shall not load my page with an accumulation of unnecessary examples, as the Reader may be well assured, that a similar fact will be found to exist in every instance, where the same Word (as it is universally called) passes through various Languages, or appears in different dialects and stages of the same Language.

Surely the contemplation of these Facts will impress on every mind a similar train of ideas; and the Reader has already anticipated, my reasoning and my conclusion on this subject. He will be struck with the deepest astonishment, that Facts like these, perpetually passing before the eyes of the Etymologist, should never have suggested the Principles of a Theory, and the Laws of a System. Among objects liable to the influence of chance and change, it is not possible to conceive a species of *Uniformity* so full and impressive, as that model of regularity which is here exhibited: The varieties of mutation are bounded by limits of controul, almost incompatible with the vicissitudes of change; and nothing but a fact so striking and unequivocal would have persuaded us to believe, that such constancy could have existed in a case, where disorder and irregularity might be imagined alone to predominate. These words, after having passed through millions of mouths, in remote ages and distant regions of the world, under every variety of appearance and symbol, still continue, we perceive, to be represented by the same Consonants—not indeed by Consonants bearing the same name; for that perpetually varies with the form of the symbol, but by those Consonants, which Grammarians have always considered to be of the same kind, and invested

invested with the same power. In considering the various Vowels attached to these Words, we at once perceive, that they supply no Principle of Uniformity, and therefore are unable to furnish any Laws, by which the Words can be recognised to be related to each other. On the contrary, they tend rather to obscure and disguise this affinity, since if no Vowels at all existed, as symbols in the representation of the above terms, the relation of these words would be still more apparent. Thus FTR, FDR, VTR, VDR, PDR, PTR, would manifestly represent to us the affinity of those Words, which we commonly express under the more disguising forms of Father, Fæder, &c.; and the same may be observed of the representations MTR, MDR, for Mother, Meeteer, (Μητηρ,) &c.—BRT, BRD, PRD, FRD, for Brother, Brether, &c. If the Vowels, which are adopted in expressing these words, were alone used, all affinity would be lost. Thus if Father, &c. or FTR, &c. were expressed by ae, æe, aee, a, eei, aui, eee; Mother, MTR, &c. by oe, eeee, ae, oo, ee, uae, uoe, ue, oee, ace, eee, ee; and Brother, or BRT, &c. by oe, oa, ee, oo, ou, uoe, ue, uae, aw, oee, a, uaue, aai, ee, oy, we at once perceive, that every Principle of Distinctive Affinity would be obliterated, and written Language would altogether become one entire blank, without any traces of ideas or meaning.

Thus, then, we at once recognise, manifestly and unequivocally, a Principle of Uniformity, by which we are at once supplied with the most important maxim in discovering the origin of words. In these enquiries, the Consonants only are to be considered as the representatives of Words, and the Vowel Breathings are to be totally disregarded. It is necessary, before we advance forward in our discussion, that this maxim should be precisely understood. The Principle, which I am labouring to establish, may be thus more minutely unfolded.— If the Etymologist is desirous of tracing out the same word, as it is called—Brother, Father, &c. through different Languages, or amidst various modes of writing and pronouncing that word in different periods or dialects of the same Language—or, if he is desirous of discovering, what words, conveying similar ideas, are derived from each other—belong to each other, or are successively propagated from each other:

other; he must seek this affinity or relationship among words possessing the same Cognate Consonants: and to this test only it is his duty perpetually to appeal. He must totally disregard all difference of appearance in the words, whose affinity he examines; as that difference arises from the adoption of different Vowels in different places; or as that difference arises from Consonants bearing a different form, and called by a different name. He must regard only the existence of the same Cognate Consonants—of Consonants invested with the same power—Consonants of the same kind, which he has seen-known and acknowledged in the most familiar instances to be perpetually changing into each other, in expressing the same or similar ideas. He should acquire the habit of viewing words in their Abstract—Simple state, as belonging only to these Cognate Consonants, and freed from those incumbrances, by which their difference of appearance is produced, and under which disguise their mutual affinity to each other has been concealed from his view.

It surely cannot be necessary to suggest to the Reader, what I have in fact already so distinctly urged, that the rejection of the Vowels, as useless and unnecessary, refers only to the Art of the Etymologist, and to the purposes, for which that Art is applied. We all know, that in the speaking of a Language the Vowels assume their full share of importance, and that the Consonants are even indebted for their existence to the friendly offices performed by the I have purposely omitted among the examples above produced, two parallel terms for Father and Mother, as the French Pere and Mere, where the second Consonant of the Radical has been lost: It must be observed, that Languages are often liable to such accidents; yet it generally happens, as in this case, that sufficient évidence still remains for the purpose of determining the origin from which the words are derived. No one doubts, that the terms Pere and Mere belong to the series of Words, expressing the same meaning, which I have before detailed; as the sense, which these terms bear, and the Consonants, which still remain, are fully sufficient to preserve and to attest their affinity. The evidence of Identity is not at all disturbed by this accident, nor is our dependence on the permanency of Conso-

h

nants, as the records of affinity, at all diminished. On the contrary, these solitary instances of deviation will afford an example of that peculiar force, attached to an exception, by which, as we are told, a Rule is at once confirmed and illustrated.

(2.)

The Writer endeavours to explain fully and precisely his Hypothesis, as it relates to the means of recognising the Affinity of Words by their symbols.—The object of the Art of Etymology, and the materials of which it is formed.—The Alphabet arranged, as it relates to the purposes of the Etymologist.—The Cognate Consonants minutely detailed.—The inflexions of Verbs and Nouns, in Latin and Greek, examined.

—The changes of certain Consonants in modern Languages.—Every evidence tends to confirm and establish the former assertion, as an Etymological Axiom, by which alone the purposes of an Art are performed, that the Cognate Consonants, under the same or similar ideas, decide on the Affinity of Words, and that the Vowels are to be totally rejected.

HAVE now possessed my Reader with a full view of one part of my Hypothesis, from conclusions, which have been drawn from the most familiar examples. It is necessary however, that we should proceed with great care and caution in laying the foundation of our Theory; and it is incumbent on the Writer to detail more minutely, and under various points of view, the nature of the evidence, on which that Theory has been formed. It is necessary for us to be impressed with the most distinct conception respecting the object, which the Etymologist endeavours to attain by the exercise of his Art; and we must then endeavour to ascertain and to arrange with all possible precision, the qualities or properties of those materials, by which the purposes of his Art can be effected. It should seem as if the race of Etymologists had passed their lives without endeavouring to decide in their own minds, or even to enquire, what was the object of their research, and what were the principles, on which it should be conducted

That

That is, our Etymologists have never thought it necessary to define, or even to investigate what constitutes the nature of the affinity between the terms, belonging to each other: These terms they attempt to discover, under the sole guidance of some obscure and undefined impression, not altogether abhorrent from the truth. Thus, for example; if any Etymologist had ever enquired of himself the precise grounds and reasons, on which he was authorised to assert, that the terms, which he had collected as parallel to Father, were in truth related to each other; he must have been led to see and to acknowledge, that he supposed them to belong to each other, because they conveyed the same or similar ideas, and were represented by the same Cognate Consonants; and he must have acknowledged moreover, that the existence of the Vowels gave him no assistance in forming this opinion respecting their affinity. If, I say, any Etymologist, at any time, had thus communed with himself, and had enquired even in a single instance, into the state of his own mind, on the affinity of those words, which he was perpetually producing as parallel, under the influence of an obscure and undefined conception; he must at once have been conducted to the Axiom, that the Cognate Consonants. conveying the same or similar ideas, alone decided on the affinity of Words, and that the Vowels availed nothing. Under this Axiom alone, the researches of the Etymologist assume the functions and perform the purposes of an Art. All, which has been at present effected, is confined within the narrowest limits, without any vestiges of a Principle or a System. The most profound and acute of our Etymologists is excluded from the province and the praise of an Artist. Even in the happiest exertions of his labour or his skill, he can claim only the merit of an industrious collector, who is not wholly destitute of some obscure and indistinct impressions, connected with the nature of his duty, which lead him to the discovery of a few parallel terms directly attached to each other, and presenting themselves to his view, under some undefined traits of affinity and resemblance.

The principles of our Theory may be thus more amply and distinctly unfolded. It will be granted, I imagine, that it is the business

of the Etymologist to discover those Words, which belong to or are related to each other. Now words cannot belong to each other, unless, by some process of change, they have passed into each other. If words pass into each other, they must carry with them the train of ideas, which they convey; and thus, in words related to each other, the same fundamental idea must exist, either in an apparent or a latent The fundamental idea, in a series of words related to each other, may be latent or obscure, amidst the various senses, which those Words represent; for the same reason, as the fundamental idea in the same word in the same Language may be obscure amidst the different senses, which that word conveys. Still however we all agree, that the different senses of any Word, however numerous they · may be, and however remote some of them may appear from each other, must have been formed from the same fundamental notion, whatever may have been the process, by which those senses have been propagated. Thus, then, in discovering the Affinity of Words, it is necessary to shew, that they appear under forms, which by the familiar operations of Language, may have passed into each other, and that they contain the same fundamental idea.

It will be agreed, that it would be the vainest and idlest of all pursuits to enquire about the Affinity of certain Words to each other, which is to be ascertained by shewing, that the forms, under which they appear, have passed into each other; if in considering the familiar changes of Language it should be found, that all Words pass into each other without any recording marks of difference or distinction, by which one set or class of Words can be separated or distinguished from another. Hence it follows, that the component parts of Words, that is, the Letters, by the changes of which into each other, the various forms of Words are produced, must be of such a nature, as to supply these marks of distinction. That is, it is necessary, that certain Letters should so regularly and familiarly pass into each other, to the exclusion of the rest, that the Words, in which such Letters. are found, thus familiarly passing into or Commutable with each other, may be justly said to belong to each other, as distinguished from other Words, attached to other sets and classes of Letters. It is the

vanced

the duty therefore of the Etymologist to discover such Letters, which by thus regularly and familiarly passing into each other, to the exclusion of the rest, will afford those marks of record and distinction, by which the Affinity of Words is ascertained. If any Letters should be found, which pass into each other, without supplying any such records of Affinity; these should be rejected as useless and impeding to the purposes of the Etymologist, however important those Letters may be, in fulfilling other purposes. Such Letters, which by passing into each other create difference of forms, without supplying any distinctive records of the affinity of those forms, must impede and embarrass the Art of the Etymologist; whose duty it is to discover the Affinity of forms, amidst all the disguises of difference and variety.

In the examples above produced we have seen, that the Consonants of the same power, or the Cognate Consonants by remaining attached to the same idea, to the exclusion of other Consonants do preserve this distinctive affinity; and that the Vowels, by passing into each other promiscuously, afford no marks of affinity whatever, but on the contrary tend to obscure that affinity, by increasing the variety Thus, then, as I before observed, in the representation of of forms. the above terms, for the purposes of Etymology, I would entirely reject the Vowels; and I should say, that Father would be best represented by some mode like the following; FTR, PTR, VTR, VDR, &c. or F, P, V D, T R-Mother by MTR, MDR, &c. or M D, T R and Daughter by DGTR, TCTR, TTR, &c. or D, T, &c. \ G, C, T, &c. \ R. This representation will fully answer my purpose, till we have defined with precision the nature and number of these Cognate Consonants; and we at once see, how, by this simple mode of generalising the subject, the mist begins to vanish from our eyes, which had before darkened all our views, and clouded all our conceptions on the nature of Languages. It is not possible to express the progress, which we have made in the Art of Etymology by this simple artifice of wholly rejecting the Vowels. We might almost say, that every cause of difficulty, as it relates to the foundation of a System, is obviated, when this Axiom of totally disregarding the Vowels is brought into effect, by removing them altogether out of our sight. Having advanced so far in certain instances, we shall be enabled to make a rapid progress in our ideas of generalization. These words, we see, are what Etymologists have called the Same words, as being words conveying the Same notion, and appearing under Consonants of the Same power. But it is the business of the Etymologist, we know, not only to discover the Same words in various Languages, that is, the Words directly Parallel conveying the Same sense, which have passed into each other, but those likewise, which in passing into each other have assumed different senses. Now it will be at once acknowledged, that these terms thus passing into each other, though conveying perhaps senses very different and apparently very remote from each other, must be attended by the same accidents, which are observed to take place under the familiar operations of Language in similar cases of words passing into each other. That is, the Cognate Consonants will continue to be attached to Words, related to each other, by the process of passing into each other, whether those Words contain the same sense, or different senses. In all cases therefore the existence of the Same Cognate Consonants must still be regarded as the record, by which the Affinity of Words is to be recognised; if it can be shewn, that amidst their diversities of meaning they do in fact contain the Same fundamental idea.

As it is from the observation of Facts alone that we can deduce these principles, and not from any abstract reasoning on the nature of the Consonants and the Vowels; we must not depend on the evidence of the few examples given above, but we must convince ourselves by a survey of other examples, that the same process of Language is universal; that is, that the Cognate Consonants remain attached to Words, as the record of their affinity, and that the Vowels afford no record whatever. The Writer feels an embarrassment in deciding on the mode, by which he should exhibit this truth, as founded on the evidence of Facts, to the mind and the eye of the Reader in an introductory Dissertation; when the whole Work is destined to illustrate the same truth by a series of similar Facts. All that can be done must consist only in producing a few Facts, or in pointing out the mode of observing such Facts, or in detailing some general information on the subject,

subject, which may be sufficient to support the writer in laying the foundation of his System. I shall first arrange the Alphabet according to a mode, useful, as I conceive, to the *Etymologist*; and I shall then illustrate the nature of the *Cognate* Consonants, according to that arrangement. When this is performed, I must request the Reader to take into his hands any book of Etymology, as Skinner, Junius, &c. in which the acknowledged parallel terms are recorded; and he will find, after the most superficial view of a single half hour, employed in the enquiry, that the general current of examples, which pass before him, exhibit similar *Facts* to those, which the above examples have displayed, and authorise conclusions, which are supposed in my Hypothesis.

We may divide the Consonants into three classes, after the following manner: 1. M, B, F, P, V. 2. C, D, G, J, K, Q, S, T, X, Z. The Letters in the first Class have been called Labials; and we shall find, that they familiarly pass into each other, to the exclusion of the rest. The Letters in the second Class have been variously arranged, under different names; but however useful these divisions may be for some purposes, they are totally repugnant to the purposes of the Etymologist, as we shall find, that the Letters in the second Class pass familiarly into each other, to the exclusion of the The Letters L, N, R, are placed in a Class, not as being similar to each other, but as being distinct from each other, and as having laws peculiar to themselves; as will be more particularly explained on It is not to be understood, that these Classes are a future occasion. not sometimes connected; as we shall find, that all the Consonants. under certain circumstances and by certain processes, have passed into each other, as the Etymologists have abundantly shewn. We shall find, however, that in the ordinary operations of Language the distinctions are faithfully preserved, and that no confusion arises from this partial connection of the classes. It is sufficient for the purposes of distinction, or of preserving and recording the distinctive Affinities of Words, that certain Consonants regularly and familiarly pass into each other, to the exclusion of the rest. The partial connection of these Classes with each other, like the exceptions of a Rule, serves rather

rather to confirm and illustrate the general principle of distinction. It must be observed, moreover, that the mode, in which these Classes are connected, is conducted by laws of Uniformity, affording marks of distinction, not less defined than those, which belong to the more general analogies.

The Grammarians have told us, that those Consonants are Cognate, which are Changed into or are Commutable with each other, in the inflexions of Nouns and Verbs. These instances are well chosen, as the different Declensions and Conjugations of Nouns and Verbs represent to us the Laws, by which large and distinct classes of words are varied in the familiar operations of a Language. We must observe too, that the changes of the Consonants in the same word, in certain cases and tenses, will shew to us the mode, by which the mind is accustomed to proceed with Consonants, when it is desirous to represent by their means the same idea, under some variation. to understand, that the mind must be swayed by the influence of a similar impression, so as to adopt a similar artifice, when it endeavours to propagate variety of meaning, under the same fundamental idea, in the production of the same Race of Words; that is, of a Race of Words directly passing into each, and connected with each other. The Grammarians have done well, I say, in delivering the Definition, which they give us of the Cognate Consonants; as connected with the examples, to which they have appealed, but they have strangely and most grossly erred in detailing those Cognate Consonants; as the facts exhibited in their examples are repugnant to their arrangement. The Vowels P, B, F, (Π, B, Φ) as they tell us, are Cognate Consonants, and L, M, N, R, are Immutable, because they have no corresponding Letters, into which they may be changed in the inflexions of Nouns and Verbs, "Liquidæ vel Immutabiles αμεταβολα, Λ, Μ, Ν, Ρ.-"Quia non literas Antistoichas vel Cognatas, quibus ipsæ mutentur in "Verborum et Nominum inflexionibus habent."

Our Grammarians might have learnt from their own examples, that M should be added as a Cognate Letter to P, B, F; and that these Consonants are changed into each in different tenses of the same verb, or in representing the same idea under different circumstances.

Thus

Thus the action of Beating is expressed in Greek by Tup, Tup, and Tum or Tumm; or, as we know not precisely the sound of the Greek υ, by TP, TF, TM, TMM, (Τυπτω, ετνπον, τετυφα, τετυμμαι.) This is not peculiar to the verb Tupto; (Tuntus,) as the Grammarians have themselves informed us, that it is the appropriate nature and quality of a certain Race of verbs, which have P, B, F, Pt, in one tense to assume M in another, "Præteritum Perfectum," say our instructors, "formatur a Præterito Activo mutando in conjugatione " prima Φa purum in Μμαι, M geminato, ut Τετυφα, Τετυμμαι, Φα "impurum in Mai, ut Teteppa, Teteppai." I might here observe, that in various other Languages, the TP, TM, &c. convey the same fundamental idea of Beating-Striking, &c. Thus TAP, TAPPEN, (Germ.) THUMP, THUMBO, THOMBO, (Ital.) &c. are acknowledged to have some relation to Tupto, Tetummai, $(Tu\pi\tau\omega)$; and it is even seen, that the Greek Doupos, Δουπος,) and ΤΗΑΜΒείη, (Θαμβείν, Perterrefacere,) may have some affinity to these words. The Etymologists however have not seen, that Thumb, Daum, (Germ.) &c. sTump, sTamp, sTep, &c. &c. with a great Race of words to be found through the whole compass of Language, must be referred to the same idea. We shall at once see, how the abstract representation of the idea of Beating or Tapping in various Languages by the Elelementary form D, S, T, M, P, MP, &c. &c. tends to assist our imagination in bringing at once all these words, within the sphere of Affinity.

The Greeks are not the only people, whose minds or organs disposed them to fall into these Labial changes. Every Welshman will inform us, that in their language, at this very hour, the same mutations are familiar. Even in different positions of the same same word, P, B, Mh and Ph, are changed into each other. "Words primarily be"ginning with P" have four initials, says Richards; "P, B, Mh, Ph,
"as Pen gwr, a man's head; ei Ben, his head; fy Mhen, my head;
"ei Phen, her head." In these instances, Pen, Ben, Mhen, Phen, are different forms for the name of the Head. The ordinary Etymologists are aware of these changes. M, as they have told us, was used by the Æolians for P, as Mato for Pato, to walk, (Matw, Natw, ambulo.)

ambulo.) They understand, that Morfe, (Moρφη,) and Forma—Murmeers, (Muρμηξ,) and Formica, &c. &c. belong to each other; and Robert Ainsworth has observed the constant union of M with B, P, in a vein of metaphor worthy of an Etymologist. "M," says he, "doth not refuse to usher in its sister labials, B and P, as in Ambulo "and Amplus." I have appealed to these common instances, and quoted these humble authorities, for the purpose of impressing the fact on the mind of my Reader, and to shew, that the connexion between M, B, F, P, is apparent on the most familiar occasions, and acknowledged by our ordinary Philologists.

It is only by observing the actual changes, which take place in a great variety of words, that we can fully understand the precise mode, by which these changes are effected. The Letter M, in the arrangement of the Etymologist, must be confounded with the other Labials; yet on some occasions we may observe a shade of difference, by which M appears to be distinguished from the others. At the end of a word or syllable no difference appears; and they are all inthis position confounded with each other. In the beginning of a word, however, the M seems to be separated from the other Labials, under some barrier of distinction, by which it maintains its place to the exclusion of the rest, as in the instance of Mother and its parallels: in the changes of which, as we perceive, the other Labials have not intruded. We may conceive, that something of this sort happens. by observing the operations of Language, with which we are most familiar. We see, that the M perpetually connects itself with the other Labials P and B, &c. at the end of a word or syllable; as thuMP, thuMB, buMPer, &c., though we do not familiarly observe the same union at the beginning of a word; but we generally find, that the M remains alone, and separated from its sister Labials. We find however, that the M is familiarly applied in conjunction with the other labials in the first syllable of a word, or in words of one syllable, when it is preceded by a vowel breathing, as in aMBulo, aMPlus, aMPhi, aMPelos, (Αμφι,—Circa, Αμπελος, Vitis.) · In modern Greek, however, the M precedes the B at the beginning of a word. when no symbol for a Vowel breathing appears. The liquid L, as it

into each other. Thus we perceive, how the two Classes T, D, Th, K, G, Ch, are inseparably blended and confounded with each other. We perceive moreover, that other Letters Z, X and S, are introduced, which must be added to the same Series of Commutable Letters.

The S has been considered by the Grammarians as a Letter invested with a power peculiar to itself. " E est suæ potestatis litera." The Letter S is not distinguished by any privileges, which are denied to other Letters. In the ordinary distribution of our Alphabets, every Letter may be considered as a Letter of its own power, or as having a power or property, peculiar to itself. Still, however, certain Letters may have a power—property or propensity to pass into each other, without any disturbance of this peculiar property, by which they are distinguished from each other; or any derangement of the particular degrees of Affinity, which these Letters may bear to each other. Different modes of classing Letters may have their use, according to the different purposes, to which their classification is applied. Yet no division can be more faulty and imperfect than that of the Grammarians, which we have just exhibited, respecting the Cognate Letters, when considered under their property of Commutabilitu into each other, in the inflexions of Nouns and Verbs. We see most unequivocally, that in the Inflexions of Verbs, the Letters C or Ch. D. G. K. S. T. X. Z. pass familiarly or are changed into each other. whatever may be their peculiar relation to each other, or the precise process, by which this change is produced. We do not obtain from the Greek verbs any distinct evidence of the peculiar relation or the degrees of Affinity, which these Letters bear to each other, though it does not from hence follow, that such degrees of Affinity may not Thus it may still be, that T, D, Th, which some call Dentals. and K. G. Ck, which some call Palatines, form two sets, in some measure, distinct from each other, as containing Letters more particularly related to each other. I have no objection to this idea, or to this mode of division, for certain purposes, and on certain occasions: but I still affirm, that it is a division, entirely false, as applied to the definition of the Grammarians, and altogether useless and improper for all the purposes of the Etymologist. We know, that the

the sound of Q is similar to that of C, Ch, or of the hardened G, with the vowel wafter them; and that J is nothing but one of the sounds annexed to G, as in George, which might have been written Jeorge; and thus we see, that the letters C, D, G, J, K, Q, S, T, X, Z, should be arranged in the same Class as Letters, which are Cognate or Commutable into each other, in the ordinary operations of Language.

Similar facts are exhibited in the Latin Verbs. Thus C is changed into X, CT, as diCo, diXi, diCTum, by a general analogy, and sometimes into S and T, as parCo, parSi, parSum, sarCio, sarSi, sarTum; -D into S, as raDo, raSi, raSum; G into X and CT by a general rule reGo, reXi, reCTum, and sometimes into S, as merGo, merSi, merSum; —Q into X and CT, as coQuo, coXi, coCTum;—SC into T and ST, noSCo, noTum, paSCo, paSTum; —T into S, and CT into X, as miTTo, miSi, miSSum; CT into X, fleCTo, fleXi, fleXum. In the Latin and Greek Nouns the same changes are likewise visible. Thus, in Latin, C is changed into CT, as laC, CTis; — S into D, T, as peS, peDis, parS, parTis, &c. &c.; —X into C, G, CT, as paX, paCis, leX, leGis, noX, noCTis. In Greek, S passes into T, Th and D, as gellos, oT-os, kor $\{uS, uTh$ -os, $lamp\{aS, aD$ -os, ($\Gamma \in \lambda ws, \tau os, Kopus, \theta os,$ Λαμπας, δος,) X into K, KT, G, Ch, as kul\iX, iK-os, an\aX, CT-os, tett iX, iG-os, beX, beeChos, (Κυλιξ, κος, Αναξ, κτος,; Τεττιξ, γός, Bn ξ , β n χ os.)

The various offices, which these Letters perform in modern Languages, would be abundantly sufficient to attest their Affinity. In our own Language, C is used for S and K, as in City and Cap, quasi Sity, Kap; and T has the sound of Sh, as naTion, quasi naSHion or naTShion. In the Spanish Language, the C is sounded like Th, before some Vowels, and like the K before others; and when h follows the C, "it is pronounced," says Del Pueyo, "as in the English muCh, "muCho." In German, C is represented by TSay; and before some Vowels it is sounded like TS. In Italian, C is sounded like TCh, as in Cesare, Cecita, which is pronounced 'TChesare, TcheTChita,' in so delicate a manner, that you cannot distinguish, says Veneroni, whether a T or D be sounded. "Pour parler avec la delicatesse "Italienne, il faut faire sentir le T de Tchesare, Tchetchita, &c. si "doucement, que l'on ne connoisse pas, si l'on prononce un T ou

"un D." Veneroni represents the sound of the Italian G, and GG, before the Vowels e, i, by DG, as Giro, Oggi, DGiro, oDGi. We may from hence see, how Oggi or oDGi, may belong to hoDie, and how Dgiro or Tgiro, Giro, Guros, (Γυροs, Gyrus,) may belong to such terms as Tour, Tour-n-er, (Fr.) Tur-n, &c. &c., with a great race of parallel words to be found through a wide compass of Human Speech.

The Affinity of the Cognate Consonants C, D, G, &c., such as they are detailed in the present arrangement, will enable us to understand. from what source has arisen that cluster of Consonants, which certain writers have so violently and unwisely condemned in some Languages, as in the German, &c. It has arisen from an attempt at extreme accuracy in expressing those different sounds existing in different Cognate Consonants, which the speaker combines together at the same time. These mingled sounds are to be found, in a greater or less degree, in all forms of Speech, which differ chiefly in this respect, than in some Languages more precision is employed in representing that combination of sounds by the power of symbols. One Language adopts the various characters, which are separately used to express the different sounds, of which the combination is formed, while another employs a single and peculiar symbol for that purpose; and a third contents itself with adopting a character, sometimes used for one of those mixed sounds, of which the union consists.

In our own Language this combination of sounds has been strongly felt by other nations; and we accordingly find, that the representation of our words by Foreigners is loaded with Consonants, for the purpose of conveying to the ears of their countrymen the nature of those combined sounds, about which we so little reflect, and which we ourselves are satisfied with expressing by a single symbol. Thus in a German Dictionary, now before me, I find the sounds of our letters C or Ch and J, generally represented by TSCh and DSCh as in Church and Judge, by TSChohrTCh, and DSChoDSCh; The sound of the G in Genius I likewise find to be represented by DSChenius. The Sclavonic Dialects exhibit likewise most fully this union of sounds. In the Russian Language, the sound of two Letters has been represented by TS, TCh; and the enunciation of a third appears to be of

so complicated a nature, that in an attempt to express this sound to a French ear, the author of my Russian Grammar represents it by ChTCh, "en faisant tres peu sentir le T." In the Eastern Languages, this relation of the Cognate Consonants C, D, G, &c. is peculiarly observable, as well by their uniou, as their separation. To some ears the sounds of these allied Consonants have appeared mingled; and to others they have appeared single; and hence we find so great a variety in representing the same term among the Travellers into the East. We shall perpetually observe, that this proceeds solely from the cause developed in my hypothesis; namely, that certain Consonants, Cognate or allied to each other, familiarly pass into each other, in representing the same idea, and that the Vowels are promiscuously changed into each other. If we do not allow this principle, we have no evidence to assert, that the following terms are at all related to each other. Dr. Vincent has detailed the various modes, under which different writers have represented one part of a compound, expressing a River in India, after the following manner; "DJen, D an, TSChan, "TSChen, Chan, Chen, Chin, Jen, Gen, TSChun, Chun, Shan, San." (Voyage of Nearchus.)

From considering this combination of Cognate Consonants, we shall be led to a very important observation in the developement of Language. The difficulty in unravelling the origin of a word consists in discovering the true Radical form, concealed under the Consonants. by which it is represented. The two letters, between which no Vowel breathing is inserted at the beginning of a Word, may sometimes represent the Radical form, but they may likewise only represent the combination of sounds, annexed to what we may consider as the first Letter of the Radical. Thus the Elementary form of the above terms DJen, &c. I consider to be CN, DN, &c.; and hence the DJ, TSCh may be regarded as representing only the first Consonant in the Radical. Whenever I imagine this to be the fact, I shall commonly place a line over such Letters, DJ, TSCh in representing the Radical form DJN; and whenever no such line is placed, each Consonant is supposed to represent one of the Radical Consonants. It is easy to understand, that a Vowel breathing would readily insinuate itself

itself in the attempt to enunciate a combination of sounds, representing the first Letter of the Radical. Thus it might have happened in some of the terms above produced, and the Tschun, &c. might have become Teschun. We should always have our attention awake to this circumstance, as to a matter of great importance in discovering the true Radical Characters. If such a fact, as I have supposed, had really taken place, and we had been induced from hence to imagine, that TS was the Radical instead of TN, SN, &c., all our labour to arrange the word in its due place would have been vain and fruitless.

The third of the Classes, into which I have divided the Alphabet for the purposes of Etymology, is L, N, R, the Letters of which Class may be considered as distinct from each other in the familiar operations of Language, and to be governed by laws, which demand a separate discussion. The Letters L, M, N, R, are called by the Grammarians Liquids, and sometimes Immutables: - "Liquidse ver "Immutabiles, A, M, N, P:" and the reason, which the Grammarians give for their being called Immutables, is thus described; "Que non "Literas Antistoichas vel Cognatas, quibus ipsæ mutentur in verborum "et nominum inflexionibus, habent." Robert Ainsworth observes on this definition, "All the Liquids by the Grammarians are called "Immutables, as in fact they are with respect to the Mutes, but not " in regard to themselves, which is evident from Numph, Lympha, " Ager, Agellus, Aeipiov, Lilium, Naupos, Paulus." Though most of these examples are unfortunately chosen, yet the fact sometimes takes place on certain occasions, and in the organs of some nations. These changes, however, are so rare, that they produce no effect in the general arrangements of Language. The Letter L first demands our attention. The Etymologist must consider the L as most intimately connected with the two Classes C, D, &c. B, F, &c., not as being changed into them, but as having the Letters of these Classes perpetually attached to it, both as following and preceding it, in expressing the same or similar ideas. The N and R likewise follow the L, though not so frequently and familiarly. We may thus represent the L as connected with the Letters, which I have detailed, C, &c. B, &c. \^L\c. &c. n, &c. n, n; where we may observe, that this general representation

in our term Call, with the Greek Kaleo, (Kalew, Voco,) we see a simple form of Clamo. In the Italian article, GLi, we see, how the G is connected with the L; and in that Language the same union of the G with the L at the end of a syllable, both before and after the L, is familiar, where no G appears in the parallel terms, as Voglio, Voler, Salgo or Saglio, Salire, Togliere or Tollere, &c. &c., belonging to the Latin Volo, Salio, Tollo. The appearance of G before the L at the end of a syllable, so familiar in Italian, is not so common in other forms of Speech, in the process of Words passing through different Languages.

It is well known, that a peculiarity of sound is annexed to the Welsh LL, which the Grammarians find it difficult to express. Mr. Richards describes it thus: "LL is L aspirated, and has a sound " peculiar to the Welsh. It is pronounced by fixing the tip of the " tongue to the roof of the mouth, and breathing forcibly through the "jaw-teeth on both sides, but more on the right, as if written in "English LLh." We see, how by this operation with the roof of the mouth and the teeth, the Palatials and Dentals are brought into action; that is, how the sounds of C, D, &c. are mingled with the L. To my organs of hearing the Dentals appear most to prevail in the enunciation of this combined sound; and when I first wrote down words from the mouths of the Welsh, I was surprized to find many terms, according to my representation, with an initial T, conveying certain ideas; which, as I well knew, were not familiarly expressed under that form, but which were generally represented by words, in which the L was conspicuous, as Thug, which I wrote for Lhug, Light, &c. &c. This union of the Dental sound with L will shew us, why we find, belonging to each other, ULYSSES and ODusseus, (Οδυσσευς,) POLLux and POLuDeukes, (Πολυδευκης,) GILEs and æ-oGIDius, &c. &c. These changes create no difficulty or confusion, when the laws of change are sufficiently understood.

The Reader will be enabled, by the following examples, to form some idea of the fact, which I before asserted, that the words with

L as

the

L as the first Consonant, appear likewise under the forms CL, BL, sometimes with the additions of c, &c. and B, &c. after the L, as C, &c. B, &c. Lac in Latin is in Greek GALA, GALACTOS, gaLactos, (Γαλα, Γαλακτος,) and in Celtic we have Lhaeth, Lait, &c. In gLAGOS, gLAX, (Γλαγος, Γλαξ, Lac,) the breathing between the G and L is lost. We find likewise in the Celtic Dialects Blith, Bloxd, Meilg, as they are represented by Lhuyd, where we perceive, that the Labial sound is introduced before the L. Let us mark the name of this illustrious Celt, Lhuyd, corresponding with our familiar name LLoyd; and let us remember FLoyd, &c. We perceive in the Celtic Mella, how we are brought to the English Milk, the Latin Mulgeo, and the Greek aMelgo, (Αμελγω.) The form of BLITH will bring us to the Greek BLITTO, (Βλιττω, Exprimendo aufero, ut mel e favis,) which will shew us, that the sense of the Fluid Milk is taken from the action of Milking, as relating to the idea of Expressing or Squeezing. Among the terms for Lux in Lhuyd I find Golou, Solus, Golug, Glus, Lhygad, Les, Leos. We here see, that the Solus brings to us the Latin Sol; and that the form LHUG, LES. &c. brings us to Lux, Light, &c. &c. We shall agree, that CLear, CLean, CLarus, &c. belong to these words Golou, &c.: and we cannot doubt, I think, that Erios, (H\u03b1005, Sol.) is attached likewise to the same words, when the sound of g in $g^{-}L$ is not heard.

Among the terms for Lutum I find, in Lhuyd, KLAI, KALLAY, KLADAX, LHAID, KLABAY, LABAN; and we remember the English CLAY, which in some places is called GWALT, together with the Latin arGILLA, and the Greek arGILLOS, (Apyllos.) We here see the forms CL, KL and GL, in Clay, Klai, GILL; and we have the Consonants D, T and B, attached to the Radical KL, together with R, &c. We perceive, how Lhaid coincides with Lad and Lut, in kLadax and Lutum, and how the Lab in kLabar, and Laban is the same. We cannot help noting, how the English words SLIME, Slop, SLIP, &c. &c. belong to the form Klab, where the Labials succeed the L; and we cannot but again observe, how we pass from this form to Limus, (Lat.) Loam, Lime, (Eng.) Labor, i. e. To Slide, &c. Let us mark in SLIDE, GLIDE, how the d is annexed to the L; and among

the parallel terms for Labor, in Lhuyd, we have the Irish Sleavnayim, Sladam, and Gluaisim, the Armoric Lampra, and the Welsh Lhithro. Here Sleav coincides in form with Slip;—Slad and Gluais, with Slide, Glide;—Lamp with Lab, &c., Lhith with Lhaid, &c. We see in some words, how the R is added, as in Klabar, Lhithro, &c., and as it is likewise in Slaver, Slobber, Slither, in colloquial Language, &c. It is impossible not to see, that Solum, Soil, &c. Clod, Chalk, Slate, Sludge, Silex, Calx, Chalie, (Xalie,) belong to these terms for Clay, Klai, &c.; and we must even on this slight view perceive, how widely extended the words are under these various forms, which relate to Dirt—Mud, &c.

This perhaps will prepare our minds for my hypothesis, which supposes, that Languages are formed from terms relating to the Earth, Ground, the Solum, Soil, Clay, &c. &c. The term Calx, which I have just produced, relates at once to the Ground, and to the Heel, the treader upon it. Let us mark in the H of HEEL, the approximation to the CAL; and in the LX of the Latin word we see, how we may pass into that form, which has actually taken place in the Greek Lax, (Aag, Calce, &c.) In the Irish Sal we see the term without the additions to the L. While I examine CALX, denoting the Heel, in Lhuyd, I perceive among other terms for the same word, denoting Chalk or Lime, Calx, (Welsh,) &c. and Yil, (Irish,) where in Yil, or, as it appears in Mr. Shaw, Aol, Lime, we simply see the L, with the vowel breathing before it, as in the Greek IL-us, ULE, (Ιλυς, Cœnum, Υλη, Materia quævis.) We have seen terms under the same Radical SL and CL, &c., relating at once to what is CLEAR-LIGHT, and to CLAY, Mud, Dirt, &c., what is Foul—Dark, Dingy, &c., ideas, as it should seem, directly opposite to each other. We shall now however understand, that 'What is CLEAR, CLEAN,' &c. is nothing but that object, from which the CLAY, Mud, Dirt, &c. is removed—the. CLAYED-out place, if I may so say. We know, that Mud is applied. in an active sense, under this idea, when we talk of Mudding-out a Pond; and in the expressions 'To CLEAR off the Dirt-To CLEAR the Shoes, &c. &c., we see the terms used in their original idea, of removing CLAY or Dirt. Thus we see, how SOL, and SOLum remote

various forms C, &c. B, &c. \ ^L\ c, &c. B, &c. R, N, pass into each other. Under one point of view the Reader, if he pleases, may consider the ^L in its simple state, with a vowel breathing before it, as the original, Elementary Character, and that all the other forms have arisen from it, by organical attraction—accretion, addition, &c. Let us suppose then, that the forms CL, &c.}^L or CL, &c. and B, &c.}^L or BL, &c. have arisen from the more simple form ^L; and in order to conceive, why these forms have been so familiarly attached to each other, in the same series of Words, let us imagine, that the sound, preceding the ^L, was of a mixed kind, such as that, which is represented by QU, QV. This combination of sounds QV, which is a mixture of the two classes C, &c. and B, &c. is familiar and predominant in Languages. We know, that the Latin Q was adopted in order to be employed in expressing this union of sounds; and hence the Q never appears without the U following it. From this source it is, that we see such a variety of words under the forms of QU, GU, &c., and of W, which seems to represent with us the first step, by which the Labials and the Gutturals G, C, Ch, as some call them, pass into each other. Hence we have Guerre, War; Gualterus, Walter; Gulielmus, William, &c. &c. By this mode of conceiving the matter we shall more readily understand, how from the form QV \^L, congenial races of words may have arisen under the forms CL, &c. BL, &c., as the sound of the Guttural, Q, C, &c., or that of the Labial, V, &c. may chance to predominate. Let us now imagine the sounds of c, &c. B, &c. R, N, to be annexed to the form QV \^L, and then we shall have QV or C, &c. B, &c. \^L\c, &c. B, &c. R, N. When the sound of qv or c, &c. b, &c. is not heard, we have then the forms ^L, L}c, &c. B, &c. R, N, with or without the Vowel breathing before the L. The loss of the sounds c and b before L will be made perhaps more intelligible, by imagining the Vowel to be lost between these Letters, as in gLax, (Γλαξ,) which would hence immediately become LAC, LACTIS, &c. We might imagine, that the accretions c, &c. B, &c. R, N, succeeding ^L, took place before the accretions C. &c. B, &c. preceded the L, and this perhaps may often happen. Yet I seem frequently to perceive, that the form ^L{c, &c. B, &c.

advanced state with such abundant Races of words. I must again and again repeat, that this is merely a modus concipiendi, totally useless in discovering the Facts relating to the Affinities of words. Still, however, as it does not impede that discovery, and as it coincides with some obscure notions about Language, which have at all times been adopted by Grammarians-Philologists, &c. &c. it may be safely and conveniently admitted among those maxims, which profess only to exert their force within the humble and contracted sphere of Theoretical Arrangement. These are all the observations, which I conceive it necessary to make on the accidents or properties attached to the Letter L; from whence we have seen, that these properties do not consist in any changes which the L suffers by passing into other Letters, but by the aptitude, which it has of attracting before and after it organical accretions, in the ordinary operations of Language, in such a manner, that Words are familiarly generated directly connected with each other, under the various forms in which L appears as a Radical Consonant. This observation must be well weighed and understood, as it is by this property, that the Letter L is distinguished from all other Letters *.

I shall

^{*} It may be expedient perhaps in this place to explain some marks, and to elucidate more particularly a vein of phraseology, which I have chosen to adopt in the explanation of my Theory, though they are made, I trust, sufficiently intelligible by the mode, in which they are introduced. In my representation of a Race of Words by Consonants only, as CL, BL, CLG, BLG, &c. I decide nothing on the place, in which the Vowel breathings are introduced, except that I suppose no Vowel breathing to exist before the first Consonant. When I mean to express, that a Vowel breathing exists before the first or the' only Consonant, I use the familiar mark of a caret ', in order to signify, that a Vowel breathing is wanting, or is to be supplied before that Consonant or that L, for example, represents a Race of words, in which a Vowel breathing is found before the AL, as ALL, (Eng.) ULe, &c. (Thm.) I decide nothing in this representation about the Vowel breathing after it, which may or may not exist. If the L were to stand alone without a Vowel breathing before it, we shall at once see, that a Vowel breathing must exist after the L, as Luo, in order to constitute a word; and I have sometimes in this case placed a caret after the Letter, as LA. Thus, then, AL, LA, would represent all the words, in which L was found alone, whether a Vowel breathing does or does not exist before

I shall next examine the Letter 'R, as it may be regarded under one point of view, like L, as a great Elementary Character, which supplies

before the L. I have sometimes supposed the L with a caret before it to represent the words in which L is the Radical, whether the vowel breathing precedes or follows it. In representing a general formula, with a Radical Consonant preceding L, I have generally omitted the caret before L. Under the general representation C, &c. B, &c. L \ c, &c. B, &c. R, N, we shall find expressed the following forms; 1. Those belonging to 'L' or L' alone, with or without the vowel breathing before the L, as ALL, Ule, (YA,) Luo, &c. 2. Those belonging to L c, &c., or to L having c or its Cognates added, with or without the breathing before L, as Alector, (Alextue, Gallus,) Lac, Lactis, &c. 3. Those belonging to L & B, &c., or to L with B and its cognate Labials, as Albus, Labium, Lip, - &c. &c. 4. Those belonging to L & R, or to L with r following, as Ilares, (Ιλαφος, Hilaris,) Lira (Lat.) 5. Those belonging to 'L' (N, or L with N following, as Olene, (Ωλιση, Cubitus,) Luna. With C, &c. B, &c. preceding these forms L c, &c. B, &c. R, N, we have Terms, in which C or any of its Cognates is the first Letter, or the labial B or any of its Cognates is the first Letter—L the second Radical Consonant, with c or any of its Cognates or with B or any of its Cognates, or with B, or N, following, as under the form CL, &c. or C, &c { L, as Call, Clay, Gallus, &c., under BL and B, &c. { L, Ball, PILL, &c. under C, &c. \L\c) c, &c. CHALK, SILEX, &c. under B, &c. \L\c) c, &c. BALK, Bulk, Pulse, &c.—under C, &c. {L B, &c. Club, Glebe, Globe, &c.—under B, &c { L { B, &c. Bulb, Blubber, Flabby, Flap, Flame, &c.—under C, &c. { L { R, N, as Clear, Glare, &c. Clean, Glean, &c. &c.—under B, &c. {L{ n, n, as BLEAR, FLEAR, BLAIN, FLANNel, &c. &c. I speak of L as the second Radical Consonant in a word, because the Organical Consonants attached to ${f L}$ sometimes presede it. On some occasions I place a line over two Letters, in order to represent, that these Letters express only the combined sounds, which are annexed to what may be considered as the first Radical Consonant. Thus I should express the Elementary character belonging to the word STONE by STN, with a line over the ST, in order to shew, that the word was attached to the Radical form SN or TN, and not to ST, or that ST represented only the first Letter of the Radical. I have adopted the terms Element and Elementary, &c., as applied to Consonants, when the Vowels are removed; because I consider the Consonants to be the Principal—Fundamental—Essential or Elementary parts of Language, by which Races of Words are formed—propagated and preserved separate and distinguished from each other. In the phraseology of the Grammarians, Letters are considered as the *Elements*, of which words are formed; and in my use of the term, I consider, that the Letters, called Consonants, considered in an abstract state, when freed

•

supplies various Races of Words. The properties however of the Letter R, when it is viewed under its relations to the other Consonants, are totally different from those properties, which are annexed to the Letter L. The R attracts after it the other Consonants, as the L does; and we might perhaps conjecture, that the C, &c. B, &c. have been placed before it, as C, &c R, B, &c. R, by accretion, from the more simple form A. If we were permitted to make this hypothesis, the general representation might, as in the case of L, mutatis mutandis, be thus stated, C, &c. B, &c. } R c, &c. B, &c. L, N. We shall not find however, that Words under these different forms are to be found in the ordinary operations of Language directly connected with each other, as we have seen to be the fact in the case of L. We shall be enabled occasionally to discover by marks sufficiently distinct and apparent, that C, &c. \ R, and B, &c. \ R, are connected with the simpler form 'R; but this relation bears no resemblance whatever to that, which we have seen to exist under the different forms connected with L. The form C R, with its appendages c, &c. B, &c. L, N, or $C\{R\}c$, &c. B, &c. L, N, is one Radical, and $B\{^n\}c$, &c. L, N, is another Radical; and the words, under these Radicals, when taken as a body, may be considered as totally distinct from each other. The different forms C{R}c, &c. B, &c. L, N, as they arise from the appendages, may afford convenient subdivisions; and especially we shall find, that the Labial additions afford oftentimes barriers of distinction. We must however always remember, that it is the first Radical

freed from vowel breathings, by which they become vocal only in particular cases, with a particular meaning, represent the *Elementary*, or Fundamental idea, pervading a great Race of words. I sometimes speak likewise of the *Radical* and the *Radical form* CL, &c. and frequently with the same meaning as when I speak of the *Element* and *Elementary form*. If we were enabled however to discover the more original *form*, as it might be ^L, from which the other forms were derived, as CL, BL, &c. we should more justly call ^L, the *Element* or *Elementary* Form, and CL, BL the *Radical* Forms; that is, those Forms, which, though they are derivative from a more primitive form, are yet themselves important *Radicals*, from which great Races of words immediately spring. These gradations cannot be adjusted, and we must be contented to apply our phraseology, according to our imperfect knowledge in the nature of the materials, which pass under our view.

Radical Consonant, when R is the first Radical Letter or the two first Radical Consonants, when R is the second, by which the fundamental idea is imparted to the whole Race of words, in which they are found, and that the succeeding Consonants may be considered as appendages only, which operate but imperfectly and subordinately, in propagating and preserving ideas. We shall find indeed, that they do operate, and that they constitute an effective part in the Machinery of Language; by the agency of which, distinct Classes of words are produced, which appear on various occasions, totally separated from each other. Still, however, when we examine these Classes with care and attention; we shall be astonished to find, how frequently they present to us the most unequivocal marks of some common energy, operating through the whole mass.

In the present Volume I shall consider the Race or Races of words, which appear with R as their only Consonant, or as their first Consonant, attended by any of the organical appendages c, &c. B, &c. 1, N, with or without a vowel breathing before it. This Race of words may be thus represented, ^R}c, &c. B, &c. L, N, and it may be divided ito different Classes: 1. The form AR is that, which may be considered, under one point of view, as its more simple state. 2. The form R{c, &c. L, N. 3. The form ^R{B, &c. These forms I have treated in separate divisions of my Work; but why I have commenced with the form AR c, &c. will be seen in the progress of these enquiries. It is impossible oftentimes to describe the gradations or subdivisions of Relation, which different forms bear to each other; and they can only be understood by observing the facts, which actually exist in Language. Nay, even when we observe these facts: the degrees of affinity cannot always be described, though they may be fully felt and unequivocally understood. We shall see, that the forms AR, and AR(c, &c. perpetually pass into each other; and we shall understand, that the Words under the forms ^R{c, p, &c. belong to each other, because the Letters c, D, &c. familiarly pass into each other; and this likewise is the cause of the affinity between words under the forms ^R{B, F, &c.; namely, because the organical appendages B, F, &c. familiarly pass into each other. Words under the forms

forms R{c, &c. and R{B, &c. may be related to each other in the same Series of words, not because the c, &c. and B, &c. familiarly pass into each other, but because they may both be directly related to the form AR. Thus we see, that among other reasons for varieties of affinity between words, one is, that the causes of affinity are different. The mode, by which the Labials become appendages to the R and the L may be at once understood; as it is only to suppose the lips to be closed in the enunciation of these Letters, and the Labials will necessarily be annexed to them. The sounds c, &c. are attached by a process equally natural and easy to the organs; but it is not so easy to describe the operation. Thus, then, we have only to suppose, that the two processes of closing the Lips, by which Labials are produced, and of performing some actions with the teeth, &c., by which Dentals, &c. are produced, to take place in expressing the same idea, which has been enunciated by A; and we shall have words under the forms ^R{c, D, &c. and ^R}B, connected with each other in the same series of words, as being both directly related to A. Hence we have heiR, hæRes, hæRedis, eRBe, (Germ.) &c. &c.

We see, as far as we have already proceeded, that R preserves the character, which the Grammarians have given it, when they place it among the Immutables, or those Consonants, which are not changed into other Letters, in the Inflexions of Nouns and Verbs. tability of R considered as a great Radical, is indeed a fundamental truth in Languages, which must be admitted. Still, however R is changed into the Class C, D, &c. with sufficient frequency, as to render the consideration of this property a necessary portion of our discussions on this subject. R. Ainsworth observes on the Letter R, that its sound "is formed in the upper part of the throat, but so "vibrated by a quaver of the tongue, and allision on the teeth, that " it makes a sound like the grinning of a dog, whence it is called the "canine Letter; but the Romans, on the contrary, give it so soft " and lisping a sound, that in writing they sometimes omitted it, " calling the Etrusci, Thusci, or Tusci, and especially before S; thus " Ennius writ Prosus, Rusus, for Prorsus, Rursus; which is less to "be wondered at, because the most ancient Latins doubled not their "Conso-

"Consonants. Yea, the sound of this lisped R was so near that of "its neighbour S, that they writ aSa, caSmen, papySii, for aRa, " caRmen, papyRii; and we find the termination oS, as well as oR, "in good writers still, particularly in the prince of poets, where " arboS and honoS frequently occur; and laboS and vapoS, &c. in "others." He concludes his observations on R, by noting, as he expresses it, "the intercourse of this Liquid with some of the "Mutes; and first with C, as in pauCus, from maupos;" pauRos "with " D, as in coRium from κωδιον;" koDion, "meRidies, from meDidies, " querque Dula for querque Rula, from querque Rus. Anciently also " aR in many words was used for aD, as in aRlabi, aRfinis, aRversus, " for aDlabi, &c. Lastly, it is used with G, as from aprn," aRne, "comes aGna, seRere from seGes. This Letter is used by Poets in "describing Motion, Noise, Indignation or Violence. Vid. Voss. Inst. "Orat. IV. 2." Our author likewise observes, that R sometimes passes into its sister Liquids l, m, n, which indeed sometimes happens; but these are changes, which seldom occur, and are not felt in the regular operations of Language. In the organs of the Chinese, the attempt to sound the R often ends in the enunciation of L; and the gravity of our Merchants at Canton is said to be frequently relaxed, when the Chinese Traders commend their bargains of Rice, under a sound, which to an English ear does not excite the notion of a very desirable commodity.

The change of R into the series C, D, G, &c. is perpetually visible. It is from this relation between R and S, that R has become the neighbour of S, as R. Ainsworth expresses it, in our Alphabet. In Arabic and Persian, the Letters called RA and ZA, R and Z, are adjacent, and they differ only by a dot placed over the Za, as j and in Hebrew, the Resh and the Daleth, R and D, differ by a small protuberance at the back of Daleth R. We see too, that the R is not Immutable in the Inflexions of Nouns, since arboS becomes arboRis; and we know, that muS makes muR-is, juS, juR-is, oS, oR-is, &c. In the Inflexions of verbs too, we know, that Ro makes SSi, STum, as geRo, geSSi, geSTum; and Wachter has acknowledged with amazement the frequency of the changes between R and S; "Quam-

"vis hæc mutatio ob diversam literarum indolem pene incredibilis " sit, nihil tamen ea frequentius est in toto orbe. Nec alia reperiri " causa potest, nisi instabilis vulgi mutandi desiderium, quo fit, ut in "iisdem nunc Hinnire, nunc Sibilare malit." If Wachter had adopted the English term Hiss he would have seen, how the HIRR or the HIRSE and HISS might belong to each other. In Greek, we know, a double RR is oftentimes represented by RS, as taRRos, taRSos, (Tappos, Tapoos,) an instance, produced by Wachter, aRRen. aRSen, (Appnv, Aponv,) &c. &c. This organical relation between R and S, &c. is an additional reason, why the S, &c. or the class c, p, &c. should be an appendage to the R, and why the forms A and AR{c, p, &c. should be so perpetually connected with each other in the same series of words. We see, that another reason operates in making the series c, p, &c. an appendage to the ^R, in addition to that, by which the B, &c. becomes an appendage to the same Letter. The s, &c. may be considered as an appendage to the 'R at once by organical relation and organical accident; and the B, &c. may be regarded as an appendage by organical accident only.

This close union between the 'R and the class c, D, &c. has induced me to examine in the same Volume, the Race of Words, in which R appears as the first Consonant, and those, which belong to the form ^C, D, &c., where the R does not appear, but where the Letters belonging to the Class C, D, &c. appear alone, or combined with each other, as the Radical Consonants, with a vowel breathing preceding. We may conceive, moreover, another process, by which the 'RC rC, &c. and 'C, &c. become connected with each other. When the r in the form ^{A}rC , &c. is not enunciated with some force, but is sounded in the soft manner described by R. Ainsworth, the r disappears, and the form ^C, &c. presents itself. The pronunciation of the r in many organs may be considered only as the preceding vowel sound lengthened, or sometimes as producing little or no effect; and we might safely represent such a sound by vowels, as in Border, Order, Recorder, Mustard, Former, Farmer, Corn, Eastern, Short, which might be written Bawder, Auder, Recauder, Mustad, Faumer, Faamer, Cauen, Easten, Shawt, &c. Though these reasons have induced

induced me to consider the form ^C, ^D, &c. in the same Volume with R, ^R{c, p, &c.; yet still, under one point of view, the forms may be considered perfectly distinct from each other. The points of union between the two forms are only occasionally visible, so as to become necessary objects of observation and discussion; and the form ^C, ^D, ^G, &c. may be justly considered as a separate Radical, generating by its own powers, if I may so say, a Race of words peculiar to itself. The Reader, if he pleases, may consider this hypothesis of the union of ^R with ^C, D, &c. as a modus concipiendi, which may be perfectly true indeed, and which will account for the relation of certain terms under the forms AR, AR c, D, &c. and C, D, &c., but which, whether it be true or false, does not at all influence the various facts, relating to the affinity between the words under the form ^C, ^D, &c. itself. I must again impress on the mind of the Reader, that no detail can adequately describe these various shades of Affinity and Separation existing between different Races of words, which may be intimately related to each other at certain points of union; and it is necessary, that the nature of the truth should be communicated to the understanding by an actual review of the examples themselves, as they appear with their various bearings in the mechanism of Human Speech.

The last Letter, which remains to be considered of the third Class, is N. This Letter unequivocally connects itself with the C, D, G, &c., though it may be considered, when once existing as a Letter of its own power, and generating a Race of words, peculiar to itself. The relation between N and the Class C, D, G, &c. is allowed by Grammarians, and is visible in every Language. The Greeks, as we all know, expressed sometimes the force of N or of NG, by the G, or GG; that is, the G before G, K, Ch, X, $(\gamma, \kappa, \chi, \xi)$ had the power of of N, which commonly appears in other Languages, as aGGelos, $(A\gamma\gamma\epsilon\lambda os)$, aNGelus, oGKe, $(O\gamma\kappa\eta)$, aNGulus, uNCus, eGChelus, $(E\gamma\chi\epsilon\lambda vs)$, aNGuilla, laruGX, laruGGos, $(\Lambda a\rho v\gamma\xi)$, $\lambda a\rho v\gamma\gamma os$, laryNX. The Grammarians or Philologists, who have written on the Greek Imparisyllabic Declension, have not failed to exhibit this union.

union of N with S. Thus, as they have observed, what was horteSios, (Opteolos,) in Greek, became horteNsius, in Latin, and in some Manuscripts, theSauri and quotieS are written theNsauri, and quotieNs. In the Latin verbs we have different forms, as sciNDo, sciDi, fraNGo, freGi, piNGo, piNXi, piCTum, &c. &c. In Welsh, C, G, T, D, are changed into NG, NG, NH, N, as Cur becomes NGar, Gwas becomes NGwas, and Tad, Duw, are written NHad, Nuw.

In Hebrew, there is a letter called GNaiN, y, and sometimes Oin, which different Grammarians have supposed to possess the sounds of NG, GN, NGN, G, N, or simply that of a vowel breathing O. In all this there is no difficulty; as we have only to conceive, that these various sounds are annexed to the Letter, precisely as the sounds of N and G more or less prevail in the enunciation. In French, as we know, the sound of G is perpetually annexed to the N, as oN is sounded oNG. From this connection between N and the Class C, D, &c., the following facts have arisen in the inflexions of Nouns; namely, that S, in the Nominative, sometimes becomes 'N or 'NT, in the Genitive; G and D become GN, DN, and N passes into NT, NK, &c., as kteiS, kteN-os, gig-\aS, aNT-os, tufth\eiS, eNT-os, paS, paNT-os, oN, oNT-os, guNe, guNaiK-os, (KTEIS, KTEVOS, TIYAS, Γιγαντος, Τυφθεις, τυφθεντος, Πας, παντος, Ων, ωντος, Γυνη, γυναικος,) saNGuiS, saNGuiN-is, oriGo, oriGiN-is, orDo, orDiN-is, &c. the same reason that we have guNe, guNaiK-os, or guNK, in Greek, we have queeN, queaN, weNCh, quasi, gweNCh, in English.

It will now be understood, that S in the Nominative passes into N in the Genitive, by a similar impulse of the mind, and by as natural a process in the organs, as that, by which S passes into T, D, &c. Those ingenious enquirers therefore, who have written on the Imparisyllabic Declension of the Greeks, have exhibited an unnecessary solicitude to discover a Nominative case, with NS, in order to correspond, as they imagine, with the Genitive in N; when that Nominative has already supplied them with an S, which is abundantly sufficient for their purpose. Thus for kteiS, kteNos, they suppose a kteiNS,

and

and for paS, paNT-os, a panNS. The form NS would assuredly sometimes exist in the Nominative; that is, the sound of N would sometimes be as fully attached to the sound of S in the Nominative, as it is to the sound of T in the Genitive, and for the same reason. Still, however, our Philologists have no more reason for seeking out this form on all occasions, as the original and proper representation of the Nominative; than they would have for supposing, that any other Consonant, which might appear before the termination in the Genitive, had originally in all instances the same Consonant in the Nominative; as for example, that the original Nominative of lampaS, lampaD-os, geloS, geloT-os, (Λαμπας, λαμπαδος, Γελως, γελωτος,) was lampaD, geloT, or lampaDS, geloTS. The affinity, which causes the S. &c. to pass into the D or T in the Genitive, operates likewise in causing it to pass into N, though the change of S, &c. into D, T is more familiar. The fact is, that the Consonants C, D, G, &c. constantly and familiarly pass into each other; and that they are frequently, though not so familiarly, connected likewise with the Letter N.

I have applied all possible diligence to explain and define the precise point of view, under which I am desirous of representing the nature of the Cognate Consonants, and to impress most distinctly on the mind of my Reader, that this arrangement of the Letters relates solely to the purposes of the Etymologist. I have no objection, as I before stated, to the subdivisions made by Grammarians of those Consonants into lesser Classes, which I have referred to the same Class; nor to their opinion, that the Letters in each of these Classes are more particularly attached to a certain organ, and more intimately related to each other. I have no objection to any of those various modes of classification and nomenclature, which the Grammarians have been pleased to adopt in their arrangement of the Consonants; in which we hear of Gutturals, Linguals, Palatines, Dentals, Labials, Doubles, Liquids, Mutes, of three kinds, Aspiratæ Tenues, Mediæ, a Letter of its own right or power, proprii juris or suæ potestatis, an Anonymous Letter, Cognates, Commutables or Antistoichæ, Solar Letters, Lunar Letters, &c. &c. •

f

I do not object to these divisions or these names, which may in different degrees, under some corrections and restrictions, be sufficiently true, and applicable to the purposes, for which they were adopted. I can have no objection even to the Anatomical discussions, which are to be found in some writers, who have exhibited the various parts in the organs of Speech, by which each Letter is enuaciated. All such matters I shall leave to be investigated by those, who from their various views of considering the question may be interested in any of these enquiries. I have purposely abstained from such disquisitions, as altogether remote from the object of my pursuit, and have confined myself to those topics only, which are important to the Etymologist in the exercise of his Art. defined by an appeal to fact, the Cognate or Commutable Consonants; that is, those Consonants, which familiarly pass into each other, in representing the same train of ideas. With this fact only is the Etymologist concerned, which remains the same; whatever may be the cause, by which it is produced. The point, which I maintain, is simply this, that those Consonants, which I have arranged in the same Class, as Cognate, are all found to pass so constantly and familiarly into each other, whatever may be the precise mode, by which the process of change is effected; that any division of these Consonants, into separate. Classes, as forming separate Races of words, is not only entirely foreign from the object of the Etymologist; but is even altogether subversive of those principles, by which alone he is enabled to perform the functions of an Artist.

If any of my Readers, whose minds should be strongly impressed with the ancient division of Consonants into different Classes considered as of the same organ, should perchance object to the use of the term Cognate, as applied to all these Consonants; I have only to observe, that I adopt this term in the same sense, which my predecessors have applied to it, when they refer to a fact, attached to these Consonants; in the familiar operations of Language. The Grammarians have applied the term Cognate as synonymous to Commutable; and I have adopted the same term in the same sense, referring only to the fact produced, and little solicitous about the cause. That is,

I have

Lhave not adopted the term Cognate for the purpose of maintaining any hypothesis about the degrees of Affinity between the Letters so called, as about a point at all connected with the truth of my argument, or the mode of supporting it. I conceive indeed, as others have done, in their divisions, that these Consonants have been thus Commutable, because they are Cognate, or have an Affinity, in various degrees and modes with each other; but the fact of their being Commutable into each other is that alone, to which I appeal, nor shall I entangle myself in the idle attempt to adjust the process of change, by which this property of Commutability has effected its purposes. In our familiar School Grammars no direct definition of Cognate is given, but the sense which has been annexed to it is manifest from the explanation subjoined to the name of certain Letters, which are called Immutable, Immutabiles, "Quæ non Literas " Antistoichas vel Cognatas, quibus ipsa mutentur in verborum et "nominum inflexionibus, habent." From hence it is plain, that the Cognate Letters, or the Antistoichæ, are conceived to be those, which are Commutable into others. In Busby's Metrical Grammar we find aptly described in a single line both the cause and the effect-Cognation and Commutation.

" Has ANTIETOINOTE in se Cognatio transfert."

I have adopted therefore the ordinary phraseology, which I found annexed to the subject; and I differ only from the Grammarians by shewing, that, according to their own idea of Cognate Letters, as Commutable into each other in the inflexions of verbs and nouns, the number of these Letters should be increased by uniting Classes, which were before separated.

This fact, which I have exhibited respecting the General Affinity, between all those Letters, called Cognate, as it appears in their Commutability, confounds none of those distinctions, which are necessary for the purposes of Language; but on the contrary it is one of the great operative causes, by which these distinctions are produced and preserved. This general Affinity between different Classes neither disturbs the more particular relations existing in those Classes; nor does it destroy the characteristic difference, by which each Letter is distinguished

distinguished from another; any more than a similar opinion of the Etymologists, respecting the affinity of Letters in a certain Class, confounds the difference between the Letters composing that Class. Though we alike maintain the Affinity between certain Letters, we still acknowledge their difference, and understand the important effects produced by that difference. The phraseology, which we adopt to express the property of Letters, is similar to that; which is applied to the purposes of Life. When we describe the Affinity between animals, it is not understood, that those animals are confounded with each other, as if they were the same animals; but that they are different and distinct individuals of the same kind or species, connected with each other by certain bonds of resemblance or relation. From the difference between such Letters is derived a great source of variety, which is displayed in the formation of different words, conveying different senses, under some common fundamental idea, in the same Language; or in the propagation of what may be called the same words, in different Languages or Dialects. It is in fact to this principle of Affinity between certain Consonants, that we owe the effects of variety and difference, which those Letters have produced; since from this Affinity it has arisen, that such Consonants have readily and familiarly passed into each other, and therefore, that these differences have been exhibited. The Vowels co-operate with the Cognate Consonants, in producing difference and variety; but here the power of the Vowels is at once bounded; while the Cognate Consonants extend their influence through a wider sphere of action, in producing the same difference and variety, under the operation of that very quality, by which at the same time they preserve—propagate and record the various relations of Similitude and Affinity. .

It is marvellous to observe, how the separation of the Consonants C, D, G, &c. into distinct Classes, has confounded and embarrassed all the efforts of the Etymologist in the prosecution of his Art. The very attempt to distinguish one Class from another seems to have formed an insurmountable barrier to his enquiries; though every Etymologist has expressly stated, that these Classes pass into each other, and has in reality tacitly allowed the operation of the principle

principle in its fullest extent; as he could not indeed proceed a step in the exercise of his Art, without acknowledging so manifest a fact perpetually recurring in the most ordinary and familiar examples, which passed under his view. Nothing new is advanced in this enquiry, respecting the Consonants C, D, G, &c., but the direct, plain and explicit declaration of the Principle, that they all regularly and familiarly pass into each other, to the exclusion of the rest, and that any separation of them into different classes, however just it may be under some points of view, serves only to blind and pervert the understanding in the researches of Etymology. There is nothing new likewise in my idea respecting the Vowels, that they all pass familiarly and promiscuously into each other, without any laws of exclusion or distinction; and moreover, that they afford no records of affinity, but the plain and explicit mode, in which this fact has been declared, and the purposes, to which a truth, thus unequivocally stated, as an indispensable Principle in the Art, is afterwards applied. The artifice likewise, which I have adopted, of removing the Vowels entirely from the view, and representing a series of words belonging to each other by Consonants only, is of singular efficacy and importance in impressing this fact on the mind of my Reader.

The Etymologists in their details of the changes of Vowels into each other, have in fact shewn, that they all pass promiscuously into each other; and therefore, that no such distinction exists; and in producing the parallel terms, whose affinity they acknowledge, where all the Vowels have been adopted; they tacitly allow, that the Vowels afford no record to determine the affinity of those words, as distinguished from other Words. They at the same time tacitly acknowledge, that the Consonants alone afford this record; and thus nothing is new in my conception, that the Consonants are the Essential and Elementary parts of Words, but the express mode, in which this Principle has been declared, and the comprehensive manner, in which it has been applied. All the Etymologists do in fact, I must again repeat, tacitly acknowledge it; and even some hardy Theorists have, from time to time, ventured to assert, that Consonants were the Radical parts of Words. Still, however, nothing has been accomplished

on this foundation. The Principle has been applied to no purposes of a general nature; nor has it afforded the basis of a regular System, illustrated and confirmed by a series of examples. That part of my hypothesis however may be considered as perfectly new, which the Reader will see fully unfolded in the present Dissertation, and established in the succeeding body of my Work; namely, that Languages have been derived or have received their force from certain names, under different Elements, denoting the Earth, Ground, &c., and the operations attached to it. On the whole, I might venture to affirm, that this idea, unfolded as it is by a new mode of applying principles, which were before inadequately conceived, may be considered as affording to the subject of Etymology an Art altogether new, and totally unlike in its form and purposes, to every other mode, which has ever been adopted in discovering the Affinity of Words.

The observations which Skinner has made on the nature of the Vowels and Consonants will sufficiently point out the mode, in which other Etymologists have considered the subject. On the Vowels he observes, "Vocales omnes in omnibus Linguis facile invicem commutantur, " hæ autem illis arctiori affinitatis vinculo, saltem apud aliquas gentes, " conjunctæ videntur, ut A cum O; præsertim in Lingua Teutonica. "U cum O; præsertim in Linguâ Latinâ, et vocibus Latinis in Itali-"cam Linguam commigrantibus, E in A, saltem sono, idque perpetuo " in vocibus Franco-Gallicis, ubi sc. E. præcedit N. Consonam, ut in " Commencer, Agencer, &c. quæ ut A plenum efferuntur." After this declaration, that all the Vowels in all Languages are easily changed into each other, it would seem to be an idle task to unfold in separate articles, the properties of each Vowel, from which only we learn, that every Vowel passes into all the rest. Skinner, however, has bestowed six Folio pages to shew into what Vowels A has been changed, or, in other words, to shew, that it has passed into all the others, with their various combinations. He has bestowed likewise seven folio pages to prove the same thing respecting the Vowel E. Though the pale of separation has in fact been completely removed by the declaration, that all the Vowels in all Languages are easily changed into each other; yet it is marvellous to observe, how the barrier

barrier is again erected by this laborious detail of the examples; which, though it actually establishes the fact by an abundant display of proofs, seems to produce a contrary effect on the mind of the Reader, and to leave an impression on his understanding, that the Vowels are still invested with the properties of distinction.

On the Consonants Skinner observes, "Consonantes ferè omnes " sibi in hâc vel alià Linguâ aliquando cedunt, hæ autem longe " rarius quam illæ: quædam in omnibus, quædam tantùm in hâc vel "illa Lingua bellum quasi implacabile inter se gerunt. "maxime sunt B et V consona, B et F, F et V consona, V consona et "W, D et T, B et V præsertim in vocibus Teutonicis, C seu K et G, "N et L, S et T, Digamma Æolicum F et V consona, J consona et G. "Zet T, præsertim in Dialectis Teutonica et Belgica. Reliquæ cæte-" rarum consonantium permutationes minus proclives et rariores sunt, "interdum tamen occurrunt, idque manifestius, quam ut à viro "cordato rejici possint." If we learn little from this arrangement, we learn still less from the detail of the changes of each Consonant. The letter B, as he tells us, is changed in D, F, G, J, M, P, R, V, &c. The letter C into CK, F, G, H, J, K, P, Qu, S, T, Tch, V, X, Z, &c., and D is changed, as he informs us, into B, Ch, G, L, N, P, R, S, T, V, X, Z, &c. It will not be necessary, I imagine, to proceed further in the detail of these changes, as we can only learn from hence, that all the Consonants pass into each other. Thus the Reader will perceive in considering this detail made by the Etymologists of the changes of each Consonant into all the rest, that I differ from them. not by enlarging the former limits of change, but by contracting them within a sphere, more bounded, distinct, and defined. We perceive moreover, that in these two modes of arrangement, the Etymologists have fallen into opposite errors, most destructive to their Art. By dividing into separate classes certain Consonants related to each other, they have destroyed the comprehensiveness of their principles, and secluded from their Art all ideas respecting that wide Affinity, which exists between extensive Families and Races of Words. In their second arrangement, when they detail to us, how all the Consonants pass into each other, they have destroyed the foundation of their Art

by confounding all distinctions, and obliterating thereby those records of Affinity, by which Words are recognised to be related to each other, as distinguished from other words. It is true indeed, as the Etymologists have stated, that all the Consonants pass into each other; but they should most carefully have distinguished those Consonants, which pass into each other regularly and constantly in the familiar operations of Language from those Consonants, which only pass into each other under certain circumstances and on certain occasions. This defect in the arrangement of the Consonants would alone render all Etymological enquiries vain and unavailing.

On every fresh view of the question we shall still more and more be lost in wonder, when we cast our eyes over the present state of Etymology; and consider, that in the conjectures of those, who profess the Art, all is caprice—confusion and uncertainty; while the Art itself, as we perceive, exhibits every appearance of constancy regularity and uniformity. It is surely marvellous, that no arrangements have been devised, and no conclusions established, which might conduct the mind to the foundation of a Systematical Theory, when the facts, which directly lead to this point are thus gross and palpable, and virtually displayed at every instant by the Etymologist himself in the details, which he exhibits. Nay, on the contrary, it should almost seem, that the operations of the Etymologist had been so conducted; as if by a kind of instinctive impression he had even shrunk from a Principle, alone important in his enquiries, as from a position adverse to his purposes, and abhorrent to his Art. Without any clue to guide his footsteps in the great Labyrinth of Language, he has wholly surrendered up his reason to the guidance of chance; and yet in the wildest wanderings of this "erring and extravagant "spirit," which has afforded so fertile a topic to the powers of ridicule; he seems, as it were, almost cautiously and purposely to have avoided the application of such an idea as an insurmountable barrier to the progress of his enquiries. Though the Etymologist is not wholly destitute of some obscure and indistinct impressions connected with the object of his Art, yet he is still perpetually prone to the strangest aberrations of licentious conjecture, and is ever ready to refer

refer words to each other, which are totally dissimilar in form and appearance; unguided by any constant or general principle, which he had before established, but prompted only by the instant and accidental suggestion of whim and of caprice. Still, however, when the dissimilarity has arisen from a cause, which is alone connected with the Principle of Uniformity; there and there only, as it should seem, the wildness of conjecture has not ventured to interpose. dissimilarity of words arising at once from different Vowels and from Consonants bearing a different name and form, though of the same kind, has ever presented before the view of the Etymologist a deep and dark veil, through which his eyes have been unable to penetrate. Thus it has happened, that Words dissimilar only in appearance have remained in our conceptions toto coelo removed from each other, though that dissimilarity has arisen from the effect of two processes, by one of which nothing Etymological can be illustrated, and by the other is produced that very appearance, which is alone capable of exhibiting any criterion of Radical similarity in the affinity of kindred forms, differing from each other. The boldest among the tribes of conjecturers have rarely ventured to imagine, that any affinity existed among Words disguised by this peculiar dissimilarity; and whenever the difference arising from different Vowels only was the object of their meditation, they failed not to proceed with due caution in detailing the progress of these mutations, and to assure us with great solemnity, that u became e in one nation, and i in another.

I have thus laboured with all possible diligence to lay the foundation firm and solid, on which alone the fabric of an Etymological System can be raised and established. I have endeavoured to explain, with all due brevity and precision, those facts, which relate to the Cognate or Commutable Consonants, about whose nature and number no ideas have been yet formed, which could at all contribute to the purposes of an Art. I shall now close my remarks on this subject, as we can only understand, from a consideration of the examples themselves, the peculiar mode, in which these changes are produced and operate. If the Reader perchance, in the spirit of captious objection, should be disposed to observe, that I have assumed to myself

an ample sphere for the exercise of my Theory or my Invention; and that with such a latitude of change, transformations of every kind may readily be effected; I have only to reply, that this variety of mutation cannot justly be charged on him, who had no share in its production; and that the confusion arising from this latitude of change (if any such should be found to exist) is not the fault but the misfortune of the writer, who has ventured to pursue an intricate and embarrassed theme through all its perplexities and all its deviations. I have described only a plain, simple fact, which it was my duty faithfully to detail; and according to this fact must all my researches be minutely regulated. If we have seen, that words belonging to each other assume these various forms, and appear under these disguising garbs; it is our business precisely to ascertain the number of these varieties, and the nature of these disguises. We may lament indeed, that the forms should be so numerous, but we shall rejoice that they are still found so regular and so similar:—If we are perplexed by the difference of the garb, we shall be guided by the uniformity of the badge; and if these varying shapes should elude our search by the frequency of change, they will grow familiar to our knowledge by the constancy of recurrence.

each other. We must now consider with great care and diligence the remaining portion of the criterion, which constitutes this fact of Affinity; namely, the existence of the same fundamental idea. This question involves in it a variety of considerations, which must be duly separated and arranged. As far as we have already proceeded, our principle is just and promising; yet it still remains for us to see, whether other circumstances concur with an agent, thus promising and capable of effect, in such a manner, that their union may finally produce the establishment of a System, which shall operate through a wide sphere in the developement of Human Speech.

We shall all agree, that if words pass into each other they must carry with them the same Fundamental idea, however various and apparently remote from each other the senses may be, which those words convey. This process of the mind, by which it passes from one sense to another, with the same Fundamental idea, is precisely similar to that, by which different senses are annexed to what we should all consider as the same word, or as derivatives from that word. Though this Fundamental idea, may not be discoverable by us in the different senses of what we should call the same word, yet no one will doubt, that such a Fundamental idea must necessarily exist. In a Race of Words bearing different forms, though containing the same Cognate Consonants, a similar difficulty increased by other causes of embarrassment, may be imagined to prevail; and though these words present one criterion, which is sufficient to shew us. that they might have passed into each other; yet we have no convincing proof, that they really have passed into each other, till we can ascertain, that they contain likewise the same Fundamental idea. This coincidence too must take place under certain circumstances, which are connected with some great and acknowledged facts in the History of Language; in order to convince us, that accident did not operate in producing such an effect. The most superficial view of Language, in its familiar operations, will shew us, that the mind is inclined to propagate different senses with the same fundamental idea, or with different turns of the same sense, by various forms of the same This, we know, is the artifice of Language in Elementary term. adopting

adopting the different parts of a Verb and Noun, under the names of Voices—Moods—Tenses, &c. Cases, &c., in forming Derivatives—Compounds, &c. If the Reader will cast his eyes for a moment over such words as Ago, Duco, Traho, in Latin, and Aγω, Baλλω, in Greek, &c. &c., with their various acknowledged Derivatives—Compounds, &c., he will be astonished to see, what a prodigious variety of ideas, apparently and in fact, most remote from each other, has been engrafted upon the same stock, or has proceeded from the same fundamental notion. The dissimilitude of ideas, existing in terms related to each other, must be considered as one of the most familiar effects produced by such a process; as we know, that in the artifice of Verbs the most prominent effect is that of producing a sense or an idea, directly opposite, with the same term, as Vinc-ere, Vinc-i, Conquer, Conquer-ed, &c. &c.

These acknowledged and familiar operations of Language will shew us, that the mind would pursue the same course, as far as it is able, on other occasions, by endeavouring to produce a Race of different Words, passing into each other, under the same fundamental idea; though their forms may be so different, that with our present conceptions on Language, their Affinity may be concealed from our view. The mind, I say, as we may conceive, from what we manifestly perceive, will endeavour to effect a similar purpose in a similar way; and the Cognate Consonants, as we have seen, are capable of being employed in effecting this purpose, and are likewise able to maintain their position in recording the fact of its existence. Other causes. however, may have operated, which would place such a barrier to the propensity of the mind, and the properties of the organs, that no System of extent or importance could be formed on this fact, however ascertained and apparent it might be. Languages might have been so constituted, as to bear little or no affinity with each other: and in such a case each form of Speech might have had a System. peculiar to itself. There is another circumstance likewise of the highest importance in such a question, and this relates to the nature of the impressions, which have influenced the mind in the formation of ideas and of words. If it should have happened, that Languages

owe their existence to impressions, arising from a variety of objects: the words, of which it is formed, might be considered as divided into as great a variety of Sets and Classes, which it would be difficult perhaps or impossible to arrange. In this case the propensity of the mind to pursue one fundamental idea, through a wide sphere of meaning, or to form one continued chain of ideas, by links maturally connected with each other, would be counteracted by another propensity, which consists in obeying the influence of predominating impressions, however various and discordant they may be. Under such an operation, Language might have presented to our view a state so embroiled and entangled, that no efforts of sagacity or diligence would have succeeded in attempting to unravel the difficulties, with which it was involved. If it should have happened, that some one great and important object has seized upon the mind, and has supplied Language with its ideas and its words; we shall at once understand. how favourable such a fact would be in the establishment of a System. If, moreover, it should have happened, from some cause connected with the History of the Human Race, that Languages bear the most intimate relation and affinity to each other, our hopes of forming some general System will be highly excited and enlarged. From the co-operation of both these causes every thing might be expected, and we should then be induced to believe, that the sphere of our labours would become bounded-distinct, and defined. Our researches would then appear to be employed on the study of one great Language-universally diffused under various forms; which was itself originally derived from one great object, universally apparent, and perpetually soliciting the attention of mankind. We must proceed however with care and caution in the development of such facts, if any such are to be found; and we must commence our enquiries with the most simple and acknowledged cases, before we venture to advance to conclusions, so extensive and important.

The Vowels, as we have seen, are wholly banished from my System, in the representation of words, not only as unnecessary, but as impeding likewise to the purposes of the Etymologist; and the Consonants alone are retained, as being those parts, which are best

able

able to propagate and to record a train of ideas, under some common, fundamental notion. Let us examine by an appeal to acknowledged and familiar facts existing in Language, if any attempts have been ever made to record ideas by Consonants only, and how far this process has actually been carried. The Reader, who perhaps on the commencement of these enquiries might have been alarmed at the hypothesis, that Vowels were unnecessary to the Art of the Etymologist, will be astonished to learn or to recollect, that they are not even necessary to convey ideas in the familiar representation of Languages, and that there are forms of Speech, and those too the most ancient and illustrious of their order, in which the Vowels are rejected. In the Eastern Languages Consonants only are applied, and the Vowels are either partly or wholly banished from the representation of Words. In my early meditations on this subject I had already proceeded to the conclusion, respecting the inutility of Vowels, and the importance of Consonants, before I recollected this familiar fact, so important to my purpose. It is marvellous to observe, how slowly the mind recalls to its view the most known and acknowledged truths, for the purpose of combining them with a new train of ideas; and perhaps, as I have suggested, the Reader himself may have proceeded to this point of the enquiry, under the same influence, without the smallest recollection of so familiar a fact.

When I began to engage in the study of the Eastern Languages, a new scene was opened to my view, and all my former conceptions became enlarged and confirmed. Before we proceed further in unfolding the train of ideas, connected with the study of these Languages; it is necessary to explain the precise mode, in which they have applied the Consonants, and rejected the Vowels. In the alphabet of these Eastern Languages—Hebrew, Arabic, &c. certain Vowels indeed exist, but they are of little importance in discharging regularly and familiarly those offices, which the Vowels in our own Language, and in others of a similar kind perpetually perform. The Reader will not understand, that the Hebrews and Arabs, &c. have acquired any artifice unknown to Europeans, by which they are enabled to speak their Language without Vowels: He will readily perceive, that this neglect

neglect of Vowels must refer only to the writing of Language; and we shall find no great difficulty in comprehending, that the symbols employed to denote the Vowel breathings are not absolutely necessary in the representation of a Language. Perhaps the following example will best serve to illustrate the mode, in which words are written in the Eastern Languages, with that mixture of Consonants and Vowels, which exists in their alphabet. "Ur fther which art in avn hlwd" be then me: the kngdm cm, the whole are in avn hlwd be then me the kngdm cm, the whole are in avn; gev-s the dy ur dly brd, and frgv-s ur trepss, as weforgy thm the treps agnst-s, and ld-s not into tempton be dlyr-s frm avl: from the is "th-kngdm and th-pwr and th-glry from the avr." This specimen will give the Reader a very sufficient notion of the mode, in which Vowels are used and neglected in the Arabic and Hebrew Languages.

Though this is the ordinary manner, in which the Hebrews and Arabs write their Language: yet they likewise employ certain marks (which, as adopted in Hebrew, are called points,) above and below the words, to represent the Vowels, which have been omitted, and which are necessary in the enunciation. Vowels, we know, are equally necessary with Consonants in speaking a Language; and if we would become intelligible, we must adopt the same Vowels in expressing the same idea: but in writing a Language, I may venture to affirm, they are in many cases totally useless. Those, who well understand a Language, do not attach to a word, as Father, &c. the sounds which ought to be adopted, by a nice consideration of the force belonging to the peculiar symbols a and e, but by an immediate impression of the sense, which the whole symbol conveys to the mind. It is evident therefore, that if the symbol, as FTHR, be sufficient to excite in the understanding the exact idea, which was meant to be expressed; any attempt to represent the breathing is superfluous. Now we know, that in the Eastern Languages the Consonants are of themselves sufficient to excite this idea; and if the Reader will make the experiment on some English sentences, with which he is not conversant, written without Vowels, he will discover, that even in his first attempts to understand their meaning he has but few difficulties.

to encounter; and he will be perfectly convinced, that with a small portion of practice no embarrassment whatever would arise from that cause.

It will instantly be seen, that the Lexicons, in explaining the various senses of a single word, as it might be called, represented without Vowels, would often exhibit a variety of senses, which on the first view might appear but little similar or related to each other: Still, however, I observed, that the Hebrew Lexicographers considered it as an important part of their task, to discover the general idea, to which these various senses might be all referred; and to detail with precision the links of the chain, by which their affinity was ascertained and preserved. I observed, that the same word, as the Hebrew Lexicographers would call it, in assuming these various senses, often adopted different points or Vowels; that is, according to our mode of conceiving the subject, we should say, that different words existed with different meanings, and that the same Consonants were to be found in all. We here perceive, that the presence of the same Consonants in these several words, which, in Hebrew, is thought of most importance in the question, would, according to our conceptions, be totally disregarded; or, if at all noticed, would be considered only as the effect of accident.

In contemplating this circumstance, a new scene of investigation was opened to my view. I began to reflect, that, as Man was the same creature in the East and in the West, the English Language must have arisen from the same principles of mind and organs, however modified by circumstances, which operated in the formation of the Hebrew; and that similar facts, as they are connected with these causes, would probably be found in both these Languages. It was then easy to understand, that, if the Hebrew Lexicographers had formed a true conception of their subject; a Dictionary might be written in English on the same plan, and that the same mode of investigation might likewise be adopted. I then applied for confirmation of this idea to an example in English: I examined the various senses belonging to the Word or the Radical CP, and I found, that with different points or vowels, it signified A Species of Dress—A

Vessel for drinking, and A Covering for the head, &c. &c. The forms, which it assumes in our Language, under these senses, are Cope (an ancient dress of priests)—Cup—Cap, &c. I soon perceived, that the same idea was conveyed under each of these forms; though the objects, which they expressed, discharged functions annexed to the original idea or quality, in a manner totally different and dissimilar to each other. I observed, that the fundamental sense of the Word or Radical CP, in these terms, was that of Holding—containing—enfolding, &c. This was a very important step in the progress of my enquiry.

On again considering the mode, which the Hebrew Lexicographers had adopted, though I still acknowledged, that it far exceeded all our conceptions on the subject; yet I soon perceived that their ideas were bounded within the most contracted limits, and that they had not even advanced beyond the threshold of the enquiry. I found, that the words, which they considered to be impregnated with the same idea, were only those, which were represented by the same Consonants, that is, by Consonants of the same name and the same form; and they seemed to be unconscious, that among other words there existed any species of relationship—connexion or similarity In the Hebrew Lexicographers we discover no prowhatever. pensities to Etymology, as it relates to the Language which they have undertaken to explain; and in this point of view, they are even inferior to their fellow-labourers in a similar employment. Without enquiring into the cause of these kindred significations being attached to the same Consonants; we well know, that it did not arise from the figure of the symbol; and therefore it is infinitely futile and unmeaning to confine the influence of this principle within a sphere of action, which has no reference to the operations of the cause. Thus if a general idea is affixed to the Radical CP, which runs through the various words in which CP is found; we are well persuaded, that the forms of C and P were not instrumental in producing this effect; and consequently that the same train of ideas will be equally found among words, which are expressed by KP-ChP, CV, &c., SB, SP, &c. &c.

On examination I found this fact likewise to exist, in English and in various other Languages. Hence we have Cavus, Cavo, (Lat.) with its parallele Cave, &c. Coif (Eng.), &c.—the parallel terms to Cup, as Scyphus, (Σκυφος), &c.—Ship, Skiff with their parallels passing through many Languages, as in the Teutonic Dialects Scip, Skip, Skip, &c. in Greek and Latin Skaphe, Skaphos, (Σκαφη, Σκαφος,) Scapha, &c.

We are now enabled to make a very important use of the Cognate Consenants, whose mutations have been already ascertained. I must again repeat, what we shall instantly acknowledge, that a general idea pervading a Race of Words with the same Consonants, is not attached to the name but the nature of the symbol;—that it is not a necessary attendant on the form of the symbol, which is an arbitrary sign, perpetually changing; but it is an inseparable adjunct to the gower and property of that symbol, whatever form it may assume, and by whatever name it may be called. Palpable as this fact may appear, that even its illustration borders upon ridicule; yet we know, that the Hebrew Lexicographers have had no glimpse of its existence; and they have continued to compose Dictionaries, as if among the mexims of their art it had been expressly decided, that of symbols invested with similar properties, though bearing different forms, ideas were enamoured with one form, and were abhorrent from another. This then was my conclusion. If it is accordant to the genius of the Hebrew Language, that similar ideas should be represented by the same Consonants, or by Consonants bearing the same form and name: it must certainly be true, that the same cognate Consonants, through the whole compass of the Language, will be impregnated with a train of similar ideas. As those principles of the human mind, which are effective in the production of one Language, will operate either partly or wholly in that of another, I again was led to conclude, that in every form of Speech the same fact will probably exist. I again referred to the English, Latin, and Greek Languages for the confirmation: of this idea; and I found the most ample proofs for the establishment of my hypothesis, which the reader will see detailed in the succeeding discussions.

We have now advanced far in our project, of generalizing the doctrine of Languages. Our scheme, as it relates to different forms of Speech separately considered, is fair and promising; and our purpose appears to be obtained, with as much evidence and prospect of effect, as can be expected in a detail, which relates only to the foundation of an Hypothesis. We have seen by a train of reasoning, which has been conducted on a consideration of some acknowledged facts in the construction of certain forms of Speech, that in each Language the same fundamental idea is probably conveyed by the same Cognate Consonants. There remains but one step more to the completion of our Theory; as it relates to the representation of ideas by these Cognate Consonants. The point, which now remains, is to determine, through how wide a sphere of action this power of the Cognate Consonants is extended. That it is extended beyond each particular Language, all will allow, who suppose that any one Language, or Dialect, bears any resemblance to another. Here againit is difficult to speak with precision; as, in extending our views, we shall be involved in the intricacies of adjusting the various degrees of affinity, which different forms of speech may be supposed to bear toeach other. Languages have been divided into various Sets and Classes, with sufficient truth and reason; as the Dialects of the Teutonic—the Celtic Dialects—the Dialects of the Sclavonic—the Dialects of the Chaldee or Hebrew, &c. Now all agree, that in the Dialects or Languages belonging to each Class the most intimate union prevails; so that in the general course of these Languages, the words, which they contain, would be considered to be the same, under some difference of form and some variety of meaning. It has ever been the business of Etymologists to endeavour to collect these same words, if I may so say, under their various forms, and to exhibit them to their readers, under the name of Parallel terms.

It is marvellous to observe, how fully and unequivocally the general affinity of Languages has been acknowledged by all our writers under the names of Etymologists, Philologists, &c. &c., in their various modes of considering the question; and yet how little they have understood of the extent or nature of that Affinity, which they labour

labour with such diligence to discover and illustrate. It might perhaps conduct the mind by a shorter process to a more precise idea of the nature of that Affinity, which pervades the forms of Human Speech; if we should briefly describe the state of the question, as it is pursued by the Enquirers into Language. The Etymologists, when the object of their research relates to the same word, as they would call it; or to words, under various forms, bearing precisely the same sense, as FATHER, PATER, &c. have performed their duty with sufficient diligence and skill. They endeavour to collect all the words, bearing the same sense, which appear under the same Cognate Consonants such as they are before described. Though the Etymologists perform this task, under an obscure and undefined impression of the nature of these Consonants; still they do it; nor have they in fact any other criterion of the identity of the word, than such as I have explained to be the true one, namely, the existence of the same Fundamental idea, and of the same Cognate Consonants. Beyond this point however all is total darkness, and the obscure impression, by which they were before guided, either avails them no more, or it involves them in the mazes of error and confusion. They commonly proceed no further in their view of kindred words, than the production of those terms, which contain precisely the same idea. Of the same Fundamental idea, under different turns of meaning, they have formed no conception. When kindred words present themselves to the Etymologist, in the familiar exercise of his art. marked, as it should seem, with the most unequivocal traits of a common origin, every idea of Affinity is lost to his view; if these words exhibit any difference in the turns of meaning which they convey: even though this difference is precisely of the same kind, as that, to which he has been perpetually witness in the different senses, annexed to a single word. Here every vestige of Affinity totally vanishes; and under this conception even the same Language does not appear to the view of the Etymologist as at all connected with itself. When I speak of such a mode, as adopted by the Etymologists in their consideration of the question; I must be supposed to mean, that this is the usual and familiar mode, in which the subject is considered.—

The

The Etymologist is indeed often liable, as I have before stated, to the wildest aberrations; in which he refers words, to each other, totally remote in meaning as in form. This however is only another practice, proceeding from a similar misconception on the nature of Languages.

It should seem, as if in the theory of the Etymologist, all the Relations of Language were loose, capricious and accidental; while in their ordinary and familiar operations they are in truth all compact; constant and necessary. Though the Etymologist sees, (I must again repeat,) an Affinity between Languages, almost to an unbounded extent, in immumerable instances; when he details words, passing through a vast compass of Human Speech, which convey precisely the same idea; yet this striking and acknowledged affinity produces. in his conception, no consequences whatever, either in the general relations of each particular Language or in the general relations of the whole mass of Languages. We might imagine from this view of the question that he conceived these innumerable instances of Affinity, as exemplified only in the existence of various insulated sets or strings of words, if I may so express it, passing through different Languages, to be merely the effects of accident. This however is not so; since most Etymologists consider the Affinities of Language, as produced from some regular cause; though indeed they suppose that cause to operate under a certain process, which no regular cause ever did or could produce. There are however some Etymologists, and those too, who have passed their lives in the enquiry, who appear to imagine that all the Affinities beyond the Kindred Dialects have been the effects of Accident, and when they discover Teutonic words, for example, existing in the Eastern Dialects &c., they communicate this fact to the reader, with some marks of astonishment, under the designation of the Strange—the Curious, or the Whimsical Coincidence.—Whatever opinion may be entertained by the Etymologists, as to the cause, by which affinities in Language are produced; it should seem, as if they all agreed as to the direction, in which those affinities proceeded: It should appear, as if the Enquirers into Languages imagined that these Affinities acted only in a straight line, generally passing though different Kindred Dialects

and.

Dialects, and sometimes stretching through the whole sphere of Human Speech, without any property or power of admitting or communicating collateral relations. I know not, in what terms, I can most impressively convey to the mind of my reader these strange and perverse conceptions, which the Enquirers into Languages have formed on the mode of its operation. It is important however, that these delusions should be fully exhibited, and that all preconceived notions, derived from this source, should be removed from the understanding.

We may illustrate these general observations, by an appeal to some examples in the following manner. The Etymologists produce, as we know, the parallel terms to Father, as Pater, Vater, &c.to Mother as Mater, Mutter, &c. and to Earth, as Erde, &c. through a wide compass of Human Speech, by which the closest affinity between the Languages, in which these words exist, seems to be proved. Yet this affinity, according to their conceptions, makes no progress collaterally, if I may so say, either in the individual Language, in which each word occurs, or in the other Languages. Mother is supposed to stand alone in English-MATER in Latin, &c. &c., except in the acknowledged and paipable derivatives. Motherly, Maternus, &c., nor are there any other words, in any of these Languages, to which it is supposed to bear any relation.— That is, if Mother with its parallels Mater be considered as one word; then we may affirm, that according to the present opinion Mother stands absolutely alone in Language—an insulated—solitary term, without any relation to any series of terms, in the world of words, with which it is surrounded. The Reader is not to understand. as I before suggested, that the Etymologists have not derived, as they call it, the term MATER from certain other single terms, existing in Language, according to their different ideas. But all this proceeds upon the same principle of the same solitary process; according to which it is supposed, that every word either stands alone, or has only one other word in Language, to which it bears any relation. In short, the Etymologists have no conception, that Mother or Mater belongs to any class or body of words, in any of the Languages,. through which it passes. This is the point which I mean to urge,

and which is most strictly true, in the fullest extent, according to the force and spirit of the observation.

Our Etymologists have discovered likewise, that the word EARTH is to be found in a great variety of Languages, as in the Gothic, Saxon, German, English, Belgic, Danish, Swedish, Hebrew, Chaldee, Syriac, Egyptian, and Greek, as AIRTHA, EARD, EORD, EORTHE, ERDA, HERDA, EARTH, AARD, j-ORD, EREZ, ARTHA, ARTHO, Ertosi, Epa, Era, as they are produced by Wachter.—Yet even this great Etymologist, when he records the terms not in the Teutonic Dialects, seems to think that they can scarcely be considered, as belonging to the same series, by faintly observing; "Conveniunt sono "et significatu."—Important as the object is, conveyed by these words, or by this word, if we consider the above forms, as constituting one and the same term; and however we might be disposed to conjecture à priori, that this word would be allied to other terms, in the Languages through which it passes; yet I may safely and confidently affirm, under the trivial exceptions before suggested, that this word is considered as standing absolutely solitary and alone in the formation of Language. One instance only occurs to me, in which our English Etymologists have made the least attempt to refer any term to our word EARTH, and even in this instance it is done only obliquely. This instance is Hearth, under which Junius and Skinner record the German Hertha and Herthus, which they acknowledge on another occasion to belong to Earth; and Skinner suggests with the adverb of doubt their relation to ERA (Epa.) "Fort. omnia à Gr. " $E\rho\alpha$, Terra, $E\nu\epsilon\rho\theta\epsilon$ $N\epsilon\rho\theta\epsilon$." I might be able perhaps to produce another instance or two among the Etymologists in other Languages, where something of this sort has taken place; which only serves to confirm the position already advanced.

It is assuredly most marvellous, that the mind, contemplating only this single fact of the parallel terms to the Earth, should not be led into a train of ideas, which would open into a wide view of the formation of Languages. We might have imagined, that such would have been the train of ideas, excited by the consideration of this fact. Is it possible, we should say, that a Word expressing an object, so important

eas Era, (Ερα,) Earth, &c. should have no terms in Language to 'which it is allied? Is it possible, that such a Word should stand 'absolutely solitary and alone, in all the Languages, through which it passes? Are there no terms, connected with it, which relate to the operations performed on its surface, as Ploughing—Digging, &c. ? 'It is impossible surely, but that such terms must exist; and if they do exist, how are they to be discovered?—Why, they must be discovered from the same principle, on which alone it can be allowed, that the various forms for the word EARTH belong to each other. 'On what principle do we allow that the forms Era, (Epa,) EARTH, &c. belong to each other? On this principle, namely, that under all these different forms the same Elementary Consonant R is found sometimes standing alone, and sometimes with the addition of the same Cognate Consonants, and that the same idea is con-'veyed.—If these different forms then constitute the same word, or 'if these words all belong to each other, what shall we say about the 'different Vowels, employed in expressing them? Why we must say, that they mean nothing in determining the affinity of words: 'for if the existence of different Vowels is allowed to form an im-'pediment to the fact of affinity between words, the terms EARTH, 'AIRTHA, &c., cannot be said to belong to each other, which we 'acknowledge to be the fact. Here we see, the words, belonging to each other, convey precisely the same idea. Is it necessary however. that this should always be the fact in words, belonging to each other, which may be connected with the EARTH, &c.? Certainly ont: On the contrary, the familiar artifice in Language in the formation of acknowledged Derivatives—Compounds, &c. exists for a purpose directly contrary, namely, that the words related to each other, may have a different meaning, and perform thereby a different purpose, though still under the same Fundamental notion.—Nay such is the propensity of the mind to form different senses from the same 'stock, that even the very same word, as we know, passes into a great variety of senses, though all proceeding on the same common idea.— We should conclude then, that a similar fact will take place in words, 'connected with EARTH, &c., namely, that certain words will be

'found, which are connected with Earth, conveying the same 'Fundamental notion, though expressing different senses, as it might be, those of Ploughing—Turning up the Ground—Harrowing, &c., 'which are to be recognised by the existence of the Elementary R, either 'alone or with the addition of the Cognate Consonants, T, D, S, &c.— 'without any regard to the Vowels adopted in expressing such words.' Nothing, as we should have imagined, could have been more obvious—direct and satisfactory than this mode of reasoning, by which we should be at once admitted into a view of the subject, most inlarged and important.

In the examples above produced, as they are represented by Wachter, we have only the D, T, S and Z introduced as the Cognete Consonants; but we must observe, that the Chaldee and Samaritan terms, intended by this writer, ארע ארל, are sometimes represented by ARK, and ARG, where the K and G are to be added as Cognate Consonants to the T, D, &c.; and thus we are brought to the arrangement of the Consonants, such as I have described them in the preceding pages. We now perceive, that the Race of words allied to ERA, (Ερα,) EARTH, &c. will be found under forms, which in an abstract way may be represented by 'R, 'R}c, D, &c. All, I think, will allow, that a Race of words, connected with each other, and belonging to Era, (Ερα,) Earth, &c. must assuredly exist, and that terms, expressing so important an object, cannot stand alone in Language, or be attended only by one or two solitary examples of Affinity. So completely however is the term Era, (Epa,) insulated in the conception of those, who detail to us the affinities of Greek words with each other, that in glancing my eye over the part of Martinius, which relates to that subject, I do not find any Greek word, belonging to the Element AR, which has been referred to this term, except Aroo, (Apow, Aro.) Even the words, beginning with EP are not perceived to have any relation to EPa; and if no Affinity of this kind should be suspected. we may well imagine, in what total darkness all other words are involved, which belong to the same Radical.

I am desirous of impressing in the strongest manner on the mind of my Reader, that all the words, of which Human Speech is composed,

are in general considered as solitary and insulated; nay, what is more curious, we even find, that this conception is most prevailing and predominant, with respect to each individual Language. Words are perpetually referred to single-solitary words in other Languages. but it seldom happens, that a word is ever referred to another word in its own Language, when these words have assumed any difference of form from different Vowels, &c., or when they are spelt differently, as we are wont to call it. I cannot adopt a term, which so aptly conveys my meaning, or which gives us so just an idea of the feeble conceptions, on which the Art of Etymology has been hitherto pursued. This spelling of Words, as it is called, has alike confounded the understandings of the youngest and oldest of our scholars. It should seem almost, as if a maxim had prevailed in the Art of Etymology, that no two words could belong to each other in the same Language, which were spelt differently, though they might in different Languages; and thus it happened, that in the conception of the Etymologist, words directly adjacent to each other in the order of his Vocabulary, which differed only by the minutest variety of form and meaning, were toto coelo removed from each other, as creatures of another world, and another system. Nay, even when the words happened to bear precisely the same form, if there existed the smallest difference in their turn of meaning, no affinity is perceived; though the greatest difference of form and meaning sometimes afforded no impediment to affinity, when a different Language was concerned. Skinner perceives no relation between BALK, the lengthened ridge of the Furrow, and BALK, a Beam; though he observes, that if he were sufficiently Critical, (Si satis Cfiticus essem,) he might derive BALK, the ridge, from the Latin Porca, though he prefers the Italian Valicare, Vado transire, which he derives from Varca or Barca. ing to this conception we see, that each Language has of all other Languages the least affinity with itself; and that the words, of which it is composed, if they are desirous of finding companions, must seek for them in foreign parts and distant regions. I beseech the Reader to cast his eyes for a single hour only over the Etymologicons or the Dictionaries of any Languages, in which the opinions of their composers can be gathered, and he will at once see in what a compleat state of *Insulation* every word in each Language is placed. All the words under any two Consonants of the same form and name, as BC, &c., which in the Eastern Languages would constitute the same word, are considered as totally separated from each other in the Teutonic Dialects—Greek—Latin, &c.; thus it is, under BD, BF, BG, &c. through the whole compass of each form of Speech.

In the Vocabularies of the Greek Language this insulated state of words will be most visible, as here their composers have exhibited their own ideas, even without the assistance of explanation, by printing their separate Radicals in capital Letters. I cannot forbear illustrating in a few sentences the observations, which I have just made, that we may be enabled to have some glimpse of the process, by which words are connected with each other. The term Ballo, (Βαλλω, Ferio, figo, saucio, attingo, projicio, emitto, profundo, pono, immitto, trado, committo, condo, ædifico, verro, flecto,) bears, we know, itself many different senses, and has been applied through its Compounds and Derivatives to a great variety of meanings and purposes. Yet even this word stands alone amidst all the terms under the form BL, in the arrangements of the Lexicographer, and almost in the opinion of the Etymologist, if we except a miserable conjecture or two made by Martinius, &c. We find Ballo, Beelos, Boule, Boulomai, Boolos, (Βαλλω, Jacio, Βηλος, Limen domus vel templi quod calcatur, Βουλη, Consilium, Βουλομαι, Volo, Βωλος, Gleba, ager, massa, Bolus,) all placed as Radicals by the ordinary Lexicographers; and Martinius sees no connection between these words. except in Βουλη and Βουλομαι. We shall now, I think, at once agree, that they all belong to each other. We shall perceive, that Ballo, (Βαλλω, Jacio,) is the verb of which Boolos, (Βωλος, Gleba,) is the substantive, and that it relates to the action of Stirring up or Casting up the Dirt. We shall likewise perceive, that BEELOS, (Bylos,) is the place in which the Dirt is Thrown about—Stirred up, &c. by the feet, &c. We shall see too, that the sense of Counsel, Boule, Bouleuo, (Βουλη, Βουλευω, Consulto, delibero, Consilia Agito,) is derived from the familiar metaphor of Stirring up or about a surface,

face, as in the phrases 'Consilia Agito, To Turn matters over in the 'mind, To Revolve, Volvere consilia;' and that Boulomai, (Βουλομαι, Volo,) the term of Desiring—Craving or Searching after or for any thing, belongs to the same action of Routing into or up a Surface; just as Scrutor, To Seek, belongs to Scruta, Rubbish, Scruta Eruere, and as Solicito, which means 'To Solicit or Desire any thing earnestly' belongs to Solum and Cito, "To Stir or Dig up, properly the Ground," says R. Ainsworth. This union between Bouleuo, (Βουλευω,) and Ballo, (Βαλλω,) is entirely hidden, even though the latter has precisely the same meaning, of which that popular Lexicographer Benjamin Hederic has produced no less than five examples, "Βαλλειν " εν θυμω seu εν φρεσι, Cogitare; Βαλλεσθ' εις νουν, animum adver-" tere; εφ' εαυτου, apud se cogitare; τι ες θυμον." We now see, that Volo attaches itself to Volvo for the same reason as Boulomai does to Bouleuo; and that all of them belong to each other. Etymologists see no relation between Volvo and Volo, To be willing, though they understand, that Volo and Boulomai, (Bouloual,) belong to each other. Yet though Volo, To be willing, and Volvo are totally removed in their eyes from every degree of affinity, yet one conjecturer has supposed, that Volvo may belong to Volare, To fly. Some have moreover conjectured, that Volvo may belong to Poleo, (Πολεω, Verso, circumago,) which is indeed right, though remote. We know, that Poleo, (Πολεω, Aro,) means to Plough; and Meric Casaubon has seen, that these words may belong to each other, in which likewise he is right. No one however has seen, that Poleo, (Πολεω,) has any connection with Pelos, (Πηλος, Lutum.) All agree, that to Volvo are attached Voluto, "To Roll, to Wallow, "to toss," and Volumen, a Volume; and thus we see, that the book or Volume, from which the Reader is enabled to understand these truths, is connected with the action of Rolling or Wallowing in the Dirt. Voluptas is acknowledged to belong to Volo, To be willing, and so it does; but we see, that it is connected likewise with Volvo and with the metaphor of Wallowing in Sensuality. Though the Etymologists see no connection between Volvo and Volo, To Will, its fellow term; yet they carry us into other forms of Speech, and compare .

compare Volvo with the Greek Eilso and Kulio, (Eilso, conglobo, Kulio, Volvo.) Though nothing can be more remote under their conceptions of Language than these terms, yet still they have justly conjectured. We see, how all this accords with the observations, which have before been made on the affinity of the Elementary forms C. &c. B, &c. L}c, &c. B, &c.; and let us mark in Globo another form of Volvo, as I have shewn in the representation GU}L\B, &c.

It has been seen, that Wallow belongs to Volvo, and Will to Volo and Boulomai, (Βουλομαι.) We shall perceive, how the Balk of Land and the Beam is connected with Boolos, (Bωλos, Gleba,) and the sense, which this Greek word bears of Massa, Bolus, the rising or swelling object—the Lump, will bring us to a great Race of words to be found through the whole compass of Language, as Ball, Balloon, Ballot, Bell, Bowl, Bolster, Billow, Bullet, Bulwark, &c. &c. Bulla, Bullio, Bolus, Bulbus, &c. &c. Pila, Pilula, Pill, Pile, Pillar, Pellet, Pillow, &c. &c. To pursue this theme would be to consider the force of the Element BL, &c., which is not the business of the present discussion. I was desirous only of giving the Reader a glimpse into the mode, by which Affinities are propagated, that he may perceive by actual examples, how far and wide they extend themselves on all sides;—how close—united and constant is that species of relation between words, in each Language, and in all the Languages around it, which the Etymologists have conceived to be so loose—so solitary, and so capricious.

I shall now advance to the conclusion, for which the preceding observations were intended to prepare the mind of the Reader; and I trust, that they will be considered as abundantly sufficient for that purpose. It must be remembered, that in this Preliminary part of my Work, I can profess only to lead the understanding into such a train of thought, and to produce such acknowledged facts, as to supply sufficient evidence for the foundation of a Theory, on which our future Researches are to proceed, and which is afterwards to be developed and illustrated, through the whole compass of Language, in a series of continued proofs, all agreeing and co-operating with each other. I have laboured to expose the false and perverted conceptions.

tions, which all the enquirers into Language have before entertained on the Affinities of Human Speech, in which detail I have endeavoured to conduct the mind into a view of the true mode, by which such operations are performed; and I have produced a brief series of examples, in which that mode is illustrated. We have seen, how under these views of the question the Affinities of Human Speech are multiplied; and the mind is directly conducted to an idea of that close and intimate connexion between Languages, which the innumerable facts produced by the enquirers into this subject would teach us to expect, but which they themselves have so inadequately and falsely conceived. This intimate Affinity between Languages, not only of kindred Dialects belonging to the same class, but of those likewise, which belong to different classes, has in truth been the perpetual theme of almost all writers, who have made any enquiries of importance on the subject of Human Speech; though no one has formed the least idea of the process, by which it acts, or conceived any project of a general principle, by which it could be illustrated.

There is a certain order of writers on this subject, who have been so impressed with the notion of this intimate affinity, that they have supposed the existence of some one Original Language, from which all the other forms of Human Speech have been derived .-This distinguished honour has been commonly conferred on that peculiar Language; with which the Theorist, who maintained such an opinion, was himself most conversant or most enamoured. The Hebrew—the Gothic—the German—Welsh—Irish—and Greek Languages, &c. &c. have in their turns been each of them exalted to this preeminence of station: though we shall now understand, that this dignity is not to be conferred on any one of the fleeting forms of mutable Languages, but on that Original-Elementary-unperishing Language, which pervades all these kindred forms perpetually liable to the accidents of change, and which at once constitutes and records the fact of their affinity. I perfectly agree therefore with these Theorists on the existence of some Universal Language, and we differ only on the mode, in which such an idea is to be conceived. Under my view of the subject, that Universal Language at this very moment actually exists,

exists, not indeed preeminently appearing in any one peculiar form of Speech, among these kindred Languages, but in that Elementary Language, abstracted from every peculiar form, which constitutes the affinity of the whole. We all know, that every form of spoken Language, now existing either in writing or speech, has been or is, perpetually changing; and how then is the existence of an Original Language to be conceived, when there is no defined period fixed for its operation. It is not necessary to pursue this idea on the present occasion; and I produce the Theory of an Original Language in order to exhibit the prevailing opinion on that intimate state of union, by which the various forms of Speech are connected with each other. Yet even on this conception of some one Original Language our enquirers were equally removed from all just ideas on the nature and extent of the Affinity, which must necessarily exist from the operation of such a cause. The examples, which they produced as proofs of this Affinity, still continued in their conceptions to be barren and unproductive relations, generating nothing, and leading to nothing. The supporters of this opinion had formed no idea whatever of any maxim—principle, or artifice, by which any approaches even could be made to illustrate that species of General-Universal Affinity between Languages, which from their own Theory must necessarily exist. Though the extent, which this acknowledged Affinity pervades, has not yet in all cases been accurately decided, yet it is allowed to have operated through so wide a sphere of action, that there is probably no Form of Speech at present spoken in the world, which is altogether removed from the sphere of its influence. This is not the place, in which such a subject can be duly unfolded; yet I might venture to observe, that of all the Languages, which have passed under my view, polished or barbarous, as they have been called, I have discovered none, in which I did not see the most unequivocal marks of the general Affinity.

I shall now therefore state my hypothesis respecting this species of Affinity, about which so much has been said, and so little been understood. My position then is, that as in each peculiar Language, and in the Dialects of kindred Languages belonging to each of the

the different Classes, the same Elementary Consonants convey the same Fundamental idea, and as the different Classes have been acknowledged to bear the most intimate relation to each other; we have good reason to conjecture or conclude, as the foundation of an Hypothesis, on which our Researches on Language may proceed, that the SAME ELEMENT conveys the SAME FUNDAMENTAL IDEA through ALL LANGUAGES, within the sphere of this acknowledged Affinity; from which probably no form of Speech now spoken on the face of the Globe is altogether excluded.

One great cause, from which our perverted notions have arisen on the subject of Human Speech, is our veneration for the Greek and Latin Languages, and for the beings by whom they were spoken, which has indeed absorbed all our senses, and confounded all our faculties. Whenever we ventured to reflect on the subject of Languages, it was only through the medium of Greek and Latin, which we appeared to consider, as standing aloof and exempt from all the accidents of Human Speech, as existing by a property inherent in themselves, and as formed on laws and principles peculiar to themselves;—as invested with that wondrous property of relation to other Languages, by which they were privileged rather to impart than destined to suffer affinity; and as placed in that high and commanding spot in the world of words, at which every thing was bound to follow, and nothing able to precede.

Strange as these conceptions may appear, nothing is more certain, than that all the Languages, which we are accustomed to call Modern, have been considered by such Etymologists under this point of view, and that they have been referred to the Greek and Latin Languages, as to the original and primitive source, from which they were derived. It is certain likewise, that there are or have been times, in which any other mode of considering the subject would have been regarded, as the idle theory of a wild and ignorant babbler, uninitiated into the greater mysteries of Greek and Latin lore, and uttering strange and delusive doctrines on the subject of Languages. What would have exceeded our astonishment, if such a Theorist had ventured to proclaim to us, that the Greek and Latin Pateer ([10,71]) Pater were possibly derived from the English Father, and not the English Father from the Greek and Latin Pateer—Pater. Yet surely this mode of conceiving the matter should not excite in us any violent emotions of alarm; unless we suppose, that the claims of the English Language to the honours of Antiquity; when contrasted with the Greek and Latin, are destroyed or diminished by the accident of its duration. If this should be our opinion, and if we should imagine, that duration is incompatible with the properties of age; let us still remember to the honour of our Mother Tongue, as the good Citizen is said to have done in rehearsing the praises of his native city, that our Language, whatever it may be at present, was certainly in former times an Ancient Language. If this maxim should be tenable, which perhaps some may be disposed to believe, we shall begin to suspect; that the case, which I have suggested, is me wholly removed from the sphere of possibility, and that the Greek and Latin PATER—PATER, with all their claims to antiquity, may perchance in former times, when our Mother Tongue, was an ancient Language, have been derived from the English FATHER.

Our Etymologists—Philologists, &c. might be divided into different Classes, according to the perverted notions, which they have conceived on the nature of Languages, and from the different forms of Speech, to which each class has been devoted, as to an object of exclusive adoration. Among these Classes the Greek and Latin Etymologists, as they might justly be called, are preeminently distinguished above their brethren, and may afford us a notable example of that state of intellect, when men are lost in the labyrinth of a little Learning, which they have been accustomed to consider as supplying all the materials of Human knowledge, and all the means of Human information.—If it has ever fallen to the lot of Learned Wights to have been lost and bewildered in a labyrinth like this; such assuredly has been the fate of our Latin and our Greek Etymologists.-With this race of Enquirers the whole world of Human Speech is a Latin and a Greek world, and it is marvellous to observe, by what a great school of disciples these teachers are surrounded.—It is indeed marvellous to observe, with what complacency and confidence we all look on the hard earned pittance of our little Latin and our less Greek, as on rich and ample stores, which are alone abundant for all our necessities and competent for all our purposes, through the whole compass of Human Knowledge, whatever we may project, and whatever we may pursue.—It should seem too, as if in the process of learning these Languages we had endeavoured to solve one of the most difficult problems, which has ever been proposed in the doctrine of Maximums and Minimums,—'The acquisition of the least 'possible knowledge by the greatest possible labour.'—There are few of us, I imagine, who are not able to testify from their own experience, that no problem has been ever more felicitously solved in theory, or more efficiently produced into practice. Wherever we turn our eyes, the effects of this process are always visible and always the same.

The maxims, which I have above delivered on the Affinity of Languages, will shew us, that in the composition of a Dictionary in which the author presumes to decide on the derivation of words, no project can be more idle, than the attempt to confine this operation within the limits of the peculiar Language, which is the object of enquiry. In our Greek Vocabularies, as the compilation of Hederic, &c. &c. the humble Philologist has soon arrived at the termination of his labours, as they relate to the derivations which are more immediately connected with the genius of the Language. He will readily discover the composition of some words from known particles, and the formation of others by established analogies; but beyond these limits all is obscurity and confusion. If the lively Greek, the speaker and the writer of the Language, were perchance capricious-negligent or forgetful;—if in expressing portions of a similar idea, he sometimes recorded his feelings under the symbol *\mathcal{B}, KB, and again under the form of \(\chi\mathcal{B}\), C\(\hbeta\mathbb{B}\), our Philologists are at once lost and confounded in their enquiries. This shade of a shade of difference (if I may so express it) is to them the Wall of Semiramis; through which no powers of mind can penetrate—which no force of intellect can break down. The kindred words, which the same ideas have produced, become at once remote and distant from each other, as creatures

1

Though our Lexicographer is unable to see the things which do exist, he is singularly sagacious in discovering those which do not. He not only tells us from what source a word is really derived, but he likewise informs us from what source it ought to be derived. This precious idea exceeds all the specimens of his craft. For every future in Eso, (now,) &c. he has a verb in w, (Eo) from which in his conception it ought to be derived. His system is built on the hypothesis, that a Greek never ventured to open his mouth, when he had occasion to express a future action by the analogy Eso, till he had perfectly ascertained by the most diligent researches, that a verb in ω , $(E_0,)$ was already in existence, from which it ought to be derived. In what terms can I seriously reply to such an 'infinite mock' as this? It is true indeed that the Greeks talk in analogies, and it is equally certain that they cannot talk otherwise. It is true moreover, that a race of words is to be found in the Greek Language, in which w, (Eo,) added to something signifies I do an action, and Eso, (now,) added to the same, means I shall do the action (Φιλ-ιω, Φιλ-ησω); as in our Language a race of words exists, in which a term in its simpler state denotes the present, I love, and with the addition of d or ed, signifies the past, I loved; but do our children or do our men, when they are desirous of expressing a past action by the analogy of d or ed, stop to consider, whether a word is in existence, without the d or the ad, signifying the action in the present? They think nothing—they know nothing about the relation of the past or the future to the present. The English and the Greeks know only or rather feel only, that they have been accustomed to Eso and to Ed, (if I may so express myself,) when they are desirous of denoting what they shall do, and what they have done. And this is all which they think or know about the matter:-This is all the analogy, which operates on the minds of those who form Languages; and a more potent analogy, conducting to a more consummate regularity, cannot well be imagined. If the Being, who is accustomed to Eso, when he wishes to denote some future action, is likewise accustomed to Eo, when he expresses some action present, there will necessarily exist an abundant race of words, in which he will be found to Eso and to Eo on the same occasion, or in representing the same idea; and hence it is, that a race of words would be generated, in which the future is formed, as the Grammarians would tell us, from the present, by changing Eo into Eso. With this process of formation in his head, the simple Grammarian is at once lost and confounded. Having established this necessary

necessary dependance of the future on the present, which his own jargon only has created; he is not satisfied with the safe possession of a word in Eso, till he has discovered a verb in Eo, from which it ought to be derived.

In Languages there are no anomalies—there can be no anomalies. Man cannot attempt to convey an idea, unless the words are accommodated to some ordets-form -or analogy, which before existed. The Language of our children, in endeavouring to express their meaning, is constructed on the most scrupulous laws of the more general analogy; and if they are wrong, as we should call it, that is, if they offend against the common usage of the Language, it is in those cases, where a less general analogy has operated in producing a race of words, which are not yet so familiar to their knowledge. I do not say that insulated words may not be found in every Language, which we shall be unable to refer to any existing analogy; but these are the effects of change and accident, about which the speaker is equally indifferent, as he was about the existence of these analogies. I must again repeat, that the Beings, who have formed and who utter Language, care nothing and think nothing about the anomalies or analogies, with which it may abound:—Still, however, those Beings do not and cannot utter Language without adopting words, which are related to some analogy; and the anomalies, which are said to exist, are commonly those, which are to be found only in the maxims of the Grammarian. Thus, in Greek, Olow and Hiegma are both accommodated to the most familiar analogies of that Language. In the Ossu, (Oiso,) the speaker does what he has been accustomed to do in expressing something future; and in the Hirra, (Enegka,) he has the same form, which he has been used to adopt, when he expresses a past action—the preceding e, (1,1) and final a (a); and his terms are derived from a race of words, in which the sounds of Ois or Enk prevail, signifying to bear-take, &cc. In short, they belong to what, in the Language of my hypothesis, are called the Elements 'S and 'NK, which the Reader will find discussed in the succeeding pages (772, &c.) If, however, Osow and Harynn, (Oiso and Enegha,) are referred to the same system, and called the Future and the Aorist of Oce, then indeed they are truly anomalics. But this, we perceive, is not an anomaly, for which the Greeks are answerable. They were totally unconscious of this system, and had formed these words according to the strict rules of an analogy, which was before impressed upon their minds. It is an anomaly, which exists only in the brain of the Grammarian, who has entangled himself, and others like himself, in the toils of his own gibberish. It is in learning this craft that our poor boys are beaten to mummies by enraged Pedagogues; and the precious days of youth are passing away, which can never again be recalled or repaired. We may treat in the Language of ridicule the inanity of the jargon; but emotions far different will be excited, when we reflect on the enormity of the abuse.

or the recorders of these forms of Speech were best qualified to convey ideas, or most enlightened in the Theory of Languages. Such strong and striking facts however have occasionally been produced, relating to the universal operation of this affinity, that we should find it difficult to fix on any portion of the Globe, from which its influence can be affirmed to be wholly excluded. But whatever may be thought on this point, it forms no part of the object, which I am anxious to ascertain in the discussions of the present Work. Abundant labour will remain upon our hands, if we should endeavour to prove to a certain extent, by due and sufficient evidence, that the same Element bears the same meaning in all those Languages, which are best known and understood; and which are acknowledged to be related to each other by the various writers, who have been employed in the investigation of such subjects.

There is yet however another material question, which remains to be examined, before we are enabled to form any well-founded opinion, that our Theory can be applied to those purposes of utility, which are intended to be accomplished in the formation of a general System. It is now our business to enquire, How this Fundamental idea, thus pervading the Elements of Human Speech, is to be discovered, and whether it is probable, that such a discovery will ever be pursued with any considerable effect in the arrangements of Lan-This indeed is a most important part of our enquiry, as all our labours in ascertaining the Elementary forms, under which affinities must exist, if they exist at all; and the probability, that the same forms universally convey the same Fundamental idea, will be vain and unavailing, unless we have the means of discovering with some facility and certainty, what that Fundamental idea is, and what are the great leading senses, into which such an idea would naturally and readily pass. Now unless some favourable circumstances have operated in the formation of Language, which may lead us to this discovery, and which may afterwards assist us in applying that discovery with effect; all our diligence and acuteness might be exerted in vain, when we attempt to pursue the devious though directed course of Human ideas through the mazes of the mind.

Let us now therefore apply ourselves to the consideration af a question, about which much unprofitable discussion has been exhibited, The Formation of Language, or the process, by which ideas have been impressed upon words in the composition of Human Speech. When I talk of the unprofitable state of this discussion, I do not refer to the falseness of any opinions, which may have been delivered on this subject, as they are either of such a nature, that we have no means of deciding, whether they are true or false; or, if they are true, they are such trivial and unimportant truths, which have been perpetually said, and which belong only to a few words perpetually produced. all the Etymologists, the writers on the Theory of Language are the only personages of their race, who have never contributed, I might almost venture to assert, one single fact to the common stock belonging to the Art; and certainly they have never added one single fact. derived from the principles of their Theory, which is totally incapable either in their hands, or under the guidance of others, to advance a single step beyond its own limits in the discovery of any one affinity existing in Language. Let us endeavour then to find some principle, which shall extend through a wide sphere of action, and which shall exhibit its efficacy in known-intelligible and acknowledged examples, under the familiar operations of Human Speech; and which shall refer to some constant and powerful sources of impression, ever present—ever visible, and ever felt. If our Principle or Theory is involved with any latent—obscure, or unintelligible impressions;—if the causes or sources, to which we attribute such great effects, are not at this moment visible to all—intelligible to all—and operating on all; we may be assured, that our Theory is indeed nothing but Theory, idle, empty, and inefficient! either false or foolish—untrue or unprofitable.

Under this spirit of enquiry let us open our eyes upon the world around us, and consider, what objects and actions are to be found, which would probably seize upon the mind of man, and supply the first and prevailing ideas, communicated by Language. When I talk of the first ideas suggesting themselves to man, I am not referring to periods and conditions, about which we know nothing, and in the discussion of which we can be led only to barren—unproductive metaphysical

mataphysical deductions, but to those first and predominating ideas, which would naturally be impressed with pulliar effect in the earlier periods of Society, so as to produce terms directly impregnated with their force, which still continue to exert their influence, upon the mind, though after a different mode, and which do in fact exhibit at this very moment, through the whole compass of Language, the most strong and striking proofs of their effect, perpetually felt, and universally acknowledged. I must again unequivocally press on the understanding of my Readers, that I look only to that stage or period of cause and effect, in the formation of Words, as impregnated with ideas, when cause and effect may be so seen and understood, as to become intelligible objects of discussion, and to lead us to the discovery of numerous facts in Language, respecting the relations of Words to each other, which were before totally unknown. In all subjects, a series of causes may be conceived or supposed, which shall operate in a corresponding series of effects; and there is always a point, at which mere Theory commences, and where all is darkness and obscurity. With this stage in the series of causes and effects I have nothing to do. My thoughts are directed only to the discovery of some early or prevailing—predominating cause in the series of causes, by which Languages have been formed, which has impressed upon them their prevailing and predominating force and which, when once discovered by a probable train of reasoning, supported by numerous—strong, and unequivocal facts, acknowledged by all to exist through the whole compass of Language, may be afterwards applied with facility and success to the discovery of innumerable other facts, which are now totally concealed and hidden from the view.

Now where is the great object to be found, which, as we might naturally conceive, would first seize upon the mind of man, and supply him with the prevailing ideas, conveyed by the sounds or words, which were uttered by the organs of speech? Are we to look up to the Sun, the Moon, or the Stars? Are we to regard the Elements Air, Water, Fire, Wind, Rain, Thunder, &c. Where can we find, or where can we expect to find an agent sufficiently potent and predominating

dominating for a purpose like this, but in that great object, which is ever present with us, at all times, and on all occasions, on which all other objects, capable of being seen or felt, either actually exist, or exhibit their force and influence, which in every period of Society perpetually presses on the attention of man, as the scene of his actions and his necessities, and which in most periods engages his incressant care and solicitude, as supplying the indispensable means for his nourishment and support. This great object, so interesting—so important, which must necessarily predominate over the mind of man, is assuredly the EARTH.

There is no one, I think, who will not instantly grant, that a more promising and productive object for the materials of Human Speech, cannot be conceived; and there is no one, I imagine, who would not. venture to decide à priori, that such an object must necessarily haveoperated to a considerable extent at least, in the formation of Languages. All moreover know and acknowledge, from examples every. where visible, that it has operated in the most strong and striking manner, in supplying ideas, which might seem on the first view most remote from the nature of the object; and all surely will allow, that it has probably operated in numerous other instances, where the effects of its influence are no longer visible. Whatever may be our opinions of the extent, through which this influence has been spread; we shall all, I think, concur to wonder, that this idea has never been sugspected, as capable at least of affording a probable and promising source. for some portion of the materials, of which Languages are composed. Surely no idea can be more probable, than that the terms, which. denote the Earth, Soil, &c., and those, which express the operations. performed on its surface, as Ploughing—Harrowing—Digging, &c. would belong to each other; and yet even this has not been seen; but here, as in other cases, such terms appeared to be insulated and separated from each other. We shall not wonder, that words containing metaphorical allusions, derived from the same source, have not been . anderstood; though the process, by which these allusions are conducted, is distinctly visible in acknowledged and familiar examples.

It will at once be directly seen, how favourable this hypothesis is.

to the formation of a System, and how all the ideas, which I have before suggested on the Theory of Languages, co-operate to the same end. We perceive, how the process of investigating the relations of Language, which before might seem to be involved in inexplicable intricacy, becomes bounded—distinct, and defined. With the EARTH, its Accidents and Operations we are well acquainted; and when we have duly studied the peculiar habits of the Human Mind in the mode of considering this object and its appendages, from known and acknowledged examples, we shall then be enabled to understand the familiar process, which is passing in Language, and to detect its influence in other examples, where the original idea is no longer visible. We shall now understand, from a review of the conclusions before produced, that our labours are directed only to the study of one great Universal Language, which is itself derived from one great Universal object, ever present—ever visible, and perpetually pressing on the attention of man. We see, how every part of the hypothesis, forming our System, supports and confirms its own conclusions. If Languages, existing in times and places so remote, are at this moment so intimately connected with each other, as to have arisen from one Universal Language, it may be well imagined, that the same potent cause must have operated in preserving the Language, which it originally formed. Whatever hypothesis we may have for the existence of kindred Languages spread over the face of the globe; we all allow. that they are now, and have been, through a long period of time, remote and separated from each other; and we may reasonably conjecture, that their affinity could not have remained in so perfect a state. unless the same constant cause had been perpetually employed in preserving the relations of that compages, which it originally formed. As we proceed forward in these discussions, we shall discover in each peculiar Language this secondary process engrafted on the Original Elementary stock; and we shall perceive a series of new senses proceeding from the same Fundamental idea. Thus each Language will exhibit the Elements, containing the same Fundamental notion, under varieties of meaning, peculiar to itself; and hence we shall understand, how each Language, under one point of view, may be considered as itself

itself directly formed from the same object, in a manner distinct from the process belonging to the *Universal Language*, of which it is a Dialect. Thus each Language may be considered as indebted for the various turns of meaning, annexed to the words which it contains, to the operation of its own powers, if I may so express it; but it is still recognised to be a kindred portion of the same Universal Language, because the same Elements are employed to convey the same fundamental idea, under all the properties of the general affinity. The process, by which these operations are performed, cannot well be understood, till a great series of Facts shall have passed before our view.

In a future page I shall detail, in a brief narrative, some of thevarious ideas, which we may conceive to have been derived from the EARTH; and I shall shew by some acknowledged examples, how the mind is accustomed to regard that object. We shall at once however see, how this Fundamental idea of the EARTH would naturally resolve itself into various other ideas, suggested by that object, which may then be considered as Fundamental ideas, pervading large and distinct Classes of Words. Each of these secondary Fundamental ideas, if I may so call them, might then branch out into other notions, which might again become Fundamental notions to their respective Classes. All this may be arranged with due accuracy and perspicuity, without embarrassment or confusion; and in such an arrangement we should at once see the general affinity, which connects the whole, and the peculiar relations, by which the various parts are distinguished from each other. We shall readily understand, what an abundant source of ideas the EARTH would supply, if we contemplate only in a superficial manner the most familiar and apparent of the Accidents-Operations-Properties, &c., which are attached to it, and which would most probably furnish Language with the very terms conveying these ideas.

Among the Accidents—Operations—Properties, &c. &c., attached to the Earth are those belonging to the action of Stirring it up—Scratching it up—Tearing it up—Routing it up—Scraping—Grating upon it, &c., with various degrees of Agitation—Commotion—Noise,

&c.; and in various modes and manners, by the feet—hands—instruments of men, &c.-by the feet-snouts-claws of animals, &c.-by wind-water, &c .- Digging-Ploughing - Harrowing - Raking-Treading — Stamping — Stepping — Walking — Drawing — Dragging, &c. &c., as likewise those expressing the various objects to be found on or under its surface, with their state—form—consistency, &c., as Dirt, Dust, Mud, Muck, Mould, Mullock, Stone, Sand, Grit, Soil, Clay, Chalk, Slime, Slop, Slunk, Clod, Clump, Lump, Glebe, Globe, Bog, Podge, Pudge, Puddle, Bough, Smooth, Hard, Solid, Soft, Wet, Dry, Moist, &c. &c. We should, I think, on the first view of the question, be disposed to believe, that the words, which express objects and actions, such as I have enumerated, would be derived from the EARTH. Now I shall prove in the progress of my Work, that the very terms, which I have adopted in the above explanation, do actually belong to a great Race of words, denoting the EARTH, Soil, &c. and its Accidents, &c. each to its peculiar class, according to the laws, which I have laid down respecting the Cognate Consonants. Thus, HARROW, HARD, ROUT, ROUGH, RAKE, belong to the Element "R, R C, D, &c. to Era, (Eoa,) EARTH, aRETZ, (Ital.) &c. Tread, DRy, DRaw, DRag, belong to TERRa, (Lat.) TIR, DAIAR, (Celt.) under the Element C, &c. {R}c, &c. z, &c. to which we must add Scratch, Grate, Gnit, Scrape, &c. &c.-Mud, Muck, Moist, Mass, belong to each other, under the Element MD.—Mould, Mullock, &c. belong directly to the Element ML. Soil, Solum, (Lat.) Solid, Solidus, Clay, CHALK, CLOd, Slush, Slime, Slop, Clump, Lump, Glebe, Globe, &cc. belong to the Element C, D, &c. \L\c, D, &c. B, F, &c. Bog, Pudge, Podge, Pudble to B{C, &c. to Pedon, (Medor, Solum,) Boden, (Germ.) &c. &c. Stone, Sand, &c. to the Element C, &c. \ N, and to Konis, (Kovis,) Conum, (Lat.) &c., and so of the rest. As HARD belongs to EARTH, under one Element, so does Durus belong to DAIAR, and Solid, Solidus, (Lat.) to Solum, under other Elementary characters.

Before I proceed further in these discussions it is of the highest importance, that all misconceptions on the nature of my hypothesis should be removed from the mind, arising either from the inadequate mode.

mode, in which I have unfolded my subject, or from that peculiar state of Language itself, which presents even to the most dextrous and adroit a perpetual source of difficulty and embarrassment. The best and most precious of the gifts, which reason has bestowed on man, is assuredly the faculty of Language; yet even this precious gift is subject to the universal lot of all the good, which he possesses, and is oftentimes attended with a portion of evil, which diminishes or defeats the purposes of the possession. We are but little aware of the great extent, through which the evils of Language have operated, by the forms of its construction, in perverting the opinions of mankind; nor would it be easy to enumerate the various sources of deception, which are inherent in the nature of cultivated Speech. Some of these sources are indeed sufficiently visible and understood; but others are so subtle-so latent and remote, that they escape from our detection, and are deeply enveloped under that mysterious web, which Language has spread over her own operations. It has unfortunately happened too for those enquirers, who have devoted themselves to the study of Human Speech, that Language never exhibits the imperfection of its nature under so embarrassing a form, as when it endeavours to unravel its own powers, and to describe its own processes. construction of cultivated Speech, the distinctions formed by the various parts, into which it has been separated, though performing in their general application the most useful and important purposes. present oftentimes a great impediment to the progress of our ideas. and the justness of our conceptions. In the distinction formed by those parts, to which Grammarians have affixed the name of Noun and Verb a great barrier is erected, and we pass with difficulty from an object to action—from matter to motion—or, if I may so say, from death to life, though the mind does not always separate these states in viewing the object itself. We may learn this, if we will endeavour to free our minds from the incumbrances of Language; and we do actually know this to be a fact from the most familiar practice apparent in its construction, where we find, that the Object and the Action, annexed to it, frequently exist in the same word; or according to the artifice of cultivated Speech in the same word, under some minute variation

variation of form—adjunct, &c., as The Bowl—To Bowl, &c.—A Burn, To Burn—A Brush, To Brush—A Crack, To Crack—Mud, To Mud—Slush, To Slush, &c. &c. Again, in expressing the same object or same species of object, the mind may be led into error by adopting words, representing either the particular or the general idea.

These observations will be illustrated by the case before us; and the developement of these possible errors may perhaps most contribute to unfold the nature of my hypothesis, and to distinguish that which I do mean, from that which I do not mean. When I state in my hypothesis, that the Words, of which Languages are composed, are derived from The Earth; and when in speaking of Words, appearing under the Element AR, ART, &c. I say, that such words are derived from The EARTH, &c. &c., there are various modes, in which the mind may be led into error, not so much from the fault of the writer, as from the nature of Language itself. In the word EARTH, standing alone, we see the idea of the material substance Dirt, on which we tread-which we stir up with our feet-instruments, &c.; but in the expression The EARTH, we have an abstract idea, in which its material parts and attributes, though not altogether hidden, are yet removed from our view. I adopt, however, this latter expression The EARTH, not because it really expresses my conceptions in a manner most accordant with the nature of the subject, but because it is an expression best accommodated to the Language of those, to whom these discussions are directed. Under one sense of the expression indeed, it is sufficiently precise; and if the Reader should understand by it, that the Words in Language are derived from the Objects and Actions existing in that Spot, which under the present forms of our mother tongue we are accustomed to call The EARTH, my meaning will be justly conceived, and my purpose has been duly answered by the adoption of the expression. I well know however, that such abstract modes of speaking have often led into the greatest delusions even on the most important occasions; and I may expect, what indeed I have myself felt, that they would exert their influence on a subject like this, removed as it is from our familiar habits of contemplation. We

cannot

cannot help considering the term used in this abstract sense, as itself the sole or superior agent in the process, which we describe; and I have been induced myself to refer other words to such general terms, not indeed subdued by this delusion, but certainly acting under its influence, or accommodating myself to preconceived notions, which arise from the accidents of Language. Thus I have said, that Bog, Pudge, Puddle belong to Pedon, (Tesov, Solum,) and Boden, (Germ.) as if these two terms, because by the accidents of Language they happened to be used in a sense more abstracted, were invested with some superior privileges, by which they were intitled to have other words referred to them, as to a source or origin. The Reader is not to suppose, that I can have any meaning of this kind; and he must diligently remember, that when any similar modes of speaking are adopted, it is meant only, that the words said to belong to a general term, such as Pedon, (Πεδον,) are derived from the Object expressed by a certain word belonging to the same race, under the form Pepon. (Πεδον.) Under another point of view Pedon, (Πεδον,) might be considered as the most improper word to be introduced as an example. from the very circumstance, that it is used in a more abstract sense: and therefore more remote from the original idea, which was that of a Material substance, as Pudge, existing on the object expressed by this general term. Thus, when in speaking of the Element 'R, 'RT. &c., I say, that words under that form are derived from E_{RA} , $(E_{\rho\alpha})$ EARTH, I do not mean, that such words are derived from the very terms themselves ERA and EARTH, but that they are derived from the Spot. which these terms express, and that these terms are themselves belonging to the same race of words. It must assuredly happen, that these very words, expressing such an object as the E_{RA} , $(E_{\rho\alpha})$ EARTH, &c. in the Greek and English Languages, will have terms in their respective Languages, which may be justly said to be directly derived from them. Each peculiar Language has indeed its own peculiar relations, which however are not frequently so marked and visible, as to afford unequivocal evidence, that such relations are exclusively derived from the operation of each Language. We see perpetually such striking examples of the common Affinity, that in general general we should speak of terms as belonging to the whole mass of Languages, rather than as the exclusive and peculiar productions of each Language. All that we can do, and indeed all that is to be done, consists in ascertaining the general affinity, and this I shall perform, as I trust, with full evidence of the truth of my hypothesis. The particular process, by which the relations of words has been formed, is hidden from our view; and we are not to expect, that a chain of affinities can be exhibited, in which each link will be minutely and accurately arranged. Indeed no such chain is to be found: as in the great operations, by which Languages have been formed words are not to be considered as derived from single words, as ina continued chain or series, but from a general impression of the force annexed to a Race of Words under the same Elementary sounds. That is, the Words under the Elementary Character 'R, 'RT, &c. &c. may be said, under one mode of conceiving the matter, to be derived from the Elementary sound AR, AR T, &c. with an Elementary sense.

There is another misconception likewise, into which the mind may fall, arising from a deficiency in cultivated Language, in which Matter and its Action are separated. I have said, that words are derived from The Earth or Earth, where I have been obliged to use a substantive, expressing only an object, as Dirt, in a dead, inactivestate; but if I had been permitted to apply this term, as a verb, 'The 'EARTH,' signifying To Stir up the EARTH, as it is used in Provincial Language, and had said, that Words derived from Earth and EARTHing, a very different train of ideas would have been presented to the mind. We should have here seen, that the Agitation of the EARTH afforded one cause, from which Languages were derived; and this would have opened into a wide field of reflexion. We shall here be brought to an ancient question, which has been so often and pertinaciously discussed, whether Substantives or Verbs first appeared in the formation of Language. For myself I cannot but declare, most unequivocally, that I am firmly enlisted under the party of the Verbs: and tha I consider their claims to superior antiquity, as most decided and unquestionable. Wherever I turn my eyes I perceive, that the great materials for Language are to be seen in Action—in Commotion

motion and Agitation, &c. This is particularly to be discovered in the consideration of the Element 'R, 'RT, &c., where we do not so much see the Era or Earth under the idea of inactive matter, but as Ear'd, Earth'd, Stirred up, Raised up, Excited, Agitated, &c. &c. Wherever this sense is not visible, but where even a contrary sense is expressed, still I find, that the idea of Agitation was probably the original source, from which it was derived. Thus, then, I should say, that Language has received all its force from ideas, derived from the Matter, and the Action or Agitation of the Spot, on which we exist; or, if I might be permitted so to express it, from Earth, Earthing or Earing—Mud, Mudding—Slush, Slushing, &c. &c., or, as we might say in Latin, 'à Solo, Solicitando,' &c. &c.

This mode of representing the question will perhaps be sufficiently understood; and it may remove or prevent various misconceptions, which might be formed by those, who are wont to entangle themselves in the mazes of their own minds. I decide nothing in this statement of my hypothesis, on the degree of influence, which the Matter of the EARTH, or its Action, under the names of Properties—Accidents or Operations, may have had in the production of words. nothing on the peculiar species of Action, or the kind of Accidents and Operations, by which this strong idea of Agitation, so visible in the formation of Language, was originally impressed. All the Accidents and Operations are so blended with each other, and are all so effective in producing and preserving the same train of ideas; that, under one point of view, it is impossible to distinguish one action from another. It must be remembered however, that as our enquiries are directed to the discovery of facts, as they appear in the present state of Language, we may well imagine, that the terms relating to the Operations of the Ground, as performed by the labours of Agriculture in Digging-Ploughing-Harrowing, &c., would exhibit in the strongest point of view the general Elementary sense of Agitation, Commotion; and that they might justly be selected as important terms, to which other words conveying a similar idea may be referred. We may justly place these words in the front of our discussions, as exhibiting in the strongest point of view the Elementary sense, and as strongly operative in impressing—propagating and preserving the general Elementary idea, from whatever source that might have been originally derived, and whatever causes may cooperate in confirming and strengthening the impression.

As my hypothesis relates solely to the discovery of facts, which are to be found in Language, as it is now presented to our view, I am totally unconcerned about any opinions, which refer to Language, before it appeared under the form of Language, or which deal only in the detail of a few terms, visible to all, and perpetually repeated by all, and which never have contributed nor ever can contribute to the discovery of a single fact, before hidden and unknown. I have no objection therefore, as it concerns my hypothesis, to any opinions, which have been held on the Theory of Languages, if such positions can be called opinions, which, in truth, propose nothing, and produce nothing. I have no objection to the idea, that Languages have been formed on the principle of Onomatopæia, which has been the perpetual theme of all Theorists on the nature of Human Speech. This may be true, and certain words may have been formed on the conception of the speaker, that the sound was an echo to the sense: Still, however, we shall never be able to ascertain, whether it be true or no; and if it be true, it is a truth, which terminates in the words themselves, produced as examples, and which is totally inadequate to the discovery of any other truth whatever. All the words, which have ever been produced as examples of this principle, do not amount probably to two hundred words; and here the knowledge and the efforts of our Theorists terminate. They have not discovered any clue, nor do they pretend to have discovered or even conceived any clue, by which they can advance a single step in the great Labyrinth of Language. No principle—no maxim has ever been proposed, under the guidance of which they can pass from these solitary terms, conveying a similar idea, into the World of Words, with all its infinite variety of purposes and meanings. It is not pretended by our Theorists, that these words perform any efficient part in Language, or are applied to any important objects; nay it has not even entered into their conception. that the exhibition of this idea was of any consequence to the foundation

tion of their Theory,—and that their words, in order to be operative words, must necessarily be attended by these properties. It has never entered into their imagination, that it was necessary to introduce into their Theory that very point, on which alone every thing depended—by which alone it could assume even the appearance of a Theory—without which the proposition became absolute inanity, and as little relative to the performance of any efficient purpose in Language, as any other proposition whatever of any kind, and belonging to any subject, which they might have chosen to produce.

Though the principle of Onomatopæia, under the present view of the question, as supplying to Language only a few solitary and unimportant words has no more to do with a System for conceiving the formation of Language, than any other Principle whatever, as of Gravity, Magnetism, &c. &c., which might have been proposed; yet we shall at once see, that if we combine this idea with the Theory of the Earth, a new world is directly opened before us; and a conception, which was before totally barren and unproductive, becomes associated with an object, invested with the most ample powers, and pregnant with the most important consequences. We shall find, as we proceed in these discussions, that the words, which are supposed to be formed on the principle of Onomatopæia, are directly connected with the Accidents-Operations, and Properties of the Earth, as ROUTE, Stertere; Rudo, &c. Rout, Rudera, (Lat.) &c. &c.; RACLER. To RAKE, and its kindred terms wRootle, RATTLE, RUTTLE, RUSTLE. &c. Scrietch, Grate, Scratch, Grit; -Grunt-Groan, Grind, a GRINDing Noise, GROUND, and so HIRRio, HARSH, HOARSE, &c., (see page 880 of this Work,) belong to Era, Earth, and their actions EARing, HARROWing, EARTHing, &c. Thus, then, if we should choose to advance into the regions of Theory, and to ask, whence it was, that the names for the part, on which we tread, &c., as Era, Earth, was annexed to the Elementary character 'R, I can have no objection to the hypothesis of any Theorist, who should suppose, that it was derived on the principle of Onomatopæia, from the h-IRR-ing noise. made on its surface by Treading—Scratching—Grating, &c. and that the original idea annexed to the Era, (Epa,) was that of the h-IRR-er.

If this should be admitted, every thing will then be performed, which any order of Enquirers into the Mysteries of Language can expect to be atchieved. We have fixed our station on a spot, full of hope and of promise, where the objects are all visible—known and familiar, and from which innumerable Facts in Language can be and will be produced. We have proceeded moreover still farther in our enquiries; and for the benefit of those, who are desirous of discovering, what they can probably never find, and which even if it could be found, would disclose nothing but itself, we have penetrated into the dark region of Theory, where any thing may be conceived, and nothing can be seen. It is from the EARTH and the EARTH only, that Language arises into existence—into full—effective—embodied—material existence, if I may so say, or into that state, by which it is enabled to perform the functions of its being, under a visible—operative, and intelligible form; whatever may have been the preceding processes of the mind, or the organs, by which it was originally associated with It is on the Earth and the Earth only, whatever may have been the first efforts of Human Utterance, that the Elementary sound AR, the "airy nothing," has received a "local habitation and "a name." It is from the EARTH, that the rude h-IRRing noise of the Animal, mimic or accidental, became instinct with those powers, by which the mind could operate in the formation of ideas, and vocal with those distinctive sounds, invested with meaning, of which Languages are composed.

(3.)

The Writer, having concluded, by a view of the question a priori, supported by certain facts, which all acknowledge to exist, that the Fundamental idea, prevailing in Language, under different Elementary Characters, is to be found in the Earth, Soil, &c. and the various Accidents—Operations and Properties attached to it, proceeds to state in the briefest manner What these Elementary Characters are which denote the Earth, &c. and to detail Some of the acknowledged facts, relating to the influence of the Earth on Language, which are perpetually visible. The Writer gives a concise statement of the various ideas, which we might conceive on the first view of the question, to be derived from that source.—Observations arising from a view of the whole subject.—The conclusion of the Preliminary Dissertation.

In the preceding division of this Section, I have concluded that the EARTH is the great object, which has supplied the materials of Language; or that The Fundamental idea prevailing in Languages, under different Elementary characters is to be found in the EARTH, Soil, &c. &c. and the various Accidents, Operations and Properties attached to it. This conclusion is supported by the probability of the idea, à priori; and likewise by the acknowledged and familiar facts, abounding in Language, in which the operations of this cause are unequivocally exhibited. I shall now proceed to state after the most concise manner, The different Elementary Characters, under which the Earth with its Accidents, &c. has been represented: and I shall likewise give a very Brief detail of some familiar examples, which have been acknowledged to be derived from the Earth and its Accidents, &c. &c. Though these instances are known and familiar to all; yet the observations, with which they will be accompanied, may serve to place them in a new point of view; and the reader

may at once understand, how a series of facts, with which he is most conversant, confirms in the strongest manner the principles of the hypothesis, which has now for the first time passed before his mind.

Our attention is first directed to the Elementary Character, which subject of inquiry in the present Volume — the Element 'R, 'R' c, &c. B, &c. L, N, &c. belonging to the Era, $(E\rho\alpha_1)$ Earth, Arvum, &c. In this volume I shall consider likewise the Elementary form ^C, ^D, &c. belonging to Esria (Εστια), &c. because the 'R is intimately connected with the class C, D, &c. though they may be regarded as constituting separate Elementary Characters; as I have sufficiently shewn in a former page (35, &c.) The other Elementary Characters will form the subject of discussion in future volumes of my Work.—I have shewn in the present volume, that the form 'NK, &c. is attached to the Element 'GG, &c., or G, and I have produced some of the words, belonging to it, as HANK, HAND, &c. which fully express the sense of the Element.—When it denotes Being, as in ANER, (Avnp.) Unus, ONE, &c., it either signifies the strong powerful personage—the HANKer, or what is ONE, an Individual, from being HANKed In, as it were, separate and distinct from others.

The Element B, F, P, V, W, R, C, &c. B, &c. L, N, will supply a separate discussion. The Greek Bor-Boros, (Βορβορος, Limus, Cœnum) from which Barbarous is derived, where the BR is doubled, in order to express the idea more strongly, and Phuro, (φυρω, Misceo, Commisceo Fœdo,) will shew us the sense of the Element. In Arabic and Persian BR is the Earth, &c. &c. In Welsh Bro is a Region, Country.—The English Bear—the Latin and Greek Fero, Phero, (Φερω,) to which we may add Pario, Paro, to prePare, the Hebrew BRA, To Create, Produce, "In the beginning God Created," &c. will shew us, how concordant Languages are in the Elementary sense. Let us mark the Pro in Produce, which brings us to a great Race of words, Pro, (Προ), Præ, Fore, Forth, &c. &c. which mean nothing, but to Stir up, To Bring or Cast Forth the Bor or Dirt. We see in Bear

÷

BEAR, BRING, BURDen, BIRth, &c., how accretions attach themselves to the Elementary form BR.

The Element M{R,} c, &c. B, &c. L, N will be examined in a separate part of my Work; though it is often connected with the form BR. The terms MIRE, (Eng.) MERda, MARga, (Lat.) MERgel. (Fr.) MARI, (Eng.), &c. &c., will fully shew us the sense of the Element. In For-mica and Mur-mex, (Μυρμηξ,) we see how the forms FR and MR are sometimes connected with each other. In MUR-Mur, Mur-Muro, (Lat.) Mor-Muro, $(Mo\rho\mu\nu\rho\omega)$, we have the Element doubled, as in Bor-Bor-os, Bor-Bor-uzo, (Βορβορος, Cœnum, $Bo\rho\beta o\rho\nu(\omega)$. To the Element MR belong, we see, those important terms Morior, which literally means To be reduced to MIRE, Mortalis, Mortal, &c. This Elementary form will shew us, how Water may be derived from the Earth, &c.—The Latin MARE is attached to the idea of the place full of MIRE, as we plainly see in the parallel English term MEAR MERE (Sax.), "A MERE, Palus, Lacus," as Lye explains the Saxon word.—I scarcely can recollect any term, which shews us more fully the humble source, from which Languages are derived, and the union of Languages, than a word, which now passes before my view. — The term MARGARITES, (Mapyapitns,) Margarita,) the Pearl, is supposed to be of Greek origin, and perhaps the frequency of the word in modern Languages may be attributed to In French and in English it is the name of a woman. this source. and in the former Language it means a Daisy. Yet this word is a Saxon compound, and signifies nothing but MEAR-GRIT, the Grit-Grout or Dirt of the MEAR or Sea, "The Pearl in the foul Oyster." In Lye a term, in the same column with MERE is "MERE-Grot. Margarita." Through the whole compass of Language MR signifies. what is Great, Illustrious, &c. and hence we have Homer, Maro. EMIR, IMPERO, EMPEROR, our surname Moore, &c., which signified originally the Raised or Abundant Heap of MIRE. In our comparative More, which will remind us of the Greek Murios, (Mupios,) we see more strongly the idea of Abundance, as it might be of a confused heap of MIRE. Hence the German Scholars will understand, why MAR signifies, according to Wachter, "Princeps, Dominus, &c. et " Mollis.

"Mollis;" i. e. the soft Mire—Stuff. The term Great, with its parallel term Gross, belongs to Grit, Grout, &c., for the same reason. I have opened a world of secrets indeed to the mind of the Reader, when I have informed him, that wherever he sees an MR, he finds nothing but the Fundamental idea of Mire.

A very important race of words is supplied by that Element, where the 'R is preceded by the Class C, D, &c., and succeeded by its ordinary attendants, as explained in a former page. This Element we may represent by C, D, &c. {R}c, &c. B, &c. L, N. We shall instantly recollect, as belonging to this Element the Latin TERRA, with its parallels produced by Lhuyd, TIR, DAIAR, DOR, &c. I dare not venture to entangle myself in this great Race of words; yet we shall readily call to memory the following terms, Tero, (Lat.) Terro, TRUO, (Τειρω, Τρυω, Tero,) TIRE, STIR, TAR-TAR, TAR-TAR-US, DIRt, Dregs, (Eng.) Trux, (Tovx,) Stercus, Sordes, (Lat.) Draw, Drag, Traho, Tread, Trot, Track, Trace, &c. &c. Gore, Core, Ground, (Eng.) Skor, (Σκωρ, Stercus,) Scoria, (Lat.) Cruor, (Lat.) Gru, (Γρυ, Quicquid minimum est, Sordes, &c.) SAROO, KORCO, (Σαροω, Κορεω, Verro,) Sarrio, Sarculum, (Lat.) Sore, Score, Scar, Grit, Grout, Grate, Scratch, Graze, Crates, (Lat.) To Card wool, &c. Scruta, Scrutor; and the terms for Noise, Cry, JARR, JARgon, Crack. CRoak, Creak, Grate, Shrick, Scrietch, Geruo, Kerusso, (Γηρυω, Sono, Κηρυσσω, Præconio promulgo,) GARRio, QUEROr, CORnix, Corvus, Korax, (Κοραξ,) Krizo, (Κριζω,) Truzo, Trizo, (Τρυζω, $T_{\rho i}(\omega_{\bullet})$ Strideo, &c. &c. If we should consider the R, as supplying the original Elementary character, from which these various forms are derived, the whole might be represented by C, &c. B, &c. R c, &с. в, &с. L, N, &с.

When the letters of the Class C, D, &c. are joined with each other, we have the form C, D, &c. }C, D, &c. The Latin Caco with its parallels under such various forms, as Chezo, (Xεζω,) the German Schiesen, &c. &c. will shew us, how the idea of Filth and Dirt belongs to this Element. Hence we have the Greek Kakos, (Kakos, Malus); and hence likewise, remote as they may seem, the English Cake.

CAKE, COOK and Cooup, &c. Coquere glebas *. The English Cut with the terms of Dispersion-Agitation, &c. Jacio, (Lat.) Shed-SHOOT—SHATTER—SCATTER, &c. and their parallels Seco. Scipi, SKIZO, SKAO, SKAZO, SKEDAO, (Σκιζω, Scindo, Σχαω, Σκαζω, Scarifico, Σκεδαω, Dissipo, &c.) will lead us through a wide sphere in discovering the sense of this race of words, which belong to the action of the Soc, &c. the Plough-share in Stirring up the Ground—the Terra Saucia vomeribus. I shew (p. 658,) that the Sack, about which we have heard so much, as pervading all Languages, is nothing but the Hollow-Cur-the Secata Terra; and that 'To SACK,' the verb, expresses the action of Curring this hollow out-up. In Scotch, Seuch is a Furrow, a Small Ditch; and Seuch, as a verb, means to Cur or divide. In Spanish, Sacar means "To Clear, To Free, To "pull or draw out," which is the sense of our word Suck, and SACHAR, is "To turn the Ground with a hoe or dibble," where we have the true idea: - SACO is a "SACK, or bag for carrying or trans-"porting any thing," and "Pillage, Plunder."— Under the form TG, DG, &c. we have Dig, Dust, Dike, Duco, (Lat.) Ducere Fossam,

^{*} It is marvellous to observe, how adroit boys are in perceiving resemblances, which are only to be discovered by those of a riper age by a great effort of the understanding. If the Instructors of our Youth would introduce to the knowledge of their scholars the Elementary doctrine here unfolded, they would be amply rewarded in the instructions, which they in their turn would receive from their scholars on this subject. The mind of a boy, not sophisticated by much or injudicious instruction, is precisely in the same state, as that of the inventors of Language; and so convinced am I of the superior sagacity of this order of enquirers not marred by age, or learning, as it is called, or a subject of this kind, that I should most willingly apply to such an oracle, whenever any difficult or doubtful point passed before my view. Though I was always well aware, that CAKE was derived from the idea of Dirt, as in the phrase, 'It is all in a CAKED state-"A CAKE of Dirt;" yet I once, for the purpose of curiosity, told a boy, not nine years of age, whom I had before a little exercised in the doctrine of Elementary Language, that CAKE belonged to the idea of Dirt, and desired him to discover the reason, when he almost instantly replied, 'Because it is all of a Lump.' It is scarcely possible to be believed, except by those, who have made the experiment, how much this doctrine of Elementary Speech assists the mind and memory of the learner in catching and retaining the senses of Words, which belong to an unknown Language.

Fossam, To make a DIKE; DIGETE, Proferre Sermonem, To draw forth words; ΤΕΙCHOS, (Τειχος,) the Ditch, To DIGHT or Dress Land: Τευςμο, (Τευχο, Paro,) Dikella, (Δικελλα, Ligo,) the instrument of Digging, &c. Diko, (Δικω, Jacio,) To Digg, or Dash out—about, &c.; the German terms Zeugen, or TSeugen, To beget, Ziehen, or Zieghen, "To draw, pull or Tug," which mean, To Dig, or Draw out, proDucere, will shew us, how the words under the forms SG, DG, become united. Under the Dental sound TA, DA, TAD, DAD, &c. we have the various terms for Father and Mother, which pervade so many Languages, (p. 479 and 838,) I shall leave the Theorists to decide, whether the Element DD, TD, &c. was derived from this source. can only observe, that the Element does not become efficient for the purposes of Language, till it has been referred to actions, which signify 'To Die up, or about the Dust, &c.'—the Teur—Deur, (the Terra,) (Wachter sub vocibus,) the Tethus, (Τηθυς, η γη,) מים TIT, "Mire, Mud, Clay," &c.

The Class C, D, &c. with the Labials M, B, &c. succeeded sometimes by the organical addition of the N or L, as C, D, &c. \ M, B, &c. \ \ n l, forms another important Elementary Character. The Reader perhaps would in some cases best understand the mode, in which words. beginning with different Letters of the Class C, D, &c. pass intoeach other, if I should consider the first Letter of the Radical as. expressed by different Letters of this Class, as TSCh, DSCh, &c, and thus the Elementary Character would be represented by TSCh, &c \ M. B, &c. \ N, L. This process has been explained in a former part of the present Dissertation (22, 23.)—To this Radical belong CAMPUS, Снамаї, (Канаї, Humi,) the Persian Zemi, Zemin, (сос) aDAM, (Heb.) Red Earth, the Sclavonic terms Summes, Zeml, (Russ.), Ch Thamalos, Χφαμαλος, Humilis,—Kube, (Κυβη,) Cyrele, Dapedon, (Δαπεδον, Solum,) STAMP, STEP, JUMP, STEIBO, (Σ τ ει β ο, Calco,) Τυρτο, (Τυπτο,) te-Tummai, (τε τυμμαι,) Doupos, (Δουπος,) •Dab, Daub, Dub, TAP, THUMP, THUMB, (Eng.) TYMpanum, TABOUT, &c.—We see in CAMPUS, how the form CM passes into CP. I have considered in a former work, the force of the Element CP, &c., in which I have shewn, that a great Race of words exists under this form,

The combination of the Class, C, D, &c. with N, followed sometimes by the Letters of the same Class, with L sometimes appearing as the last Consonant, constitutes another Elementary Character, as C, D, &c. \{ n\} c, d, &c. L. Among the Words of this Element we shall mark the following, Thon, (Χθων, Terra, &c.) Konis, (Κονις, Pulvis,) Koinos, (Κοινος,) &c. Cœnum, Cinis, Sentina, Sand, Stone, Shineles, Cinders, Sink, &c. &c. County, Country, Town, the DN, &c. in the names of places, so universally prevailing, as Lon-Don, &c. which Element is particularly visible and distinct in the Chinese Language, as Tien, a Field, Can-Ton, (which is precisely the same combination as the French CxnTon) Pe-Kin, Nan-Kin, &c.—Stan, (Pers.) Hindo-Stan, &c. &c. through the whole compass of Language;—Thon, (Germ.) Mud, Clay, Tunch, "Litura e calce, gypso, &c," as Wachter explains it; who in another article has Tunch, Tunica, though

nected with each other.—I did not however venture to hope, that I should ever be enabled to form such a System as the present, which I have already extended so far and so wide, and which affords, as I trust, such unequivocal testimonies of its efficiency and its extent.—I certainly did not imagine, that I should ever be enabled at once to assume this Universal—Fundamental idea, this secret master-spring of the whole, as the first principle in my System, to which I could readily refer all the other parts in the machinery of Language.

Though in my former Work the words are in general justly arranged in the due order; as belonging to each other; yet I have sometimes mistaken the idea, from which they are more immediately derived. I have supposed, that the Hand is an agent of some power in the formation of words, which longer experience induces me to consider as ill founded. There is another misconception likewise, appearing in this Work, which it becomes me to acknowledge, and to correct. I have supposed, that in many words, beginning with SP, as Speed, the SP is the Elementary part, which is not so. The S is generally an organical addition to the P, arising sometimes from a notion of Dispersion-Agitation, &c. connected with this sound, and the PD is the Radical.—The Reader will at once see, that the mode, in which the arrangements of the preceding Volume were made, however just and precise they may have been, under one point of view, is totally incompatible with the form, which the Work has now assumed, and according to which tit will be continued.—I have therefore thought it most expedient to consider the former book as a Specialen buly of the Elementary doctrine, and the present Volumes as the com-'mencement of a Work on Languages, in which all the parts will be attanged according to the same System.

quoted by Wachter, the word is brought to its humble and original station, the Ground; "Besmon gacherit enti gaSchonit, Scopis mun"datum et Purgatum." I have shewn (page 28,) that Sol belongs to Clear, Clean, Clarus, &c., and that these words are derived from the idea of Cleaning off the Clay or Dirt. Thus, then, Son is an object of the same Kin—Kind, or Matter with another; and the Sun is the Shining — Clear—Fair object, from which Matter or Foul Matter is removed. Thus it is, be assured, my good Reader! that Languages have been formed.

When the Labials precede the Class C, D, &c. with L sometimes following, we have the Elementary Characters M{C, D, &c. L, B, &c. {C, D, &c. L. Though the words in these Classes perpetually connect themselves with each other, yet I shall consider that Elementary Character, in which M is the first letter, separately from that, in which the other Labials are the first Radical Consonants. I shall do this, not only because the Words in both Classes are too abundant to be considered together, but because the M seems to be somewhat distinguished from the other Labials, as I have before observed, (p. 18.) I shall open a great world of secrets indeed to the view of him, who ardently enquires into the mysteries of Language, when I inform him, that all the ideas annexed to the Elementary Character MD, &c. will be found in our term MUD. We shall in a moment call to mind such words, which directly associate themselves with MUD, &c., as Muck, To Mute, Mist, Matter, Materia, Macus, (Lat.) Mix, Misceo, Mignuo, (Μιγνυω,) Moist, Madeo, Mudao, (Μυδαω,) Massa, Mass, Mash, Macerate, Macero, Masso, (Maσσω, Pinso, subigo,) &c. These words will almost lead us through the different ideas annexed to the whole Element. The universality of the term Mup will be ·understood, when we remember the name of Ægypt, Mis=Ram or Masar, which we shall own to be justly called the Land of Mun; and recollect moreover, that Sanconiathon has made the first principle of all things to be Mor, which some, as he tells us, consider to be Mud. Bochart explains the doctrine thus: "In ipso operis exordio legas " statim initio rerum fuisse πνοην αερος ζοφωδους, tenebrosi aeris spi-" ritum, quem appellat Χαος ερεβωδες.—Sequitur ex conversione " spiritus cum Chao emersisse Mωτ, Mor; id est, Limum aut aduosæ " mixtionis

÷,

" his epithets is AMITA. The Fo of China was the son of Mo-ya, and "one of his epithets is Om-o-to; and in Japan, whose natives are of "Chinese origin, the same god Fo is worshipped under the name of I could neither collect from any of the Chinese what the "literal meaning was of Om-e-to, nor could I decypher the eharac-"ters under which it was written," &c. (p. 468.) The same writer observes in another place, that the priests of Fo or BUDHA, "live in a "state of celibacy in large convents or temples, which the Chinese call " Poo-ta-la, evidently derived from Budha-Laya, or habitation of "BUDHA, this name being adopted by the Tartars, which the Chinese "have been under the necessity of following as nearly as their organs "of speech would permit." (p. 469.) The Budha or Pota La or Laya is literally the Layer of BUDHA—the place where BUDHA Lies or Lays, or is situated. The Chinese in most cases and the Hindoos in this case, have done precisely with the Element LG, to Lie, Lecgan, (Sax.) Legen, (Germ.) as the English have done in the present instance, who in their pronunciation have lost the last Letter of the Radical; and if the English had always done the same, their Language would have been as inefficient and unfurnished as the Chinese. which is probably the most vile and abortive attempt at Human Speech, now extant under the Sun, especially in its more cultivated. state, accompanied by the profound artifices of their profound and learned Illiterati. The sound of the second Radical in this word is however preserved in other Nations, as among the Teutonic tribes, the Latins and Greeks, Lego, To gather Legoo, (Γεγω, Lego, Colligo: Λεγομαι, Cubo, jacco,) which both mean, To Lay together, or. colLect, and in Greek the term signifies moreover 'To Lie down,' as in its kindred Lechos, (Aexos,) and the Latin Lectus, the place of Lying down, the Layer, Litter, &c.

The name of Amadis belongs to the Saint or the Deity Amida; and I suspect, that the Tale conveyed originally a Mythological meaning, as it has happened in various other cases, as in the story of Sir Tristrem, &c. &c. It is acknowledged in the History, that Amadis was a sacred name. "Darioleta took ink and parchment, and wrote upon it, this is Amadis, son of a King. It was the name of her "Saint

the form M D. It refers to the Ground in general, but chiefly to the Soft—Plastic, Lumpy—or swelling appearance of Mud or objects of that kind,—to the Low, Muddy Spot—to Mud in agitation by Treading on it—by Splashing, or reducing to Mud, Dirt, &c. so as to disperse— Dissipate—Destroy, as an action of Violence. We may obtain a sufficient idea of the sense annexed to the Element by the following terms, Pudge, Hodge=Podge, Bog, Puddle, Botch, Batch, Paste, PUDDING, FAT, POTTAGE, PACHUS, (Maxus,) PUTHER, BOTHER, SPHODROS. (Σφοδρος, &c. &c.—Potter, Figulus, Figura, Facio, Poieo, (Ποιεο,) quasi Pojea, Fashion, Feature, Vas, Vessel, &c.—Pot, Pitcher, Bason, Bottle, &c. Pays, (Fr.) Peasant, &c. Boden, Bottom, Pedon, (Πεδον,) Fossa, (Lat.) aByss, Buthos, (Βυθος,) Pit, Base, Vassal, Bab, &c. Pejor, Pessimus, (Lat.), &c.—Pat, Pit-Pat, Pass, Pad, Vado, BADINO, (Βαδιζω,) Baino quasi BAJno, (Βαινω,) PATeo, (Πατεω, Calco,) FOOT, Pous, Pod-os, (Hous, vodos,) &c. &c. Patasso, (Haracow, Com strepitu palpito, ferio) Pitulos, (Πιτυλος, Strepitus, qualis præsertina aquæ remo percussæ,) PADDLE, &c. PASH, ("Death all to dust PASHED,") Posh, Push, and Beat—(To Beat the Ground) BATTER. (Fr.), &c. &c.—The Reader will in general find little difficulty with the words under the Element BD, &c. when these ferms shall have been diligently considered.

I shall now examine the Labials, when they exhibit themselves as the Elementary Characters, either alone, with or without the breathing before the 'M, 'B, &c. or combined. with a Vowel breathing between them, with L or N, sometimes as the last Consonant. This Element may be represented by 'M, AB, &c. } L, N, or M}, M, B, Li, N, &c. It has afforded the name for Father, and Mother, Man — Woman, &c. Being, &c. through a great variety of Languages, PA, MA, PAPA, MAMA, &c. &c., and has been supposed to be derived from the Infantine Sounds, made by the Lips of Infants, MA — MA, &c. (See page 278, &c.) It is supposed moreover to have formed much of the materials of Human Speech.—I have no objection at all to this hypothesis, when considered after a certain manner, and to a certain extent; as I think, that I perceive terms, under these sounds, which may seem directly to conduct us to such an origin. The extent however, to which this influence proceeds it is difficult or rather impossible

Earth. We see, how k-Umi appears to connect itself with ch-Amai, and Ammos, (Aμμος,) with ps-Ammos, (Ψαμμος, Arena,) and this might lead us to enquire, whether the Element s} M was not derived from the simpler form 'M. On this point I can supply no opinion; and I have only to observe, that the Element Sξ M exhibits a Race of words, very different to that, which appears under the form 'M.

The form N\{M, B, &c. may be considered as belonging to different Elementary Characters, as to 'N and to 'M, by attraction of the organical M, as a postfix, N\{M, or of the organical N as a prefix, N\{M. The N\{M} is often connected with the form kN\{M, or KN\{M, P, as Nepios, (Nn\(\pi\)cos,) with kNave, or kNabe, (Germ.) a Boy. It sometimes likewise happens, that NM is connected with the form D\{B, as we must remember, that the Welsh in some cases use N for D, as ei Dhuw, his God; fy Nuw, my God; and thus we see, how Numer may be another form of Divus and Divinus, Nimbus of Divum, &c. This Element is of too complicated a nature to admit of a brief explanation. It is necessary to observe, that the form N\{C, &c. with a vowel breathing between the two Consonants, and not appearing before the N, belongs to 'NC and KN\{c, or kN\{c}, &c.

The Elementary form with the Labials before the N, as M, B. &c. \ N, may be considered as frequently connected with the form M, B, &c. C, &c., though it constitutes a separate Element. connection of these forms familiarly appears, as in Fingo, Fixi, FICTUS, PANGO, pePiGi, PACTUM, &c. The sense of the Element will be seen in such words which denote the Muddy spot, or something belonging to the Muddy, Watery spot, as FANGO, (Ital.) Mire, Dirt. Pond, Fen, (Eng.) Fundus, the Bottom, &c. The Hindoo and Gipsey PAUNE, Water, Fons, Pons, (Lat.) the Rising-up Heap of Mud or Dirt, as BANK, &c. serving for a Mound, Boundary, Fence. FINIS, &c. We see, that MUNDUS, the World, is nothing but the Mound; and hence we have the Latin Mons, Mænia, the Eastern MINNarets, the Celtic terms for the Rising Hill, the Top, &c. PEN, &c. Bounos, (Bouvos, collis, tumulus, clivus, acervus,) Bun, &c. (Eng.) Mundus, Clean, is derived from the action of clearing out the Dirt. by which the Mundus or Mound is made, ab eMundando, Fossam, Mungendo,

Mungendo, eMungendo, &c. The Element is applied to signify the Soft, tender form of Infants, Children, &c.; and hence the very word inFans, inFant, the Eastern Ben in Ben-jamin, &c. &c.; and hence we have the Celtic Bean, the Woman. In the Eastern Languages, the names for Son, &c. בנה BNH, is connected with that of Building, or BANKing up; and we see likewise the idea of "The form, pattern, "model," in which we are brought to the original sense of Plastic unaterials. Hence under MN we have such terms as Mens, Mind, Meaning, Mien, Menuo, (Μηνυω,) &c. &c. In the adjective MEAN we have the vile Dirt, and in the verb Mean and substantive Mien, we have its plastic form. In Welsh, Menu is "To make an impression, "to imprint, to work upon, to effect," and Menw is "Intellect, "MIND or Soul," as Mr. Owen explains these words, who refers us to MAN, signifying among other things, "A Spot or Mark," the adjacent words to which are MAN, "Small, little, petty fine; MANad, "a Mass, Lump," from whence we shall understand, that Minuo, MINUTUS, MINUOS, (MINUOS, Parvus,) MINUTE, &c. &c. relate only to little pieces of Dirt. We may have seen perhaps with eyes of joy the liquor Mantling in the goblet; yet we were little aware, I imagine, from what a lowly, or rather from what a foul spot this joyous term. has been derived. We shall however instantly acknowledge its humble origin, when we cast our eyes on "The green MANTLE of the "standing Pool," and remember, that "There are a sort of men, " whose visages do cream and Mantle like a standing Pond." (Lear, Othello.)

I have already unfolded the important Elementary form GV \ L \ c, &c. B, &c. L, N, and shewn, how it resolves itself into the parts C &c. \ L \ c, &c. B, &c. L, N, B, &c. \ L \ c, &c. B, &c. L, N, (p. 26, 27.) Among the words relating to Dirt, under the form C, &c. \ L \ c, &c. B, &c. L, N, &c. we have seen the terms CLAY, CLOD, CHALK, SLATE, SILEX, CHALIX, (Xali\(\xi\)), CALX, SLUDGE, SLUSH, SLIME, LIMUS, LIME, LUMP, CLAMP, GLOBE, GLEBE, SLOP, SLIP, SLIDE, SLITHER, GLIDE, &c. I have shewn, how all the forms, in which L appears, may directly pass into each other. Still however, the forms, in which the C, &c.

C, &c. appears before the L, and the Labials B, &c. appears before it, will be treated separately, and even the various parts of each form will be examined in different divisions of my Work, as Solum, Soil, &c. Tellus, Till, Toil, Tool, Tollo, (Lat.) &c.

I shall consider the Labial form M{L}&c. as more peculiarly distinct from the other Labial forms, according to the observations, which I have before made on the property of the Labial M, (p. 18.) Under ML we at once remember Mould, Mullock, &c., and we see in Mould, Form, Shape, how that idea is attached to the Plastic materials of the Earth. We shall see under this Element ML, Races of words, denoting what is Soft-Sweet, &c., and likewise actions of great violence and power, as signifying 'To reduce in a Mould state -In pulverem Redigere-Subigere.' Hence we have Mel, Meli, (Meλi,) Mollis, Mild, Malasso, Meilisso, (Maλaσσω, Mollio, placo, Meiλισσω, Demulceo,) Mulceo, Pell-Mell, Mawl, Mill, Mola, aMalos, aMalduno, (Aμαλος, Mollis, Αμαλδυνω, Corrumpo, ut Molle, Demolior, everto, solo æquo,) the Eastern name for a King, MALEK, from whence Moloch is derived; -de-Molior, deMolish, Molior, To Moil and Toil, "Dum cultores agri altius Moliantur Terram, " Plough it deeper," says R. Ainsworth. Under the Element B, &c. \L\subseteq &c. I have already produced, (p. 60,) some examples, as Bolos, Belos, Ballo, (Βωλος, Gleba, Ager, Massa, Bolus, Bηλος, Limen domus vel templi, quod calcatur, Βαλλω, Jacio,) where we have the Dirt and its Agitation, BALK, the Furrow; Pelos, (Πηλος, Limus,) Poleo, (Πολεω, Aro,) to Plough, &c. &c. Volvo, Voluto, Wal-Low, &c. with the metaphorical application of these terms, as in Bouleuomai, (Βουλευομαι, Consilia Agito,) 'To reVolve a thing in the mind.' I dare not venture to entangle myself in the consideration of these Elementary characters, so abundant in terms and ideas; yet the most superficial glance over Languages will directly shew us, how words are connected with this source. We shall immediately call to mind the terms of Violence, Agitation, &c., which belong to the idea of Ploughing or Stirring up the Pelos, Bolos, (Indos, Bωλος,) as Pull, Pluck, Vello, Vellico, Viole, Violent, Pell-Mell, Pallo.

Pallo, (Παλλω, Vibro, Agito,) Peel, Pillage, Pelt, &c. Hence we have the terms of abundance, as Dirt in Heaps, Polus, (Πολυς,) Full, Plenus; and hence the Foul Vile matter, &c.

- Thus have I arranged in the most brief and cursory manner the different Elementary Characters, and I have likewise shewn, whenever the case would admit, the prevailing and predominating ideas, which those Elements convey. Though no explanation can be more con-- cise than this detail on a subject of such vast extent; it must not however be considered as superficial; and brief as it is, it may save perhaps to the enquirers into Language whole years,—I might venture to say, even ages of misapplied and unsuccessful meditation on this involved and mysterious subject. I certainly may be permitted to make this - declaration, when I freely unfold the painful operations of my own mind on the same enquiry. When I now cast my eyes over Human Speech, with the result before me, which I have just unfolded to the Reader; nothing appears so plain and so obvious as the facts, which I have stated; and the words of Language seem to attach themselves - to these ideas, with the greatest facility and readiness. Yet I must observe likewise, that years of ardent and incessant meditation have passed away, before I was enabled to form those results, which are . here stated; brief as they are in the narrative, and easy, as they may appear, in the discovery. The words, under an Elementary -Character, were all involved in obscurity and confusion; until the Fundamental idea, and the leading notions proceeding from it, had been fully discovered. The Reader is not to imagine, that he will at once perceive in every word, belonging to a certain Element, some one of the prevailing ideas, which I have attributed to it; or that the discovery of the connection between the senses of a word and some one of these prevailing ideas is, in all cases, a task easy to be performed. He will not fail however to understand, from what a mighty labour he has been freed in the course of his researches. He has been supplied with the Fundamental idea, to which his words are ultimately to be referred; and he has been or will be furnished with the leading senses, into which this Fundamental idea resolves itself, under certain Elements, or in its general operation. He has nothing to do then but

but to study with diligence the various senses of his word, and to discover that peculiar bearing of meaning, under which it attaches itself to the Fundamental idea. In the present Volumes the Elements AR, AR c, &c. L, N, and AC, AD, &c. are examined. The other Elementary Characters will be considered in future Volumes of my Work, if a few years of life and hard-earned health should permit the Writer to pursue his labours with the same industry and ardor, which he has hitherto exerted in the study of Languages. The Elementary Character ^M, M{C, D, &c.—B, &c.{C, D, &c.—C, &c.{M, &c. are already arranged in manuscript, and wait only for that persuasive or imperious call, which authors so willingly obey in the demands of a kind and a curious Public. The future Volumes might be dispatched with more brevity, according to the model, which I have exhibited in considering the forms AR and AR M, B, &c. if I should discover, that the judgment of learned and intelligent men was favourable to that method. In the first opening of my Work, I considered it at once just and becoming to detail the acknowledged parallel terms produced by the Etymologists, together with their opinions on the subject, that the Reader might be fully possessed with all the popular information on the question, and be enabled to judge between the performance of the past, and the pretensions of the present. When this matter shall have been sufficiently decided; the writer may then pursue his own course according to his own plan; and a few Volumes would comprise some of the most important facts, relating to the other Elementary characters; if the method, to which I have alluded, should be adopted throughout the whole Work*.

I shall

^{*} Whenever we turn our view to the Theory of Language, and attempt to discuss those parts of Human Speech, which we may suppose to have existed before Language appeared; we must not wonder, that the mind should be lost and confounded in its enquiries. In considering the Elementary characters ^M, MR, MD, we see the idea of Soft, Watery substances, MIRE—MUD; and thus the Theorists might suppose, that the Liquid M, as the Grammarians call it, was the original Radical germ, according to the phraseology of some writers, from which these forms were derived. If the matter be considered

I shall now proceed to the second portion of the discussion, which was proposed to be unfolded in this division of the third Section.

I shall

considered under this point of view, these different Elementary forms might be represented by 'M, M $\{$ R, c, &c. If we add the other forms, in which the Labials appear first, with R, c, &c. following, as B \ R, B \ c, &c., denoting likewise the Soft Substance, 28 BOR-BOR-05, (Bochoco, Limus;) the Theorist might say, that the incipient Germ of all these forms exists in the Labials M, B, &c., and that the general representation might be AM, AB, M, B, &c. ER, C, &c. N. I have no objection to this Theory; and I seem to observe, that the power of M appears to predominate in various words, under these forms, as if the M should be considered as the original Elementary sound, from which the others were derived. We may suppose, if we please, too, that the sound of M originally belonged to the Infantine Language, MA, PA, &c., from which it was applied to other objects, as the MIRE, &c. If this should be the case, what shall we do with M, considered under the principle of Onomatopæia, as in Hum, &c.? Children form PA and MA. from the necessity of the organs, but men form Words from the principle of Onomatopaia. if that principle be true, from choice. Shall we say, then, that both causes have operated in the formation of words, beginning with the Labials? We have seen, that 'R is a predominating Radical; and such undoubtedly it is. How shall we consider then the forms MR, BR, in which we have introduced two Prevailing Elements or Germs, M, B, &c. and R? Shall we say, that the Element MR, BR, in its nascent state, may be sometimes considered as a compound, in which the force of both the Elements was impressed on the speaker—that in other cases, the R was sometimes an organical addition to the prevailing Labial M, &c., and the Labial M, &c. sometimes an organical accidental accretion to the R. We have seen, that the L is a great Elementary character, and so at must undoubtedly be considered; and it is accompanied likewise by those laws, which I have before described. But I have no objection to any Theory, which may pretend to give a solution for the existence of those Laws. Shall we say, that QV \ L is formed From an impression of the force, annexed to QV and L, on the principle of Onomatopæia? The L is called a Liquid, and it certainly appears to exert its influence most in expressing Soft Substances. Thus, then, the forms M, B, &c. { L, may be considered as compounds in which the impressions of both sounds, the Labial and the Liquid, passed over the mind of the speaker. By the original nature or use of the organs an aptitude has been acquired of combining these sounds, and when this is done without any impression of the force of the Labial on the mind of the speaker, the union of the Labial with the Liquid may be called corganical, as I have called it, without embarrassing myself with a case, about which I know mothing. This imaginary or real force of QV on the mind might be represented by the **Term QUAG** in QUAG-Mire. Shall we say, then, that the Elementary character C { C, or $Q\{Q$, is derived from the impression of QU, or Q, as we see it in QUAG. The TAp TAT, I shall recall to the remembrance of the Reader some of the acknowledged and familiar examples, in which the EARTH and its Operations—

TAT, the Infantine Language, may be a separate appendage to CC. For the same reason, that the Labials precede the L in expressing Soft Substances, so will they follow the L, as Limus, Labi, Slime, Slip. Now the S is supposed to have a force, by which it imparts to Words an idea of Dispersion—Scattering; and hence it is, if we so please to say, that S appears before and after the L, as in SLime, SLuSh, &c. Shall we say, that the Labials and the Liquid L, were originally applied to the Earth; as denoting the Soft Substances of Mun. LIMUS, &c. &c., that the accretions to these Elementary Letters were partly on the principle of Onomatopocia from design, and partly from accident dependant on the Organs or organical.—Thus in Mish-Mash, MISCEO we may hear, if we please, the compound of M and S, such as I have stated.—Shall we suppose then, that the union of S with ^R is of a compound nature, on the principle of Onomatop $oldsymbol{arphi}$ is $oldsymbol{h}$ -IRR, $oldsymbol{h}$ -ARSH, and that it exists as an independant Radical, denoting Dispersion-Agitation, Noise, as in HISS, OOZE-the terms for Water Wasser, &c. In Wasser we might imagine a compound to exist of the Labial and the S. Shall we imagine that the Element S \ M is a compound of S and M, on the same Principle, as in Swamp, &c. Thus then if we please, the AR, AM, B, &c. AL, may be considered as the original Elements, or Letters, from which the great Elementary Characters, such as I have stated, have been formed, by accretion, as of S, QV, &c. In the QV we have the important sound, by which the Labials pass into the Guttural. That is, if any Theorist wishes to maintain, that L, CL, SL, QV { L, have attached themselves to such terms as ILus, 1205, Limus, Lutum, CLay, GWALT, GLEBA, &c. on the principle of Onomatopocia, as expressing a substance of a Smooth—Soft—Smeary— OILY, ULiginous, nature, as something "thick and SLAB," as something on which men often move GLIBly, or on which they SLIP, SLIDE, or when considered in a more watery state, attended with Agitation and Noise, as something SLOPPY—as something all in a SLUBH-all PLAShing or sPLASHing about; if I say, any Theorist wishes to make this position, I can have no objection whatever to his Hypothesis. Our Theorist has then obtained every thing, which he proposes, and I shall have gained every thing, which I am desirous of possessing. He has a term existing from Onomatopæia, to which only he looks, from which he has drawn no consequence, and from which he can draw no consequence. till it is considered under one certain point of view, to which he has never once directed his mind, even in the remotest conception.— I have obtained, by the benefit of this Onomatopogia, if it has indeed thus operated, a term for the Earth-for CLAY, GWALT, &cc. to which alone I direct my attention—which I consider alone as the important part of the business, and from which, after the adoption of a few principles, I am enabled to discover innumerable facts, which are to be found through the whole compass of Human Speech. I can therefore have no objection to this or any other opinion, not repugnant to my Hypothesis, about

rations—Accidents, &c. has been found to exert their influence in the formation of words and ideas.—We shall all understand, as I before observed, what an abundant source of ideas the Earth would supply, if we contemplate only in a superficial manner the most familiar and apparent of the various Accidents—Operations—Properties, &c. &c. attached to it. Among these Accidents—Operations—Properties, &c. are those, as I before remarked, which belong to the action of Stirring it up.—Scratching it up—Tearing it up—Routing it up—Scraping— Grating upon it, &c. with various degrees of Agitation—Commotion— Noise, &c. in various modes and manners, by the feet—hands—instruments of men, &c .-- by the feet-snout-claws of animals, &c. by wind, water, &c. &c. Digging-Ploughing-Harrowing-Raking-Treading Stamping — Stepping — Walking — Drawing, Dragging; as likewise those, expressing the various objects to be found on or near its surface, with their state—form—consistency, &c. as Dirt, Dust, Mud, Muck, Mould, Mullock, Stone, Sand, Grit, Soil, Clay, Chalk, Slime, Slop, Slush, Clod, Clump, Lump, Glebe, Globe, Bog, Podge, Pudge, Puddle. Rough, Smooth, Hard, Solid, Soft, Wet, Dry, Moist, &c. We shall all,

about the nascent processes, by which the objects of my discussion have been formed.— Some obscure notions of this sort, on the power of the Letters, M, L, &c. have always prevailed, and such notions commonly contain the "adumbrata," if not the "expressa "signa veritatis."—These impressions of the force of Letters and sounds, as formed on the principle of Onomatopæia still exist and are still applied, either as derived from facts now remaining, which were originally the effects of accident, or as really attached to the nature of things. I have introduced these minute points, because the Reader may expect some discussion of this sort, and may be desirous of knowing, how the ordinary opinions on this subject, idle and unproductive, as they may be, accord with the new doc-. trines, maintained in my Hypothesis.—I must again and again repeat, that these processes, whether true or false, have nothing at all to do, with the facts, which are here produced.—If they could be proved to be true, they would not assist us, by their own value, in discovering a single Fact in the various relations of Words to each other.-I speak only of Language as it now appears, and is visible to our view; when it is capable of being an object of discussion, when the great Elementary Characters have been formed, such as I have supposed them, propagating separate Classes of words by their own power, though occasionally passing into each other, and attached to the Spet, from which they derive all their force and all their efficiency.

all, I think, agree, that the Words, which express objects and actions, such as I have enumerated, would be connected with the EARTH; or that Races of words, expressing these objects and actions, centering in the same spot, the Earth, would be related to each other, according to the laws attached to the organs, by which this relation is permitted—performed—and preserved.—According to these Laws, then, which have been so fully explained, Solum, Soll, Solidus, Clay, Chalh, &c. would belong to each other—Mud, Muck, Moist, Mass, would belong to each other, and so of the rest.

The Author is embarrassed amidst such materials of observation, which the whole Work is intended to unfold; when he attempts to select some peculiar topics for the purpose of a brief illustration. That material objects and actions should belong to Matter we shall all agree; and it has been perpetually said, that words, expressing abstract ideas, mental operations, &c. have been derived from Material objects; and yet with these obvious truths, universally acknowledged, and perpetually repeated, the Matter of the EARTH has never been selected, as the important or only agent, to which all these operations are to be attributed.—Where is Matter to be found but in the EARTH? Did man mount up into the Skies for these material objects, or did he seek for Matter in his own Limbs or those of other animals? All other Matter exists in, on, or arises from the Matter of the EARTH. Let us first consider into what various ideas the Soft Matter of the Earth extends itself. — That Mollis may belong to the Soft Mould we shall all agree, as it does belong to Soft Substances; and the various senses, to which the idea of Soft may be applied, we shall learn from the familiar and well known senses of Mollis, which according to that authentic interpreter, R. Ainsworth, signifies, "Soft, Pliant, flexible, "Calm, gentle, temperate, Mild, exorable.—Easy, facile, plain.— Sweet, pleasant, delightful—Weak, tender effeminate, womanish, "wanton, amorous; flashy.—Soft, easy, natural, done to the life.— "Sniooth tasted. Mellow, ripe. Lazy, restive."—We shall all agree, I must again repeat, that Mollis may belong to Mould, and if it does, we shall likewise agree, that Mould may indeed be applied to a great variety of purposes. Let us note the explanatory English terms

terms Mellow and Mild, which belong to the same race of words. It will now be understood, that Mollis is applied in its original sense, as relating to the Moulding of plastic materials, in the following passage, where the use of the word has been thought somewhat extraordinary, "Excudent alii spirantia Mollus æra.—As Mellow, belongs to Mould, so does Maturus, to Mud.

We shall all agree likewise, that the idea of Stirring up may belong to the Agitation of Dirt, Pulverem Excitare; and thus MoLior might belong to Mould, as Mollis may. But whether it does or not, it is certainly applied to the action, of Stirring up Mould, as Moliri 'Terram, To Plough,' and the sense of Stirring up, connected with that action, certainly passes into a variety of meanings, which are apparently very different from such an action. R. Ainsworth explains Molior by "To move, or Stir. -To toil, Moll, or take pains and "labour about.-To heap up, throw, cast, manage, order, pro-"perly, some great thing.—To build, or raise, properly a great struc-"ture.—To rig.—To prepare, or make ready.—To enterprise, or under-"take; to attempt, or endeavour, to do a thing; to design, meditate, project, plot, or continue." The Lexicographers refer Molior to Moles, "The Mole, a pier, or Dam;" where we are directly brought to the Heap or Mound of Mould. The terms Pier and Dam belong to their respective Elements PR, DM, for the same reason, as I have shewn Mound and Mons to belong to the Element MN. Among other senses of Moles we have Grandeur, Cumber, and I shall shew, that Grandeur, Grandis, Grand belongs to Ground. Lexicographers refer Moles to Mola, A Mill, Meal, &c. where we see, that the MILL is that, which reduces substances to Movlo, and MEAL is that, which is reduced to a substance of MOULD nature. Molo means To Grind, Molor, To be Ground, says R. Ainsworth, where it is impossible not to see, that GRIND belongs to GROUND.

The Latin Molior will teach us another operation of the Human mind, and will shew us, that the idea of Stability, and that too of the most intensive kind, as connected with the greatest and most ponderous objects, may be derived from the idea of Agitation—Moving or Stirring about, &c. "To Build, or raise up a great Structure." The

same

same union of ideas takes place in Structure and STRuo, 'To pile or 'raise high,' &c. which latter word is acknowledged to belong to Storeo, Stroo, Stronn-umi, (Στορεω, Στρωω, Στρωννυμι,) Sterno, "To Throw, "or Strike down," to which some have justly referred the English STROW, and they might have added the English STIR likewise. Thus we perceive how the conStruction of the sentence, now before the Reader, "Struere orationem," may belong to the action of Throwing up-about, &c. We shall at once see from the senses of STRUO, which relates both to the Heap and the Structure, how our terms STORE and STORY, Contignatio, "The first STORY," may belong to each other and According to my view of the question all these to STRuo, &c. words must be referred to the Terra, which perhaps we shall see more fully in the English THROW. Again let us mark, that STRUO has the metaphorical sense of Mental operation, which is annexed to Molior, as 'To Contrive,' which R. Ainsworth has used in the explanation of both these words. We know, that conTrive belongs to Tero, Trivi, "To rub, to break, to bray, bruise, or stamp," another form of the Greek Teiro, (Τειρω, Vexo, adfligo, infesto, molesto, domo, subigo, &c.) which brings us to the English Tear, Tire, &c. No one, I think, will doubt, that Tero belongs to Terra-' Ad Terram 'vel pulverem redigere.' Let us mark the terms Moil, Molesto, Molestus, belonging for the same reason to Molior.—In the Phrase Terere tempus, we see how something which can be applied to Dirt, or to Reducing things to Dust or Powder, may belong to Time; and we see in the word Time, which is acknowledged to be attached to Tempus, Temperies Tempero, "To Temper, mix, or mingle, &c."— Temperat Arva; — To Temper Mortar, &c. that the same object may belong to the same spot, under another mode of conceiving the materials, found upon its surface.

The Latin Colo will show us to what various purposes, an operation relating to the *Earth*, may be employed. R. Ainsworth explains Colo, "To Till, or husband, Ground.—To deck, trim, or adorn.—To Dress, "or Prune.—To inhabit, live, or dwell in.—To worship, to revere.—"To Love, favour and esteem.—To make court to, to be attached to, "or to wait upon one.—To make love to a woman.—To exercise, "practise, or study.—To follow and use.—To maintain, preserve, and "keep

"keep."—Here we see, that the various ideas of Respect and Reverence in its highest state, of Mental application—of Ornament—Dress, &c., belong to Tilling the Ground. We must not wonder, that ideas, bearing so opposite a sense to the original action, which may appear to some of so homely a nature, should suffer no stain from the baseness of their origin. This impression speedily vanishes, and the idea comes into the mind free from any foul adhesions of its original matter, though still impregnated with its original force. We adopt the same word in the most opposite senses of Dignity and Vileness; nor is the more dignified sense at all debased by the more foul application, in which it may be sometimes used. The word Reverence is, we know, a term of the greatest dignity, nor is its force weakened or sullied by an ignoble use, to which it is sometimes applied. We shall all, I think, agree, that the Latin Colo belongs to Solum, just as Till may appear to belong more immediately to the form Tellus. The explanatory term Dress belongs, I imagine, to Dirt; but whether it does or not, it equally illustrates my hypothesis. It is applied to the Cultivation of Land—Cookery, and to Ornament or Cloathing. In the phrase "Dum Moliuntur, dum Comuntur annus est," we again see, how elaborate Ornament may belong to Ploughing the Ground.

Thus we know, that Ornament—Finery—Spruceness—Cleanness, &c. may be derived from Dirt; and this union of ideas is effected in various ways. I have shewn, that CLean, CLear, &c. is attached to CLay, from the idea of CLearing or CLeaning a surface from Dirt or CLay, just as we talk of Mudding a Pond; and we find in the same manner, that Purgo, Purus belong to Pus, Puris, Foul Matter. I have shewn, that Mundus, "Clean, neat, fine," &c. is derived from the idea of removing Dirt-ab eMundando, eMundendo, where in Mungo. we unequivocally see the idea of Filth. In the Greek MIAINO. MINTHOS, (Μιαινω, Inquino, conspureo, Μινθος, Stercus, Merda,) we see the form MN for Dirt, though in the term Miaino, quasi MIAJno, we see the forms MJ and MN. The preceding terms to MINTHOS. (Μινθος,) in my Greek Vocabulary are MINDax, MINTHa, (Μινδαξ, Suffimentum quoddam, Muvba, Mintha, Herba suavis odoris,) where, I think, we shall agree, that these terms for the Incense, and the strong

strong or sweet-smelling Herb MINT were taken from the scent of the Dung. I must here observe, that the terms for sweet odors are commonly derived from the idea of Strong smells, which belong to the strong smell of Foul matter. It is allowed, that perFume belongs to Fumus, which is no very pleasing exhalation; and it is impossible, I think, not to acknowledge, that Fumus, "Smoke, Reek, or Fume." has some relation at least to its companion Fimus. The Latin Polio. another elevated term to express what is Polished—Polite, exhibits on the first view the idea of Scratching or Rubbing on a surface, so as to remove something, which we might venture to call Dirt; and its attendant Polluo but too plainly points out the base origin, from which it is derived. Thus we see, how Polish and Pollution are allied to each other. We shall own too, I think, that Lima, a File; and LIMO, "To File, to take away what is superfluous, to Polish," belongs to Limus, for the same reason. The File is that, which removes · what is Foul.—In Pollen, Fine flour, or the Dust that flieth in the "Mill: also in the small Dust of any thing," we see another purpose, to which the idea of Dust or Dirt may be applied. While I examine these words Polio and Pollen, in my Latin Vocabulary, I cast my eyes on Polus, "The Pole, the end or point of the "axle-tree, whereon Astronomers imagine Heaven to be turned.-"Heaven," which is acknowledged by all to be derived from Poleo. (Πολεω, Verto, Verso, Aro); and thus we see, how the Poles of the Heavens,—and the Heaven itself may be derived from the lowly action of Ploughing up the Ground. I shall shew in the same manner, that the term Heaven is taken from the raised Up Heap, as it might be of Dirt-Mud, &c.

There is another mode of conceiving the substance of Dirt, from which the idea of Ornament—Finery, &c. may be derived; and this mode of obtaining the idea of what is Fine—Gaudy, &c. consists in supposing a surface to be smeared over with Dirt. This we shall imagine to be an extraordinary mode indeed of arriving at the sense of Finery, or a shewy appearance, as it is called; yet nothing is more certain or more common. In our English term Dawb, 'A mere 'Dawbing,' we begin to perceive, how this idea may be obtained,

but

(Λιμναζω,) to Smear, belongs to Limne, (Λιμνη,) the Lake, for the same reason.

That I am right in my origin of TIN-STANNUM, as denoting the STAIN or TINGE smear'd or spread over a surface, will be unequivocal from considering the parallel Celtic terms Stean-Stan-Yetaen, &c. Mr. Owen explains ySTAEN, (TAEN,) by "That is spread out, that is "Sprinkled over, a STAIN, also TIN;" and Mr. Thomas Richards produces as a Welsh word, corresponding in sense, with the English TINCT the term ySTARNiad. In English even the word STAIN is applied to the most gawdy exhibition of Colouring in the expression STAINEd Glass. We shall now understand, that all these terms for the gawdy TINCT bring us directly to the English Tinsel. I cannot quit the Greek GANOO, (\(\Gamma\)ow,) without reminding the Reader of another parallel term, which actually signifies 'To make White-by spreading Dirt 'over it; i. e. to White-wash,' as we express it. This term is Koniao, (Koriaw, Calce induco, calce dealbo, Cerusso, Fuco,) &c., which is only another form of Ganoo, (Γανοω.) The Latin Color, "A natu-"ral Colour, a Die or blue.—The outward shew or beauty of a "thing;" Coloro, "To Colour or die," still belongs to the idea of Soil-'To Soil,' &c.; and thus we see, how these words are attached to Colo, and Solum. Let us mark the term Die, Deag, (Sax.) Color, where we perceive the sense of a Dusky, Dusty Spot, from which it is taken. In Greek, Chroa, Chros, and Chrozo, (Xpoa, Color, Xpus, Color, Χρωζω, Coloro, Colore, Tingo,) relate to Colour, Colouring; and that these terms are derived from the idea of the Die or Dawb. will be manifest, when we remember their kindred words CHRAO. CHRaino, (Xpaw, Commodo, Oraculum edo, Imbuo, Tingo, Pollua, Xoairo, Coloro, Contamino,) which actually signify To Foul. shall now see, that CHRao, of which CHRio, To Smear, is only another form, belongs to Chora, the Ground, (Χραω, Χριω, Oblino, Χωρα, Terra, Ager.)

If the terms signifying, what is Clean—Ornamented—Fine, &c. can be derived from the Dirt of the Earth, we shall not wonder, that the terms, denoting what is Foul,—Vile, Rotten, Decayed, &c. either in Matter

Courage — Finery — Goodness are united in our words Brave, Bravery, Bravado, &c. — But the sources for terms representing Good and Bad qualities are so numerous, that they cannot be exhibited in a brief detail.

The action of Stirring up-Agitating-Breaking up or to pieces-Routing up, &c.—Scratching up—Tearing up—Vellicating—Scraping up or upon—Grating upon, of reducing to Dust or Powder, &c. &c.. under various modes, accidents and purposes, with various degrees of Commotion-Agitation-Noise, &c., by Ploughing up, over-Harrowing up-Raking up, over-Digging up, Treading upon, &c. the surface of the Earth, has supplied Language with the Terms, which express those Accidents-Operations, &c. of Routing-Scraping, &c. and the other Accidents and Operations of a similar kind, as likewise with a Race of words, which belong to a metaphorical application of such actions. Under this Race of words are included Terms, which express Excitement-Agitation-Commotion-Noise - Disturbance - Annoyance, actions of Force and Violence, as applied either to Matter or to Mind, in various modes and with various degree of intensity and effect. The imperfection of Language does not permit me to express at the same time the cause and the effect—the active and the passive state; but the Reader will understand, that these actions of Power and Violence include in them likewise the ideas of Weakness and Imbecillity, by passing from the Agent to the Patient, concerned in the same action; as To Break, To be Broken, To Rout-To be Routed,-To Harrow, To be Harrowed; and hence we have a Race of words, denoting a Broken - Disturbed - Weakened - Harassed -Distressed state, from the slighest suffering of Irritation-Vexation and Annouance, to the most extreme condition of Desolation and Destruction. In considering the origin of these words, we cannot separate moreover the appearance of the matter on the surface of the Earth from the state of that Matter, when excited or acted upon by the various Accidents, &c. attached to it.—Among these appearances we have the Earth in a Rough—Cloddy state—in a Dry—Gritty—Stony state—in confused disorderly heaps of Dirt, in a Mish-Mash, Muddy State, if I may so say, Mixed and jumbled together; all which appearances co-operate in forming

senses, which it bears, will serve to shew, what ideas may be derived from that source. "Solicito, To Stir, or Dig up, properly the Ground." To Disquiet, to busy, to trouble, to disturb, to make Solicitous.—"To Solicit, to provoke, or to be in earnest with, one; to importune, to press, to be urgent, to intice one to do a thing.—To sue, or pray, "for.—To allure."

I beseech the Reader to cast his eyes over the various senses of Ago, Agito, Subigo-Exerceo, and Verto, Versor, which do actually relate to operations on the Ground; and from hence he will learn. what a vast variety of ideas may be attached to that action. It is not necessary to prove here, what I shall prove on another occasion, that such was the original application of these words, from which the other senses are derived; as it is sufficient for our present purpose to shew, that these various ideas are really connected with this action, and therefore, that such an action may be a source, from which these various ideas can be derived. R. Ainsworth has detailed the modes, in which these words are applied, after the following manner. Ago, "Properly to drive gently, or forcibly.—To do or execute any "business.—In both which senses it is translated to the mind, as upon "due attention may appear, in the manifold use of this verb.—To talk "of.-To mind, or observe.-To require.-To take care of.-To endea-"your.—To sue, implead, or indite.—To apply, or bring to.—To " move. or shake.—To disturb, or disquiet.—Absol. To live.—To act, "or personate.-To act, or shew, the part of.-To treat or deal with. "To plead.—To exercise. —To count or reckon.—To manage, or "govern.—To bargain, or contract, for. It is often Englished by the "verb of the following noun." In the phrase Agene Terram aratro, and in Vervactum, quasi Vere-Actum, "Verno tempore Aratum," we see its application to the Ground; and the term Acror means, we know, "An Actor, Agent, or doer.—A bailiff, or comptroller.—An Actor in "a play.—A Pleader at the bar," where in the Bailiff of the Farn we are brought to the same spot.

I shall shew, that the *Pleader* and the *Player*, with their kindred terms, denoting *Action*, the *Plier*, and the *Plodder*, belong ultimately to the *Plougher*. If *Pleader* has a Teutonic origin, as some imagine.

" to Ply. To use, to practise, to profess.—To instruct or train up.— "To Till.—To occupy." Exercer frequens Tellurem "To pass, or " lead.—To vex and trouble.—To keep from idleness, to find one work. "-To employ, or lay out to advantage. Exercised, employed, inured "in any thing. Also tormented, troubled, teazed, vexed, turmoiled, "wearied. Also tried and approved." In the same Lexicographer are the following interpretations. VERTO, "To turn.—To transform. "To change.—To dye, or discolour.—To overthrow, to cast down, "to turn upside down.—To dig or cast up." Quo sidere Terram VERTERE Conveniat. "To borrow of one to pay another.—To im-" pute.—To translate.—To be changed, or altered.—To happen, fall "out, or prove. Verso, To turn often.—To tumble up and down, "or over and over.—To stir, or turn, about." "VERSARE Terram. "Plough it."—To "To drive from place to place, as shepherds do, &c.—. "To manage.—To weigh, to consider.—To perplex, tease, or fret.— "VERSOR, To be turned.—To be employed or exercised in a thing.— "To Converse, to stay with one.—To be. VERSUS, Turned, changed.— "Overturned, ruined, abolished. Propense, inclined. VERSUS, A "Turning again at a land's end. A Verse." I shall shew, that v-Erro and ex-Erceo belong to the Element ART, and mean 'To 'EARTH up,' &c.

I have produced these examples from the detailed explanation of an humble Philologist, that the Reader may at once learn what nobody has known, from that which every body does know, at least is supposed to know.—Our interpreter has faithfully detailed the senses of these words; and in this explanation, well studied and well understood, will be found the most abundant materials of knowledge, for developing the vast variety of ideas, which, as we now see, actually are connected with, and which therefore may be derived from that impressive and important action of Stirring up the Ground. All this, I say, every one is supposed to know; and yet the Reader, I trust, will grant, that of all this nothing was known, when he considers the various senses, attached to these words, under the impression of the train of ideas, which I am now unfolding. It was from the careful and constant perusal of words like these, which were acknowledged

have seen, that terms for Cookery have been derived from Dirt, as in Dress, 'To Dress the Land,' and 'To Dress Meat,'-the delicious CAKE, belonging to the CAKE of Dirt, and the very term Cook to Coovo, which is applied to the Ground, "Coquere glebas." In Greek, the most exquisite term for Condiment is derived from Sprinkling with Dung; and in our own Language our good Huswives are accustomed to Powder, or, as it might have been, to Dust or Dirt over their pickled meat. The tub, in which the operation is performed, is called the Powdering Tub, which in our ancient Language has been applied to a very different purpose. The Greek term, to which I have alladed, is Ονθηλευω, "Proprie Fimo agrum aspergo, deinde cibes ex-"quisite condio, quia ut fimo agri fæcundiores, sic cibi condimentis "delicationes fiunt." I shall shew in the course of my enquiries, that Condio,—Candy, &c.—Sugar—Candy, belong to Conum, Mud. In Candy we see the idea of a lump, as in Cake; and we shall now acknowledge, that it is not derived from the Island of Candia, as some imagine.

Our names for Dignities are derived too from the humblest objects. We have already seen the origin of King; and most of the other names for rank and authority are derived from a source equally lowly. I dare not venture far into this discussion, as it would lead usthrough a wide range of Human Speech. Yet we shall at once re-. * collect, that Duke, Dowager, and Duchess belong to Dux and Duco, " which bring us to the Drawer or Digger of a Ditch, Ducere Fos-The term Doctor, the Teacher, is the Ductor, the Leader, or Guide, which brings us to the same spot. The Marquis and the Count are the personages, who belong to the MARCHES of a Country, and to the Country, or District itself. It is agreed, that the term CLERGY belongs to KLEROS, (Κληρος, Portio agri colono data,) the aflotment of Land. The dignity of Chancellor is acknowledged to be. derived from the Cancelli "Lattices or windows, made with cross "bars of wood, iron, &c. Fenestræ Clathratæ," as R. Ainsworth explains it; and whatever may be the origin of the Cancelli, the explanatory, parallel Latin word Cluthratæ, (fenestræ,) will shew us, from what an humble source such a term might have been derived. The term

that Scribo, and Grapho, (Γραφω,) belong to Scrape, Grave, Grub up, for the same reason. I shall likewise shew, that the English WRITE means to Wroote, Root up the Earth.—The man of Profound knowledge still belongs to the Fundus, "Land or Ground, the bottom."-The man of Erudition to Rudus, or Rubbish,—of Investigation, to the Vestigium, the Print of the Foot-Step on the Ground, &c. &c. If he Revolves the most abstruse subjects in his mind, he is only Wallowing in the Dirt, (Voluto, 'To Roll, To Wallow, to toss, To think of, Revolve, and toss in one's mind,')-if he Scrutinizes a subject with the most piercing eye, he is merely Routing into Scruta, "Old trash or "trumpery."—Even the Grounds of his argument, on which he prides himself so much, are not formed of nobler materials, than the Grounds of his tea or his beer, or even than the Ground, on which he treads:—If he be a man of brilliant Conversation, or if he be Conversant, or Versed in various Arts and Sciences, he is still associated with the Plougher or Digger of the Field, (Versor, Terram, Versor,)—if he be a man of Cultivated mind, or if he duly Exercises his faculties, he is still engaged in the same employment: If he should write the most charming Verses, he is advanced no further than the turning of the furrow, (Versus, A turning again at a Land's end,) and if even those Verses should contain the most Sublime conceptions. "thoughts that breathe, and words that burn;" even then, he is but just emerging above the Mire, (Sublimis, qui Supra Limum.)—Nay. the writer, and the Reader, who produces and peruses these truths on the humble origin of Languages in the Preliminary Dissertation now before them, have their attention fixed on an object, which is derived from the Sower of the Field, and the Mud before their doors: (Dissertatio, Dissero, à Sero, and Præliminary from Præ, and Limen, a Limus.) This derivation of Limen from Limus; as denoting the part exposed to the effect of Dirt, will surely not be doubted, though it is not acknowledged by the Etymologists, who among other conjectures derive indeed Limen from Limus, though not as signifying Mud, but as denoting "Obliquus, transversus, &c.

1 shall close these remarks by producing the various senses annéxed to the derivatives of Verto, Verso, which as we have seen, express the action

awaken the attention of my Reader to the contemplation of the subject, and to prepare his mind for the admission of that new train of ideas, which is involved with the principles of my hypothesis. Whatever sentence may be passed on the final success of the Writer in establishing his System; the preceding facts will certainly prove, that remoteness of application, in the sense of words, from an original idea cannot be urged against the probability of my hypothesis. It is impossible to conceive purposes and applications more various and remote from each other than those, which we have seen exhibited in the examples, above produced; and yet it is acknowledged, that they are all actually connected with the action of Turning up the EARTH, whether the original idea be or be not annexed to that action. Let us for a moment suppose, what is most probable, that such is the original idea, and we may take occasion from hence to offer an observation, which will be perpetually applicable in the progress of these enquiries. We perceive, that in these various applications of VERTO, and its derivatives, the original idea has totally disappeared, and that these words in their ordinary use are wholly remote from the action of Turning up the Earth, just as if they had never been derived from that action, or never applied to it. Now if this original sense of Verto had been obscure or lost; and if we had possessed no artifices; by which we could recall the word to its original spot or action; all our diligence might have been exerted in vain, when we endeavoured to discover the Fundamental idea. The Reader must be prepared to expect the same difficulty and embarrassment, when I am employed in examining a Race of Words in the prosecution of these Enquiries. He is not to imagine, that I shall be enabled at every moment to produce absolute proofs of my hypothesis, by shewing, that the word, which I examine, is or has been actually connected with the Earth.—The Reader can expect only to find such evidence, as: the subject will admit, and when he reflects for a moment on the nature of the question, and considers the infinite variety of purposes, most remote from the Earth, to which the terms of Language are applied; he will not wonder at any deficiency of absolute and direct proof in the support of such an argument; but he will rather be astonished

I fear, be found deficient on occasions, where that deficiency was least to be expected. It will be seen, I suspect, that I have omitted to cite many passages, most known and familiar, which would have been singularly illustrative of the truth of my hypothesis. In the curiosa felicitas of the Poet and the Orator, whose combinations are formed from the influence of strong and just impressions, we see the original idea annexed to words; and from hence we are enabled to draw the most apposite and striking examples of their primitive meaning: If I have omitted sometimes to avail myself of such examples, the omission is not always to be attributed to the negligence or the ignorance of the Writer. It must be remembered, that as these enquiries are directed to the consideration of words under a certain point of view, which was never before presented to the mind; innumerable passages may have escaped from our recollection, even in those writers, with which we have been most conversant from our earliest days, if such passages have not actually passed before us, since that period. when the very words, which they are calculated to illustrate, have become the objects of our enquiry. The deficiencies of this kind, whatever they may be, will hereafter be readily supplied without effort, and without search; and the intelligent observer will furnish to himself, in the course of his reading, every assistance, which can be derived from this source.

The System, which has been delivered in the present Dissertation on the nature of Languages, would open into a wide scene of important and profitable meditation. Many of these topics however would best be understood at the conclusion of our labour, if that period should ever arrive, when the various facts, relating to Human Speech, shall have been fully unfolded, and firmly established. We may bear however in our remembrance some of those topics, on which our attention should be peculiarly fixed; and as we proceed forward in our research we may apply our discoveries to the elucidation of that mysterious process, by which kindred Languages have been thus generated, propagated and preserved, over the face of the Earth. We might enquire, and we cannot but enquire, with the most anxious curiosity, whence it has arisen, 'that the same Elementary Language has been thus

thus universally diffused,' we might almost venture to assert, through every region of the Globe. We cannot even attempt to give any answer to this question, till a great body of facts shall have been collected respecting the nature of that Elementary Language, about which we so anxiously enquire. The Mosaic origin of the Human Race from the same common Parents might enable us to solve a portion of this difficulty; yet the diffusion of a Common Elementary Language is attended with other circumstances, which that fact alone will not be able to explain. We shall discover, that this diffusion of a Common Speech is involved likewise with the propagation of common opinions—of common practices, rites and ceremonies, civil and religious. It should seem too, that all this has been effected by a peculiar process; just as if one great nation had been once spread over a wide extent of the Globe-advanced in arts and sciencesunited and communicating with each other by one common Language, by the same Religious observances, and the same Civil Institutions. Of a nation, thus great and powerful, existing in the most remote periods, no traces are to be found in those Histories of the Pagan World, which are considered as the authentic records of Mankind, and which some are disposed to reverence with peculiar and exclusive idolatry. From these teachers or their disciples nothing can be learnt. which will assist us in accounting for the various facts, exhibited by Language, in the most striking and impressive manner. We must look to higher authority for the solution of these difficulties; and the Mosaic History will alone supply us with the narrative of that extraordinary event, to which all our discoveries in Language at once lead us, with direct and irresistible conviction. We must ascend to those distant periods in the Revolutions of our Globe, when according to the first and greatest of Historians, "The WHOLE EARTH was of ONE " Language, and of one Speech."

Every portion of the narrative, which is connected with this great fact, is pregnant with the most important truths; and must be studied with all the diligence of an enquiring and ardent spirit, if we are desirous of prying into the secret history of remote periods; which is indeed deeply buried, though not, as I conceive, wholly and irrecoverably

coverably lost, under the ruins of the ancient World. The plain of Shinar, propitious for the arts and inventions of its inhabitants,—the preparation of Clay for brick, and of slime for mortar—the building of a City and a Tower, are all allusions to important events, which are confirmed by dark though impressive traditions, universally diffused among the nations of the Earth. The name of Shinar, whatever may be the spot to which it alludes, is deeply involved in the extraordinary event, by which it is accompanied, and perhaps some future enquirer will discover in this significant term the name of the great tribe or nation, who may lay claim perhaps to that universal Language, which was spread over the Earth.

I have supposed on a former occasion, (p. 20,) that the CELTS originally signified "the workers in CLAY, the artists, who made "bricks for building - vessels of Pottery," &c. &c.; and hence Builders - Architects - Potters, &c., or, in other words, that they signified "the Illustrious persons, who were the great Artists of the "Ancient World." I have supposed, that the Titans have a similar meaning, and belong to such words as TITANOS, (TITANOS, Calx. gypsus,) &c. &c. If, then, we should venture to conjecture, that the CYNTS, a division of the Celts, still belong for the same reason to Cœnum, &c. &c., as denoting the workers in the same materials, we shall see, how all these ideas co-operate to the same end. We ought to remember, that a great nation still exists under the name of the Cyns or Chinese, who still derive their glory from works belonging to the same matter of Conum, or Clay; and that they have afforded to the Western world a name for the most familiar and elegant of our utensils, which is derived from their own country. Aneurin, in his Gododin, has divided the Celts of the British Isles into "Cynt. " a Guyddil, a Phrydin." If we should still proceed in the same vein of observation, and imagine, that the Phrydins—the Britains. &c., were possibly derived from the same source, the illustrious nation, who now bear the name and speak the Language of the PHRYDins, would inform us, that in their Language, PRIDD or PRIZ denotes "Mould, Earth, &c. r PRIZaur, A Potter; PRIDD-faen, a "Brick, or burnt tile; PRIDDgist, Potter's Earth," &c. &c. We cannot but see, how the g-Yddils, or the Iddils may bring us to the ATLS or the ATL-antidæ; and if this process should be just, we are advanced to a great point indeed. In the fate and fortunes of the ATLANTIDÆ the wonders of the Ancient World are deposited; and the Reader will certainly be astonished, when his mind is occupied. with this train of reflexions, to learn, that in a Chinese tradition referring, as it is supposed, to the subversion of the Island of the ATLANTIDÆ, it is recorded, that "Maurigasima was an island famous " in former ages, for the excellency and fruitfulness of its soil, which " afforded, among the rest, a particular Clay, exceedingly proper for "the making of those vessels, which go now by the name of " Porcelain or China ware." (Davies' Mythology of the Druids, p. 149.) This is assuredly an extraordinary tradition, as relating to the ATLANTIDÆ, which will appear still more extraordinary, when we remember, that among the personages called ATLANTIDÆ were ATLAS, one of the Titans, and his brother the great worker in Clay, &c. Prometheus. I have observed in a former page, (105,) that Perion, the father of Amadis, "is the chief personage in a transaction, belonging " to the greatest Physical event, which ever happened on the face of our "globe;" and that this event, according to the Chinese, is connected with the plastic materials of Mud or Clay. Now in the Chinese tradition, the personage, who was saved from this Deluge, was king PRIRUUN, who escapes to China in a ship, where his arrival is still celebrated by a yearly festival. Even Mr. Bryant has seen, who has indeed, (I must solemnly declare it,) seen nothing even of that, which he professes most to have seen, even Mr. Bryant, I say, has understood, that the Greek Phoroneus, who lived in the time of the flood, &c. &c. belongs to the character of Noah; but he has not seen, that the Phonon in Phononeus is the Peinuun in the Chinese tradition. It must have been seen by many, as I suppose, that iNACHUS, the son of Oceanus and Tethys, bears the very name of Noah, וות NCH, Noach; but the Reader will be astonished, I conceive, when he finds, that PHORONEUS is the son of Inachus. The adepts in Druid lore will now understand, that Phoroneus, the instructor of mankind in various institutions, belongs to the Pharaon, the Higher Powers, whose priests

priests are the *Pheryllts*, "the first teachers of all curious arts and "sciences." (Davies, p. 215.) The term Pharaon seems to belong to the Welsh Peron, "That causes or bids to be, the Creator, "the Lord," the corresponding verb to which is Peri, "To cause, "to effect, to make, to do; to bid, to command;" as Mr. Owen explains them; and we shall now see, that Peri is nothing but the Latin Paro, "To make, shape, or contrive—To prePare," &c. &c. This glimpse into the dark regions of tradition will shew us, that a new system of Mythology must be conceived and executed, before the secrets of the Ancient World will be unfolded to our view.

The pursuit of this enquiry would lead us into a wide field of discussion, and as the purposes of the present Dissertation are, I trust, sufficiently fulfilled; it is necessary that these Preliminary observations should be now brought to their conclusion.—I must again appeal to the curiosity and the candor of my Reader; that he may proceed forward in these investigatious, with a mind willing to learn, and pliant to conviction. Every thing conspires in a work of this nature to place the writer in a perilous situation, which demands a patient hearing and a favourable reception.—To develope, in an intelligible and conciliating form, a new and remote train of ideasto combat ancient prejudices, either obstinately maintained or duly defended,-to bring the mind back again in periods of learning from a sophisticated state, to plain principles and simple conceptions—to be entangled in the toils of Language, unable to explain her own processes; these are all great and important difficulties, which an enquirer into subjects like these, is at every step of his progress destined to encounter, and bound to overcome. Even the private and the personal causes. which may impede a writer in the prosecution of his Work, should not be wholly forgotten in our estimate of his performance; and though they cannot be produced in extenuation of ignorance and inability, they may at least be admitted as pleas of palliation for the lesser faults of omission and deficiency. A seclusion from spots, which are most favourable to researches of this nature, from Libraries. where Languages are recorded, and from capitals, where they are spoken, must have assuredly operated in diminishing the richness and variety

Human Speech,—the mode, by which Man communicates with Man, he might indeed exult;—He should then think, and he should then feel, that the fleeting period of his life had not passed away like a shadow, a mere void in the creation, without some record of his existence. He should then think, and he should then feel, that, from the recesses of his solitude, he had supplied to posterity some memorial of a mind, at once ardent in its search, and humble in its views, which looked not too high in its pursuit of Human Knowledge,—that object and acquisition of the creature Man;—but which followed with patience—with perseverance and with zeal, the obscure vestiges of Truth, on those lowly spots, where Truth is sometimes contented to abide, remote from the lofty heights, at which Sages are wont to gaze, in vain and unavailing contemplation.

a state of rest.—From 521 to 651, as referring to Agitation.—From 876 to 902, Terms for Noise under both forms AR C, &c., and C, D, &c. are considered.—From page 903 to 1126 the Elementary form R { c, p, &c: N, L is considered. This may be studied as a separate discussion, affording the fullest evidence of the truth of the Doctrine.—The Elementary Character ^C, ^D, &c. is considered from page 96 to 136—from 164 to 270, as referring to a state of rest.—From 652 to 875, as referring to a state of Agitation.—From 271 to 520 the Elementary Character AC, D, &c. is considered, when it is applied to express Pronouns, Verbs of Being, as It, Is, &c. &c. This part may be regarded as entirely a separate Dissertation on the Composition of Verbs, Pronouns, &c.—the nature of Particles, &c., which the Writer has laboured with infinite care and diligence:—Here the original idea, whatever it may be, is in general lost, and the secondary one only prevails. If the Reader wishes at the same time to understand all the evidence respecting the original idea, he must proceed to page 825, &c., where the terms of Stability are compared with those relating to Agitation. I shall conclude by observing, that the whole Work should be read regularly through, according to the actual arrangement of the Writer; though it may be afterwards studied with advantage in separate parts, according to the mode, which is here detailed.—The imperfection of Language, and the necessity for brevity may lead to an ambiguity, which it is necessary to explain.—When I say, that Languages are derived from the: EARTH, I mean, that Languages are derived from that spot, which we commonly: call the EARTH; and here I think nothing of the peculiar Elementary Character, under which words appear. When I say, that words under the Element 'R, R C, D, &c. belong: to the EARTH; I here suppose likewise, that such words belong to the spot, called the EARTH, though I mean moreover, that the very term EARTH is itself a word included in the same Race. In one case, EARTH denotes only the object, but in the other, while it expresses the object, it must be considered likewise as a word, bearing a certain form, distinguished from other forms.

^{*}By the symbolical representation 'R. R. A.—C, D, G, &c., as the *Element*, or *Elementary* Characters, constituting a certain Race of words, belonging to each other and distinguished from other races, I mean to express those words, which appear commonly under the three following forms. 1st, Such words, of which R is the first Consonant, and the next is one of the Consonants C, D. G, &c., with a vowel breathing before the R, as ARCA, &c. This form of words I represent by AR.—C, D, G, &c., or, as it might be written, ARC, ARD, ARG, &c., where the mark

mark of the Caret A is used to express, that a vowel breathing is wanting, or is to be supplied before the R. 2dly, Those words, which like the former have R for their first Consonant and for the next one of the Consonants C, D, G, &c. but which have no vowel breathing before the R, as RACE, ROAD, &c. This form I express by R.—C, D, G, &c., or, as it might be written, RC, RD, RG, &c. 3dly, Those words, where the r does not appear at the beginning, but which have for their first Consonant one of the Consonants C, D, G, &c., with the vowel breathing directly preceding C, D, G, &c., as Occa, &c. This form I express by '.--C, D, G, &c., or, as it might be written, ^C, ^D, ^G, &c. In the first form, ^RC ^RD ^RG, &c., a vowel breathing may or may not exist between the R and the C, D, G, &c.; but in the second form, RC, RD, RG, &c., it must exist in order to constitute a word. In all the forms a vowel breathing may or may not exist after the C, D, G, &c. Consonants C, D, G, &c. are sometimes found single, and sometimes combined with each other. Words under other forms are included within the pale of my Hypothesis, when those words are supposed to have directly arisen from the forms here exhibited, as h-EARTH, y-ARD, w-ARD, g-UARD, where the h, y, w, and g are considered only as different degrees of aspiration annexed to the vowel breathing. The other forms, which, in the process of change, I conceive to be derived from the same source, will be duly unfolded in the progress of these discussions. adopted the terms Element and Elementary, as applied to these Consonants, because I consider the Consonants to be the Principal, Fundamental, Essential or Elementary parts of Language, by which Races of words are formed and preserved, separate and distinguished from each other.

CHAP. I.

SECT. I.

^R.---C, D, G, J, K, &c.

Names for the Ground, Land, Soil, &c. corresponding with the English word Earth, as Erde, &c.—Terms derived from the idea of the peculiar or appropriate place --- the Enclosed or Secured Spot of Land or Earth--- The Earth, by way of distinction, as y-Ard, &c.: hence, words denoting Enclosures of Security, Safety, and of Defence, as g-Arden, &c.; or Security, Safety, and Defence, as gu-Ard, w-Ard.--- Enclosures in general, of any kind, and for any purpose, as Erkos, (Equo, Septum,) Arca, &c.-- Words signifying that which Enfolds, Keeps in or off; Stops, Represses, Compresses, Constrains, &c., as Eirgo, (Equo, Includo,) Arceo, &c.: Words denoting what is Held or Confined within a certain Spot, Enclosure, &c., as

Names corresponding with EARTH. (Eng.)

AIRTHA. (Goth.)

EARD, EORD, EORTH, EORTHE,
YRTH, g-EARD. (Sax.)

ERDE, ERDA, ERTHA, h-ERDA,
h-ERTHA. (Al.)
j-ORD, j-ORDEN. (Dan.)

ERD, AERDE, EERDE, &c. (Belg.)

ARZ. (Heb.)

ARK, ARG, &c. (Chaldee, Samaritan, Syriac.)

EARDIAN, EARDIGAN. (Sax.)
Habitare; i.e. To be on a certain EARTH or Land.

ORDON. (Al.) Habitabat.

h-EARTH, h-EORTH, h-ERD, h-EERT, &c. (Eng. Sax. Germ. Belg.) Focus; i. e. The Ground, or EARTH.

THE term EARTH appears in the various Dialects of the Teutonic, and in some of the Eastern Languages, as the familiar name for the Ground, Land, Soil, &c. &c.; or, in other words, the Element, ^R. R. ^.---C, D, G, J, K, Q, S, T, X, Z, supplies, in these Languages, a familiar term, corresponding in sense and Elementary characters with our word EARTH. These various terms for the EARTH are acknowledged by the Etymologists to belong to each other. In Junius, the parallel terms for the EARTH are "Goth. AIRTHA. A. S. EORTHE. Al. ERDA. HERDA. "ERTHA. HERTHA. Dan. JORD. B. AERDE, EERDE." And in Skinner they are thus represented: "EARD, EORD, EORTH, "GEARD, —Dan. JORD, JORDEN, Belg. ERD, AERD, AERDE, "Teut. ERD, ERDE."

In Hebrew, ארץ ARZ is the appropriate and familiar name for the EARTH; as will be understood by learning, that it is adopted

adopted in the opening of the Book of Genesis. "In the " beginning God created the Heaven and the EARTH," ארץ ARZ. In Chaldee ארק ARK and ארע ARG are used for the EARTH. I have represented the letter y Gnain, as it is called, by G, because it is commonly supposed to possess this power. some cases, however, the sound of G in this Hebrew letter becomes weak, as it does in the English Might. In the Samaritan and Syriac the name of the EARTH may be represented by ARZ and ARG. In Arabic ارض ARZ is likewise the familiar and eppropriate name of the EARTH. These Hebrew and Arabic terms are acknowledged to belong to the English word EARTH and its parallels. Mr. Richardson, in his Arabic Dictionary, gives us, among the terms for EARTH, ارض ERZ, ارض AROOZ, ARZeen. ارضير، ARZeen. The preceding article to URUZ, " Earths, Grounds," in Mr. Richardson's Dictionary, is ERUZ, "Firm, steady, rooted, fixed. — Collecting or contracting اروز الارز one's self. — Avaricious, covetous, tenacious, اروز الارز " Enuzu'l'Erz, Extremely tenacious." We shall not doubt that ERUZ, Firm, steady, &c., belongs to URUZ, the EARTH, (" Thou "Firm-set EARTH!") From the idea of what holds Firmly, derived as we see from the "Firm-set EARTH," the Arabic word passes into the sense of Avaricious; and thus we can understand, at the very commencement of our enquiries, how the name of the EARTH may supply ideas, which on the first view appear very remote from the original source. Again, let us note the term jet Erz, adopted in the phrase "Eruzu l'Erz." Arabic jel Erz or Urz means, says Mr. Richardson, "the "Pine, Cedar;" and in other senses we have "EREZ, A tree "whose timber is very hard. Aris. — Firmly rooted (tree)." We here see, that the name of the Cedar is taken from the idea of what is Firm, whether as applied to its property of being a Firm

a Firm hard wood, or of being Firmly Rooted. We shall not doubt, I think, that Erz, Firm, Steady, belongs to Eruz, Firmly Rooted, &c., and that they both belong to URUZ, the EARTH. Thus we see, how senses, apparently the most remote from each other, as Avaricious, and a Cedar, may belong to the same idea, as Firm, Firmly Holding, &c., and how that idea may have arisen from the name of the Earth. In Hebrew, та ARZ is the Cedar, and ARZa is the name of this tree in Syriac. — These examples will shew us, what difficulties the Enquirer has to encounter, if the intermediate idea, by which remote senses are connected, should not be visible, and that patient investigation can alone enable us to discover those secret links, by which words are connected with each other. The Reader will likewise from hence learn, that remoteness of signification in words affords no impediment to the Hypothesis, which supposes that races or families of words may by some secret bond of union be ultimately related to each other.

I have recorded the Hebrew ארץ ARZ according to its original and genuine representation in Hebrew, without the vowel points, which were afterwards added for the purpose of attempting to convey with more precision the sound of words, as they were enunciated by the inventors of those points. The Reader, I imagine, well knows, that various Eastern Languages, Hebrew, Arabic, Chaldee, &c., are written without vowels; or, in other words, that the vowels, which exist in those Languages, are of little importance in discharging regularly and familiarly those offices, which the vowels in our own Language, and in others of a similar kind, commonly perform. In the present instance we have no symbol to represent a vowel breathing between R and Z, which has sometimes been heard in the pronunciation of this word, and which is recorded, when the vowel points are adopted. The Hebrew ARZ has been represented,

among various other modes, by AREZ, or ARETZ. Mr. Parkhurst has represented the supplied vowel by the Greek s, and the whole word by Earsj. The Reader will perfectly understand, that the Hebrews and Arabs, &c. have acquired no art, unknown to Europeans, by which they can speak a Language without vowels: He will instantly perceive, that this rejection of vowels refers only to the writing of a Language, and he will learn from this practice of the Eastern nations, that the symbols employed to denote the vowel breathings are not absolutely necessary in recording words, or in conveying the sounds annexed to those words. Every one knows, that in reading our own Language we pronounce a word at once from the idea, which the whole symbol excites in our minds of the object intended, without stopping to consider the force of those various parts of the symbol, which attempt to represent the sound of the word. If then Consonants are of themselves able to excite in our minds the idea of a certain word, representing a certain object; they are able likewise to suggest at the same time the sound, by which that word is enunciated. This practice of the Eastern nations will prepare our minds for the admission of an important maxim, without which all our researches would be vain and futile, -that vowels may be considered as of no importance in recording Languages; but that the Consonants alone are the efficient parts of words, by which Human Speech is propagated and preserved.

The principles of the Theory, on which this work is founded, have been fully explained in the Introductory Dissertation, with which I suppose my Reader to be already acquainted; yet it may not be improper to state, on the present occasion, a general idea of the doctrine which has been there unfolded. The Reader will perceive, that though the name of the EARTH in the Dialects of the Teutonic has assumed various forms, as AIRTHA, EARD, EORD, YRTH, ERD, ARRDE, j-ORD, &c. &c., yet that

the letter R, together with the consonants T, D, still remain, and we know, that these Consonants have been ever acknowledged by Grammarians as Cognate, or such Consonants, which from their affinity familiarly pass into or are Changed into each other. If we proceed however to examine the examples before us, we shall perceive, that other Consonants pass into each other in conveying the same idea of the EARTH. We find, that in the Eastern Languages, the name for the EARTH has been represented under various forms, as ARZ, ARES, ARETZ, Arz, Erz, Arooz, Arauz, Uruz, Ark, Arg, &c.; where we perceive, that Z, S, K, G are to be added to T, D, and that they are all to be considered as Commutable into each other, in representing the same idea of the EARTH. The letters h, j, g, preceding the vowels at the beginning of some of these words, as h-Ertha, j-Ord, g-Eard, may be considered only as different degrees of aspiration annexed to these vowels. The h after the T in Earth, &c. represents only another sound of T, and the en in j-Ord-en is an appendage to j-Ord, which is the simple genuine form. Thus then, if we should be desirous of representing the familiar name for the EARTH, as it appears in various Languages, in an abstract point of view, we ought not to express it under this or that peculiar form, as EARTH, ERDE, &c., but we should say, that it might properly be represented by any of the Commutable Consonants, T, D, Z, S, K, G, with R before them, as 'RT, 'RD, &c. I have before stated, that by the mark A prefixed to the R, I mean to express, that a vowel breathing is wanting, or is to be supplied before the R. I have justly omitted the vowels employed in expressing these words, because, as we see, they have been all adopted without any marks of distinction of one vowel from another. I have thought it necessary to employ a mark for a vowel breathing before the R, in order to represent, that a vowel breathing has been used in

all the terms for the Earth in that position; and I have omitted to employ that mark in other places, because in those, places, as after the R and after the T, D, &c., it has sometimes appeared and sometimes not appeared. We know, that the letter J is only the softened sound of G, as pronounced in George—that Q is only a Ch, or G with the sound of u after them, and that X is only a combination of KS, CS, &c. Thus we might venture to observe, that the familiar name of the Earth, in the dialects of the Teutonic and some of the Eastern Languages, may be represented in an abstract general way by AR.---C, D, G, J, K, Q, S, T, X, Z. We perceive, moreover, that this mode of representing Earth, &c. would perfectly distinguish it from all other names for that object, as from the Greek Chthon, (xhw,) the Latin Terra, where the T precedes and the R follows, Tellus, &c. &c.

The Reader, whom the principles of Science have taught to understand the importance of symbols, and of converting particular into general representations, will readily admit, that the simple and obvious artifice, which I have here adopted, of expressing in general terms the name of the EARTH, may open into a new world of ideas, and may perhaps enrich the imperfect art of Etymology with a series of truths resembling the deductions of Science. When the artificial method of Algebraical notation, by applying symbols and using general for particular expressions of quantity, had been once adopted; it might have been safely predicted, that a new Science was invented, which would at last conduct the understanding to truths the most important and remote. In adopting this artificial mode of representing generally the name of the EARTH by ARC, ARD, ARG, &c., I have in fact only applied the Eastern manner of expressing the same object, as Arz, Arg, &c. The A, which is here used, only represents, what my symbol ' does, the existence of a vowel breathing in that place; and is not considered as expressing the

sound of any particular vowel; since a vowel point is added to A in Hebrew, &c., in order to represent the sound of the particular vowel, which is there applied.

We may well imagine, that an object so important to man as that of the EARTH or Ground would supply a plenteous source of ideas, and form a great race of words expressing those ideas. This we should all readily imagine, on the first view of the question à priori; but the wide sphere of action, through which that object has extended its influence, will be understood only by an attentive consideration of the discussions in the present volume. We shall at once admit, that words, which express Operations performed on the Ground, as Digging—Ploughing— Harrowing, &c., or which denote some Accident or Property belonging to it, as that which is Low, Inferior—the Base— Bottom - Foundation - Firmness - Stability - Solidity, &c. &c. &c. would be all naturally derived from some words, signifying the EARTH or Ground. I shall shew, in the progress of these Enquiries, that all the explanatory terms, which I have here adopted, are directly taken from certain words, under different Elements, denoting the EARTH or Ground. The terms Solidity and Foundation are acknowledged to belong to Solum and Fundus, the Ground; and I shall shew in the present volume, that for the same reason the Greek Anche, (Aexi, Principium, Exordium, Initium, Fundamentum,) the Foundation, and the Latin O 160, belong to our Element ARC, &c. the EARTH, ARK, &c. &c. From Anche, (Apxy,) are acknowledged to be derived Anch, as ARCH-Bishop, &c., Architecture, &c. &c.; and thus we see how Languages have been formed. We may well imagine, likewise, what a variety of terms would be derived from the ideas, which I have above exhibited, by metaphorical allusion. The strongest term, which we have in our Language, to express the most violent state of mental Solicitude, is taken from an Operationperformed

performed on the Ground, as 'To HARROW up the Soul.' I shall shew, that HARROW belongs to EARTH, HERTHA, &c., and that the second consonant of our Element ARC, &c. has been lost. This is manifest by comparing it with the parallel terms in other Languages, which the Etymologists have produced, as HARSE, HERCE, HERSE, (Fr.) HARCKE, (Germ.) The form of the French HERSE will shew us, that the French word HARASSER, and the English HARASS, are derived from the metaphor of tearing up the EARTH with the HARROW or HERSE. instance of HARROW will convince us, that, even when by the accidents of mutation the important part of our Elementary form has been lost, we are still not destitute of resources, by which we can ascertain the relation of a word to its true origin.— Let us mark the explanatory term above adopted, Solicitude, derived from Solicito, which is acknowledged to signify, in its first sense, " To Stir, or Dig up, properly the Ground," Solum, Citare. This instance would be alone sufficient to illustrate, how ideas most connected with mental sensations may be derived from the Ground.

Simple and obvious as the idea is, that the name of the EARTH would be attended by a numerous class of Derivatives; yet we do not find, that the Etymologists have profited by a notion so manifest, as it should seem, and indisputable. We shall scarcely find, in the progress of these discussions, a single instance, in which the Etymologists of our own Language have derived words from the term EARTH. If the Reader should imagine, that in my Hypothesis this idea is extended beyond its due bounds; he will at least, I trust, be of opinion, that it is a conception of considerable promise, and that an abundance of examples must necessarily exist, in which this cause has exerted its influence. It will be at once understood, that these Derivatives from the name of the EARTH will be discovered by the same record.

record, which was adopted in ascertaining the affinity between the EARTH and its parallel terms AIRTHA, &c.; namely, by the existence of the same set of Commutable Consonants, and of the same or similar ideas. The record of the origin, from which the Derivatives spring, will be as faithfully preserved in the forms of these Derivatives, as in the forms for the various names of the Earth itself; though considerable difficulty will oftentimes arise in discovering the similar ideas, by which the original and derived object are connected with each other. The sense, which the Derivative bears, will oftentimes appear entirely remote from that of its origin; and all our sagacity will be required to discover the common notion, by which their affinity is recognised. I have before exhibited the same sentiment, as it cannot be too deeply impressed on the mind of the Reader. It will be allowed by all, that the name of the EARTH, AIRTHA, &c. &c. would supply various Derivatives in those Languages, in which it was the appropriate and familiar name for that object, as in the Dialects of the Teutonic, and the Hebrew, Arabic, Chaldee, Syriac, and Samaritan: but we shall find, that it has extended its influence to other Languages likewise, in which it does not appear as the appropriate and familiar name for the Ground, but in which a certain Affinity has been acknowledged to exist, as in Latin, Greek, the Dialects of the Celtic, &c. &c. The wide sphere of Human Speech, through which this Affinity extends, and the nature of that Affinity, will be understood only from an attentive consideration of the succeeding discussions.

The Consonant r, as it is enunciated by different organs, has sometimes the strong sound, annexed to that letter; and sometimes it serves only to lengthen out the sound of the vowel breathing, by which it is preceded. Thus we are unable to distinguish, without some effort of the voice, between Father and Farther. In general, the strong sound of r is lost in Farther,

but sometimes we find it attached to Father; and thus we see, how it is lost by one mode of expressing a vowel breathing, and gained by another. Our ordinary pronunciation of the r may be considered only as the preceding vowel sound lengthened, or sometimes as producing little or no effect, and might be safely represented by vowels, as in Border - Order - Recorder -Must-Ard - Former - Farmer - Corn - Eastern - Short, &c. &c., which might be written Bawder, Auder, Recawder, Must-ad, Faumer, Faamer, Cauen, Easten, Shawt, &c.; and this mode of representation, which applies to innumerable other instances, would express with sufficient accuracy the force of r in the ordinary sound of these words. The strong sound of r is in my organs expressed by an effort of the voice, which I seem to perceive likewise in the enunciation of others. This effort is sometimes so marked, as to appear painful in the speaker, and to become disgusting to the hearer. Robert Ainsworth thus describes the strong and the softened sound of R. It is formed, he says, "in the upper part of the throat, but so vibrated by « a quaver of the tongue, and allision on the teeth, that it makes a sound like the grinning of a dog, whence it is called the canine letter: but the Romans, on the contrary, give it so soft and lisping a sound, that in writing they sometimes omitted it, calling the Etrusci, Thusci, or Tusci; and especially so before S; thus Ennius writ Prosus, Rusus, for Prorsus, Rursus." From these observations we shall not wonder, that the Elementary form ^RC, ^RD, &c., or ^rC, ^rD, &c. passes into ^C, ^D, &c. Under the form ^C, ^D, ^G, &c. we have Estia, (Eotia,) Ago, Occo, (Lat.) Hough, &c. It is not to be understood, that every word under the form ^C, ^D, &c. has arisen from another word under the form 'RC, 'RD, &c.; but that these forms familiarly pass into each other, and belong to each other. It should be observed, however, that each form, though united together by the the closest affinity, may be considered as generating, by its own Elementary powers, if I may so express it, a Race of words peculiar to itself, and distinct in some measure from the other. The Reader will be enabled only from the examples to understand the force of this remark, and to comprehend the mode by which one Race of words passes into another; and yet each Race may be regarded under one point of view, as a distinct class, preserving at the same time the marks of difference and the record of similitude. It is thus in the natural world, that Races of animals, which are allied to each other, exhibit at once their appropriate characters of distinction and of affinity.

and A vowel sometimes exists between the R C, D, &c. in the Elementary form ARC, ARD, &c., as in the Hebrew Aretz, &c.; and when in this case the vowel breathing before the R is lost, we have a Race of words generated, belonging to the form RC, RD, &c., as Rus, (Lat.) Rout, ROOT, ROAD, and the term, which I find it convenient so often to adopt, RACE, &c. &c. &c. We see, that in the different senses of the word RACE, as the ROOT or Stock from which a family springs, and the Course performed on a ROAD, we are brought to the Ground, as the common Spot, to which these two senses belong. In such terms, as ORUZa, (Opuζa,) ORYZa, RICE, and ERUThros, RED, we see how the form AC, AD, &c. passes into the form RC, RD, &c. We shall readily understand, that the idea of Colour would be taken from the Ground, or EARTH, as exhibiting Earths, or Soils, of various Colours. I shall shew in a future volume, when I consider the Element CL, SL, &c., that Soil, (Solum,) Colo, and Color, belong to each other. It may be observed of the form RC, likewise, what we have remarked concerning the form ^C, ^D, &c., that RC, when once existing, would generate a Race of words distinct in some degree from the class, from which it was derived. We perceive that the two forms of the Element RC, RD, &c., and ^C, ^D, &c., do not directly pass into each other, and are only related through the medium of the form ^RC, ^RD, &c.

My hypothesis is, that all these forms supply a Race or Races of words, which directly or more remotely belong to such terms as EARTH, AIRTHA, &c.; and that they relate to the EARTH, or to the Operations, Accidents, and Properties attached to it. By the expression Directly or more remotely I mean, that the words under those forms, either directly themselves denote the EARTH, with the Operations, &c. attached to it; or that, however various may be their senses, or however abhorrent those senses may appear from the ideas connected with that object, they are all ultimately to be referred, in degrees of distance more or less remote, to the EARTH and its Operations, &c., by that process of change, under which ideas and words pass into each other. I have stated, that by the Race of words under these forms, ^R.R.^.---C, D, &c., I mean those words, which have RC, RD, &c. with or without a vowel breathing before the R, for their first Consonants, and likewise those words, which have C, D, &c. for their first Consonant, with a vowel breathing before the C, D, &co. I have said that the Elementary Consonants are the first Consonants in a word, because I consider the word to be in its simple state, before the process of composition has taken place, and because they are commonly found in that state.

When I affirm, that words under the forms R.R.A.---C, D, &c. are thus related to each other; I must be supposed to mean, that the RC, RD, &c. and C, D, &c. in these words represent the true Elementary forms, that is, that they are themselves significant, and not derived from any other source or Element. Thus in Astonish, Etonner, (Fr.) Erstaunen, (Germ.) the Ast, Et, Erst, do not represent the Elementary form AR.R.A.---C, D, &c.; nor are they of themselves significant,

but they are compounds of A, E, Er, and ST, T, a portion of the Element ST N, SN, TN. I have placed the mark — over the ST, to shew that ST does not represent an Elementary form, of which S is the first Consonant, and T the second; but that ST is to be considered as a combination of sounds attached to the first Consonant sound in an Element, of which S, or T, &c. is the first Consonant, and N the second. In such terms as Assist, Assisto, which are compounds of Ad and Sisto, the As or Ad belongs indeed to our Element, and would therefore be once considered in its proper place; but the second S is to be regarded as a portion of the Element SS, ST; and therefore the Ass in these words does not belong to our Elementary form, nor are the words, to which it is attached, among the objects of our Hypothesis.

We have seen, that EARTH, AIRTHA, &c. have assumed the forms h-Ertha, j-Ord, j-Orden, g-Eard; where we may perceive, as I have before suggested, how the simple vowel breathing before the 'RT, 'RD, &c. passes through the aspirate breathing h to those stronger aspirations, which are represented by Consonants. I shall consider in another volume of my Work, a great Race of words which appear under the Element G-RT, J-RT, &c.; and it will there be discussed, whether these forms ${}^{\wedge}RT$ and $g = {}^{\wedge}RT$, or G = RT, originally belonged to each other, by the process which is here exhibited. Whatever might be the process, from which the Element G-RT arose; we may observe, that when it was once formed, it may be considered as totally distinct from any other Element, and as generating a race of words peculiar to itself. I shall discuss only in this volume those words, under the forms h^-RT , i^-RD . g-^RD, &c., which directly connect themselves, as I conceive, with our Element ART, &c. We shall find, that almost all the words with the aspirate h before AR, A, --- C, D, &c. must be referred

referred to the Element ^RT, and the letters w and v will frequently supply another state of the vowel breathing before ^RC, ^RD, &c., ^C, ^D, &c.; as v-IRID-is, v-ESTA, (belonging to ESTia, E $\sigma\tau$ ia, Terræ Dea,) which presents to us a race of words directly connected with those attached to our Element. We shall find, likewise, in the progress of these Enquiries, that the Element ^R. R. ^.---C, D, &c. has furnished other forms, which will be duly examined in their proper places, and which can only be fully understood by tracing the process of changes in the examples exhibiting that process.

We have seen, that in many Eastern Languages, as the Hebrew, &c., Consonants only are used, and that the Vowels are rejected; that is, the vowels which exist in those Languages do not perform the same offices, which they do in modern Languages. It is not necessary to repeat, that this rejection of the vowels refers only to the writing and recording of a Language, and not to the speaking of it, in which, as we all know, Vowels are equally necessary as Consonants. We may divide the Consonants into three Classes: 1. B, F, P, V, M; 2. C, D, G, J, K, Q, S, T, X, Z; g. L, N, R. The letters in the first class, B, F, P, V, M, have been called Labials, and familiarly pass into each other, to the exclusion of the rest. In the second class, which belongs to the Element now under discussion, C, D, G, &c. pass likewise familiarly into each other, to the exclusion of the rest: and the letters of the third class, L, N, R, may be considered. as distinct from each other, and as having laws peculiar to them-It is not to be understood, that these classes are not sometimes connected; as we shall find that all the consonants, under certain circumstances, pass into each other. Still, however the distinctions are preserved, and no confusion arises from this partial connection of the classes; as it is sufficient for the purposes of distinction, or of preserving and recording the distinctive.

affinities of words, that certain Consonants regularly and familiarly pass into each other, to the exclusion of the rest. The partial connection of these classes with each other, like the exceptions to a Rule, serves rather to confirm and illustrate the general principle of distinction. The mode, in which these classes are connected, is conducted by laws of uniformity, which afford marks of distinction not less defined than those, which belong to the more general analogies. We perceive, in this arrangement, how the combination of these classes will afford various Elementary Characters, distinct from each other. The first class with itself and the others will exhibit the Elements B, &c. - B, &c., B, &c. - C, &c., B, &c. - L, B, &c. - N, B, &c. - R. From the second we have C, &c. - C, &c. - B, &c., C, &c. - L, C, &c. - N, C, &c. - R. And from the third we have R-B, &c., and ARC, &c., the Element which we are about to examine. Now all these Elementary characters express names for the Ground—Soil—Earth, and may be considered as distinct from each other. The other combinations, which are afforded under this arrangement, as L-B, &c., L-C, &c., and the minuter observation's upon these forms, are discussed in their due places. What I have now exhibited is sufficient to shew, that the Consonants thus combined from these classes, if the classes are distinct from each other, as I have represented, afford full and ample records of distinctive affinity in classes of words; that is, of the affinity between words annexed to a certain class, as distinguished from words belonging to another class.

It will be granted, I think, that it is the business of the Etymologist to discover those words, which, by passing into each other, belong to, or are related to each other. If words pass into each other, they must carry with them the train of ideas which they convey; and thus the affinity of words to each other must be discovered, by shewing that they contain the same or similar

ideas,

ideas, and that their forms have passed into each other, as distinguished from other forms. I shall now consider the changes of these forms, and shew the mode by which such affinity can be ascertained, as it relates to those changes only, and not to the ideas conveyed, which form a separate enquiry. be agreed, that it is in vain to talk or to enquire about the affinity of certain words to each other, if, in the process of change, all words pass into each other, without any recording marks of difference or distinction, by which one set or class of words can be separated from another. Hence it follows, that the component parts of words, or letters, by the changes of which into each other these various forms are produced, must be of such a nature as to supply these marks of distinction; that is, it is necessary that certain letters should so regularly and familiarly pass into or be changed into each other, to the exclusion of the rest, that the words, in which such letters are found thus familiarly passing into or commutable into each other, may be justly said to belong to each other, as distinguished from different sets and classes of words.

such letters, which, by thus regularly and familiarly passing into each other to the exclusion of the rest, will afford those marks or records of distinction by which the affinity of words is ascertained. If any letters should be found, which pass into each other, without supplying any such records of affinity, these should be rejected, as useless, and impeding to the purposes of the Etymologist, however important those letters may be in fulfilling other purposes. Such letters, which, by passing into each other create difference of forms, without supplying any distinctive records of the affinity of those forms, must impede and embarrass the art of the Etymologist, whose duty it is to discover the Affinity of forms, amidst all the disguises of difference

difference and variety. Now the Consonants supply these distinctive records of Affinity, and the Vowels do not; that is, certain Consonants pass into each other regularly and uniformly, to the exclusion of the rest, but the Vowels all pass perpetually into each other without any distinction; that is, they all pass into each other in such a manner, that there is no set or class of vowels, which are familiarly comutable into each other, as distinguished from or to the exclusion of the rest. I shall not stop to enquire, which vowels have the greatest affinity or similitude in sound to each other: I shall only observe, that this affinity, if any such there be, forms no barrier of distinction, by which these vowels are separated from the rest, but that they all perpetually pass into each other, without supplying any distinctive records of affinity to the words, in which they are used. The Consonants, therefore, should alone be regarded by the Etymologist in the exercise of his art, and the vowels be entirely rejected from his consideration. Thus the Elementary forms ^RC, ^RD, &c. — CR, DR, TR, &c., CL, SL, &c., are sufficient to mark the distinction between certain distinct and separate names for the Spot on which we live and tread, as EARTH, ERDE, &c., Terra, Daiar, (Welch,) and Solum, Soil; and they are sufficient likewise to mark the affinity of words belonging to these, and to shew, that each class is separate or distinguished from the other; as of HARD to EARTH, ERDE, &c. - of DURUS, to TERRa, DAIAR, &c., and of Solidus, to Solum, Soil, &c. Here we see at once, how Consonants may preserve and record that distinctive Affinity, which I am endeavouring to impress upon the mind of my Reader.

That the Vowels perpetually pass into each other without distinction, and that the Consonants familiarly preserve these regular and distinctive changes, such as I have represented, will be seen from the general current of examples of words passing into

into each other. The Reader has only to cast his eyes for a few minutes over the Etymologicon of any Language, or to recollect words passing through various Languages, and he will see this truth fully illustrated. It is difficult to adopt a mode of producing examples of a fact which perpetually recurs; as the instances exhibited may appear to be selected for the purpose of supporting an hypothesis.

Let us take the numerals, in which are found the letters C, D, G, &c. &c., as Two, Three, Six, Eight, and Ten. parallel terms to Two, as given by the Etymologists Skinner and Junius, are Duo, (Lat. and Gr. Avo,) Twai, (Goth.) Twa, Twe, Twy, (Sax.) Zuuo, Zwey, Zwo, (Germ.) Dau, Dwy, (Welch,) Dou, (Arm.) Do, (Irish.) Du, (Dan.) In Persian, Do or Du, Here we see that the Commutable Consonants T, D, Z are changed into each other; and it is from the existence of these letters in the words Two, Duo, &c., that we ascertain the affinity of those words; while the vowels uo, wai, wa, we, wy, uuo, wey, wo, au, ou, o, u, afford us no assistance in deciding on this affinity. The parallel terms to Three, as given by the Etymologists, are Drie, Dreo, (Goth.) Tri, (Welch,) Thrins, (Goth.) Tre, (Swed.) Dry, (Belg.) Drey, (Germ.) Dryer, (Isl.) Trois, (Fr.) Tre, (Ital.) Tres, (Span.) Tres, (Lat.) Treis, (Gr. Treus,) &c. &c., where we see the change of T into D, and where we perceive, that the existence of the Consonants TR and DR, in all these words, shews their affinity; while the vowels ee, ie, eo, i, e, y, ey, ye, oi, ei, shew nothing of this affinity. Six, as it appears in various Languages, becomes Syx, (Sax.) Ses, (Belg.) Sechs, (Germ.) Sei, (Ital.) Seys, (Span.) Six, (Fr.) نش ش Sh-Sh, Shash, (Pers.), which Mr. Richardson represents by Shush, ST, Sitt, (Arabic,) as the same writer records the word. Here the Commutable Consonants X, S, ChS, T, at the end of these words, pass into each other, and SX, SS, &c. existing in these

these words, with the same idea, convince us that they belong to each other; while the vowels i, y, e, ei, ey, a, u, passing into each other without any laws of distinction, do not help us in discovering this affinity. In the Italian Sei, and the Greek Ex, ('EE,) the final and the first Consonant of the Element is lost. This however creates no difficulty, as we are convinced that these words belong to the others, Sex, &c., because the Consonants S and X still remain, and because they convey the same idea. The various parallels for Eight, as they are represented by Junius, are Octo, (Lat.) Okto, (Outu, Gr.) Wyth, (Welch,) Ahta, (Goth.) Eahta, Eht, (Sax.) Akt, (Germ.) in modern German Acht; Huict, (Fr.) or, as it is now written, Huit; Otto, (Ital.) Ocho, (Span.) Atta, (Run.) Att, (Dan.) Acht, (Belgic.) In Persian, HShT, which my Grammarian represents by Hasht, and Mr. Richardson by Husht, means Eight. In these words we have the familiar changes of GT, CT, KT, Ch, ChT, T, ShT, into each other; and the Cognate letters in those words, conveying the same idea, mark out to us, that the words are related to each other; while the vowels ei, oo, wy, aa, eaa, e, a, ui, u, passing promiscuously into each other, afford no marks or records of this The parallel words, produced under Ten by the relation. Etymologists, which belong to the form TN, &c., are Tyn. Tin, Tien, (Sax.) Tien, Thien, Zehan, Zehen, (Germ.) Taihun, (Goth.) We may add to these the Latin Deni, not produced by the Etymologists. Here we have the regular changes of the Cognate Consonants T, Z, D into each other, with the vowels y, i, ie, ea, ee, aiu, passing into each other promiscuously, without any laws of distinction; and we reason on this case as on the others. Thus, then, the numbers above exhibited might be expressed in Elementary characters by T^, D^, &c. TR, DR, &c. SX, SS, ^C, ^T, &c. TN, ZN, &c.; and this mode of representing &cc. them will answer all the purposes of the Etymologist.

I shall now give an instance, in which the Labials and our Consonants C, D, &c. exist in the same words. The parallel terms to Foot and Feet, as recorded by Skinner and Junius, are Fot, Fet, (Sax.) Fode, Foed, (Dan.) Fusz, Voet, (Belg.) Fuaz, Fuoz, Fuot, (Germ.) Pes, (Lat.) in another case, Ped-is; Pous, (Gr. novs,) in another case, Pod-os, (110005,) where we see the regular changes of the Labials F, P, V into each other at the beginning of the word, and our Consonants T, D, S, Z changed into each other at the end of the word. The changes of the vowels are without any principle of uniformity; as oo, ee, o, e, oe, u, ua, uo, ou. If we represent, therefore, these terms denoting the part with which we tread, by FT, PD, &c., this representation will serve to distinguish them from other terms denoting that part, as Troed, (Welch) &c.; and will moreover serve to connect them with the Ped-on, (neson, Solum,) to which they belong. Let us remove the Consonants, and say that the name, for the part by which we tread, is represented by oo, ee, o, e, oe, u, ua, uo, ou, we perceive, that these vowels by themselves mean. nothing, and represent nothing; nor, when added to the consonants, do they afford us any marks of affinity and distinction, by which the words containing them, as Foot, Pes, &c., can be conjectured to be allied to each other, or to belong to PEDON, (11500,) or to be distinguished from Troed. Among the Celtic terms for Pes in Lhuyd are the Welch Troed, the Cornish Truz, Treiz, Truyd, the Armoric Troat, and the Irish Troidh, which belong, as we see, to each other, and to the English Tread, Trudge, and Trot Here we see the changes of D, Z, T into each other at the end of the word, and the Consonants TRD, TRT, are sufficient to shew the affinity of these words to each other, as distinguished from other words, under a different Element; while the vowels oe, u, ei, uy, oa, oi, ea, o, afford no marks of affinity or distinction.

I must

I must again request the Reader to cast his eyes over any common book on the subject of Etymology, as Skinner, Junius, &c., in which the various parallel terms are recorded, passing through different Languages, that he may fully and completely understand how familiarly the Consonants C, D, G, J, K, Q, S, T, X, Z, pass into each other, to the exclusion of the rest. are able however to illustrate the fact in a more general way, by appealing to the same test of the Commutability of Consonants, which has been adopted by the Grammarians themselves. Consonants are considered among the Grammarians of the Greek Language to be Cognate, or Commutable with each other, which are changed into each other in the inflexions of Nouns or Verbs. The instance of Verbs is well chosen, as the Conjugations of Greek verbs represent distinct and large classes of words; and therefore the changes of certain Consonants, exhibited in these Conjugations, represent the laws of mutation annexed to these Consonants, as connected with some general property and principle of the organs and the mind. It will be sufficient for our purpose to note the verbs Frazo, (Φραζω,) and Orusso, (Ορυσσω,) which are commonly produced in our Greek Rudiments, as examples to illustrate what is called the fourth conjugation of Barytone verbs; and the latter of these words will afford me a very striking instance of my Hypothesis, in another point of In Fraz-o, Fras-o, e-Frad-on, pe-Frak-a, (Φραζω, Φρασω Εφραδον, Πεφρακα,) representing the same idea of Speaking, w find, that the Z, or DS, TS, and D, K, or C, Ch, pass into eac other. The verb Oruss-o, or Orutt-o, becomes in other tens ORUG-on, ORUX-o, or ORUKS-o, ORUCS-o, ORUCh-a, or ORUC-ΟRUK-a, (Ορυσσω, Ορυττω, Ωρυγον, Ορυξω, Ωρυχα,) where the S, T, G, or KS, CS, and Ch, C, or K, pass into each other in express the action of Digging. The sound of Q is similar to that C, Ch, or of the hardened G, with the vowel u after the

and J is like that of G, when it is pronounced in a softened manner, as in *George*; and thus all the mutations of C, D, G, J, K, Q, S, T, X, Z, into each other, may be said virtually to exist in the same Greek verb.

This affinity or relation of these Commutable Consonants to each other, will enable us to understand from what source has arisen that cluster of consonants, which certain writers have so violently and unwisely condemned in some Languages; as in the It has arisen from an attempt at extreme accuracy German, &c. in expressing the mingled sounds of these Cognate Consonants, which in some Languages have been inadequately represented by single characters. These mingled sounds exist in a greater or less degree in all forms of Speech, which chiefly differ in this respect, that in some Languages more precision is employed to represent that combination. One Language adopts the various characters, which are separately used to express the different sounds, of which this combination is formed; while another employs a single and appropriate symbol for that purpose, and a third contents itself with adopting a character sometimes used for one of those mixed sounds, of which the union consists. In our own Language, this combination of sounds is strongly impressed on a Foreign ear; and we accordingly find, that the representation of our words by Foreigners is loaded with Consonants, For the purpose of conveying to the ears of their countrymen the mature of those combined sounds, about which we so little reflect, and which we ourselves are satisfied with expressing by a single symbol. Thus in a German Dictionary, now before me, I find the sounds of our letters C, in Ch, and J, generally represented By TSCh, and DSCh; as Church and Judge, by Tschohrtsch, and Deschodsch. The sound of the G in Genius is likewise represented by Dschehnius.

In Italian, C is sounded like Tch, as in Cesare, Cecita, which

is pronounced Tchesare, Tchetchita, in so delicate a manner, that you cannot distinguish, says Veneroni, whether a T or D is "Pour parler avec la delicatesse Italienne, il faut sounded. " faire sentir le T de Tchesare, Tchetchita, &c. si doucement, que "l'on ne connoisse pas si l'on prononce un T ou un D." Veneroni represents the sound of the Italian G and GG before the vowels e, i, by DG; as Giro, Oggi, Dgiro, Odgi. We may from hence see, how Odgi or Oggi, To-Day, belongs to Hodie; and how Dgiro, or Tgiro, Giro, what is round, a Circle, may belong to Tour, Tour-ner, Tur-n. We shall not wonder, that the sound of T or D is mingled with that of Ch, when in English T is sounded like Sh, as in Nation, quasi Nashion, or Natshion. The C in our Language has the sound of S as well as of K. es in City, Cap, quasi Sity, Kap; and thus we see how S is allied to K. In the Spanish Language, the C is sounded like Th before some vowels, and like the K before others; and when h follows the C, "it is pronounced," says Del Pueyo, "as in the English "Much, Mucho." Let us mark, that in the pronunciation of our English word Much, quasi Mutch, or Mutsh, Ch has the mingled sound of Tch, or Tsh. In German, C is represented by Tsay, and before some vowels it is sounded like TS. The letter C, which thus connects itself with T, Th, D, S, and with K, will shew us, how T, Th, D, and S pass into K, and its acknowledged Cognate G. The Greek Grammarians and all agree, that τ , δ , θ , T, D, Tk, are Cognate with each other; and that x, y, χ , K, G, Ck, are Cognate with each other: and we now see from this acknowledged affinity of C, Ch, with T, D, Th, how the two orders, as they are here arranged, T, D, Th, K, G, Ch, are related or Cognate to each other, by thus passing into each other. This mixture of sounds in the Consonants C, D, G, &c. is peculiarly observable in the Eastern Languages; and hence we find, that the travellers into the East, in their endeavours to represent these mingled sounds

by which they are related. Their union will shew us, how readily the organs of Speech are inclined to blend them with each other; and their separation will point out to us that propensity in the Human mind, by which it is prompted to express the same or similar ideas, appearing under certain varieties, by Consonants of a similar kind, distinguished by certain differences. It is not my province to mark the precise nature of such differences, nor to adjust the degrees of affinity, by which these Consonants are related to each other. Grammarians have attempted to perform all this, with abundance of diligence, by the division and subdivision of these Consonants into separate classes, which they have distinguished by a multitude of names, as Cognates, Letters of the same Organ, Gutturals, Linguals, Palatines, Dentals, Semi-vowels, or Doubles, Mutes of three kinds, Aspiratæ, Tenues, Mediæ, Solar letters, Lunar letters, &c. &c. I have abstained from such disquisitions; and have been contented to state, by an appeal to fact, the Commutable Consonants, or those Consonants, which familiarly pass into each other, in representing the same train of ideas. With this fact only is the Etymologist concerned, which remains the same, whatever may be the cause by which it is produced.

If any of my Readers, therefore, whose minds may be strongly possessed with the division of Consonants into different classes, should perchance object to the use of the term Cognate, as applied to all these Consonants, I have only to observe, that I have followed the ordinary Language of our Grammarians, in making the words Cognate and Commutable synonymous with each other, and that I have not adopted the term Cognate for the purpose of maintaining any Hypothesis about their degrees of Affinity, as a point at all connected with the truth of my Argument, or the mode of supporting it. I conceive, indeed, that these Consonants have been thus Commutable, because they are Cognate, or have

an Affinity, in various degrees and modes, with each other, and this we have fully seen in the preceding discussion; but the fact of their being Commutable into each other is that alone to which I appeal, nor shall I ever entangle myself in the idle attempt to adjust on every occasion the process of change, by which this Commutability is effected. We learn, at the earliest stages of acquiring the Rudiments of the Greek Language, as I have before stated, that K, G, Ch, are Cognate with each other, and that T, D, Th

are Cognate with each other. "Inter se cognatæ sunt $\begin{cases} \pi, \beta, \phi. \\ \varkappa, \gamma, \chi. \\ \tau, \delta, \theta. \end{cases}$

A direct definition of Cognate is not given, but the sense annexed to it is manifest, from the explanation subjoined to the name of certain letters, which are called Immutable, Immutabiles, "Quæ " non literas Antistoichas vel Cognatas, quibus ipsæ mutentur in " verborum et nominum inflexionibus, habent." From hence it is plain, that the Cognate letters, or the Antistoichæ, are conceived to be those, which are Commutable into others. I have adopted therefore the ordinary phraseology which I found annexed to the subject; and I differ only from these Grammarians, by shewing, that according to their own idea of Cognate letters, as Commutable into each other in the Inflexions of verbs, the number of these letters should be increased. I have proved, that under this idea both these series of letters, \varkappa , γ , χ , τ , δ , θ , K, G, Ch, T, D, Th, should be considered as Cognate to each other; and, moreover, that ζ , ξ , Z, X, which these Grammarians represent to be Semi-vowels or Doubles, (Semivocales vel Duplices,) and S, which they regard as a letter of its own power, (" z est suæ "potestatis litera,") should be comprehended likewise under the same class with the former, by the name of Cognate, as being all Commutable into each other in the inflexions of verbs.

The

The Reader, I trust, will perfectly understand the precise point of view, in which I am desirous of representing the nature of these Cognate Consonants, C, D, G, &c., as they relate to the purposes of the Etymologist. I have no objection to the division made by Grammarians of these Consonants into different Classes, nor to their opinion, that the letters in each of these Classes more particularly belong to a certain organ, and are more intimately related to each other. I have no objection even to the Anatomical discussions, which we find in some Etymologists, who have exhibited the various parts in the organs of Speech, by which each letter is enunciated. These matters I shall leave to be investigated by others who are concerned in the enquiry. The point, which I maintain, is, that these letters all pass so constantly and familiarly into each other, whatever may be the precise mode by which this process of change is effected, that any division of these Consonants into separate Classes, as forming separate races of words, is entirely foreign to the purposes of the Etymologist, and is even subversive of his art. This idea, which I have given on the affinity of all these letters to each other, does not lead to a confusion of the differences, which exist between them, any more than a similar idea entertained by the Etymologists, respecting the affinity between letters composing a certain class. Though we alike maintain the affinity between certain letters, we still acknowledge their difference, and understand the important purposes produced by that difference. The phraseology, which we adopt to describe the property of letters, is similar to that which is applied to the purposes of Life. In the affinity between animals, it is not understood, that those animals are the same, but that they are different and distinct individuals, of the same kind or species, connected with each other by certain bonds of resemblance or relation. From the difference between such letters

letters is derived a great source of variety in the formation of different words containing similar ideas in the same Language, or of the same words in different Languages or Dialects. It is in fact to this principle of affinity between certain Consonants that we owe the effects of Variety and Difference, which those letters have produced; as from this Affinity it has arisen, that such Consonants have readily and familiarly passed into each other, and therefore that these differences have been exhibited.

It is marvellous to observe, how the separation of these Consonants C, D, G, &c. into distinct classes, has confounded and embarressed all the efforts of the Etymologist in the prosecution of his Art. The very attempt to distinguish one Class from another seems to have formed an unsurmountable barrier to his enquiries; though every Etymologist has expressly stated, that these Classes pass into each other; and has in reality tacitly allowed the operation of the principle in its fullest extent, as he could not proceed a step in the exercise of his art, without acknowledging so manifest a fact, perpetually recurring, in the most ordinary and familiar examples, which passed under his Nothing new is advanced in this enquiry, respecting these Consonants C, D, G, &c., but the direct, plain, and explicit declaration of the principle, that they all regularly and familiarly pass into each other, to the exclusion of, the rest, and that any separation of them into different classes, however just it may be under some points of view, serves only to blind and pervert the understanding in the researches of Etymology. There is nothing new likewise in my idea respecting the Vowels, that they all pass familiarly and promiscuously into each other, without any laws of exclusion or distinction; and, moreover, that they afford no records of affinity; but the plain and explicit mode, in which this fact has been declared, and the purposes, to which a truth thus unequivocally stated, as an indispensible principle in the

Art, is afterwards applied. The Etymologists, in their details of the changes of Vowels into each other, have in fact shewn, that they all pass into each other, and therefore that no such distinction exists; and in producing the parallel terms, whose affinity they acknowledge, where all the vowels have been adopted, they tacitly allow, that the vowels afford no records to determine the affinity of those words, as distinguished from other words. They at the same time tacitly acknowledge, that the Consonants alone afford this record; and thus, nothing is new in my conception, that Consonants are the Essential and Elementary Parts of words, but the express mode, in which this principle has been declared, and the comprehensive manner, in which it has been applied. the Etymologists do, in fact, I must again repeat, tacitly acknowledge it; and even some hardy Theorists have, from time to time, ventured to assert, that Consonants were the Radical parts of words. Still, however, nothing has been accomplished on this foundation. The principle has been applied to no purposes of a general nature, nor has it afforded the basis of a regular System, illustrated and confirmed by a series of examples.— That part of my Hypothesis may however be considered as perfectly new, in which it is maintained, that Languages have been derived from certain names, under different Elements, denoting the EARTH, Ground, &c. On the whole, I might venture to affirm, that this idea, unfolded as it is by a new mode of applying principles, which were before inadequately conceived, may be considered as affording to the subject of Etymology an art altogether new, and totally unlike, in its form and purposes, to every other mode, which has ever been adopted in discovering the affinity of words.

The Observations, which Skinner has made on the nature of the Vowels and Consonants, will sufficiently point out the mode, in which other Etymologists have considered the subject. On

the

the Vowels he observes, "Vocales omnes in omnibus Linguis facilè "invicem commutantur, hæ autem illis arctiori affinitatis vinculo, " saltem apud aliquas gentes, conjunctæ videntur, ut A cum O, " præsertim in Linguâ Teutonicâ, U cum O, præsertim in Linguâ " Latinâ, et vocibus Latinis in Italicam Linguam commigrantibus, "E in A, saltem sono, idque perpetuò in vocibus Franco-Gallicis, "ubi sc. E præcedit N Consonam, ut in Commencer, Agencer, "&c. quæ ut A plenum efferuntur." After this declaration, that the Vowels in all Languages are easily changed into each other, it would seem to be an idle task to shew, in separate articles, that each Vowel passes into all the others. Skinner, however, has bestowed six Folio pages to shew into what Vowels A has been changed, or, in other words, to shew that it has passed into all the rest, with their various combinations. He has bestowed, likewise, seven Folio pages to prove the same thing respecting the vowel E. Though the pale of separation has in fact been compleatly removed by the declaration that all the Vowels in all Languages are easily changed into each other; yet it is marvellous to observe how the barrier is again erected by this laborious detail of the examples, which, though it proves the fact, seems to produce a contrary impression on the mind of the Reader. On the Consonants, Skinner observes, "Consonantes ferè omnes sibi in hâc vel illà "Linguâ aliquando cedunt, hæ autem longè rariùs quam illæ: " quædam in omnibus, quædam tantum in håc vel illå Linguå " bellum quasi implacabile inter se gerunt. Cognatæ maxi-" mè sunt B et V consona, B et F, F et V consona, V consona "et W, D et T, B et V præsertim in vocibus Teutonicis, C seu K et G, N et L, S et T, Digamma Æolicum F et "V consona, J consona et G, Z et T, præsertim in Dialectis 1 Teutonica et Belgica. Reliquæ cæterarum consonantium per-"mutationes minus proclives et rariores sunt, interdum tamen " occurrunt.

"occurrunt, idque manifestiùs quam ut à viro cordato rejici " possint." If we learn little from this arrangement, we learn still less from the detail of the changes of each Consonant. B he tells' us is changed into D, F, G, J, M, P, R, V; the letter C into CK, F, G, H, J, K, P, Qu, S, T, Tch, V, X, Z, &c. changed, as he tells us, into B, Ch, G, L, N, P, R, S, T, V, X, Z. It will not be necessary, I imagine, to proceed further in the detail of these changes; as we can only learn from hence, that all the Consonants pass into each other. Thus the Reader will perceive, in considering this detail of the changes of each Consonant, that I differ from the Etymologists not by enlarging the former limits of change, but by contracting them within a sphere, more bounded, distinct, and defined. We perceive, moreover, that in these two modes of arrangement the Etymologists have fallen into errors most destructive to their art. By dividing into separate classes certain Consonants, related to each other, they have destroyed the comprehensiveness of their principles, and secluded from their art all ideas respecting that wide affinity, which exists between extensive Families or Races of words. In their second arrangement, when they detail to us how all the Consonants pass into each other, they have destroyed the foundation of their art, by confounding all distinctions, and obliterating thereby those records of affinity, by which words are recognised to be related to each other, as distinguished from other words.

Before I finish my observations on the Cognate Consonants C, D, G, &c. I cannot forbear observing, that one of the Greek verbs which I have above produced, in order to unfold the affinity of those Consonants, is singularly adapted to the illustration of my Hypothesis. I shall shew, in the course of these discussions, that Orusso, or Orutto, (Oρυσσω, Ορυττω,) (Fodio,) To Dig, belongs to Earth, Airtha, &c. and that it means, in its original sense,

To EARTH, or To Stir up the EARTH or Ground. When the Reader perceives, that the Element ^RT assumes the various forms of 'RS, 'RG, 'RX, and 'RK, in one and the same word, which expresses the action of Digging among the Greeks, as ORUTT, ORUSS, ORUG, ORUK, OF ORT, ORS, ORG, ORX, ORK, he will not wonder at the mutations, which I have supposed to be annexed to our Element, in words passing through various Languages or Dialects. He will be prepared to understand, what he will find in the succeeding pages, that the Greek Erg-on, and the English terms w-ORK, w-RIGHT, Opifex, in Saxon w-RIGHTA. w-YRHTA, different in form as they may appear, are derived from Operations performed on the EARTH. The Saxon verb, to which w-Ork belongs, w-Yrcan, Operari, becomes, in one of its tenses, w-ORHTs, Elaboravit; where we have a similar change from ARC to ART. In Lye's Saxon Dictionary we have the following phrases, " EORThan WYRCAN, Terram Elaborare, Colere,-"Man hæs the tha Eorthan Worhte, Homo non erat qui terram "coleret;" where the term w-ORK is brought to its original Spot, and connected with the very word EARTH from which it is derived. These examples of the Greek ORUTTO, (Ogurra,) and the Saxon w-Yrcan, will at once illustrate the familiar changes of these Commutable Consonants, and the principles of my hypothesis, The Reader will in fact perceive, that I demand in my hypothesis no greater latitude of change, when a word has passed through millions of mouths in different ages and regions of the world, than that which takes place in the same dialect of the same Greek verb.

The wide compass of Human Speech, through which this Element A. R.A. --- C, D, &c., denoting the EARTH, &c. has extended its influence, will be understood only from an attentive consideration of the succeeding discussions: yet I might here briefly state the comprehensive scale of research, by which that influence

influence has been illustrated. I might venture to assert, with as much precision as the case demands, that I have examined all* the ordinary and familiar terms, belonging to this Element, which

^{*} By the expression, " all the terms," I mean to say, that no selection was made in those Languages of the terms, which were supposed most aptly to coincide with the hypothesis of the writer, but that some one of the ordinary Dictionaries in those Languages was regularly examined;—that all the Radical terms in familiar use were noted with sufficient accuracy; and that they are here presented to the attention of the Reades. When the purpose of this examination is duly understood, it will be sufficiently manifest, to what a degree of minuteness the writer is bound by duty to extend his researches. The examination was made for the purpose of comprehending in the discussion the Radical terms, belonging to the Element, which performed the most important part in each Language; and it was rendered thus extensive, in order to remove every idea of a selection of certain words favourable to the support of an hypothesis. When the writer had taken due care to guard against this idea, he did not charge himself with a scrupulous minuteness, which would have retarded rather than have advanced the object of these researches. Having thus stated, that I do not charge myself with a minuteness of detail, which would in fact be foreign to the purpose of my argument, I might venture, I think, to affirm, that the greater part of the Radical important words, belonging to our Element in every Language, above recited, have been noted with a diligence, which would probably not have been always adopted even in an Etymological work, professedly written for each of these Languages. Many words are of such a nature, as the names of Plants, Animals, &c. that they can only be referred to their original idea by the adepts in each Language, who must exert all their knowledge in the history of that Language, and of the customs of the people, by whom it is spoken. This remark might be extended even to the ordinary and familiar terms in every form of Speech, which require the skill and science of a Master in each peculiar form, in order to detect their original and primitive meanings; without the knowledge of which, the efforts of the Etymologist would be vain and unavailing. The writer therefore of the present work will be thought perhaps to have much exceeded the limits of his province and his powers, in attempting to make any arrangement of so comprehensive a nature as to include all the ordinary and familiar words of a certain class in such a variety of Languages, however loosely and imperfectly that arrangement may have been made. Some perhaps will be of opinion likewise, that too great minuteness ought not to have been adopted in a general work of this nature, even if the knowledge of the writer had been duly adequate to the task of performing it with effect. They will think, perhaps, that in a work on the general facts of Etymology, as discoverable in various forms of Speech, a selection only ought to have been made of such words in each Language, which most pointedly and strongly illustrated the main scope and tenor of the argument; and that the discussion

From

which occur in the Gothic, Saxon, English, German, Italian, Spanish, French, Welsh, Hebrew, Greek, and Latin Languages. A perpetual appeal has been made to the Arabic Language; and

cussion ought not to have been encumbered with a minute detail of other terms, which must tend to disturb and embarrass the attention of the general reader, who is only interested in the great outlines of the subject, and not in obscure researches belonging to the peculiarities of each Language. This objection has, in my opinion, considerable weight, and might be turned to a profitable account, at least with respect to the mode in which the work should be arranged. It might perhaps be at once provided, by a certain arrangement, that the Student in each Language could find materials of enquiry particularly connected with the form of Speech in which he was interested, while the general reader should not be diverted from the main drift of the subject by the minuteness of details, foreign to the great and leading points of the argument. In the present volume I shall consider various words in the Index of my work, and in a future volume this mode of arrangement might be carried to a greater extent. Though the Alphabetical order is in general useful only for the purpose of directing the Reader to the spot in which a word is to be found, and ought not to be adopted in a work on Etymology, which professes to unfold a series of words, connected with each other by the same train of ideas; yet in some cases even this arrangement may be properly adopted. Those words, whose senses are insulated, and remote from the general train of ideas conveyed by the Element, may be properly referred to the Alphabetical arrangement of an Index, in which they would be at once removed from the body of the work, and yet might be consulted by those who were interested in the enquiry. Even the form of a Note, placed at the bottom of a page, might sometimes supply a convenient mode of representing certain things, which it would be right perhaps to record, but which all would not be desirous to read. In attempting this detailed review of words through so many Languages; though I am persuaded that the words, which I have examined, fall within the pale of my hypothesis; yet it may too often happen, I fear, that my want of knowledge in the secrets of some of the various Languages here examined, has caused me to mistake the intermediate idea, by which the word is connected with the general sense of the Element. It is only in a few Languages that any Individual can hope to perform, in a comprehensive manner, the part of an Etymologist with precision and effect; and he, who should presume to attempt this task, would betray his ignorance of the first principles on which his art is founded. Nothing can be done, unless the original idea annexed to words be discovered; and this cannot be performed without a profound knowledge of the Language investigated, or such assistances which are not often to be found or easy to be obtained. Nothing can be done, I must again repeat, unless the various senses of a word are accurately studied, as they appear in sentences where the word is used in conjunction with other words.

the Chaldee, Samaritan, and Syriac Dialects have been familiarly produced. I might almost venture to affirm, that the Irish and Galie Dialects of the Celtic have been examined with equal diligence as the Welsh. The Persian has been cited on every occasion, which, as far as my knowledge of the Language extended, was supposed to afford a due topic of illustration to the subject of my Enquiry. When we consider, that the Gothic, Saxon, English, and German Languages have been thus regularly examined, and learn, moreover, that a constant reference has been made to the corresponding terms in Dutch, Danish, Swedish, Runic, &c. as recorded by the Etymologists, I may confidently affirm, that all the Radicals, belonging to our Element, in all the

From hence only can be discovered the peculiar turn of meaning annexed to each word, and that genuine idea with which it was originally invested. Though a diligent study of the authors in each Language is best calculated to supply us with this species of knowledge in its highest state of perfection, yet other modes of information may be summoned to our aid, and be adopted with sufficient effect. Great and essential benefit might be derived from a Lexicon, judiciously arranged, which should abound with examples, most literally and faithfully translated, illustrating the various senses of a word, and which should state likewise all that was known on the history and origin of that word. With no other knowledge of a Language than that which a Grammar and a Lexicon of this nature would afford me, I could venture to investigate the secrets of that Language, and to perform the part of an Etymologist, with safety, and with success. Every Language should be supplied with a Dictionary of this kind; and it should always be accompanied with a Grammar. The labours of the Student in Elementary Language would be infinitely abridged, if the unknown characters of a Language were rejected for characters more known. Though in Languages, where our means of information are less perfect, we shall be oftentimes unable to discover by what intermediate idea a great variety of terms are connected with our Element; yet we may still be enabled to ascertain, that the force of the Element prevails in those Languages, and that they are alike to be considered as falling within the pale of our A few strong and striking examples will establish this fact; and it is with this fact alone that the writer of the present work is concerned. When that has been well and sufficiently ascertained, the duty of the writer may be said to terminate: and all that he performs more, he does it in the abundance of his zeal, as labouring rather in the cause of his hypothesis, than as performing a task necessary for its confirmation.

the Dialects of the Teutonic, have been considered in these Enquiries. I might safely, I think, observe likewise, that the mode. in which the Hebrew Language has been examined, and the frequent appeal to the Arabic, Chaldee, Samaritan, and Syriac, have supplied all or most of the Radical words, belonging to our Element, which exist in those kindred Dialects. It will be acknowledged, I imagine, that in the Welsh, the Galic, and the Irish Dialects, are contained all the Radical words, which are to be found in the Celtic forms of Speech; and thus we may assert the same fact, which we have affirmed of the Teutonic Dialects. the Radical words of an Element in certain Dialects. I mean the uncompounded words, exhibiting the more distinct and leading ideas, conveyed by the Element, in these Dialects. Such Radical words may be considered as pervading these Dialects, and supplying in each Dialect different senses, and different derivative words, by some variations of the Radical or leading ideas. When I have brought, therefore, these Radical words, with their leading ideas, within the pale of my hypothesis, I may be justly said to have proved the truth of my hypothesis in those Dialects. The Etymologists in each Language or Dialect will find but little difficulty in arranging the subordinate divisions of derivative terms, when the more Radical words, or those which appear to convey the more leading ideas, distinct and separate from each other, have been referred to one common notion, and their affinity has been thus unravelled and ascertained. I shall not enumerate the various other Languages, which I have occasionally exhibited for the illustration of my hypothesis, as the Dialects of the Sclavonic. Russian, &c. the Sanscrit, Gipsey, Coptic, &c.; as the Reader will fully understand, from what has been already observed, that my hypothesis is supported on the most firm and ample basis.

My anxious desire to explain most perspicuously the principal points of my theory on the very spot, in which the

the examples themselves are produced, has led me perhaps to extend these preliminary observations beyond their due limits. I shall now however proceed to the discussion of those examples, and shall return to the consideration of the articles in Skinner and Junius, in which the parallel terms for the EARTH are produced, as Atrtha (Goth.) Eard, Eord, &c. (Sax.) &c. &c. Junius 20cords the Teutonic name for the EARTH, as we find it in Tacitus; " HERTHÆ meminit Tacitus de Germanorum Moribus, c. 20, "ubi ait, 'In commune HERTHAM, id est, Terram matrem colunt. "' eamque intervenire rebus hominum, invehi populis arbitrantur.' In other copies of Tacitus we have Herthum, Nerthum, Verthum; but Lipsius thinks that it should be Aorthum, " Ita enim nostratem " eam vocem efferimus, scribimus. Cum adspiratione focum nobis. "signet, non Terram." Some think that it should be read " Erdamm, i. e. Erdamme, ex Erd et Amme, Mater, Nutrix, " (Hesych. Αμμα, Μητηρ, τροφος,)—quia Tacitus interpretatur Terra " Mater." If the translation of Tacitus be precise, the latter portion of the word Hertham, or Erdamm, must signify Mother. The terms Herthum, Erdamm, or Herth-Thum, Erd-Damm, might then be considered as compounds of EARTH and Dam, or Dame, Mother; or if it be not a literal translation, the TM, or DM, mightsignify the Ground, and be employed in a similar manner as the Thum and Dom in German and English, in Fursten-Thum, King-Dom, the Land or Domain of the Prince or King. The union of Erde and Thum, terms bearing a similar meaning, in Herthum, will then be of the same kind as that of ERDE and Boden, the Ground or Soil, in Endboden, or of Ende and Reich, "Realm, "Kingdom," in Endreich, "the Earth, Soil, Ground, Land." The Sakon YRTH gives us another form of these terms EARTH, &c. denoting the Land, &c. Lye explains this word by "EARTH. " Fundus arabilis, Ager novalis, agri proventus." Skinner observes, under Earth, "Si Græcus essem, deflecteren à Gr. Eea, Terra,

Terms derived from the idea of the Peculiar or Appropriate Place—the Enclosed or Secured Spot of Land or EARTH—the EARTH, by way of distinction.

YARD. (Eng.) A certain peculiar Spot of Land,—and a Measure, as of a certain Piece of Land, &c.

YARD-Land. (Eng.) A certain Measure or Quantity of Land. ERISH. (Arab.) A Yard, Cubit. v-IRGA. (Lat.) The Land, and the Measure, the Rod, &c.

v-Erge, v-Erga. (Fr. Ital.) The Rod, &c.

v-Erger. (Eng.) The Boundary. v-Erger. (Fr.) An Orchard.

g-ARTH. (Provincial Dialect.) A Yard, Area, &c.

g-EARD. (Sax.) Yard, the Earth, Sepes, Mundus, Terra.

g-Arden, j-Ardin, g-Iardino, g-Ardin, g-Aerd, g-Aard,

g-Arte, g-Arten, g-Arde, &c. (Eng. Fr. Ital. Span. Belg. Dan. Germ. Welsh.)

g-UARD—w-ARD. (Eng.) To Secure, as by an Enclosure.

g-Arder, g-Uardare, g-Uardare, To Guard.

w-EARDAN, w-AERDEN, w-ARTEN,w-ARDJAN,v-ARDA. (Sax. Belg. Germ. Goth. Island.) To Ward.

ARTH. (Welsh.) A Yard, Enclosure.

h-Ortus, Orto. (Lat. Ital.)
Ort. (Germ.) Place, a Part.

ORTS. (Eng.) Parts, Pieces, originally of Land.

ORDA. (Irish.) A Piece, Fragment.

ORCH-ARD, (Eng.)

ORCHATOS. (Gr.) Pomarium.

ORCE-ARD, ORC-YRD, ORTg-EARD. AURTI-g-ARDS. (Sax. Goth.) An Orchard, Garden, &c. an Enclosure in general. This will remind us of Girth, Gird, Garter, &c.

The Saxon g-EARD not only means "YARD, Sepes, Sepimen"tum," but it signifies likewise "Mundus, Terra, Area," The
World, a Region or Country, the EARTH. In Saxon, MiddanGEARD and Middan-EARD signify, "Mundus, Orbis terrarum,"
as they are interpreted by Lye. The phrase "Middle EARTH"
still remained in the English Language. In the Merry Wives of
Windsor we have "I smell a man of Middle EARTH," (A. V. S. 5.):
on which Mr. Steevens observes, "So, in the ancient metrical
"romance of Syr Guy of Warwick, bl. l. no date:

- "Thou mayst them slea with dint of swearde,
- " And win the fayrest mayde of Middle ERDE.

"Again, in Gower, De Confessione Amantis, fol. 26:

"Adam, for pride, lost his price "In Myddell ERTH."

Mr. Malone observes on this passage, in the Appendix to his Edition of Shakspeare; " Middle EARTH, says the Glossarist to Gawin "Douglas's Translation of Virgil, is only this EARTH, ab A. S. " Myddan EARD, Mundus." There is a well known passage of Cædmon, preserved by Alfred, in which Middan-Geard occurs, and which affords a sufficient specimen of our Saxon Poetry. "Tha "middan GEARD, Mon cynnes weard, Ece drihtne, Æfter teode, "Firum foldan, Frea almihtig."—'The middle EARTH or Region, 'The Ward or Guardian of Man-Kind, The Eternal Lord, Afterwards ' produced, As the Field or Ground for Men, The Almighty 'Master.' Lye translates it thus; "Tum orbem terrarum humanī " generis custos, æternus Dominus creavit, hominibus terræ "Dominus omnipotens." The translation of Lye, "Terræ "Dominus," appears not to be correct. Lye, in his Edition of Junius, produces the phrase Middill-End, as used by Gawin Douglas, &c. He explains it by "Terrarum orbis, orbis habita-" bilis.

- " bilis, oncouper, q. d. illud totius universi medium, quod incolunt
- "homines.-Ab A. S. Middan-Eard, vel Middan-Geard, Mundus.
- " Alamannis est Mittel-Gart. Gothis, Midju-Gards. a Midjus.
- " Medius, et Gards. Domus."

The word YEARD or y-EARD, Virga, the Rod, was originally applied to a measure of the EARTH, or Land; as we see it in the combination YARD-Land, "Virga, seu virgata terræ." When this term is used for the measure of a Rod or Stick, it is called YARD-Wand, and now simply YARD. Let us note the term Rod, and consider its resemblance to Rood: I shall shew in a future page, that they both belong to each other and to the form of the Element RD, denoting the EARTH, ERDE, &c. ERISH signifies " A YARD, cubit, span, palm." The Latin Pertica means at once a Staff and a Measure of Land—a Perch; and let us mark the explanatory words of Junius, the "VIRGA seu "VIRGATA Terræ" We shall now see, that v-IRGA is only another form of these words denoting the EARTH, ARZ, ARK. (Heb. Chald.) In v-IRGA, the vowel breathing before the Radical has passed into a labial sound. VIRGA, the Rod, appears in the French Verge, the Italian Verga, &c. We know, that Verge has the sound of Verdge; and thus we see a combination of the sounds D and G, and learn one mode by which the D and the G pass into each other. The Verger, the Apparitor, is the person, who carries the Virga, or Staff. VERGE, in the sense of the Boundary—" within the VERGE of the Court," brings us directly to the idea of the Enclosed—appropriate or separate Spot—EARTH, The Etymologists, Junius and Skinner, do not appear ERDE, &c. To have produced the word in this sense. Junius however exhibits The word VERGER for "Hortus, Viridarium," as used by Chaucer; where we again unequivocally see the appropriate—separated Spot Junius records as parallel terms, the Italian Verziere, **∽**f Ground. and the Spanish Vergel; and he imagines, that it properly signifies " Locus

"Locus Virgis consitus, Lieu planté de Verges;" though Skinner, in one of his Vocabularies, observes, that VERGE, the Garden, is "quantum-Virgå seu Radio definiunt, et metiuntur "circa domum." He has another article for Vergere, the term in Chaucer, which he refers to the French Vergier, now written Verger, the Orchard. Some imagine, that the VERGE of the King's Court is so called from the VERGE or Staff, which the Marshal bears, and which denotes the power and jurisdiction of the Lord High Steward of the King's Household within those limits. Verge has another sense in English, belonging to the Latin Vergo, To bend, or decline downwards, Vergit ad Imum, where v-Erge-v-Erdge signifies To Earth, or To tend to the EARTH, ERDE, &c. Martinius rightly understands, that this word would be most naturally taken from the Ground; and he derives it accordingly from epa and ayw, quasi, Epale ayouas. In Hebrew, a term with this meaning appears under a more simple form. In this Language יוד IRD means "To descend, go, or come down." Mr. Parkhurst has justly compared this word with пон, "To descend, come, or go down," where the breathing before the R is lost.—The explanatory word Viridarium belongs, we know, to VIRIDis; and the Reader will now understand, that v-IRIDis, v-ERDure, v-ERT, (Fr.), Green, are attached to the EARTH, ERDE, (Germ.) &c. the object of all others, from which. as we should have imagined, à priori, the word would have I shall shew in a future Volume, that Green belongs to arisen. Ground.

GARDen, g-ARD-Den, appears in various Languages, as in the French Jardin, the Italian Giardino, the Spanish Gardin, the Belgic Gaerd, the Danish Gaard, the German Garte, Garten, the Welsh Gardd, &c., which the Etymologists record, who produce moreover the Gothic Aurti-Gards, An Orchard. They likewise remind us of the terms WARD and GUARD and YARD, which, as

we have seen, all belong to each other. We see, that GARDEM has a similar form to JORDEN, the Danish name for the EARTH. The N in these words might be only an organical addition to the D; yet the Den may be significant, and may belong to a great race of words to be found through the whole compass of Language. The Element, to which it is attached, may be represented by DG-N, DCh-N, TCh-N, denoting the Earth. We shall call to mind the Greek Chthon, (Xthur, Terra,); from which we shall at once see, how the forms CN, TN, DN, &c. arise. Under the form CN we have Country, County, &c.; and under DN, TN, we have Town, the Din in 'Lon-Din-Um,' &c. &c. In the Eastern Languages, the terms for a Garden, or 'Gard-Den,' are found under this Element; as, Junnut, (Arab. ביים), Gan, (Heb. נון); and hence we have the Den in Eden. The Hebrew 13 GN, as a verb, signifies "To Protect, Defend." Gorne is a term in old English for a Garden; as in the Poems attributed to Rowley, (Eclogue I. 36.) This will remind us of the Enclosure of the Barn—the Garner; and the form of these words will bring us to the Ground, the original Spot. We have seen, that in Welsh, GARDD is a Garden; and in the same column of Mr. Richards' Dictionary, where this word occurs, we have GARTH, "A mountain or hill, a " promontory or cape. Hence Lluarth, A place on a hill where " an army hath rested or remained for some time; Pennarth, in " N.W. Pennardd, Gogarth, Llwydiarth. Bid lâs Lluarth. P. "i. e. Let the place be green, where an army hath been." Garth, or g-ARTH, the Hill, means only the distinguished EARTH— Spot-or Place—the High Spot. In the compounds we see the true form ARTH, ARDD; and we may likewise learn, that the words are used in their more simple sense for a Place. Richards has justly explained Llu-ARTH by the Place, where an army has been. The same Lexicographer has derived Buarth from Bu, the Ox, and Garth; and he has justly explained Bu-ARTH

by the "YARD or *Place* by a House where cows are turned to be "milked, a *Place* to fold cattle, a fold or pen."

GUARD appears in the French Garder, the Italian Guardare, the Spanish Guardar, &c. Skinner next to GARD has the nautical term Garboord, which, he says, is quasi Gardboord, Asser Muniens, from Gard and Boord. In modern English, GUARD has the sense of protection, without particularly recurring to the idea of Security, as arising from an Enclosure. In old English it sometimes simply denoted an Enclosure or Border, without any notion of protection; and hence our term Black-GUARD is derived. GUARD in ancient Language means the Border of a Garment. So in Shakspeare:

" Isab. O! 'tis the cunning livery of Hell,

"The damned'st body to invest, and cover

"In princely GUARDS." Measure for Measure, A. III. S. 1.

"A GUARD, in old Language," says Mr. Malone, "meant a

"Welt or Border of a garment; 'because' (says Minshew) 'it

"' Gards and keeps the garment from tearing.' These borders

"were sometimes of lace. So in the Merchant of Venice:

"Give him a livery

" More GUARDED than his fellows."

The GUARDS* or Borders on the Garments of persons dressed in

^{*}GUARD in this sense occurs in other passages of Shakspeare, which the Commentators have justly noticed. Yet there is one passage in the Lover's Complaint, where we can scarcely distinguish, whether the word GUARDS is used in its ordinary sense, or as applied to Garments. Perhaps the Reader of taste will be of opinion, that the word was forced on the attention of the Poet by the powerful fascination of the associating principle, so operative on the ardent mind, in the moments of invention. A Damsel thus complains, whose chastity had fallen a sacrifice to the arts of her lover:

[&]quot;There my white stole of chastity I daff'd,

[&]quot;Shook off my sober GUARDS, and Civil fears."

in fine cloaths, consisted of gay colours, and were of a splendid ornamental kind; while those, used by grave plain-dressing men, were commonly of Black: Hence was derived the contemptuous term Black-GUARD. — We here see, that GUARD, as applied to the ornaments of a Garment, seems at the first view but little related to the spot, from which it was taken; and thus it is, that the name of the EARTH has supplied a race of words, which in their various applications are oftentimes totally different from the ideas, which we commonly annex to their original source. In the explanatory words adopted by Mr. Malone, this idea is still further illustrated. Border, we know, is equally applied to the Ground, and to a Garment; and I shall shew, that it belongs to the Element BD, denoting the Earth, as Boden, (Germ.) Pedon, (Medov.) Welt, in the phrase, the Welt of a Garment, belongs to the German Welt, corresponding, in its sense and its Elementary

Civil is particularly applied to the Dress. Thus our great Poet,

" Till Civil-mited Morn appear,

"Not trickt and Frounct as she was wont

" With the Attic boy to hunt."

Mr. Malone, on the above passage of Shakspeare, has noted the sense of Civil, Grave, decorous;" as illustrated in the following quotation, without remarking on its peculiar application to Dress:

" Come, Civil Night,

"Thou sober-Suited Matron, all in black."

Romeo and Juliet.

Mr. Warton thinks, that Milton has borrowed the idea from this imagery in Shakspeans; and he produces a passage from Beaumont and Fletcher, where Civil is applied to the colour of dress:"

"The fourteen yards of sattin give my woman;

"I do not like the colour, 'tis too CIVIL."

(Woman's Prize, A. III. S. 3. Vol. VIII. p. 221.)

There are some, who might venture to imagine, that a Civil Suit, as applied to Dress, was derived, by the operation of the associating principle; from the Civil Suit, the Process of Law. However quaint this conception may appear, it is by such minute operations that the human mind is affected and controuled. The "Trickt "and Fraunct" alludes to the gawdy trimming of the Guards.

Elementary form, with our word World. The Etymologists refer-Welt to Wall, and they all belong to the BL, VL, WL, the Ground, to Vallum, &c. &c.

Let us again mark the explanatory term h-Ortus, which must likewise be referred to this race of words, under the idea of the appropriate separate Eart-h or Ground. In Italian, Orto is without the h. The form Ort in h-Ort-us and Orto may remind us of the German Ort, Place, which, as it will be now seen, is derived from a spot on the Eart-h, j-Ord, &c. &c. From Ort, the Spot of Piece of Land; is taken our word Orts, Pieces of any thing. Skinner derives Orts, fragmenta, frustula, from the Belgic Ort, Quadrans, which probably meant a Piece; though Lye thinks, that it is a corruption from Ought, which in Devonshire is pronounced Ort. Lye too reminds us of the Irish Orda, a Piece, fragment, which is derived from the same origin as Ort.

Let us note the explanatory term produced above, Orch-Arp, which some conceive to be quasi Hort-Tard: Others conceive it to be quasi Worts-Yard, Wyrt-Geard, "Area, ubi herbæ "crescunt;" and Skinner adds, "Alludit Gr. Oexos, Oexaros, "Plantarum Ordo, Hortus v. YARD et GARDen." Junius prop duces the derivation of Meric Casaubon from the Homeric word Orchatos, (Opxatos, Pomarium;) and he moreover gives us the Saxon terms for Horrus or Orrus, (as he expresses it,) as ORCE-ARD, ORC-YRD, WYRTUN, ORT-g-EARD. He produces. likewise the following Saxon passage: "Thu EARDast on ORT-"GEARDe, Habitas in Horto;" where we see the word EARDast is likewise taken from the ERDE or EARTH, signifying To Dwell. Junius, moreover, produces the word Orc-Erd-Weard, denoting the Gardener, which literally signifies the WARD of the ORC-ERD or Orch-Ard. WARD, as we have seen, is taken from the same spot; and, if the Saxon passage had been "Se. Orc-Erd-Weard. **Erdath**

Erdath on Ort-Gearde," The Gardener dwells in the Garden, we should have had in this sentence ORC, ERD, w-EARD, ERD, ORT, g-EARDe, all taken from the EARTh, ERDe, &c.; and such is the mode, by which Languages are formed. Junius records, moreover, the Gothic Aurti-Gards, the term for Garden, in the Argenteus Codex. - The Greek Orchatos, (Opxaros,) we see, has the hardened form 'RC, 'RK; and this will remind us of the Greek ERKOS, (EOROS, Septum, Vallum. To EORN, Rete,) the Enclosure, which the Etymologists justly refer to Eirgo, (Egyu.) The ordinary Lexicographers make two articles of Eingo, in its senses of To Keep in and To Keep out, (Eugya, Includo, Conjicio in carcerem, Egyw, Arceo, prohibeo, excludo.)

WORT, WURTLE, WYRT, | WORT. (Eng.) Cerevisia mustea WAURTS, WURTZ, WURTZEL, WORTE, WORTEL, URT, ORT. (Eng. Sax. Goth. Germ. Belg. Dan, Swed.) Herbs and Roots, the Production of the Earth. | WARTON, quasi WYRT-Tun.

et tepida, the liquid fresh from the Herbs.

WYRT-Tun. (Sax.) Herbarium Septum, Hortus.

In the composition Orchard, it is certain, that both parts, Orch and Ard, are taken from the EARTH; but there is some small difficulty about the precise meaning of the first part of this The most obvious idea is, that ORCH and ARD compound. both mean the peculiar spot of EARTH, and that they are joined together, with some minute difference of meaning; so that ORCH-ARD may signify the HORTUS, or GARDEN YARD, or Spot, or the ERKOS, (EAROS,) the Inclosed YARD, or something of that kind. We have seen, that Orch-Ard has been derived from WYRT-Geard, which Lye explains by "A WORT-Yard, ORT-Yard, " ORCH-Ard,

"ORCH-Ard, Herbarum Atrium, Hortus, Fruticetum, Pomarium." If this should be the case, ORCH must signify the Herb. We shall instantly agree, that WORT, WURTLE, and their parallel terms, WYRT, (Sax.) Herba, Olus, Waurts, (Goth.) Radix, Wurtz, Wurtzel, (Germ.) Worte, Wortel, (Belgic,) (Dan.) Ort, (Swed.) which are produced by the Etymologists, mean the EARTH's productions; the Herbs or Roots belonging to the EARTH. Wort, as applied to new beer, &c. means the liquid, fresh from the Wort, or vegetable substance, from In Saxon, as we have seen, Wyrt-Tun which it is extracted. is "Herbarium Septum, Hortus;" and from this compound our familiar name WARTON is derived. - The Tun has the same meaning, which I have attributed to the Ten or Den in Garten, Skinner derives Wyrt, in the sense of Garden, &c. &c. "Cerevisia mustea et lepida," from Work, Fermentari, Effervescere.

WORTH, WORTHY, &c. (Eng.) | WORTHAM, BosWORTH, Holds-What belongs to the Value of Property in Earth or Land. WAIRTHS, WEORTH, WYRTHE, &c. WERTH, WURDIG, WEERD, VARD, WARDE, GWERTH. Germ. Belg. (Goth. Sax. Dan. Swed. Welsh.) Worth, Worthy.

(Saxon.) WORTH, WORTHIG. Fundus, Prædium, Agellus, &c. Earth, or Land.

Worthy. (Eng.) Names of Towns, or Spots of Earth. GWERTHYR. (Welsh.)

GWERYD. (Welsh.) Earth cast up.

GWERYDOE. (Welsh.) A Land, Country, Region.

ERJ. (Pers.) Price, Worth. Enziden. (Pers.) To be Worth. ARZ. (Arab.) The Earth, more or most Worthy.

WHILE I am examining the term WORT, I cast my eyes on the adjacent terms Worth, Worthy, Worship or Worthship, which we shall at once agree to be derived from Worth or Value, as annexed to property in Earth or Land. Worth, Worthy, occur in various Languages; as in the Gothic Wairths, the Saxon Weorth, Wyrthe, &c. the German Werth, Wurdig, the Belgic Weerd, &c. the Danish Vard, the Swedish Warde, and the Welsh Gwerth, &c. Lye refers to these words the term produced in Hesychius, Εορτας, αρεσκουσας, καλας, " Gratas, pulchras," and Εορται, Eδοξο, "Visum est, placuit." The Eortas, (Εορτας,) may be another form of Aresko, Areso, (Αρεσκω, Αρεσω, Placeo,) which I shall consider in another place. But on this I cannot decide. origin of Worth and Worthy will be placed beyond doubt, when we consider Worth, as the adjunct to many names of Places. Skinner places Worth with this sense in a separate article, but he justly refers us to the Saxon word WORTH. in his Saxon Dictionary, explains Worth by "i. q. Weorthig, "WORTHIG, Fundus, Prædium; - Platea, Vicus; - Atrium;" where we see unequivocally expressed the EARTH or Land. WEORTHIG, &c. he explains by "Pradium, Agellus;" and to these terms he justly refers the names of Places, as Wortham, Bosworth, Worthington, Beworthy, Holds-worthy. these names of places the names of men have been taken, as Wortham, Bosworth, Holdsworth, Lee-Worthy, &c. &c. not attempt to produce the various forms of these words, which are to be found in Saxon, &c. and which every one will readily refer to this source, as WEORTHian, Colere, honorare, &c., which means, To regard, as an object of Value or Worth, &c. &c. Welsh, GWERTH signifies "Price, Value;" and the adjacent words In my Welsh Dictionary are, "GWERTHYR, A Fortification," where we are brought at once to Guard, Ward, &c.—"GWERYD, "EARTH cast up,"—and "GWERYDOE, A Land, Country, Region,"

as Mr. Richards explains them. I find likewise, adjacent to these terms, Gwers, a Verse, which I produce for the purpose of exhibiting the power of G in Welsh. In Persian, I Erj signifies "Price, Worth, value, esteem, honour— Erzish, Price, "value, esteem, honour— Lezish, Price, Erzish, Price, "value, esteem, honour— Lezish, To be Worth," as Mr. Richardson explains them, with other words of a similar kind. In Arabic, اض (ARZ) Erz, which signifies "the Earth, "Ground, Soil, Country, Region," means likewise (Araz) "More "or most Worthy."

I shall consider in this part of my work the terms belonging to our Element ART, ARK, &c. denoting an Enclosure—the appropriate and peculiar Spot of EARTH - Set apart - and Secured by fences, &c. from the Land about it. I shall not omit, however, to consider other terms belonging to our Element, which present themselves to my attention, though they convey a different I shall likewise chiefly consider in this Volume those terms, belonging to the Element ART, ARD, which commence with a vowel, simple, or aspirated. When the aspirate becomes converted into a Consonant, we shall then have a race of words, belonging to the Element CRT, GRD, which are to be found through the whole compass of Language, and which will form the materials of another Volume. We have seen in the interpretation of YARD, "Court-Yard, Area Curtis-Yard for Poultry, Chors," where we may mark the terms Court, Curtis, Cuors, which belong to the Element CRT, CRS; and we see in c-h-Ous how One may pass into h-One, and into ch-One. These, as I observed, will be considered in another Volume; yet still I shall not fail to note in the present Volume some of those words under the Consonant form C, G.--- ARS, which are directly connected with the Vowel form ARS. We shall instantly understand, that to the form of Guard, &c. belong Garnet, Garits, (Fr.) Propugnaculi turis, Garter, Girb, Girth, &c. &c.

the German Waren, Wehren, the Belgic Waren, Bewaren, which, we see, exist in the form WR, and which remind us of Aware, War, Wary, Beware. These terms must be considered, as attached to the race of words under the Element ARD, &c. by the loss of the D, the second letter in the Radical War is used for Beware, in the Hunter's phrase 'War Horse,' in addressing a Dog, &c. Gare, the French word, 'Gare la chorde,' appears to be another form of Ware. In Saxon we have both Warian and WARG-an, which Lye explains by "To Be-Ware, Cavere, "vitare, defendere;" and the preceding term in the Gothic and Saxon Dictionary by this writer, is the Gothic Warjan, Pro-In the same column we have the Gothic hibere, Arcere. WARDJans, Custodes. The sound of G is perpetually lost, as. we see it in the instance before us, War-ian from WARG-an. Sometimes the record of the G is preserved in writing, as in-Burrough, the Town, though it is lost in the sound; but in Burrow, the Rabbit Hole, which belongs to Bury, the sound of G is lost, and the letter itself likewise. Burrow and Bury belong to the Saxon Byrigan, where the G is preserved, though it is sometimes written Birian, where the G is again lost.—The words Wary, &c. are brought back to their true sense in the Saxon War, Wer, signifying the Enclosure, "Septum, Sepi-"mentum, Retinaculum," as Lye explains it. Among other things, it signifies "Septum piscatorium, vivarium, piscina. "Hodie, a WEAR." The preceding term is War, Wary, Cautus, &c. In the same column we have Wære, Fœdus, pactum, which. means the Wary transaction, or act of Security; and likewise Wæran, Tueri, and Wendian, Tueri, custodire, where the D appears. In the next column I find "Wær-ham. (à Wær, Septum.) " Munita habitatio. Hodie War-ham in agro Dorsetensi. Waring, "Wering, Agger. Waring - Scyre., Warwicensis Comitatus. " Waring-Wic. Aggere munitus vicus... Hodie Warwick." . Wick

Wick in Warwick is Vicus. The Sirname Wickwar is an inversion of Warwick. Such appears to have been the origin of the name of Warwick. It affords me a melancholy gratification, in my journey through this world of words, to arrive at my native place, and to be impressed with those various feelings, which the remembrance of such a spot naturally inspires.

The Wear in a River means a Dam, a Guarded or Secured place in a River, for any purpose, either for Keeping in Fish, or Confining the Waters. Skinner improperly has two Articles of Wear in these senses, though he justly refers them both to terms denoting Defence, as Werian, (Sax.) Defendere, Wehren, (Germ.) Weeren, (Belg.) In Saxon, Wer or Wær is Septum. Lye produces under "Wear or Sluce" in Junius, the Saxon Werian, Webigan, and the Gothic Warjan, Prohibere, Arcere.

We must add to this race of words our English term WARN, To put any one upon his WARD or GUARD; where the G or D is lost, as in the words just produced, and the N is added to the The Etymologists have detailed the parallel terms in other Languages, as the Saxon Warnian, Warnian, Wyrnan, the German Warnen, the Belgic Waernen, the Swedish Warna, the Islandic Varna. The Saxon Wyrnan signifies "Prohibere, vetare, im-"pedire," which we see is To WARD off, as we express it; and this agrees with the sense of WARN in English, in the expression "To WARN a person off your land," where the word is adopted in its more original idea. The Saxon word likewise signifies "Denegare, recusare, renuere;" and hence Junius has compared it with the Greek Arnoumai, (Apreomas, oumas, Recuso, nego, &c.); and perhaps this Greek word may belong to the terms before us. Junius likewise produces the Saxon word Wearn, or Wearne, which signifies 'Obstaculum.' The succeeding term to Warn in Junius is WARNEstore, WARNstore, which, as he observes,

"Chaucero est Strengthen, Fortify. Item Warnishing, Fortifying." Here, we see, the word comes directly to its original sense, To WARD or GUARD. Among the instances, which he produces of the use of this word, are the following: "I shall WARNstore "mine house with toures." —" WARNishing of hie toures and "of hie edifices is done with grete costages." Junius moreover observes, that in ancient German, WARNOR signifies Munire. To these terms belong our Sirnames Warner and Vernon. Warnish belongs more immediately to the French Garnison, a Garrison, and Garnir, To Furnish—" To Fortify, Strengthen.— "To Garnish, &c." as my Lexicographer explains it. The English Furnish, Furniture, and the French and Italian Fournir, Fourniture, Fornir, belong to Warn, Garnir, &c. only another form of Warnish. The French Etymologists derive Fournir from Hope Ceiv, Hope aiveiv, &c. Ferrari says, that the Italian Fornir is derived from Ornare, and, what is curious, that Garnir has the same origin. Some of the French Etymologists have derived Garnir from Granum, though others have seen its true source.—Nothing appears more remote than the idea, that Furnish is derived from Earth; and it is certain, that no two words can appear more different. Nothing however is so easy as the Process, by which they are related. We have all allowed, I imagine, that w-Ard belongs to Earth, Aerd, &c. Etymologists agree, that WARD, Warian, Wary, &c. belong likewise to each other. Warn, Wyrnan, Warnish, &c. directly connect themselves with Warian, &c., and Warnish brings us at once to Furnish.

WARREN, the Rabbit WARREN, the place of Security for Rabbits, is another form of Wering. In French and Belgic, Garrene and Waerande mean a Warren. Warrant is still another form of these words, and belongs to Garantir, (Fr.) Guarantire, (Ital.) and the Welsh Gwrant, as the Etymologists understand.

Guarantee.

WARD-GUARD.

WATCH. (Eng.) To have Ward over any thing.

WAKE. (Eng.) To be on the Watch.

WACHT. (Germ.) The Watch.

WACIAN, &c. WACHEN, WAECK-EN. (Sax. Germ. Belg.) To Wake, or Watch.

Vigilo. (Lat.) To Watch.

WAKAN, WAKJAN, WAKA, UAKA, VAAGE, *Er*-Wecken,

(Goth. Swed. Run. Dan. Germ.) To Wake.

WAIT. (Eng.)

WARTEN. (Germ.) To Wait.

Re-GARD — Re-GARDER, &c. (Eng. Fr.) To look upon, be attentive, to have a Guard upon or over.

Re-WARD. (Eng.) To Re-Gard

—Look upon, or attend to
the services of another.

Guerdon. (Old Eng.) A Re-Ward.

UAKA, VAAGE, Er-WECKEN, WARISON. (Old Eng.) A Reward.

Let us mark the explanatory term Watch, which means, To have Ward over any thing. Watch might have been written Waurtch even in our mode of speaking it, under which form we should not have sought for any other origin.—The term Watch brings us at once to Wake. The Etymologists refer us under Watch, to the German Wacht, vigiliæ, the German Wachter, and the Belgic Wachter, Excubitor—the German Wachten, Custodire, Cavere, &c., the Saxon Wacian, To Wake, Waccian, or Wacan, To Waken, Excitare, the German Wachen, and the Belgic Waecken, Vigilare.—The German Wache or Wacht is justly explained by my Lexicographer "The Guard, Watch, or Ward;" and Wachen, "To Wake, Watch, be Awake, be not asleep," and "To Watch and Ward, keep Watch and Ward." The adjacent term to these words in the German Lexicons is Wacksen,

"To Wax, burnish, grow up, increase," which belongs, as we shall instantly agree, to the EARTH, from another idea. The WATCH, the little Clock, is that which WATCHES - Preserves -Keeps or Measures Time, as we express it. Let us mark the explanatory word adopted in the above explanations, Vigilo, and we shall own, that the Vig, or, as it might have been, according to our pronunciation, Vidge, will remind us of WATCH. Welsh Dialect of the Celtic, Vigilo is Guilied, according to Lhuydd, and the Gil in Vigilo may belong to this Celtic term; or the L may be the termination denoting person, as in Vigil, In Saxon, VACOL is VIGIL. In the name and hence Vigilo. - Virgilius we have the R in Virg, as in the more regular form of the Element, such as we find it in VERGE, WARD, &c. &c. Etymologists, under WAKE, WAKEN, have referred us to the terms produced above, under WATCH, and likewise to the Gothic Wakan, To Wake, to which they might have added Wakjan, To Waken, the Swedish Waka, the Runic Uaca, the Danish Vaage, the German Wecken, to which belongs Erwecken, &c. Lye has derived these words from Αχέω, "Doleo, Ægre fero; quòd mo-Lestissima sit et languorem ægritudinemque corpori pariter atque animo inducat insomnia." I shall consider, in a future work, various words under the form WG, &c., as belonging to the -Element BD, PD, to the Boden, (Germ.) Pedon, (Hedov); and some of these terms would arrange themselves with sufficient precision under the words belonging to that Element. We may • bserve however, that these Elements, though forming distinct classes of words, may perhaps be considered as originally con-- nected with each other; and a difficulty occurs in our arrangement, when we are deciding on the links of the chain, by which they are united.—I shall now return to the consideration of WARD. where we see the more regular form of the Element.

We have seen, among the parallel terms to Ward, the German WARTEN.

WARTEN, which signifies "To expect, tarry, stay, stand, wait " or attend," where the idea annexed to WARD or Watch over passes into the sense of Watching or Attending to the motions of another, as Waiting for his arrival, &c. Let us note our term WAIT, which we see is only another form of WARTEN. In our sense of the word WAIT, as To WAIT upon a person at tableto Wait or attend upon a sick person, the word more particularly expresses its original sense of WATCHING over or Attending to the concerns of another. The Germans use WARTEN in the same sense, "To Tend, attend or nurse a sick person, to Look after "him, take care of him," as my Lexicographer explains it, who interprets WARTER by "A WARDEN, Keeper, or Tender." The Etymologists refer WAIT to the German and Belgic Wachten, opperiri, vigilare, &c. and to the French Guet, Excubiæ, and Guetter, Guatare, (Fr. Ital.) Observare. The term WAIT, we see, belongs more directly to WARTEN; and GUET, GUETER, GUATARE, (Fr. and Ital.) belong to GUARD, WATCH, &c. In French, GUÊTRE signifies Spatterdashes, which means the things put over the Stockings—as GUETS—GUARDS or protection from the dirt. From hence our word GAITERS is derived. Hence GUEUX signifies a Beggar, from Guerer - Waiting or Watching about a House, or other Spot, to obtain Alms. Thus in the famous old Song of the Beggars, "Sometimes we WAIT at a gentleman's "gate," &c. &c. The WAITS, or Musicians, may either be derived, as Lye observes, from WAIT, because they attend upon Magistrates and others, in processions, &c.; or from WATCH and its parallel terms, because they go about the streets during the night, as the WATCH. It is difficult to decide, to which of these two ideas the term belongs. - Junius, under the word WAIT, refers us to the Belgic use of Wachten, and the Scotch Waucht, corresponding with our word Pledge, as when one drinks to another, and the second person answers in Dutch "Ik WACHT se,"

I WAIT

as we shall all agree, is most directly connected with the EARTH: there is nothing, which we might not conceive to be taken from this same object—the EARTH. However remote the two ideas of Sight and the GUARDed Place may appear from each other, we shall own, when we begin to reflect on the subject, that nothing is more familiar to our knowledge than this union of ideas; and perhaps we have already discovered, that Re-GARD is one of our most ordinary terms for Seeing or Beholding. To GUARD or WATCH over any thing brings us directly, as we now understand. to the operation of Sight—the most important agent in the process of Guarding. The Latin Tueor has the same union of ideas: it signifies "To see or behold, to look stedfastly; - To "defend, assist, or protect;" which means precisely To GUARD and re-GARD. Let us mark the explanatory term be-Hold, where we see the same metaphor from the Hold, the place of Security, &c. The term Re-GARD belongs, as we know, to the French Re-GARDER, the Italian Ri-GUARDARE, &c. &c. We shall now understand, that Re-WARD, the Retribution, has precisely the same meaning as re-GARD; and that 'To re-WARD a Service' means only to re-GARD a Service - Look back upon it - To look upon a Service after it is performed. The same metaphor is used, when a person solicits for retribution: "I hope, Sir, you will "Look upon me for this job - Consider me for this job." The Etymologists cannot avoid seeing, that Re-WARD belongs to Re and Weard, Versus, Erga; and then to Re-WARD a person would mean, if I might so express it, To To-WARD a person, or To Turn To-WARD a person. I differ only from this, by supposing, that WARD, in Re-WARD, does not immediately belong to the idea of Situation or Place, but that of Attention or re-GARD. We perceive, that the simple idea of To Look to— Attend to -- Consider, will express the sentiment without the addition of the Re or Back again. Hence, perhaps, we have the

word Guerdon, which may mean simply Garder, To look upon, or attend to. It is GUERDON in French, and Guiderdone in Italian. Skinner observes, that Menage derives the French Guerdon from the German Werdung, Pretii æstimatio; and he adds, that the Italian Guiderdone might be taken from Guidare, Ducere, and Dono, Lat. Donum, Præmium conductionis. Junius produces, amongst the terms parallel to Guerdon, the Spanish Galardon; and if this should be the case, my derivation is ill founded. We have Guerdon perhaps under another form in our ancient word WARISON, a term of the same meaning. Skinner refers Warison to the French Guérison, a Recovery, from Guérir. If WARISON should belong to Guérison, the term may perhaps signify Recompence, under the idea of Refreshment, as Meat and Drink given for some service performed. — I find however considerable difficulty respecting the origin of these words. Perhaps our Sirname Kerrison may belong to Guérison. We all remember that GUERDON is used in Skakspeare; and we forget not, likewise, how much it exceeds in value Remuneration. " There's thy "Guerdon," says Biron to Costard. "Go."—Cost. "Guerdon! "O sweet Guerdon! Better than Remuneration; eleven-pence "farthing better: Most sweet Guerdon! — I will do it, Sir, in " print. — Guerdon — Remuneration." Warison perpetually occurs in our ancient writers. We may remember it, perhaps. in the well-known Poem of The Battle of Otterbourne:

"Wherfore schote, archaes, for my sake,

"And let scharpe arowes flee:

" Mynstrells, playe up for your WARYSON,

"And well quyt it schall be." (Percy's Reliques, Vol. I. p. 29.)
Warysh is the next word in N. Bailey to Warison, which he explains by "To Cure, Heal, Save, or Deliver," and which brings us to Ward, To make Safe. In the same column of his Dictionary we have Warectum, "Fallow Land, which has been "long untilled," where we are brought to the Spot supposed in my hypothesis. The preceding term, in Skinner, to Warison is

Warished, (see his third Index,) which he explains by "Eased, "Delivered;" and he derives it from the French Guérir, and the Italian Guerire, Sanare. He adds, however, that Warish signifies To Drive away; and this he refers to the Saxon Werigean, Lacessere. He derives likewise the French Guérir from the German Wahren, Defendere, Armare; "Qui enim morbum curat, "hominem à morbo tuetur, et ipsum contra morbum armat et "munit." If Guérir belongs to Wahren, it must be referred to the race of words now under discussion, To Ware, be-Ware, &c., To WARD off, Keep off, or Drive off any evil. It probably however is attached to Curo. Warish, in the sense of To Drive away, and the Saxon Werigean, must be considered on another occasion.

WARD OF WARK of a City. Farringdon-WARD. South-WARK.

WARDS of a Prison—Hospital— Lock, &c. Certain Parts— Places distinguished or WARDed off, as it were, from each other.

East-WARD—To-WARD. The certain Place—Spot or EARTH.

WAIRTH, WEARD, UUERT, UORDA, WAERD, WERDTS. (Goth. Sax. Al. Run. Belg. Swed.) To-Ward.

v-Ersus — h-Orsum — Erga. (Lat.) To-Wards.

Ergo. (Lat.) What is done for a person's sake—Erga ali-

v-Ergo. (Lat.) To v-Erge or Tend to any Spot-Place, &c. ARDWY - ARDAL. (Welsh.) A Region.

ARDWYAW. (Welsh.) To protect, defend.

AIRD. (Gal. and Ir.) A Coast, Quarter, Cardinal Point.

AIRDE Tuath—AIRDE Deas, &c. (Gal. and Ir.) North, South, &c.

ART. (Scotch.) Plaga, ora, clima.

ORT. (Germ.) Place, Part.

ORTS. (Eng.) Parts, Pieces.

n-ORTH, sou-TH, ea-ST, w-EST.

(Eng.) The certain Part— Place or Quarter.

ARCTOS. (Gr.) The North. Euros. (Gr.) The East Wind. quem, or To-Wards any one. | Eos. (Gr.) The East, Morning.

WARD, as we have seen, the term of Security, is derived from the idea of the EARTH, or the Place; that is, if I may so express it, the Place, made a distinct and peculiar Spot of EARTH or Ground, by fences, &c., for the purposes of Safety and Security. In another sense of the word WARD, 'Urbis regio,' as Farringdon WARD; it means a Place or Spot of EARTH, under a certain jurisdiction; and it partakes in some measure of the sense of WARD, as the WARDed or Enclosed Spot. Hence WARD signifies any Place - as divided and distinguished from another; or, in other words, the Divisions or certain Portions of any District-Building - Machine, &c., as the WARDS of a Forest - of an Hospital - Prison - Lock, &c. WARK may be considered as another form of this word: If it be supposed to signify a Rampart or Fortification, as in Bull-WARK, it has the same meaning of the Enclosed EARTH. The Etymologists derive WARK from Work, Opus; and if that should be the fact, it is still taken from the EARTH, though under somewhat of a different idea. I shall shew in a future page, that Work—Ergon, (Εργον,) is the Operation relating to the EARTH; and hence Operation in general. Wake means a certain portion or Space near a Ship, distinguished from the water about it, as the Place of the Ship; where we have Wark, when the r has disappeared. — WARD, in such phrases as East-WARD, For-WARD, To-WARD, means simply the ORT—the Place—the EARTH, without any idea of the Enclosure of Safety and Security. Skinner refers WARD, Urbis Regio, to WARD, Custodia, "quia sc. quælibet urbis regio "proprias sibi Excubias et proprios Vigiles habet." The word in this sense is not noticed by Junius; but WARD, in the sense of East-WARD, West-WARD, &c., he refers to the Gothic Wairth, the Saxon Weard, the German Uuert, the Runic Uorda, the Belgic Waerd, to which Lye adds the Swedish Werdts. Skinner places WARD in this sense in a separate article, and refers us to the Saxon

Saxon Weard, though he adds, "Si à Lat. Vertere deflecterem, "quid sceleris esset?"

From the compound Towards, 'Going to a Place,' we have the idea of 'Going to - Inclining to any thing in general;' and hence the adjective Toward - Towardly, as a Boy, &c., which signifies a Boy inclining to his business—ready to do his business, Tractable, Adroit, &c. So apparently remote are words from their original idea in their mode of application; and yet so natural is the process, by which they pass from one sense to another. — Auk-WARD we know is the opposite to this, where Auk means From - Not, or something of that sort - 'Not going to the WARD or Place, or from the WARD or Place-Not 'Inclined to any Pursuit—Business, &c.' The exact meaning of Auk is not perfectly evident. The A or Au may be simply privative, and the K may have been added to avoid the union of so many vowels. Skinner produces " Æwerd, Perversus, aversus," where the Æ is privative. The Auk however may belong to Ex, Out, Aus (Germ.), &c. &c. In Froward, the Fro has the same sense as in To and Fro, i. e. To and From. In Saxon it is Fram-WEARD or From-WEARD. While I am examining Aukward in Skinner's Dictionary, I cast my eyes upon the term Award, which is not directly taken, as he thinks, from A and Weard, "Versus, Erga, q. d. Erga talem (i. e.) tali addicere, assignare;" but, as Spelman conceives, it belongs to the French Garder, or to WARD, the term of Security, &c. To Award means To Assign, or settle any thing, in an authentic formal manner, so as to make the matter WARD-ed, GUARD-ed, or Secured.

We have seen the interpretation of Weard by "Versus, "Erga;" and Ward the Etymologists explain in Latin, as they must do, by Versus. Junius likewise justly interprets For-Ward and Back-Ward by Antrorsum, Retrorsum. Yet the Etymologists have not seen that the v-Ers—the Erg—and the Ors, in v-Ersus,

v-Ersus, Erga, Antr-Ors-um, and Retr-Ors-um, are only different forms of w-ARD, or a term of that nature, and denote the Place or ORT on the EARTH, ERS, ERK, &c. &c. The Etymologists derive Versus from Verto; and whatever may be the precise idea, by which VERTO is connected with the EARTH, we shall agree, that a term bearing such a sense would be naturally derived from that object. The Etymologists themselves bring us to this spot, as they agree that Versus—the Verse, is derived from the "Turning again at a Land's end in ploughing." Thus we see, that the name for the highest effort of the human mind, the lofty Verse or v-Erse, is acknowledged to have been derived from the most ordinary operation performed upon the This will open to our view a wider Surface of the Earth. scene of reflexion; and will incline us to suppose, that from the same source may be likewise derived other terms, which appear to bear a sense equally remote. The Latin v-ERTO, however, seems to be connected with this spot, under the idea of To EARTH up,—to disturb or Turn up the EARTH, as we express it in the labours of Agriculture, ploughing, &c. Thus, then, the word is used in its original notion, and brought to its primitive spot in the sense of "To Dig, or cast up," as Robert Ainsworth expresses it, "Quo sidere Terram Vertere conveniat."

The Latin h-Ors-um is supposed to be derived from Huc Versum, as Prorsum from Pro and Versum. We have likewise other compounds of this word, as Qu-Orsum from Quo and Orsum, &c. &c., and we have seen similar compounds of Ward, as For-Ward, To-Ward, &c. The Latin v-Ersus, To-Ward, seems assuredly to belong immediately to Verto, Versum; yet, when we compare v-Ersus with Horsum—Erga and Ward, we might be inclined to think, perhaps, that they all belong to each other. We see, moreover, that Vergo, To Tend, coincides with the sense of Versus. When similar ideas occur in the same object,

object, they cannot easily be separated. If v-Ergo in its original sense meant precisely To EARTH, we see at once a cause for the signification 'To Tend to the EARTH'-" VERGIT ad imum," and To EARTH, as relating to Place, that is, To WARD, if I may so express it, To lie or be situated To-WARD any Part or Quarter -VERGIT ad orientem, 'It is East-WARD.' - The Latin Erga is derived by the Etymologists from Ergo, which they consider to be quasi Epyw, the dative case of Epyov. We now see, that Ergo, "For, because, for one's sake," is directly taken from Erga, To-WARDS. Such phrases as "Divina bonitas Erga Homines," might be expressed with a similar meaning by "Divina bonitas "Hominum Ergo apparens—existens, monstrata," &c. ness shewed To-WARDS a person is a Kindness exhibited For him — Because of him or For his sake, Propter eum — Ejus Ergo. The Italian Verso means "Towards, Against - In behalf of, "With regard to," which contains the senses of Erga "Towards, "Against," and Ergo "For, because, for one's sake."

In Welsh, Ardwy and Ardal signify 'a Region,' Ardwyaw, "To protect, Defend," where we have the double sense of w-ARD, the Region, as in To-w-ARD, and of Defence, as in "w-Ard off." Airde precisely answers to w-Ard, Eastw-ARD, &c. in other Dialects of the Celtic. Mr. Shaw, in his Galic and Irish Dictionary, produces AIRDE-Tuath, AIRDE-Deas, AIRDE-Near, AIRDE-Niar, as the terms for North, South, East, West. Mr. Shaw, under AIRD, explains it by "A coast, quarter, cardinal" " point." Lye produces this Irish word, as a parallel term to ART, which in Gawin Douglas, as he says, signifies "Plaga, ora, clima." These words, we perceive, coincide with the German ORT, a Place, or Part; and to this, as I have before observed, we must refer our word ORTS, Parts, Pieces, Fragments, which was taken from the idea of Parts or Pieces of Land. In Mr. Shaw's Galic and Irish Dictionary we have ORDA, "A Piece, Fragment," which belongs

belongs to these words. The preceding term to this is ORD, · A Hammer, Mallet, which is derived, I imagine, from the idea of beating any thing into *Pieces* or Fragments. When the r is lost in the Element ^rT, ^rD, denoting Place, we have the form ^T, ^D, bearing the same meaning. Hence, in Mr. Shaw's Dictionary, we have "AIT, AITE, a Place, Stead," and IATH, Land. appears to me, that in our terms no-ARTH, sou-ATH, ea-ST, w-EST, the 'RS, 'ST at first simply denoted Part or WARD, Air; and that the n-s, and the distinguishing vowel-sounds, were acquired in process of time to mark the difference of the Quarters. We might imagine, that the n and s were never significant, as belonging to other words, but that they were added to distinguish one from the other, and arose from vowel breathings. It is precisely the same artifice in the formation of Languages, as it relates to the vowel breathing, which I am unfolding in every part of this discussion. It is from hence that EARTH has become ORT, ART, AERDE, w-ARD, &c., and has been applied to denote different ideas, and to distinguish between different objects, though agreeing in some fundamental notion. I must observe, however, that the vowel breathing does not often pass into the sound of N; though we ought still to remember, that it perpetually passes into the sound of G, and that the N is a familiar organical addition to the G. Hence it is, that the Hebrew letter y Gnain has been formed, which is by some called Oin. These names have been given to the letter, because some conceive, that it has simply the sound of a vowel breathing, while others think, that it has the sound of GN. We accordingly find, that the corresponding terms to the Hebrew words, beginning with this letter, commence in other Languages, sometimes with a vowel breathing, and sometimes with Gn, G, and N. I must add however here, what I shall suggest in another place, that the N and S, in North and South, may possibly represent articular prefixes,

prefixes, denoting This or That. We shall all readily admit, that the names for the four quarters would be naturally derived from the idea of Place—Region—Part—Quarter. In Arabic, the South is unequivocally expressed by a word, which means A certain Part—Quarter &c.; and it is often joined with its parallel word, denoting Quarter, appearing under a minute difference of form. Thus, جنب Jenus means, "The South, "South wind. Junus: Sides, Parts, Tracts, &c."; fend, "1. A Side. 2. A Part, a Tract of Country, a Coast;" and fend found, means The South Part.

These terms for the four quarters are to be found in various North occurs in the Saxon North, the Islandic Languages. Nordur, the German and French Nord, the Belgic Noord, the Danish Norden, the Italian and Spanish Norte, &c., as the Etymologists understand. Lye informs us, that, according to Martinius, the Nordwind is derived from Nehren, Alere, pascere, as Bopeas is taken απο της βορας, à cibo vel pabulo, for a reason which Vossius, as he observes, unfolds to us under Boreas. Vossius, Boreas is derived from Boga, Cibus, " quoniam eo abun-"dant boreales tractus, ut censet Porphyrius; vel quòd vento "hoc flante avidiores ac edaciores simus; vel quòd," &c. &c. After such reasons for the origin of words, no attempts in Etymological conjecture can be considered as wild and visionary. General Vallancey observes, that "the Celtic name of a point of "the compass is ARD or ART, a word still used in Ireland and "Scotland. The North by pre-eminence was called An Ard, the "highest point; hence Nard, Nord, North. Ce is the Earth, "and Ce-ART or Che-ART literally signifies the delineation of " a nautical survey, disposed according to the proper bearings," and from this he derives "Cart, or Chart." (See Essay on the Celtic Language, annexed to the Irish Grammar, p. 108.) The word CHART belongs to the Element CRT, denoting likewise the

the Earth, which I shall consider in a separate Volume. General Vallancey has recorded in an adjacent page (110), among the Celtic names for the Earth, the terms Criadh and Creat, to which Chart, Charta, Card, Chartes, (Xaptys.) belong. The An Ard, North, might lead us to think that the N in North was derived from the Celtic An. South is found in the Saxon Suth, the German, French, and Italian Sud, the Belgic Suyd, the Swedish Soder, and the Islandic Sudur, &c. Some derive these from Terus, Pluviosus, as they derive the Latin Auster, 'ab Hauriendis 'aquis,' and Notus and Tys Northos. The parallel terms to East are the Saxon East, Eost, the German Ost, the Belgic Oest, the Danish Oster, and the Islandic Austur, which the Etymologists derive from the Greek Hug or Eug, Aurora, Oriens. The Greek Eos (Eus) may perhaps denote the East. West is to be found in various Languages, as in the Saxon, German, and Belgic West, the French Ouest, the Danish and Islandic Vester, the Swedish Wester, which the Etymologists derive from the Greek Esperios, (Esperios,) by changing π P into τ T. The origin of Esperos (E $\sigma\pi\epsilon\rho\sigma$) or Hesperus is very obscure: The P may be only an organical addition to the S; so that Esperos may be Esér-os or Ester-os, belonging to Vester, &c.; or the E may be an addition, and the word may be Speros, belonging to the Element SPR.

In the Greek Arktos, (Aquitos, Ursus, Ursa; Signum coeleste; Piscis quidam; — Pars orbis Septentrionalis,) we see unequivocally the form of Airde, as in Airde-Tuath; and we shall now understand, why in our Dictionaries Arktos, (Aquitos,) originally meaning the certain Earth—Ort, Place or Part, is adjacent to Arkeo (Aquitos, perpulso) and Arkus, (Aquitos, Rete,) which belong to Erkos, (Equitos, Septum,) the Enclosure—from the peculiar—Separate Earth. Every thing, we see, in Language is consistent and uniform. We shall now moreover understand, why the Stars towards the

North Pole have been connected with the idea of a Bear. has arisen from a confusion in the meaning of words, where ARKTOS (Aprtos, Ursus, Pars orbis Septentrionalis,) means at once a Bear and the North. — Heraclitus, as it should seem, understood by ARKTOS, (Aprtos,) the Horizon; in which case it actually denotes the ORT-AIRDE, the place-quarter-or EARTH, under the notion of the Erkos, (Eexos,) the Boundary - Place - or Earth. The idea of the Boundary is perpetually connecting itself with these words, and cannot, in many cases, be separated from their original meaning. "Heraclitus," says Martinius, sub voce Arctos, " (ut ad Manilium notat Scaliger,) nomine Aquetor intelligit îpsum "Horizontem." The Greek Orizo and Oros, (Opiζu, Termino, Oeos, Terminus,) and the Horizon, may directly belong to this race of words - to Erkos, (Equos,) &c. The Greek Euros, (Eugos, ventus ab oriente spirans, &c.) Eurus, must probably be referred to the terms now under discussion; where we have the full form ^RS, ^RD. The Latin Auster should perhaps likewise be added to this race; and we perceive, that it more particularly coincides in form with Oster, Austur, and Wester, &c. above produced, as terms for other quarters. Euros, (Eupos,) is supposed to be derived from " απο της εω ρεσιτα, quod flatus ejus ab oriente sit hiemali," or from " ev pen, bene fluere." The Greek Notos, (Notos, Notus, Auster,) may be derived from Notis, (Notis, Humor,) as it is imagined, though it may have been formed as North, and applied to a different quarter. The succeeding word to Euros, (Eugos,) referring to a quarter of the EARTH, in the Greek Dictionaries, is Euros, (Eugos, latitudo,) Breadth; and we shall all agree, that Euros, and Eurus, (Eugos, Latitudo, Eugus, Latus,) denoting Breadth or Extension, would be naturally derived from the EARTH. While examining the Greek Eurus, (Eugus,) I find in the same column of my Greek Vocabulary by Hederic, Euroos, (Eugus, Sitis, mucor, caries,) Dirt, Filth, which, we should likewise all agree,

agree, would be most naturally taken from the Dirt of the EARTH.

We have seen, that in Celtic, IATH means Land; and in the same column of Mr. Shaw's Galic Dictionary, where Iath occurs, we have Iarthar, the West, belonging to Iar, which means at once "The West," and "After, At, Upon." Whether Iar should be considered, as having lost the Radical T, quasi Iart, and as belonging to our Element ART, I cannot decide. Again, we have Oirthear, "The East, Eastern World;" and in the same column, "Oirthir, the shore, coast, borders." Among other terms for the East, Mr. Shaw gives us Oirsceart. We shall see in a future page, that Air and Oir are Celtic terms for the West and East, and this will supply us with a topic of reflexion, which opens into a wide field of investigation.

Enclosures in general, for any kind and for any purpose, as of Defence, Holding, &c., originally derived from the appropriate Earth, &c.

Words signifying that which Enfolds, Keeps in or off; Stops, Represses, Compresses, Constrains.—Words denoting what is Held, or Confined within a certain Spot, &c.

Bull-Wark, Boule-Vart or Boule-Vert, Balo-Ardo, Bal-Varte, Boll-Werck, Bull-Verck. (Eng. Fr. Ital. Span. Germ. & Belg. Dan.)

ERKOS. (Gr.) An Enclosure.

EIRGO, EIRKSO. (Gr.) To Include — Keep off.

ARCEO. (Lat.) To Keep off.

Arx, Arc-is. (Lat.) A Citadel.

ARSENAL, ARCENAL, ARSENALE. (Eng. Fr. Ital.)

Arkeo. (Gr.) To Keep off— To be of Assistance to—To be adequate to, or sufficient for any occasion or purpose. Arego. (Gr.) To Defend or Assist.

ERUKO — ERETUO. (Gr.) To Keep in—Inclose—Repress.

ARKUS. (Gr.) A Net.

ARCTO — ARCTUS — ARTO —
ARTIO. (Lat.) To Keep in—
Hold fast, Compress, &c. Tie
tight together, &c.

ARTUS. (Lat.) The Limbs, quod Membra Membris Artentur.

ARTHRON, ARTICULUS. (Gr.)
Joints, from the idea of Confining — Tying or Keeping together.

ARTE, ARTEN. (Old Eng.) Cogere, Compellere, Arctare.

ARCA. (Lat.) A Chest, Coffer, &c.

ARK. (Eng.) A Chest, Boat, Ship.

ARK-Wright. (Eng.) A Sirname.

ARGO. (Gr. Lat. &c.) The famous Ark or Ship of the Argonauts.

ARCH, ARC, EARC—EARK, ARK, ARCHE, ARCA, ARCK. (Welsh, Galic, Sax. Germ. Fr. Ital. and Span. Dan.) An Ark.

ARCUS.

The Bull belongs to the Element BL, denoting the Earth; and means nearly the same as WARK, the Enclosure of Safety-Strength. Bull belongs to Bolos, (Bulos, Gleba, Ager,) Wall, Salmasius sees, that Bull has reference to Vallum, &c. &c. Bolos, (Βωλος.) Skinner derives Bullwark from Boll, Globus, and Work or Werck, Opus, Fabrica, q. d. Fabrica Globosa, Sphærica; and Menage, as he says, derives it from the German Bol, Trabs, and the same term Werck, q. d. Fabrica ex Trabibus constans; " sed Bol," as he adds, "hoc sensu nusquam mihi occurrit." Menage has produced various other derivations for this word, which it is not necessary to record. The parallel terms to Bulwark, exhibited by the Etymologists, are Boulevart, Boulevert, (Fr.) Baloardo, (Ital.) Balvarte, (Span.) Boll-Werck, (Germ. and Belg.) Bullverck, (Dan.) where we see, that the WARK, WERCK, VERCK, VART, VERT, ARDO, are different forms for the EARTH, or Secured, Enclosed Spot of Ground.—To the Italian BALOARDO belongs the term BALORDO in that Language, signifying Stupid, Foolish, a person of a mind impenetrably dull, against which no impressions of good sense can prevail, as in the following metaphorical application of the same kind. Hamlet, as we remember, says to his Mother,—

" Peace; sit you down,

- "And let me wring your heart; for so I shall,
- "If it be made of penetrable Stuff;
- "If damned custom have not braz'd it so,
- "That it be proof and BULWARK against sense."

Junius remarks under the word Sconce, that in Islandic VIRKE is Vallum, and that in Saxon Manuscripts he has found WERC and WEORC frequently used for Castellum, "i. munimentum "adversus repentinas hostium incursiones exstructum: unde "manifestum hujus acceptionis vestigium adhuc in compluribus "arcium oppidorumque nominibus remansit." Let us mark the explanatory

Auxilior, opem fero,) which is only a different form of Arkee, (Apren, Auxilior, opitulor.)

To Arego and Arkeo, (Αρηγω, Αρκίω,) we must add Eruko and Eretuo, terms of a similar meaning, (Ερυκω, Inhibeo, contineo, servo. Ερητυω, Inhibeo, cohibeo, reprimo.) They are all derived from the same idea of the Erkos, (Ερκος,) the Enclosed—Secured Earth. A passage or two in Homer will abundantly explain the original notion of these words:

Λειπε δε λαον

Τρωϊκον, ους αεκοντας ορυκτη ταφρος ΕΡΥΚΕ.

(Il. n. 368-9.)

" Deseruitque is populum
" Trojanum, quos invitos profunda fossa coercebat."

Here we see, that Eruko, (Ερυκω,) under the idea of Stopping, is referred to the impediment caused by the Fence of the Earth. We see, moreover, that the Latin term co-Erc-ebat corresponds with it in meaning, and is derived from the same spot.—Let us note another term Orukte, from Orusso or Orutto, (Ορυκτη, Ορυστω, Ορυττω, Fodio,) To Dig, which we shall instantly grant is derived from the Earth. The same word Eruko (Ερυκω) is again applied to the Defence of Earth or Ditch, raised by the Greeks, about the Ships. "What fools," says Hector, "are the "Greeks to make these weak contemptible Fortifications, which "will not Stop or repress my Might!"—"Tad' ou menos amon "Eruxei—(ταδ' ου μενος αμου Ερυξει,)"—" which will be no Erkos, "(Ερνος,) no Arx or Bull-Wark against my fury."

Νηπιοι, οι αρα δη ταδε τειχεα μηχανοωντο, Αξληχρ', ουδενοσωρα· ταδ' ου μενος αμον ΕΡΥΕΕΙ. (\mathbf{R} . \mathbf{e} . 178-9.)

The same column in my Greek Vocabulary, which contains Arkeo, (Αρκεω,) exhibits likewise Arkus, (Αρκεω, Rete,) a Net, which

which signifies the Erkos, (Equos,) or Enclosure. Erkos itself means an Enclosure and a Net. (Equos, Septum, Vallum; $\tau \alpha \text{ Equip}$, Retia.) I again perceive in the same column, Arkt-os, (Aquitos,) The Bear, which, with its corresponding term, the Latin Ursus, belongs, as we see, to our Element ^RK, ^RS. These words convey the idea expressed by Hirsutus, which will be explained on another occasion.

The Lexicographers have seen, that Arcto, Arctus, &c. belong to Arceo, which not only signifies to "Keep off, out or " from;—To drive away;" but "To hold fast, strain, or tie hard— "Teneras Arcebant vincula palmas," as Robert Ainsworth explains it. — ARTO, "Strictum facio," and ARTio, are only different forms of Arcto—Arceo. The Etymologists justly consider the ARTUS, the Limbs or Joints, to be so called "quod membra "membris Artentur." Hence we have Articulus, and the Greek ARTHron, (Appear.) Skinner observes, that in Old English ARTE, ARTEN, signifies, "Cogere, compellere, fort. ab Arctando." In Galic, ART is "A Stone, a Tent, Tabernacle, House."—ART likewise means "A Bear"—"A Limb"—"God"—"Flesh," which are produced by Mr. Shaw, as separate words. same page of Mr. Shaw's Dictionary, we have Aros, "A House, "Habitation,"—Aroch, "A Hamlet, a little shielding;" and the same writer explains ARAS by "A House, Village, Settlement." The House means the Enclosure or Appropriate Spot. sense of the Limb and Flesh must be referred to ARTUS, and that of the Bear belongs to ARKTOS, (Aprtos.) The name of God should probably be referred to the race of words, signifying High - Great - Illustrious, &c., as the Galic Ard, "High, Lofty, "eminent, excellent," which we find in the preceding page to that, in which ART occurs. In Welsh, AROS signifies "To tarry " or stay; to wait or expect; to dwell, to abide," which means to Earth, or to be fixed in a certain Place or Earth. ARRASS.

ARRASS, Tapistry, is supposed to be so called from the Town in which it was made, which may be the case. If this were not so, it might belong to ARAS, under the idea of the Stuff for Enclosing—Covering, &c.

The adjacent word to ARCEO, &c., ARCA, "a Chest, Coffer an ARK," is acknowledged to belong to ARCERE, Continere; and Arcanus, Secret, they derive from Arca. Robert Ainsworth explains one sense of Aroa by "A Dam of wood to keep away "the course of the waters; an ARK." In English, we know, ARK is used for an Enclosure of different kinds, a Chest, Boat, Ship, &c., as 'the Ark of Moses, the Ark of Noah.' To Ark, as denoting the Enclosure of a Boat or Ship, belongs the name of the celebrated Ship, Argo. The word Argo has been derived from Argos the person, who is said to have built the Ship, or the place where it was built, or because it carried Argives or Grecians, or from Argos, (Apyos,) Swift, &c. Junius produces the parallel terms to ARK, as the Welsh Arch, the Saxon Earc, Erk, the German Ark, the French Arche, the Italian and Spanish Arca, the Danish Arck; all which he derives from the Greek Eingo, " E197w, Includo. Item Arceo." Arc is another form of the word in Saxon, and ARKA is the Gothic term. The familiarity of the term may be understood from the name, which denotes the Maker of the ARK, as ARK-Wright. In Welsh, AROH, as Mr. Richards explains it, is "A Chest, a Coffer. Thus in Arm-" Arch Noe, Noah's ARK, a Coffin. Heb. MIN ARGAZ, a Chest, "a box, D. It is also used for the Body, exclusive of the head, "arms, and legs, q. d. the Chest of the Body." Lhuyd produces under ARCA the Irish Arg, and Airk. I find in Mr. Shaw's Galic and Irish Dictionary, ARC, "A chest, ARK;" and in the next article, "Arc, a Body." Having obtained the original sense of the word, I must leave the Celtic Scholars to discover, why Arc signifies "a little Pig, a Dwarf, a Bee or Wasp, " a Lizard,

"a Lizard, Impost." Perhaps the little Pig, the Dwarf, and the Wasp are derived ab Arcto corpore, from the Contracted Compressed Dimensions. The Impost is likewise perhaps taken from the idea of Compression — or Griping hard. The Lizard or Lacertus belongs, we know, to Lacertus, the Arms, where we have again the idea of Compression-Hugging in. The succeeding words in Mr. Shaw's Galic Dictionary are "ARCAN, a Cork-stopper. " Arc luachrach, An adder, lizard. Archu, A Chained Dog. "ARCHON, A Fierce Dog. Archuisg, An experiment. ARCHUR, "Sucking. Arcis, A Hide." In the Stopper and the Chained Dog we see the true idea. The sense of Sucking is derived probably from the notion of Compressing or Squeezing out, and in that of the Hide we see the Enclosure. What the Experiment is derived from, I know not. Again, in Welsh, Argae signifies, as Mr. Richards explains it, "A Fence to keep water in its own "channel, or in mill-dams, a lock in a river, a water gate; " a place inclosed, an inclosure, a close." Here ARGAE corresponds with the sense of ARCA, given by Robert Ainsworth, of "A Dam of wood to keep away the course of the waters." In the same column of Mr. Richards' Welsh Dictionary, in which the interpretation of Arch is, we have Archen, "Clothing, apparel. " It seems to signify properly a shoe, patten, or any thing worn "on the foot:" and in the next column we have ARCHRE, "Cloaths." These words are probably taken from the idea of that which Incloses, &c. The Latin Arcera, a species of Rustic Cart, may belong to ARCA, though it may be derived, as some think, The Acerra, the Incense Pot, might be quasi from Carrus. Arcerra, and belong to Arca.

We shall now understand, that Arcus, the Arch and the Bow, is the Round Enclosure. The Latin Etymologists have a similar idea, when they refer Arcus to Arkeo, (Apren,) Teneo. The term occurs in the French Arc, and the Italian and Spanish

Junius faintly observes on these words in the modern Languages, Arch, &c., "Videntur esse desumpta ex Lat. Arcus;" and he adds, "Alii derivant ab Aprew, Propulsare, continere, " auxiliari; quod universam concamerati operis molem, jamjam " veluti casuram, lapides mutuo sibi incumbentes atque invicem Skinner observes on ARCH, "Hoc " obstantes sustineant." " nimis manifeste à Lat. Arcus, quia Arcum flexum figurâ refert." IRIS, IRID-05, is, (Ipic, Ipidos) is the Arcus, the Arch, Bow, or The Etymologists derive Iris from Eiro, Equ, Denuncio, "quod presentem pluviam et futuram denunciet serenitatem," says Martinius. Unceus, the Pitcher, and ORCA, "vas teres ad "vinum, oleum, salsamenta capienda," another species of vessel, signify the Enclosure. In Gothic, Aurks is Unceus, as Lye explains it. Orcus, the place of confinement for the Dead, and then the Deity of the Dead, is an Erkos, (Epros,) or Enclosure of a different kind, and brings us to the Spot, from which I suppose these terms to be derived. Some justly remind us of this Greek word under Oncus; and by others we are referred to the Greek Orchos, Oexos, Fovea, the Ditch—to the Chaldee name for the EARTH WITH ARKA, and to ORKOS, Opros, the Oath, because the Gods swear by Styx, and the Infernal Regions. — The fable of Swearing by the Infernal regions is probably a mistake, arising from a confusion in the terms Orcus, the Place of the Dead. and Orkos, the Oath. The word was sometimes written in the ancient Language of the Latins, Horcus and Uragus. - The term Orkos, (Oexos, Jusjurandum, Juramentum, Sacramentum, fœdus, religio,) as applied to the solemn Oath-League, &c., denotes the Ceremony or Rite of Security or Assurance, and belongs to the race of words before us, denoting the Erkos, (Eoros,) the Secured or Safe Spot; that is, Erkos (Eoros) is the locus, qui Securos homines facit, - and Orkos is the Ritus, qui Securos homines facit; or Erkos is the Septum materialeand Orkos the Septum mentis. This origin, for terms denoting an Oath, is obvious and simple; and such, we know, has perpetually been the metaphor annexed to this subject. The term Orkane, (Opran,) under a similar form, in its first part, to Orkos, (Oproc,) the Oath, actually signifies the same as Erkos, (Equoc,) and is derived by the Lexicographers from that source; (Opran, Septum, Sepes, Sagena, ab Equoc.) Orkismos, (Oqran,) is explained by "Obstrictio per Jusjurandum," the Binding—by an Oath, where we have a similar metaphor. There is however another possible origin of this word, which will be explained in a future page.

While I am employed in examining these words, I cast my eyes upon the Greek Oncheomai, Oncheo, (Ορχεομαι, Salto, Tripudio, Oexew, Moveo, Saltare facio,) To Dance. Here again we are brought to the idea of the ERKOS, (Epxos,) the Enclosure—as the Place fenced all round, as we term it, or to the Round-about, if I may so express it. The action of Dancing is often connected with the idea of Going Round - or of a Circular kind of Lye has compared our term Dance with the Greek Donesis, (Aornous, Agitatio,) or, as he might more accurately have said, Dinesis, (Aumois, In vorticem, seu gyrum circumactio,) Koupos δ' OPXHΣTHPEΣ EΔINEON, &c. Il. Σ. 494.; and he has interpreted the former word, as if he had employed both terms in his derivation, "Volutatio, vacillatio, agitatio, talis præsertim, qualem " in choreis videmus, quum aut gyri fiunt saltatorii, aut pro "modulorum ratione passus variantur." The Greek Choros, (Xopos, Chorus,) has a similar idea of a Round-about, and belongs to the explanatory Latin term just quoted, Gyrus. An adjacent word to Orcheomai, (Ορχεομαι,) To Dance, is Orchis, Ορχις, Testiculus, - Genus olivæ, which appears to contain an idea very remote from that of Dancing. The resemblance however will be readily acknowledged. The sense of a Round-about or Circumference

ference not only belongs to the idea of a flat Surface, but is extended to Bodies of a solid form; and it is then applied to solid substances of a Round-about appearance (if I may so say), or of a Swelling Hence Orchis, (Oexu,) denotes the Testiculus and the The Latin Am and the Greek Amphi, (Auo,) relate, we know, to the Round or Circumference; and from hence, as we know likewise, are derived Ampulla - Amplus, &c. Again, I find adjacent to Orkos, (Opuos,) the Greek Orizo, Oros, (Opico, Termino, Finio, Opog, Terminus, Limes, Finis alicujus regionis, vel agri, Oeos, Mons, collis,) the Separating Enclosure of Lands—the Fence—the Boundary—the Bounding Hill, &c. The idea of the Boundary of Land would of all others, as we might suppose, supply terms, which would be derived from the EARTH. mark the word TERMINUS, which I have shewn to be attached to the TMN, the Ground. This likewise we should have supposed à priori; but let us mark another word derived from it, Term, and note what office it is made to perform by a metaphorical application. This will shew us, how words belonging to the Ground may express ideas, which apparently are far removed There is however one difficulty from the original notion. respecting Orizo and Oros, (OpiCa, Opos,) which it is necessary to explain. These words are all certainly attached to an Element denoting the Ground; but whether they belong to our Element ^RZ, ^RS, or to that of ^R, is not absolutely manifest. Izo and the Os in these words may be only additions from the construction of the Greek Language. In Hebrew, the name for a Mountain, which seems to correspond with Oros, (Ogos, Mons,) belongs to the Element AR. In Hebrew הרה HRH or הר HR signifies "A Mountain, a protuberance, rising, or Elevation of " the Earth."

From the idea of the certain Place or EARTH—the appropriate Spot, Guarded or Warded off from the rest, for the purpose

purpose of Security and Defence, we pass at once to the notion of whatever is Secured or comprehended within that Spot or Place; and hence we have HORD—HOARD—HERD. The Hord of Barbarians, Robbers, &c. is the company of Barbarians. Robbers, &c. living in a certain Earth or Place—distinguished and separated from others. This brings us nearest to the original idea; and we see, how HORD in this sense connects itself with EARdian, Habitare, Incolere. The Hord or Hoard of Goods-Treasure, and the HERD of cattle, denote the things or animals deposited or collected within the WARD, or GUARDED EARTH OF The Etymologists refer Hond to the Saxon Hond, Spot. Thesaurus, HORDan, Recondere, and the Gothic HAURDAI, Ostium; and Lye produces the Islandic HIRDA, Servare, custo-To HOARD up is to collect together in the WARD or Repository. In Saxon, Horder is Custodia, and Boc-Hord is Bibliotheca — the Repository for Books. In the prose compositions, communicated by Chatterton to Mr. Barrett, as the productions of Rowley, this term for a Library frequently occurs. " Inne the middest of thys cloyster bee the Boc-Horde, wyth "fulle mainte bookes thereyn," &c. &c. (The Rolle of Seyncte Bartholemeweis Priorie in Barrett's History of Bristol.) or HEARD, the company or Hord of animals, the Etymologists have referred to the Gothic Hairda, the Saxon Hiord, Heord, Hired, the Belgic Her, Herde, the German Herd, Herde, the French Harde, the Danish Hiord, &c. We know, that HERD is sometimes used for the HERDSman, or the Man attending on the HERD; and to this belong the parallel terms in other Languages, produced by the Etymologists, as Hairdeis, (Goth.) Pastor, the Saxon Hyrd, Hyrde, the German Hirt, the Danish Hyrde, &c. &c. Junius has justly remarked, that the original sense of this word is that of Custos; and hence, as he says, the Saxon Cwen-HYRDE, "Eunuchus, cui demandata est mulierum Custodia." HYRDE

HYRDE is literally the Queen-HERD, the Woman-WARD, or WARDer. I have shewn, that Queen, the illustrious Woman, and Quean, the low or bad Woman, belong to Cwen, and to the Greek Gune, (Tuny.) Lye explains the Saxon Hyrd by Pastor, Custos; and Hyrdan, by Custodire, Servare. The Herd, as applied to the collection of Animals and to the Man, means precisely the WARDed, and the WARDer. We have various combinations of this word, as we know, in our Language, as Shep-HERD, or Sheep-HERD, Cow-HERD, the WARDer or Keeper of Sheep or Cows. In Herdsman it seems as if HERD meant the Flock, and the s might be added under that idea; but it was probably at first the HERD-Man, or Keeping-Man. Junius has derived HURDLE, the Fence of osiers, &c. from Hyndan, Custodire; but whether this be the fact must be considered in a future page. is found in the Saxon Hyrdel, the Belgic Horde, Hurde, the German Hurde, as produced by our Etymologists. My Lexicographer explains the German HURTE or HURDE by "a HURDLE, "HORD, Pen, fold, grate." In the next column of my Dictionary I find Hort, "a Protector, strong-hold, safety, refuge." only produces under HURDLE the derivation of Meric Casaubon from Kopludy, " quicquid eminet et convolutum est." The preceding term in this Lexicographer is HURD, which, as he observes, in Gawin Douglas is Thesaurus. Lye properly refers it to Hono, Thesaurus. - To this race of words belong our Sirnames Hurd, HURDis, &c. Skinner observes under Hurdle, that it has some relation to the Greek EIRGO, (Eugu, Claudo.)

The term succeeding the Saxon Heord, Herd, Grex, is Heordan, Heordas, which Lye explains by "Hards, Stupæ.—" It. Napthæ, fomites." Heordan, with its parallel term Hards, seems directly to belong to the Heord, the Herd, the collection of things crowded together, and to mean Stupæ—the coarse materials, which are used for calking Ships, &c., by being Crammed

Crammed close together. Stupæ, (Lat.) Stupe, (Στυπη,) are derived from Stupho, (Στυφω, Adstringo;—Spisso, Denso,) under a similar idea of Stuffing, or Cramming together. The word Heordan signifies Napthæ, Fomites, from the inflammable property of Tow, or Flax. In the same column of Lye's Saxon Dictionary we have Heordnesse, Custodia, and Heord, "i.q. Heord," says this Lexicographer, "Conventus Monachorum," a Herd of Monks. The succeeding word is Heord, or Heort, Cervus, which may be derived from the idea of these animals going together in Herds. The contrast between the wounded solitary Deer—"the poor sequester'd Stag," in its rejected—unnatural state, and of the Herd, sweeping by him in a body, has supplied, we know, to our great Bard, an affecting topic of Poetical imagery.

"Anon a careless Herd,
"Full of the pasture, jumps along by him,
"And never stays to greet him."

If this be not the origin of the word *Hart*, it may perhaps be taken from HARD or HARSH, and refer to the blows given by the Horns of this animal. Junius imagines, that it is derived from the HEART, because timid animals have large HEARTS. The parallel terms to HART occur in various Languages, as in the Saxon *Heort*, above produced, the German *Hirsch*, the Belgic *Hert*, the Danish *Hiort*, &c., which the Etymologists understand.

We find adjacent to the words Hyrd, Custos, and Hyrdan, Custodire, in Lye's Dictionary, the term Hyred, or Hired, which signifies "Familia;—Palatium;—Curia;—Exercitus;—Conventus "Monachorum," as Lye explains it; which signifies the Herd or Company belonging to a certain Earth, as a Family, a Convent of Monks, and afterwards a Company in general, as an Army, &c. It likewise means the appropriate spot or Earth, in which persons are collected together, as a Palace, Court of

Justice, &c. &c. In Old English, HIREDE perpetually occurs for a Family—Houshold, &c. I shall only add the Gothic Harjis, which signifies, says Lye, "Multitudo, Legio."

To the idea conveyed by HIRED, Palatium, we should perhaps refer the Saxon Hearge, Hearch, Templum, Fanum. The succeeding terms in Lye's Dictionary to Hearge, Templum, is HEARGE, Hercules, which might belong to the idea of the HERD, the Governor—or to our Element ARG, signifying, To HARROW, Harrie, HERGian, (Sax.) To Rout, Depopulari, Hostiliter invadere, which will be explained on another occasion. --Skinner refers to Hyred, Heord, Familia, our old word Heordfeste, which is the same as Hust-fastene, Pater familias. French, HARDE not only signifies a Herd, but in the plural HARDES, it means "Attire, clothes, dress, Houshold goods," which signifies the HERD - HOARD or collection of other things; and hence is derived the verb HARDer, To exchange, or truck, as the HARDES, or Goods. Again in French, HARAS means " A Stock of Breeding mares, Stud. — The place where a stud is "kept," that is, the HERD, or collection. Skinner, in an Appendix, has YERD, which he says is interpreted Government, and which he derives from HEORD, Pastor, Grex, or from YARD, (Gird. Sax.), the Rod, "Virga enim et fasces Imperii vera insignia sunt." YIRD means what is subject to the HERD—the WARDer. preceding term in Skinner is YERD, Rod, for YARD, which I have shewn to mean a measure of Earth or Land. We sometimes find the idea annexed to HERD, the company of animals, without the R, as in Ede - Eowde, (Sax.) Grex. In the column of Lye's Saxon Dictionary, where the latter word occurs, I find again the form 'RD, as EORYD, Legio; and in the preceding page we have EOROD, "Cohors, turma," &c., which is adjacent to the source, from whence these ideas are derived, EORTH, the EARTH. I shall not attempt to produce 'the various corresponding words in Saxon,

Saxon, &c. denoting a Herd, or Company, as Eored, Legio, Weorad, Cœtus, agmen, &c. &c.

We shall now understand, that the "Pastor Aristaus" is the HERD or Keeper of Cattle, and that Argus, the Keeper of Io, the Heifer, is likewise nothing but the HERD. The quality of possessing many Eyes, attributed to Argus, would be naturally connected with the vigilance of a HERD or Keeper of Cattle; yet I suspect, that the story of his many Eyes has arisen from a confusion in names, and that Argus under this idea belongs to the Greek Auge, (Auyn, Lux; - Oculus,) the English Eye, and its parallels Eag, (Sax.) Ooghe, (Belg.) Aug, (Germ.) the Oc in the Latin Oculus, the Italian Occhio, the French Yeux, &c. In the Greek en-Arges, (Evapyns, clarus, evidens,) we have the form 'RG. I shall shew, that the English Heed - the German Huten, &c. &c. &c. belong to HERD, the Keeper, and HYRDAN, To Keep; and perhaps Auge, (Αυγη,) Oculus, Augazo, (Αυγαζω, video,) Eye, &c. may belong to HEED, &c. &c., To observe, behold, WATCH, &c. &c. In Mr. Shaw's Galic Dictionary we have AIRGE, A Herd; and that this is taken from the idea of Confinement, will be manifest from the succeeding term "AIRGHean, "a Bridle, Rein;" and it means likewise "Symptoms, AIRGHEANNA "a bhais, Symptoms of Death," that is, when the Chains of Death Encompass you. In another place of Mr. Shaw's Dictionary we have Argairim, "To Keep, HERD." The form of these terms brings us directly to Argus. I shall consider in another place the words, with which these Celtic terms are accompanied. We know that Argus was the Herp or Keeper of Io. In the word Io, a confusion of names has likewise arisen. Io is quasi Jo, the Cow, which is to be found in a great variety of Languages; as Cu, (Sax.) Ho, (Dan.) Huhe, (Germ.) &c. &c., which the Etymologists have produced; and we may add to these the Persian JGa-oo, and a corresponding term in Sanscrit. In the Hindoo Mythology

of the seven Heavens, the Seas are supposed to consist, among other things, of "Ghee, a species of liquid butter," that is, of the produce of the Cow. (See Mr. Gericke's Introductory Remarks to Mr. Kindersley's Specimens of Hindoo Literature.) - Augeas, the possessor of the numerous Oxen, and of the Augean Stable, which Hercules cleansed, is the Herd, or Arg-us. An adjacent word to the Saxon Hend is Hene, Exercitus, Turma, Cohors, which may perhaps be quasi HEREG, and belong to the race of words now before us. There is however some difficulty, as to the precise idea, from which HERE in this case might be derived. The Saxon Herge, Hergh, actually signifies Turma, but it means likewise Pradatores, which connects it with the adjacent word Hergian, To Harrow; and this belongs to the EARTH under another idea. We see in Harrow, that the G has been lost. The German HERR, a Lord or Master, with its parallel terms in other Languages, may be perhaps quasi Herrig. In Herschen, to "Govern, rule," we perhaps see the genuine form; and the term probably means to Possess a certain Earth or Land. Herschaft signifies the command over a certain Land or District, 'the Dominion, Lordship, Domination, Seignory,' &c., as my Lexicographer expresses it. If this should be the case, the Latin Herus must be added to the race of words, which are now under discussion. The term HER-us might be referred to the Element FR, VR, denoting Man, as VIR, (Lat.) In Irish, FEAR is "A Man, a Husband," as Mr. Shaw explains it. In the next article I shall suggest another idea; from all which the Reader will perceive, that the term is of very doubtful origin. There are few words, in which I have found it necessary to propose such various derivations.

HERES, HERED-is, ERES. (Lat.)
The Person who is to possess
the Earth or Land.

Heir, Hoyr, Hoir—HERETIER,
HEREDE, HEREDERO. (Eng.
Belg. Fr. Ital. Span.)

HERSCHEN. (Germ.) To Rule,
Govern.

In-Herit. (Eng.) To Possess,
Dwell in.
Waris. (Pers.) A Heir.
IRAS—IRS. (Arab.) Inheriting,
Inheritance.
IRS. (Heb.) To Inherit.

. Before I conclude my observations on the race of words, belonging to the form of our Element ^RS, &c., which denote the Appropriate or Peculiar Spot of Ground or Earth, as distinguished from others, I might here introduce a term, which unequivocally brings us to this idea; and which will afford a striking illustration of the truth of my Hypothesis. all at once agree, that the Latin Hæres, Hæred-is, or as it was anciently written Eres, is the person, who possesses, or is destined to possess, the Certain Spot of Land—or of EARTH, HERTHA, HERDA, &c. On this point, I imagine, no one can doubt.—In the English word Heir, the last consonant of the Radical is lost, as it is in the French Hoir, and the Belgic Hoyr, &c.; but it is preserved in the French Hérétier, the Italian Herede, the Spanish Heredero, and the English In-Herit. Some derive Hæres from Hæreo, "quod, qui Hæres est, Hæret, hoc est, proximus est ei, "cujus Hæres est." Festus observes, that Hæres anciently signified Dominus, HERES apud "antiquos pro Domino ponebatur." Some refer Hæres to the Latin Herus, and the German and Belgic Herr, Heer. If these words belong to each other, the S has been lost in Herr and Heer, and perhaps in Herus; as the Us must be considered probably as a termination only. In the German Herschen.

HERSchen, To govern, rule, &c., we see the last consonant Angelus Caninius justly produces as parallel to HÆRES, the Hebrew ירש IRS, " quod est, HÆREDEM esse, Pos-"sidere." Mr. Parkhurst explains this Hebrew word by "To " Inherit, be Heir;" and he is aware that all these terms belong to each other. In the Chaldee and Syriac, IRT has a similar meaning. Festus defines HEREDium by 'Pradium parvulum,' where we are at once brought to the EARTH. — The metaphors of the Poet will supply the most important information in the study of Languages; since they are precisely of the same kind as those, from which Languages have been originally formed. The Reader may perhaps recollect, that in a passage of Shakspeare. the same imagery is connected with the same word, and exhibited exactly as I have stated it in my Etymology of Hæres. Capulet, in Romeo and Juliet, wishing to express, that his daughter Juliet is the sole Heiness of his fortune, says,

"She is the hopeful Lady of my EARTH."

On which Mr. Steevens observes, "This is a Gallicism: Fille "de terre is the French phrase for an Heiress. King Richard "calls his land, i. e. his kingdom, his Earth:

" Feed not thy sovereign's foe, my gentle EARTH.

" Again,

"So weeping, smiling, greet I thee, my EARTH.

"EARTH in old Plays is likewise put for Lands, i.e. Landed estate.

" So in A Trick to catch the Old One, 1619:

" A rich widow, four hundred a year in good EARTH."

In-HERIT is used by Shakspeare for Possess or Dwell on a Place, as the Saxon Eardian is, which means "Habitare, Incolere."

"The great globe itself,
"Yea, all which it In-HERIT, shall dissolve."

Mr. Malone

Mr. Malone explains it by "All who possess, who dwell upon it. "So in the Two Gentlemen of Verona:

"This, or else nothing, will INHERIT her."

In Persian, وارث WARIS'is a Heir, which is only another form of HERES. In Arabic likewise, ايراث IRAS is " Making one an " Heir. - Inheriting," says Mr. Richardson. Again, in the same Language, ارث IRS is " Inheritance, Heritage, Hereditary Right;" and in another sense it signifies Ashes, where we are at once brought to the dirt of the EARTH. We have likewise another sense, where it means "Wounded, mortally Hurt;" and in HURT we see a parallel term. In Mr. Shaw's Galic and Irish Dictionary we find OIDHRE, and OIGHRE, denoting "An Heir, Heiress." There is still another sense of the Arabic Ins, ارث A Root, " stability, firmness, the principal part, any thing agreeable to "ancient Hereditary Custom," where in the sense of a Root, Stability, &c. we are brought likewise to the EARTH, under the The succeeding word in idea of the Base or Foundation. Mr. Richardson's Dictionary is the Persian ارثه Unset, " A Limit, "march, boundary, confine, order;" and the next word is the Persian ارج Enj, " Price, Worth, value, esteem, honour," where let us note the explanatory term Worth, which I have referred to the EARTH, as the great source of Value, Property, &c.

and shift (.gnd) and a

CHAP. I.

SECT. II.

^C, ^D, ^G, &c. &c.

Terms, which signify the Appropriate or Peculiar Spot of EARTH—ARK, &c. &c., or EARTH—ARK, &c.—Secured by the Fence or Enclosure: Hence, Terms denoting Possession—Security—Caution—Attention:—Enclosures for the purpose of Covering—Holding, &c. &c.

Echo. (Gr.) To Have or Possess a Peculiar or Appropriate Spot of Land;—sometimes under the idea of an Inclosure; —To Inhabit, &c.

AIGAN — AGAN — ÆGAN — Æ-GNIAN. (Goth. and Sax.) To Hold—Have—Possess.

Ægn. (Sax.) Proprius — Own.

HEDGE—HEGGE, &c. HAEGE—HECKE, &c. (Eng. Sax. Belg. Germ. &c.)

HAY. (Eng.) Rete Cunicularium:—the Enclosure.

HAIE—HAIER. (Eng. Fr.) The Hedge, To Enclose.

HAW-Thorn. (Eng.) The Hedge Thorn.

HAWS. (Eng.) The Berries on the Hedges.

Haw-Haw. (Eng.) The sunk Hedge or Fence.

HAGA, HAGEN. (Sax.) Agellus,

Prædium, Domus, Mansio.

HAGE—HAWCHIS. (Isl. Scotch,)
Enclosed Pastures, or Meadows.

HAY—HIEG, &c. (Eng. Sax. &c.) Gramen: the product of those Meadows, or Fields.

To dance the HAY. (Eng.) To Dance Round or in a Ring; as it were about a Ring-Fence.

HAYES—HEYS—HAWES, &c. &c. (Eng. Names.)

HAY-Ward—HOWARD. (Eng. Names.) The Keeper of the Hedge, or Fence; or of what is included within the Hedge or Fence.

Agros

AGROS—AGER—ACKER—ACRE
— ACERE, &c. (Gr. Lat.
Germ. and Belg. Sax. &c.)

HAITHJO—ÆTHER.(Goth.Sax.)
Ager.

Аснарн. (Gal.) A Field.

UATH. (Gal.) The Earth.

IATH. (Gal.) Land.

IATHAM. (Gal.) To Surround.

AIT, AITE. (Gal.) A Place, Stead.

Hutch — Hwæcca — Huche, &c. &c. (Eng. Sax. Fr.) The Enclosing vessel.

HAT, HÆT, HOED, &c. (Eng. Sax. Belg.) What Encloses the Head.

Hood-Hod, &c. (Eng. Sax.) Capitium.

HUT, HUTTE, HYDDA. (Eng. Sax. Germ. Belg. Island.)
The Hedged in, or Enclosed Place.

HEED—HEDAN—HUTEN. (Eng. Sax. Germ.) To Watch, or Keep, as within a Hedge or Fence.

Huт. (Germ.) Heed.

Hush—Hisr. (Eng.) To Heed, Listen, be silent.

Отне. (Gr.) Heed.

Audio — Ausculto — Akouo. (Lat. Gr.) To Heed, or Hear.

Ous — Audin, Azin, &c. (Gr. Chald. Heb.) The Ear.

HARK — HARKEN, HYRCNIAN, HORCHEN. (Eng. Sax. Germ.)

Auses — Audes, Aures, Ear, Eare, Ohr, Orecchia, Oreja, &c. &c. (Lat. Eng. Sax. Ger. Ital. Span. &c.)

HAUSGAN, Hear, Hyran, Horen, &c. (Goth. Eng. Sax. Germ. &c.)

Hush. (Pers.) Care, Attention. Hushriden. (Pers.) To preserve, Keep.

HIDE — HYDAN, HOEDEN, &c. (Eng. Sax. Belg.) To Conceal, i. e. To Enclose.

HIDE, HYD, HOUDE, HAUT, &c. (Eng. Sax. Belgic, Germ.)
The Skin, the Enclosing Covering.

HIDE. (Eng.) A Portion of Land.

In the present Section I shall consider certain words, belonging to the form of our Element ^C, ^D, ^G, &c., when the sound of has been lost; which denote the *Appropriate* and *Peculiar* Spot

of Earth, Secured by the Fence or Enclosure; and hence Security — Caution — Attention, as Hedge, Heed, &c. Some of these words coincide altogether in sense with the terms before produced, as Erkos; (Equag.) &c., which, when the r is lost, becomes Ekos; &c. &c. I shall introduce into the present article those words, which denote Holding or Possessing, under the idea, as I conceive; of Holding or Possessing a certain Spot of Earth or Land, as the Greek Echo, $(E_{\chi\omega})$, &c. &c. — There are some terms, belonging to this form of our Element, which, though they signify to Hold — Take in, &c., are derived, as I imagine, from another train of ideas, and which therefore will be considered in a different portion of my Work. I shall introduce however in this Section the consideration of some terms, which present themselves in the course of my discussion; though they are not directly connected with the train of ideas above unfolded.

The original sense of the Greek Echo, (Exw, Habeo, Possideo, Teneo, Obtineo; - Cohibeo, Reprimo, Cingo, Circumdo; -Habito, Incolo,) is that, as I imagine, of Holding or Possessing a certain Peculiar or Appropriate Spot of Land or EARTH, ARK, Ark, &c. &c., sometimes under the idea of an Enclosure, or ERKOS, ErKos, (Epros,) &c. &c. When it refers to an Enclosure, we have the sense of Cingo, Circumdo; and we unequivocally, I think, see the idea, from which this Sense of Holding is taken, when it signifies To Hold or Possess a certain Spot of Land, or To Inhabit a certain Spot of Land, Habita, Incolo. shew, that Colo belongs to Solum for the same reason. Algan signifies Habere, and in Saxon, Agan, Ægan, Ægmian, The preceding word to Ægnian, Possidere, is Ægni Proprius, to which, as the Etymologists understand, belongs the English Own. The parallel terms to Own, produced by the Etymologists, are the Gothic Aight, Aihn, the Saxon Agen, the German, Eigen, the Danish Egen, &c. These words will be more particularly considered in a future page.

" the

Our familiar term Hedge presents itself most consdicuously among those words, which denote a Fence - Enclosure, &c. Etymologists produce the parallel terms, which are to be found in other Languages, as the Saxon Hogge, Hag, Hedor, the Belgic Haege, the German Hag, Hage, Hecke, Sepes, Hegian, Hagun, (Sax. Germ.) Sepire, &c. &c. Skinner observes on this word, " Parum quid alludit G. Epros, septum, claustrum." Junius records the Latin names, explained by Spelman, Huga, Haja, and Lye justly refers us to the word Hay, Rete cunicularium, where the sound of G is lost in Y. Skinner has a Hey-Net, which he justly compares with Hege, Sepes. We have seen, that Erkos, (Equos, Septum, vallum; Ta Equy, Retia,) means both an Enclosure and a Net. Junius refers us to the French Haier, Sepire, which is quasi Hajer. Thus Haie, the Hedge, is quasi Haje. - The Etymologists understand, that Haw-Thorn is the HEG-Thorn or HEDGE-Thorn; and hence HAW, in Hips and HAWS, Morum Sentis. The preceding and succeeding terms in Junius to Haw, Morum Sentis, are HAW and HAWOHIS. He explains HAW by "Cantianis vocatur agellus domui adjatens et "Circumseptus, unde iis Hemp-HAW, item Bean-HAW dictus est " talis agellus, cannabis vel fabarum sationi destinatus. D. HAWE "est Hortus. Olim quoque Mansum vel Villam sic videntur "appellâsse. v. Spelm. Arch. in HAGA. Argent. codici Heiwafrauja exponitur ounosermorns. Marc. XIV. 14." Hawchis is explained by Lye, "Prata, &c. G. Dougl. Isl. HAGE est locus pascuus." Lye in his Saxon Dictionary explains HAGA, HAGEN, by "Hay, " Haw, Agellus, Prædium, Domus, Mansio." From the HAGE, the Locus pascuus, comes Hig, (Saxon,) "Fœnum, Gramen," to which our word HAY belongs. The Etymologists produce the parallel words to Hay in other Languages, as the Saxon Hieg, Hig, the Gothic Hawi, the Belgic Hey, &c., the Cimbric Hei, the Danish Hoe, the German Hew, or Heu, &c. . To Dance

"the Hay—Dancer à la Haye," Skinner rightly explains by "In orbem ac figuram Sepis Choreas ducere." The idea of the Ring-Fence, or the Fence all Around, brings us directly to that of Dancing in a Round or Ring; and this serves to confirm my idea, that Orcheomai, (Oexequal, Salto,) to Dance, is derived from the Erkos, (Equal), the Sur-Rounding Fence.—The Haw-Haw, we shall now understand, is that, which serves for a Haw or Hedge. From the terms denoting the Hedge, thus doubled Haw-Haw, we have the Sirname Hey-Hoe. The Haw in the eyes Skinner rightly derives from the Haw or Hedge, Hæg, Sepes, &c. &c., "quia sc. visum intercipit, intercludit, et quasi "intersepit."

From these words HAY, HEDGE, the Fence, are derived our familiar names, HAY, HAYES, HEYES, HEYS, HAWES - HAWIS -Howes-Higgs, &c. &c. Skinner produces the word Hawgh or Howgh in his Index of proper names, as a "Nomen Gent.," and observes, that Camden explains it by " Parvum pratum in "valle situm."—The name HAY-Ward means likewise, as some Etymologists understand, the Keeper of the HAY - HEDGE or Enclosure. Others derive this word from Heard, Grex, or Hig, Gramen, and Ward. The sense of HAY-Ward comprehends in it the idea of Keeping the property, whatever it may be, within the HAY or HEDGE. The illustrious name of Howard may either convey this notion, or it may be derived from Hor and Ward, the Keeper of the Court. Hor however, in its original sense, means the ordinary Court-Yard, and in a secondary sense, the Court or Precincts of a King's Palace. My German Lexicographer explains Hor in one of its senses by "The Yard, Court-Yard—it. A Croft, HAW." Some might imagine, in order to preserve the dignity of the name, that HOWARD was formed from the Hof, as denoting the Court of a Prince. Skinner, who produces various other derivations of this proper name, observes, "Heroico nomini injurius viderer, "si deflecterem ab ant. Haward seu Haiward." Such ideas however are idle and futile; and Skinner has justly observed, "Et tamen omnibus notum est, etiam summas gentes à rebus "vilissimis, ut Agricultura Pisis, imo etiam Galbis ortum duxisse." Perhaps Hayward and Howard may be the same. The succeeding term to Howard in Skinner is Howburn, which he derives from Hæg, or Haga, Agellus, and Bourn; for the sense of which latter word he refers us to his general Dictionary, where we find the explanation of Torrens. Bourn means probably in this place Boundary, and the whole word means the Boundary of the Hedge or Enclosure.

The Saxon HAGA, HAGEN, Agellus, will direct us to that portion Ac of the Latin explanatory term, Acellus, which coincides with it, to its primitive Ager, and corresponding term in Greek Agros, (Ayeos.) The Etymologists derive these words from Ayω, "Quòd in eo multa sunt Agenda, ait Donatus. " Actiones ad vitam alendam præcipue sunt ruri," says Martinius: To these terms the English Acre belongs, with the parallel terms Acere, &c. (Sax.) Acker, (Belg. and Germ.) &c. &c. Martinius produces, moreover, the Hebrew אכר AKR, Agricola, which he derives from SKR, Campus. This may create some difficulty, as the Element CR denotes likewise the Ground; and from hence might Ager, &c. be derived. I have given however, as I imagine, the original idea. The parallel word produced by Castell, under the Hebrew term אבר AKR, is the Arabic אבר AKR, "Digging, Delving." The Latin AGGER means AGER, either under the idea of the Separate - Enclosed Land or Field, Secured by the Mound; or the Earth'd up Place, the Place Secured by the Mound of Earth. Some derive AGGER, the Heap, from Aggero. The name for a Field, belonging to our Element, appears in Gothic and Saxon under various forms, as Akrs, (Goth.) Ager, HAITHJO, (Goth.) Ager,

Ager, Acer, Ecer, Ecr, Ecyr, Ether, (Sax.) Ager. We find adjacent to the Gothic Akrs, another Gothic term, Akran, Fructus, which means probably the production of the Akrs, or Field.— Under Æcer we have the compounds Æcer-Ceorl, Agricola, Colonus, and Æcer-Mon, Agricola, in German Acker-Mann, which expressed in their parallel terms mean Acre-Churl, Acre-Man. To the latter word belongs our Sirname Ackerman, to which we must add Hackman, Hickman, &c. &c. The Greek Agra, and AGReuo, (Αγρα, Captura, Venatio, Αγρευω, Venor,) belong to Agros, (Ayeos,) and mean that, which is Taken or Hunted in the Field. My Lexicographer considers Agra, (Ayea,) as a Root. The adjacent term Agr-Upneo, (Αγευπνεω, Vigilo,) seems to come from AGReuo and Upnos, (Ayeeuw, Twos,) under the idea of Chasing away Sleep. The compound is supposed to be that of A priv. and Taros, and the Gr, ye, is imagined to be an addition Per Epenthesin. The Greek Egeiro, (Eyespa, Excito,) and Ageiro, (Ayespa, Colligo,) may possibly be other forms of Agreuo, (Aypeuw.) I have proposed however a different idea in another place.

The Etymologists derive AGORA, (Ayoga, Forum rerum venalium,) from Ageiro, (Ayeiea,) which is a very probable conjecture; yet Agora, (Ayoga,) seems to be derived directly from Agros, (Aypos,) the Field or Place, by way of distinction, as destined for Aguris, and Agureo, (Ayueis, Cœtus, mula peculiar purpose. titudo congregata, Ayuu, Congrego, Colligo in unum,) must be referred directly to Ageiro, (Ayenew,) and yet in Aguris, and AGURtes, (Αγυρις, Αγυρτης, Qui congregat ac cogit in unum, Circulator, et Præstigiator Circumforaneus,) we seem to perceive more immediately the Crowd of the AGORA, (Ayopa.) The Greek Egregoreo, (Εγρηγορεω, Vigilo,) or Egr-Egor-eo, is a reduplication of the same Element, whatever it be, GR, or AG, AGR, signifying to Stir up - Excite. It belongs to EGEIRO, (Εγεφα,) and perhaps to Agreuo, (Αγρευω.) From the form Gregoreo, (Γρηγορεω,) we have the

the name Gregory. While I am examining Gregoreo, (Terryopew,) I cast my eyes on Gureuo, (Γυρευω, In orbem verso; Fodio,) which means To Dig up or Stir up the Ground; and hence we may see, that the Element GR might supply the idea of Stirring up-Exciting, &c. In the preceding column to Agros, (Ayeos,) I find in my Greek Vocabulary Agrippos, (Αγριππος, Oliva Sylvestris,) and Agriphe, (Αγειφη, Ligo bidens, rastrum.) The word Agrippos, (Αγριππος,) is considered as a Root, yet we plainly see, that the Agr in this term belongs to Agros, Agrios, (Ayeos, Ayeos, Agrestis,) and means Sylvestris. In the same column of my Vocabulary we have the same term in composition, applied to the same thing; — Agrielaios, (Αγριελαιος, Oleaster; — Ex Agresti oliva, seu Oleastro confectus.) On the latter part of the compound Agr-ippos I cannot decide. We might have thought, that the 'P in this word belonged to the 'V in Oliva, if we had seen, that the Element 'V was a separate significant part. The V in Oliva seems to be only an organical addition to the L. On the Greek Agriphe, (Ayeiff, Ligo bidens, Rastrum,) I am doubtful. The Griphe may belong to Grapho, (Γραφω,) which means to Grave, *Grub*, or Dig up, and the A may be intensive; or the Agr in Agr-Riphe may be derived from Agros, (Ayeos,), and Riphe may belong to the Element RP, signifying To Stir up - about. I shall shew that Rapto, (Paπτω, Suo, Consuo, Sarcino, Consarcino; —Struo, Machinor,) and Ripto, (Ριπτω, Jaceo,) &c. belong to the Element RP, under this idea of Stirring, - Throwing, or Rabing up, together, about, &c. - The Greek Choraphion seems to be a similar compound from Chora; (Xupa,) Land, and the Element The former word means the Instrument Raking up the RP. Land, and the latter, the Land Raked or Harrowed up, or the Land demanding that operation. The word Choraphion, (Xuguapion,) occurs in the old Glossaries, and is explained by "Ager Satio-"nalis." It is supposed to be a diminutive from Chora, (Xuex.) The

The word is to be found in the Scholiast on Theocritus, who in explaining this passage, Απο σπορω ασκαλα παντα, (Idyll. X. v. 14.) observes, Σκαλευω δε το Χωραφιον, οτε σκαλισι καθαιρω αυτο, where the term is connected with the very action of Stirring up the Ground—Ploughing—Raking—Harrowing, &c., from which I suppose it to be derived.—In the Irish and Galic Dialects of the Celtic, we have "Achadh, a Field;" and the terms adjacent to this in Mr. Shaw's Dictionary are "Achaidh, An Abode," and "Acha, A Mound, or Fence." Again, Iath is Land, and Iatham signifies "To Surround, move round." In the same Dialects, Ait, Aite is "A Place, Stead."—Uath is "the Earth, "Mould."

The name of the Town in Holland called the HAGUE, is supposed by Skinner to be taken from the Saxon Hegge, Hæg, and the Belgic Haege, Sepes, Septum, "forte," says this Lexicographer, "à nobili aliquâ olim circa villam Principis Sepe." The preceding term in Skinner is Haga, the name of a place in Surry, which he derives from Hagan, Mora Rubi; and the succeeding word is HAG-Worthingham, the name of a Town in Lincolnshire, which he derives from Hag, Sepes, Worthig, Vicus, via, septum, agellus, and Ham, Habitatio. We shall find the names of various places derived from the HEDGE or Fence.—I shall not attempt to produce the various forms, under which the parallel terms to Hedge occur in Saxon, as they will be instantly seen to belong to this race of words. — There is an Arabic term, which ought not to be omitted on this occasion. The Arabic Jul AIAD seems directly to signify the HEDGE, Fence, &c. It is interpreted thus by Mr. Richardson: "Whatever Preserves, "Defends, or Protects, as a Fortification, Castle, Asylum; the "bark of a tree; a veil, curtain; the hair, ether, atmosphere; "mounds of clay or Earth raised round tents, houses, or cisterns, " to keep out, or hold in water." Again, in Arabic, as HD means " A Boundary,

"A Boundary, Limit." In the next opening of Mr. Richardson's Dictionary, I find AHRD, "An Impediment," and HYRZ, a "Fortification, a garrison town, a castle, "a place of refuge." The preceding term, under the same form, is HYRZ, "Rough Ground," which directly brings us to the spot, supposed in my hypothesis. Here we have the form ARD, &c.

The succeeding word to Hedge in Junius is HEED, relating to Care—Attention; and it is derived from the idea of Keeping— WATCHing or Attending to any thing within the HEDGE or Fenced We have seen under the form 'RD, HERD, the Keeper of the Cattle, and Hyrd-an, Custodire, belonging to the g-Uarded place, the secured YARD or EARTH. Junius properly explains HEED by "Curare, Custodire;" and the Etymologists produce the parallel terms to be found in other Languages, as the Saxon Hedan, the Belgic Hoeden, the German Hut, Custodia, and Huten, Custodire. We find succeeding to this Saxon word Hedan, "Cavere, Curare, Attendere," the Saxon HED-Clath, Ventrale, HED-Clyfa, Cubiculum, Hedd-Ern, Cellarium, granarium, &c., "Heden, Casla; - forsan Cassia," which I do not understand, and Heder, Sepes, &c. The Saxon Eder and Edor are other forms of Heder, and probably of Æther, Ager. The form of these terms will remind us of the Latin Atrium, to which it should be referred. Epor signifies Domus, as well as Sepes. Some derive the Latin Atrium from Allea, because the ATRIUM was the pars subdialis—others from Ater, &c. &c. ATER seems to be taken from the Ground, under the idea of Dirt-Mud, &c. The Etymologists derive Ater from Attero - Ανθραξ, Alla, &c. &c. There is always a difficulty with respect to words under this form to determine, whether they belong to the Element ^AT or TR. Through the whole compass of Language TR denotes the Ground — Terra, &c. My conjecture however about

the origin of Heder — Eder and Edor must be right, as they directly connect themselves with Hedan, Cavere, &c. Perhaps the Latin HEDERa, Ivy, should be referred to these words Heder, &c., the Enclosure, under the idea of the Enclosing or Twining This form of words will be considered in another place. The preceding terms to Edor and Eder in Lye's Dictionary are EDO, and EDE, Grex, where we see precisely the idea of the HERD, the g-UARDed, or HEEDed animals within the Fence. Lye refers us, under Ede, to Edwde, Grex, another form. In the same column of Lye's Saxon Dictionary, where Eder occurs, we have Edisc, which he explains by " Edish. Vivarium." sense of Vivarium we see the idea of the HERD—in the Preserved, secured Spot. We have likewise Edisc-Weard, Vivarii Custos, where we have two words of a similar kind, joined together. Skinner refers Edish to the Saxon Edisc, and his explanation is "Gramen Serotinum hoc à præp. Loquelari, A. S. Ed, Rursus, " Denuo, Iterum, q. d. Gramen quod denuo crescit, παλιμφυες." In some counties Edish certainly has the sense given by Skinner, and it may be derived from the Saxon Ed, Rursus, but it has nothing to do with Edisc, Vivarium. Mr. Grose in his Provincial Glossary explains Eddish by "Roughings, North. Ground "whereon wheat or other corn has grown the preceding year; "called, in Norf. and Essex, an Etch. Also, in the North, "After-grass." In the same column of Mr. Grose's Glossary we have "ED-Grew, After-grass. Shropsh.," "EDDER. Fence "Wood, commonly put on the top of Fences. Norf. and Essex." In the same column we have EASTER, "The Back of the chimney, " or chimney-stock. North;" which perhaps means the EDDERthe strong Fence - or Support. In the same column of Lye's Saxon Dictionary, where Edor, Sepes, Domus is, I find Edra, Vena, which may perhaps mean the Enclosure for the Blood -" Sepes Sanguinis." The corresponding term in German is Ader. Another

Another form of Edra is Ædra or Æddra, which latter word Lye explains by "Vena; Renes; nervi, Rimæ, Fissuræ, Crenæ," where we have at once the idea of the Hollow—Receptacle—Enclosure. These words are adjacent to Æcyr, Æcer, Æcr, Ager.

HUT is explained in my German Lexicon by WACHE, WACHT, HEED, GUARD, &c.; and HUTen likewise means, according to the same Interpreter, "To take HEED, beware, Have a care, &c. &c. "Das vieh, To tend or keep the Cattle;" and HUTER, "A GUARD-"ian, WARD-en, Keeper," &c. Hut likewise means a HAT, the Enclosure, to preserve the Head. The Etymologists are aware of this derivation, and they produce the other parallel terms, which are found in various Languages, as the Saxon Hat, Hasel, the Belgic Hoed, the Islandic Hattur, the Danish Hat, Hyemalis mulierum pileolus. Hoop, Hod, (Sax.) Cucullus, Capitium, is only another form of HAT, &c.; and the Etymologists have accordingly referred it to the same source. Hoop, as in Priest-Hoop, &c., belongs to a different idea, which will be explained in a future page. An adjacent word to the Saxon Hæt in Lye's Dictionary is HETeron, Vestitus, where we have a similar idea of an Enclosure or Covering to protect the person. German Lexicon, the adjacent word to Hut is Hutte, "A Hut, "Cottage," which is likewise understood to mean the secured protected place. The Etymologists coincide with this idea, and they produce likewise, as parallel terms, the Saxon and Belgic Hutte, and the Islandic Hydda. Hur will naturally suggest to us the word House, which I have produced in another part of my Work, and referred to the idea of the Appropriate Spot — Place or EARTH, in which a person is Seated or Situated. Nothing is so difficult as to decide on the mode of arranging a subject, when the same general idea prevails in the words which are discussed; though perhaps they may appear to be distinguished

distinguished by a turn of meaning somewhat different from each other. We perceive, I think, that HUTTE, the HUT, or Cottage, seems to be more particularly connected with terms denoting the Fence; that is, the Appropriate Spot, or EARTH, as Guarded, Fenced, &c. &c., as HEDGED in; as a spot, in which things are HEEDed, if I may so express it, Watched, &c. &c. — In Lye's Saxon and Gothic Dictionary we have the following article, "HICE." Paruca; Vocab. "Dewes. 'Non liquet, (inquit Somnerus) fortasse Perruqua, i. e. " galericulus." If it means any covering for the Head, it may perhaps be referred to these words. The succeeding word in Lye is Hicemase, " Parrax, Regulus, scil. avis," which I do not understand. The succeeding word to Hut in Skinner's Lexicon is Hutch, Arca, which, with its parallel terms Hwacca, (Sax.) Huche, Hotte, (Fr.) Hotte, (Germ. and Belgic,) Hucha, (Span.), must be referred to the same notion of the Enclosure, or HUT. for the purpose of Securing or preserving any thing. I have already referred the explanatory term ARCA to a similar sense under the form of our Element ARC; and Skinner justly reminds us, under Hytch, of Arca or Orca. In the German Lexicons, the adjacent word to Hutte is Hutschen, "To rush along, to "move or stir, a crawling or a creeping," and "Hutsche, A low "wooden stool or seat," where we see the idea of the Earth, &c. under another sense—that of the low situation, and the Spot, on which animals Move—Rush—Crawl or Creep, &c. An adjacent word to the English Hut is Husk, and this Skinner refers to the Belgic Hulsche, &c., which he derives from Helan, Tegere. Husk and Hulsche belong to each other, then Husk must be referred to the Element ^L, to Helan, Hold, &c. Yet Junius explains Husk from Martinius by "Domuncula vel theca, i. "Involucrum tritici;" and derives it, with its diminutive Husken, vel Huysken, from the Teutonic Hus, vel Huys, Domus. is still another adjacent word to Hut — the term Hush. This

This word Hush means simply to HEED. Skinner informs us, that Minshew derives this word from the Hebrew Haschah, Silere; though he adds, "Mallem à Teut. Hucken, Con-"quinescere, appressis clunibus humi desidere." Another form of Hush is Huiste, which is produced by Junius, as vox silentium. indicentis, occurring in Chaucer. We have still a different form of Hush, as Hist. Another term of Silence, Whist, probably belongs to Whisper, and to other words denoting a gentle noise. We shall now be prepared to understand, that the Latin Audio and Greek Akouo, (Akouo,) mean nothing but to take HEED. The Greek Othe, (Ob, Cura,) should perhaps be referred to HEED, &c. Some derive Audio from Audy; though others justly refer it to ATA; (ATA,) the Doric or Tarentine word for OTA, (Ωτα,)—to an ancient Latin word Audes,—to the Chaldee The Audin,—the Hebrew און AZin,—to a modern Greek word Audia for Oτia, (Ωτια,) all signifying Aures, and to the Greek Aio, which is quasi Ajo, (Am,) To Hear. In the French Ouir, and the Spanish Oir, the Radical Consonant has likewise been lost. To the Greek Ata, Ota, (ATa, $\Omega \tau a$,) we must add the other forms of these words, Ous, OT-05, OUAS, OUAT-05, (Ous, QTOS, Ouas, Quatos, Auris.) The explanation of the Hebrew Lexicographers will shew us, that these words convey the same idea as the English HEED. Taylor explains in AZn by "To Hearken. To attend, to give "good Heed." The German ACHT, "The Heed, care, obser-"vance, minding, regard of a thing," might seem to belong to Heed, &c.; yet another sense of Acht, "Outlawry," &c. brings, us to a different idea, and a different race of words, which will be explained in another place. Taylor in his interpretation has: not only, as we see, adopted the very word HEED, to which I have directed my Reader, but he has likewise used the term HEARKen, another of these terms. HARK and HEARKen belong

to the same idea as HEED; and they appear, we see, under the full form of the Element 'RK. The Etymologists justly refer them to the German Horchen, a term of the same meaning. The succeeding word to Horcuen in my German Vocabulary is a term before produced, - Horde, "A Hord, Fold or Pen for "Sheep," which brings us to the original idea of the g-UARDed or WARDed Spot, the secured YARD or EARTH, from which I suppose the idea of Observing or Watching is derived. in Hearken is an organical addition to the Radical K, &cc., as it is in the Hebrew AZn. The German Ge-Horsam, "Obedient, "dutiful," is a compound, of which the parts are Hor, Horen, atid Sam; and in the Saxon Her, Hear, Hyr-Sumian, we have a similar combination. The Aus in Ausculto, another explanatory word used by Taylor, must be referred to Aunio, as the Etymologists understand. In Gothic, HAUSgan is Audire, and in Saxon, HYRCNian and HEORCNian is to HEARKEN.

The Latin Auris must be referred to Ouas—Ous, &c. (Ouas, Out.) Martinius has produced the remark of Scaliger, which illustrates this derivation: "Auses, Audes, et Aures dicebant "veteres. Ausis, Ous, Aros. Cretice et Tarentine Aus, Auros, "Auses." Martinius adds, "Nempe ab Aw, Audio." We have seen, that Aio is quasi Ajo, Audio, to HEED. The sounds of R and S are sometimes blended with each other. Hence we have Affin and Agony, and the ancient Latin forms Asa, Casmen, Papysii, for Ara, Carmen, Papirii. Hence it is, that R and S are adjacent to each other in the Alphabet. Auris therefore may either be considered as Ausis, and as belonging to the form of the Element 'S; or, with the R bearing its ordinary sound, it may be regarded as belonging to the Element 'RS. — In the English Hear—and the word denoting the organ Ear, the sound of S' has been lost, as it is in Aur-em; though I imagine that they must

must be referred to the race of words now before us, under the Element 'RS, or 'S. The Etymologists produce, as parallel to Hear, the Saxon Hyran, the Belgic Hooren, the German Horen, the Danish Hare, the Runic Ad Heira, and the Gothic Hausgen. They refer us likewise to Ear, under which they produce the Saxon Eare, the German Ohr, the Danish Ore, the Belgic Oor, the Islandic Eyre, the Æolic Oar or Or, (Æolicum Oap, vel Op pro Ous,) the French Oreille, the Italian Orecchia, and the Spanish Oreja. In some of these we perceive only the R; but in the Italian Orecchia, and the Spanish Oreja, we have the Element in its full form 'RC, 'RJ. In the Gothic Haus-gan, we see likewise the true Elementary form, as in Audia, &c. In Persian, Hush means " Care, attention, study," and שמין कि HUSHTiden, "1. To Whistle, Hiss, or make any noise with the lips. "2. To preserve, keep (any thing.)" In Mr. Shaw's Galic and Irish Dictionary we have "OGH. The Ear," and EISDam, "To "Hear, listen, be silent, attentive," and Eistam, "To Hear,"— The English Ear, in the sense of Arista, Spica, and in that of Arare, belongs to our Element ^D, ^RS, ^RG, &c. EAR in the sense of Arista has the following parallel terms in other Languages, as they are produced by the Etymologists: Ahs, (Goth.) Ear, Aher, (Sax.) Are, (Dan.) Aer, Ader, (Belg.) Ather, (Abne;) and to these they should have added the Latin Arista, where we see the full form of the Element 'RS. The parallel terms to Ear, To plough, are Arian, (Goth.) Erian, (Sax.) Arare, (Lat. Ital.) and the Welsh Aredig, as they are produced by the Etymologists. The Saxon Erian is sometimes written Erigan, where the true form appears; and thus it is in the Welsh Aredig, and the Latin ARATrum, which we see denote the action or the Instrument of EARTH-ing or turning up the EARTH. The Culto in Aus-Culto, which is parallel to the Greek Kluo, (Kauw,) certainly belongs to the idea of the En-Closure, and even to the very word—to Closure.

Closure, Claudo, &c. The Culto and Kluo, (Khua,) are derived from the Celtic terms, with the same meaning, Cluinam, Claisdam, (Gal. and Ir.) To Hear. Mr. Shaw interprets Cluinam by "To "Hear," and Cluin by "A Fraud, an Enclosure." Claistinam means to Hear; and to this belongs, as we shall all agree, our word Listen. This will shew us, why List means to Hear, "List! List! O List!" and likewise an Enclosure—the Lists for Combat, and the List, the Border of a Cloth. The same Element KL supplies the terms for Hearing in other Dialects of the Celtic. - The Galic Eispam, To Hear, belongs probably to "Eisam. To Trace," — under the idea of Tracing out or Investigating what is said. The succeeding word to Eispan in Mr. Shaw's Dictionary is " Eiseadh. Seeking, Hunting after, "Researching." These ideas of Tracing are derived from the notion of Stirring up the Land. In the same opening of Mr. Shaw's Dictionary I find " EITE. An addition to the Ploughshare, "when worn," and "EITRE. A trench, furrow."

HIDE, signifying To Cover -- Conceal, and as a noun, the Skin of a Beast, must either be classed with this race of words, denoting an Enclosure, or must be referred to the Earth, Erde, &c., as denoting the Surface, Top, the Superficial Covering, &c. The Etymologists produce, as parallel to HIDE, the verb, the Saxon Hydan, Celare, the Belgic Hoeden, the German Hitten, Custodire; and they derive these words, either from the Greek A and Edu, or from Keutho, (Κευθω.) HIDE, the Skin, they justly refer to the Saxon Hyde, Hyd, the Belgic Houde, &c., the Danish Hud, the Runic Hyd, the German Haut, &c., which they derive from the verb HIDE, or from Cutis. It is possible, that Hide and its parallels may be directly connected with the Element C, D, &c., and belong to Keutho, (Keutho,) Cutis, and a great race of words of a similar kind. That HIDE is derived from some idea relating to the EARTH, will be manifest from the sense of HIDE, denoting a Portion

a Portion of Land. It will not be necessary, I imagine, to prove, that it is not derived from the idea of that quantity of Land, which can be measured by a Bull's HIDE. This notion has not only supplied an Etymological conjecture, but has been recorded even as an Historical fact. This mistake has arisen from a confusion in words of a similar or of the same sound, denoting at once Land, and the Skin of an Animal. A story of the same sort, we know, occurs with respect to the Byrsa—the Citadel at Carthage, which has been acknowledged to be derived from an equivocal meaning in similar terms, denoting at once the Fortified Enclosure—a Citadel, Town, &c., and the Protecting Enclosure, the Skin. Hide is interpreted by Skinner to be "Terræ portio " quæ vel ad alimoniam unius familiæ, vel ad annuum pensum "unius aratri designatur, vel ab A. S. Hydan, Tegere, vel Hyd, "Corium, priori sensu Lat. Barb. Mansum, et Manerium voci-" tatur, Latinius Bedæ Familia dicitur, et fort. idem quod Tectum "sonat, fort. quia Domus semper huic terræ portioni annexa est." HIDE of Land seems to have originally meant the small portion of Land Enclosed about the Dwelling; and thus we see, how HIDE connects it with HUT-HEED-HUTEN, (Germ.), which relate to the HEDG'd in — the Enclosed or Protected Spot. HIDE and Gain is a combination, recorded by Skinner, signifying Terra Arabilis. HIDEL is an old term denoting an Asylum, which is properly derived from HIDE; and the succeeding word in Skinner's Appendix of Law Terms is HID-gild, which he derives from Hyde, Corium, and Gild, Solutio; "q. d. Pretium, quo quis " redimit corium seu pellem, (i. e.) corpus suum."

HITH. (Eng.) A Port, a Station for vessels. The Land.

ECKE. (Germ.) A Fore-Land, a Nook, Angle.

ERCKEN. (Germ.) A Balcony.

HECKE. (Old Eng.) The Shore.

AKTE. (Gr.) The Shore, the fruits of the Earth.

ÆGE, IG, IGOTHE, IGLAND, &c.

(Sax.) Insula.

Insula, ISLE, Island, Isola, Isle, Isla. (Lat. Eng. Ital. Fr. Span.)

Ai, or Aj. (Heb.) A Settlement,
Habitation, Isle.
Aia, quasi Aja. (Gr.) A Country,
Region, &c.
Ai, Aoi. (Gal.) A Region, Tract,

Ai, Aoi. (Gal.) A Region, Tract, Country, &c.

I shall now produce some terms, the precise idea of which is not fully manifest. HITH, signifying "Portus, navium statio," as " Queen-HITH, Lamb-HITHE, corrupte Lambeth," says Lye, may denote the Enclosure convenient for receiving Boats, &c., or it may simply express the Land, or Shore. Heck in old English means the Shore, or the projecting and extreme part of the Shore, where the idea may be that of the Hedge or confining Boundary of the Water. The Edge, in the sense of the Edge of the Water, is derived from a different idea. HECK however might possibly belong to Edge. In German, Ecke signifies "A Corner, Angle, Nook. Ecke oder Spitze des landes, A Point, "Cape, Promontory, Fore-Land." Ecke, in its sense of a Nook, seems to bring us to the idea of an Enctosure; but in that of a Point, Fore-Land, Spitze, we seem to perceive the EDGE. I have derived ΑκτΕ, (Ακτη, Littus,) from an idea somewhat different, and have considered it to be the EArTH, or Strong Mound, or Support, against the Water. That it is derived from the Spot, which my hypothesis supposes, is manifest from its sense of the Productions of the EARTH. (Azry, Farina, Fruges.) We shall however be inclined to conclude, that the German Ecke is taken from the idea of An Enclosure, when we see another German word Ercken, which signifies "A Balcoon, "Balcony, Jutty, Projecture, Jutting or Leaning out," which surely belongs to such terms as Erkos, (Equos, Septum.) Heck occurs in the Poems attributed to Rowley. We find it in the Hymn, which was supposed to be sung in honour of St. Wareburghus, who is described in the following manner:

- "Strong ynn faithfullnesse, he trodde
- "Overr the waterrs lyke a Godde,
- "Till he gaynde the distaunt HECKE."

We again find this word in the same Poem:

- "Thenn the foulke a brydge dydd make
- "Overr the streme untoe the HECKE."

Dean Milles interprets Hecke by Height. (Edit. Rowley, p. 434.) I ought perhaps to produce in this place words under a very different form;—the Saxon w-Earth, w-Aroth, w-Arod, which signify Littus, where we have the form of the Element ^RD; and these assuredly belong to the idea of the Earth or Land. Hecke may denote the Shore, under the idea of the Land. We know, that Land is applied to the Shore, as To Come to Land—To Land, &c. In Saxon, Æge is Insula, the Isle, or Island; which may mean the Land or Shore, that is, the Spot, which every where supplies a Shore—or it may mean the Enclosure, that which is Hedg'd in or Surrounded by the Sea.

If we considered only the Is in *Isle* and *Island*, we should say, that it belonged to the Saxon ÆGE; yet, when we compare *Isle* and *Island* with *Insula*, we shall think, I imagine, that they are to be referred to each other; and we shall agree, I conceive, that the Ins in *Insula* belongs to the Celtic terms conveying the same idea, INSH, YNYS, &c., which are attached to the Element

'N, 'NS, &c., and denote that, which takes In - In-closes, &c. There is still however great difficulty remaining, when we compare the Teutonic terms for an Island with the Celtic. true, that they all seem attached to each other; and yet the Teutonic terms appear to belong to the Element ^C, ^G, ^S, &c., and the Celtic to the Element 'N, 'NS. I find in Lhuyd, under Insula, the following article: " Tnys, An Isle or Island. C. "Ennis Ar. Enezen, Ir. Innshe, Elan. Scot. Insh, i." the Celtic Ynys the familiar Surname Innis is derived. The Welsh Lexicographers understand, that the Greek Nesos, (Nyoos,) belongs to these words. When the breathing before Ynys is lost, as Nys, we have the NES in NES-os, (Nyoos.) Adjacent to the Welsh. YNYS, I find YNG, Narrow, and YN, the Preposition "IN, At," which give the true idea annexed to Ynys—that of an In-closed Spot. We have the same idea in a word borrowed from this, as Insulated or Isolated Situation — the Situation Shut up — Inclosed or Separated from the rest. The Latin Insula not only signified An Island, but likewise a House Inclosed within itself, if I may so express it, without any other Houses joining to it. R. Ainsworth explains Insula by "An Island or Isle; a Land Closed "In, or Environed with, the Sea, or fresh water. (2.) A House " in a city having no house joined unto it, but the street on "every side; such as great men's houses were in Rome." Etymologists derive Insula from In Salo Posita; and Nesos, (Nyoos,) they derive from No, (Nw, Nato.) We see that Isle is the simpler form of Island, and under this form ISLE we have a term relating to Buildings. N. Bailey explains "ISLES (in "Architecture)" by "The Sides or Wings of a Building;" and in another article he has "Isles, (of Ailes, F. Ala, L. a Wing,) " Certain Strait passages between pews within a Church." We see in the latter interpretation the same idea, which belongs to ISLE, The ISLAND; and from that certainly it might have been derived.

118

of the Angles, as the Etymologists imagine. It might however be the Eggland, or Igland, or Island. Yet this is not perhaps the true derivation, as we do not see any thing of this in Anglia, unless Anglia should be the Agglia or Islia—the Isle. We might suppose, that Anglia and England meant the Country or Land of the Galli or Celts, without passing through the medium of the Angles.—If this medium should be imagined, we shall have the same idea. The Angles or A-Gles are the Galli or Celts.

The Island of Ceylon may be the Ceyl Eilain, the Island of the Celts. The natives of this Island are called Cin-Glasses. This is curious. Even under the very form Glasses we have in Shakspeare the name of a Celtic tribe:

"The merciless Macdonwald,
"from the western Isles
"Of Kernes, and Gallo-Glasses is supplied." (Macbetk, A. I. S. 2.)

The portion Gallo is only a different form of the words denoting The CIN is another name, by which the Celts CELTIC Tribes. are denominated. "Aneurim, Taliessin's contemporary, in the " conclusion of his Gododin, distributes the Celtæ of the British "Islands into CYNT, a GWYDDIL, a Phrydin;" (Davies' Celtic Researches, p. 129.) that is, the CYNT — or CINS, and the GWYDDIL, the GALATE, the CELTE, the GAULS, &c. &c., and the BRITAINS. The GL, CL, may be considered as the name of the Nation; the Gall—Race. The T or D is an organical addition to the L; and as it precedes or follows, we have the Gwyddil, the Guideli, Gadeli, by which the Irish are commonly called, and the Galatæ or Celtæ. The race of the Cymri was supposed to have been brought by Hu Gadarn, into the Island of Britain, from the Land of Hav, called Defrobani, as Mr. Davies has observed in his Celtic Researches, pp. 154, 165, &c. This information is derived from the Welsh Triads; and a Commentator,

a Commentator, at least as old as the twelfth Century, according to the opinion of Mr. Davies, supposes, that Defrobani was the name of a place, where Constantinople now stands; and Mr. Davies explains the term according to this opinion, by " Dy-vro-banau, the Land of eminences, or high points, Thrace in " general, or else Dyvro-Banwy, the Land or vale of the Peneus, Defrobani is the Taprobane of the " Thessaly, Hæmonia." Ancients, or the Island of Ceylon. This Island is likewise called Serendib. - In Sanscrit, Div is an Island, and Seren is quasi Selan, the Island of Ceylon. This change of the R and L is perpetual among the Eastern nations, and it is acknowledged in this case by Bochart. (Geograph. Sac. p. 693.) When the Chinese bargain with our countrymen for Rice, they amuse the purchasers by this confusion of sounds. The Island is called Salica, and the Inhabitants Salæ by Ptolemy, &c. The Div, denoting an Island, belongs to Dapedon, (Danedov, Pavimentum, Solum, &c.) TAPIS, (Fr.) &c. Bochart derives Taprobane from מתפרון Taph-Parvan, vel Taph-Provan, id est, " anthe the Papelan vel the Propar." (p. 692.) On the origin of this term I have not yet satisfied Taprobane is perhaps the TAP—or Div, or Island, of the Bani—the Point—Phoenicians, &c.,—another form of the CINS, QUINS, &c. This change is likewise acknowledged. The famous work of Bochart on the Phænicians is called Chanaan. In the same page of Mr. Davies's work, in which we have the quotation produced above, respecting the name of the CYNTS, we find that Taliessin calls his Countrymen, Cyn-wys, or Echen GYNWys. The GYNWys brings us to the GWENet; and Mr. Davies observes in a preceding page, "In this corner of Asia, we find "the Heneti, or Veneti, which pronounced by a Celt would be "Henet, Kynet, or Gwenet, well known tribes, wherever the "Celtæ are found."—The same change takes place in another name of the Celtic tribe; and thus we have the Galli, Gauls, Welsh,

Welsh, Belgæ, &c. This mingled sound of the G and U is perpetual, and from hence, we know, has arisen the Latin Q, to which a U is always subjoined. Hence we have Guerre, War, Gualterus, Walter, &c. &c. To the name of this Celtic tribe belong the familiar appellations Quin, Winne, &c. Hence we have in the names of Countries, Chanaan, China, Gentoo, Hindoo, India, &c. &c., Cin-Glasses, &c., and Phænicia, Pæni, Hi-Bernia, Al-Bion, &c., Al-Banique patres, &c. &c. The Al is the g-AL or Gal. I shall proceed no further on the present occasion; yet even this, I trust, is enough to rouse the Celtic Scholar from his sleep, which has been so long and so profound.

The Hebrew is AI or Af, above recorded, belongs to our Element AJ, AG, &c. It denotes in general the spot of Ground, the Place or EArTH, ArZ, &c., where a person is situated. means, says Mr. Parkhurst, "A Settlement, Habitation," &c. &c.; who observes, that the versions and Lexicons usually render this word by an Isle or Island; though he adds, "It may be "justly doubted whether it ever had strictly this meaning." is used likewise as an adverb of Place, with or without an Interrogation, Where, Whence, &c. &c. Mr. Parkhurst, in his account of this Hebrew term, observes, "Hence also the Greek Aix often "used in Homer, for a Country or Region." The Greek Aia, (AIR, Terra,) is quasi AJA, and belongs likewise to our Element denoting the EArTH, ArZ, &c. &c. The Lexicographers tell us, that Aia is "per aphæresin pro Γαια." The Greek Ge, Gaia, (Γη, Γαια, Terra,) is quasi AGE, AGAIA, &c. &c., where the vowel breathing before our Element AJA, AGA is lost, or when it becomes J^A, G^A, &c. In the Galic and Irish Dialect of the Celtic, Aoi, which I consider to be quasi Aoj, denotes "An Island, "a Trade, a Hill, Possession;" and again we have AI, AOI, "A Region, Tract, or Territory." The same words signify "An Herd, also a Cow or Sheep;" and they likewise mean "Inheritance

"Inheritance of Land, Possession." We find, that I means an Island, and hence, I Cholum Cille, says Mr. Shaw, Icolmkill, or the Island of St. Columbus. It is curious, that the I should remain in all these words, Celtic, Hebrew, and Greek, as a record of its kindred letter J, the Radical Consonant.

Words, signifying To Hold, Have, Possess, &c., as a certain Spot of EArTH, ArK, &c. &c.

Echo. (Gr.) To Hold—Have— Possess. To Hold or Confine, as within a Fence— Enclosure—Bounds, &c.

AIGAN — AGAN, &c. (Goth. Sax.) To Hold — Have — Possess, &c.

AIGIN, AIHN, AGEN, EIGEN, EGEN, OWN, &c. &c. (Goth. Sax. Germ. Dan. Eng. &c.)
Proprius.

Agen. (Sax.) Contra, Iterum, or Against—Again. (Eng.)

Æнт—Æнте. (Sax.) Possessio, Hæreditas.

Æнте-Man. (Sax.) Colonus.

OUGHT. (Eng.) Debeo, What a person Has in charge to do.

OUGHT or AUGHT. (Eng.) Any thing, What a person Has or Possesses.

AUCHT. (Scotch,) Res, facultates, possessio.

HEAD — HOOD, HAD, HEIT, HED, &c. (Eng. Sax. Germ. Dan. &c.) The State, Quality, or *Property* of any thing. What a person Has or Possesses, as peculiar to himself.

EAD. (Sax.) Possession, Felicity, Prosperity.

Epric, Epwin, Epward, &c. &c.

I HAVE before produced the Greek Echo, (Exa, Habeo, Possideo, Teneo; — Cohibeo, Reprimo; — Cingo, Circumdo; — Habito, Incolo;) which, as we have seen, conveys at once the idea of Having — Holding or Possessing any thing, as a certain Spot of Ground; and that of Holding or Enclosing, as within a Fence.

that in the same column of my Saxon Dictionary, where Agn, Proprius, and Agnian, Possidere, are found, we have Agther, Uterque, where the Ag undoubtedly denotes Being, and is to be referred to the race of words, which I have recorded.

The article succeeding Agen, Proprius, is Agen, Contra, Adversus; - Iterum, Denuo. In the Agen, 'Contra, Adversus,' we are brought to our English word AGAINST; and in that of "Iterum, denuo," to our word AGAIN. All these terms belong to each other. Agen, signifying "Contra, Adversus," is Agen; Proprius; from the idea, that what is Peculiar or Appropriate to a person, or what is the Property of a person, implies an Exclusive right in Opposition to any one else; and hence it means In Opposition to, or AGAINST. The idea of actions or circumstances being put Against each other, brings us to the notion of something Reciprocal - Mutual - or Recurring; and hence we have Agen, Again, "Iterum, denuo." — When we say, in a case of contention, " If you do so and so, I will do the same AGAIN "to you," we have at once expressed by this word, the sense of AGAINST, with the reciprocal action AGAIN. In the Language of the people, Again is used for Against; and in a phrase like the preceding, "If you hit me, I'll hit you Again," we hardly know, which sense of the Saxon Agen, "Contra-Iterum," would suit best with the idea. The Latin Contra signifies at once Against and Again. Robert Ainsworth explains Contra in one sense by " Mutually, reciprocally," " Quæ me amat, quam "Contra amo," She who loves me, I love her AGAIN. Etymologists place Again and Against in two separate articles; the former of which they derive from Agen, (Sax.) Angehen, (Germ.) Aggredi, Eac, (Sax.) Iterum, &c.; and the latter from Agen, Ongean, (Sax.) Gegen, Entgegen, (Germ.) Contra, &c., and even from the Greek Kata. "Dr. Mer. Cas. mirabiliter defl. a Gr. " Kata," says Skinner. The German Gegen is Egen, Agen, &c.

In the same column of my Saxon Dictionary, where Ægnian occurs, we have Æht, Æhte, which Lye interprets by " Possessio, "Hæreditas." We see in the interpretation Hæreditas, the same idea under the form ARD, which directly brings us to the EARTH, ERDE, &c. &c. In the quotation produced under ÆHT, we find the word in combination with the term, to which it belongs: "Theah he ealne middan-EARD on ÆHT begite. Licet "universam Terrarum orbem lucretur." The succeeding words are " Жит, Жите. Æstimatio; — Жита. Octo; — Жите, ab Agan. " ÆHTE-Land. Terra Possessionis. ÆHTE-Man. Colonus, Agri-"cola, Laborator;" and we have adjacent to these terms " ÆHTIGE. Divites," and ÆKER. Ager, &c. Let us note the Æst in Estimatio, or Est-Timatio, which might belong to EHT; but the Æ may be only an organical addition to the ST in ST-M, or T-M, which is a Radical. In Italian, the word is Stimare.— I shall not attempt to produce the various forms in Saxon and Gothic, under which these terms appear, as Ahjan, (Goth.) Existimare, Eht, (Sax.) Æstimatio, &c. &c. The German Acht. Heed, care, observance, &c., Achten, "To care, Esteem, respect, " regard, observe, mind a thing, make account of it, value it," might be referred to these words Eht, &c., denoting Property— Value, or to HEED. ACHT means likewise in German, "The "outlawry, proscription, outlawring, banishment;" where ACHT belongs to that race of words, attached to our Element, which signify To Stir up or Cultivate the Land - Exercere Terram; and hence, To Stir up, Rout up, Disturb, Plague, or Exercere in general.

It is curious to observe, how the terms, which I have now under discussion, are intermingled with this race of words; or rather, it is curious to mark these senses, which appear so different, belonging to the same words, or to words directly connected with each other. The term preceding Eht, Æstimatio, is the verb

verb Ehtan, Persequi; which is attached to the idea, conveyed by a word in the preceding column, Egean, Occare. words directly belong to each other, as the two senses of ACHT, Value and Banishment, do; and they are all to be considered only as different forms of each other. We have only to imagine, that these words are applied in the two senses of Cultivating or Stirring up Land, and afterwards of Stirring up or Disturbing in general; and likewise of Possession - Value, &c. We know, that Colo has the double sense of Tilling or Cultivating the Land, and of Inhabiting it.—Whatever be the precise process, by which these words receive such meanings; the fact, about which only I am interested, is certain, that these terms belong to the We have seen, that ÆHTE-Man is the "Colonus, " Agricola, Laborator." In all cases EHT would signify EATH, and EHTE Man, the EArth Man, either as the Possessor or Cultivator.—If ÆHTE-Man had been explained 'Vir Terram Exercens,' we should not have wondered to see a term belonging to it, as EHTan, explained by Exercere, Exagitare, Persequi. Let us mark the Erc in Ex-Ercere; which I shall shew to belong to the form of our Element ARC, &c., signifying to EARTH up, or to Stir up the EARTH, ARK, &c.

There are some words in Saxon denoting Happiness—Prosperity, which are derived from these terms, signifying Possession—Property, &c. Thus Ead, Aud, Island. signifies, according to Lye, "Possessio;—Fœlicitas, Beatitudo;—Res Prosperæ;" and Eadeg, Eadig, mean respectively "Beatus," and "Beatus; "—Dives." Again, Ed is explained by "Fælicitas;—Salus, "Servator, Asylum;" and this might remind us of the Greek Ugies, (Tying, Sanus, valens, &c.—Bonus, &c.) and Eus, (Eug, Bonus, Strenuus;) though I have classed these terms under a different race of words. Perhaps the Greek Edus, (Hõug, Suavis, Jucundus;—Lætus, Lepidus,) may belong to Ed; yet here great difficulties

difficulties occur. — The Etymologists have understood, that from such terms as Ead, Feelicitas, a series of proper names has been formed. Skinner derives from Ead, the names Edith, Edmund, Edric, Edward, Edwy, Edbald, Eadbert, Eadgar, Eadulph, Edwin, &c. &c. Edward is explained by Skinner, Felicitatis custos, vel Felix custos. Edward means the Ward of the Ed, the Property or Land. We have seen, that Hayward is the Ward of the Hedge, or Enclosed Property. In the succeeding column of my Saxon Dictionary to that, in which Ead, &c. is found, we have Eadmed, Humilitas, Eadmod, Humilis, where Ead seems directly to denote the Ground; as Humilis, we know, belongs to Humus. Med or Mod belongs to the Saxon "Mod, Mood. Mens, animus."

In Mr. Shaw's Galic Dictionary I find "ADH, AGH. Felicity, "good luck," "En. Gain, Profit, advantage;" and in three other articles, we have a word under the same form, ED, denoting, "To "make, receive, to handle;"—"Defence, Protection;"—"Cattle." In the same column we have "Epim. To Catch, apprehend." To this race of words, EAD, ED, &c., the Latin UTor, Usus, and its parallel terms in modern Languages, Use, User, (Fr.) &c. may belong. The original idea of UTor seems to be that of Possessing or Having any thing. R. Ainsworth explains it under this idea of Having; - " To Have the Use or Benefit of. - To Have, or "enjoy. — To Have, even what we would not." In Usurpo, To Usurp, "To take another's Property," we see fully the idea of Property and Possession. The preceding term in Lye's Saxon Dictionary to Agnian, Possidere, is Agnette, Usura; where we perceive how one sense of UTOR, namely, that of USURA, is connected with the idea of Possession. In Mr. Shaw's Galic Dictionary, IDH is "Use;" and a word under the same form is explained in another article by "A wreath or chain; a ridge;" which may mean the HEDGE or Fence, Surrounding or Holding in any thing. In the preceding column we have IATH. Land,

and IATHAM. "To Surround, move round." The Saxon Est, Munificentia,—Amor, gratia, &c., Estas, Deliciæ, Epulæ, seem to belong to EAD, Possessio;—Fœlicitas, beatitudo;—Res prosperæ. Adjacent words to this are Est, "Superlativorum terminatio" Anglo Saxonica," and Est, the East, which I explain in other portions of my work.

HOOD or HEAD, as in Knight-HOOD, Maiden-HEAD, &c., denotes Property—Quality—State or Condition of any thing or-Person; and belongs to this race of words, denoting Property of another kind. Knight-Hoop, &c. is that state, which a Knight Possesses, as Peculiar or Proper to himself.. Thus the original sense of Hood and Head, and the secondary sense, have the same relation to each other, as Estate bears to State, and as Property, in the sense of a Possession, has to Property in the sense of Quality. The Etymologists refer us under Hoon to the Saxon Had, Hade, conditio, the German Heit, the Danish Hed, and the Belgic Heyd, the Islandic Hauttur, Modus, &c. HAD among other things is applied to an Ecclesiastical condition, "Ordo Ecclesiasticus;" and hence Hadian means "Ordinare, "consecrare." In the same column we have Hador, Serenus; which seems to belong to the German Heiter, explained on another occasion, as attached to Æther, and Hadrian, Angustare, which belongs to Edor, Sepes, explained likewise in another place. Whence HAD-Swapa or Swapa, "Pronuba, paranympha," in the same column, is derived, I do not precisely understand. The Islandic HAUTTUR, Modus, will explain to us the Saxon HYTH, "Modus, Commodum, quæstus," where we have the Sort. —Condition — Mode, and the Value or Property: We shall now understand, how Hoop, the Covering for the Head, Cucullus, bearing the same form as Hoop, the State or Condition, agree with each other. Hood, the Covering, is that, which Holds or contains; and Hoop, the Property or Quality, is that which a person

128

a person Holds - Has, or Possesses. Hood, Cucullus, with its parallel terms, Hod, (Sax.) Hoed, &c. (Belg.) Hut, (Germ.) Pileus, &c., has been referred to the German Huten, Custodire, These words bring us to HAT, HUT, &c., to HEED, the term of Guard and Protection, and to Hedge, the Hold, which Contains or Confines things within a Fence. — Let us mark the explanatory term Has, and remember Had, which do not belong to the Element 'S, 'D, denoting Possession; but are terminations of the verb, quasi Haves, Haved. We have seen, that Æнта, Octo, is adjacent to Æht, Æstimatio; and they might possibly belong to each other, from the numeral expressing a Valuable or Considerable Quantity - Much - Many. Our ideas concerning what is great or little are proportioned to the range of our knowledge. Eight appears in a great variety of Languages, as Ahta, (Goth.) Eahta, (Sax.) Atta, (Run. and Dan.) Acht, (German and Belg.) Okto, Oktoo, (Lat. Gr. Oxtw.) Otto, (Ital.) Ocho, (Span.) Huict or Huit, (Fr.) which the Etymologists have produced. In the Dialect of the Gipsies Okto is Eight, and in Persian it is فشت Husht. In the Dialects of the Celtic we have the Welsh *Uyth*, the Cornish *Eath*, the Armoric *Eith*, and the Irish $O_{\chi}t$, for the same numeral, as they are represented by Lhuyd.

The word, which immediately precedes \cancel{Egan} , Possidere, is \cancel{Egan} , Ovum, which may perhaps mean, that which Contains, Holds or Has, by way of eminence, according to the old Proverb, in which in order to express abundance of any thing, we say, "A person is as full of such a thing, as an Egg is full of meat." The parallel terms to Egg produced by the Etymologists are the Saxon \cancel{Eg} , the Danish and Islandic \cancel{Egg} , the German and Belgic \cancel{Ey} , the Welsh \cancel{Wy} , the French Oeuf, the Italian Ovo, and the Spanish Huevo. These latter words, the French Oeuf, &c., directly connect themselves with the Latin Ovum. Under Ovum

The property of the second

in Lhuyd we find the Welsh Uy, the Cornish Oi, the Armoric Ui, and the Irish Ugh, Ork. It is difficult to decide on the precise idea annexed to Egg and its parallels. I have already given one derivation, and others might be added with some appearance of probability. I have supposed, that Orchis, (Oexis, Testiculus, Oliva,) belongs to ERKOS, (Epros, Septum,) denoting the Sur-Rounding Fence, or the Round-about Fence, from the idea of the Round - Swelling figure of these objects. The term Egg may have the same relation to Hedge—Ægan, Possidere. In Irish, as we see, we have the form ORC, which should be considered perhaps as directly belonging to the idea, which I supposed to be attached to Orchis, (Oexis.)

Some refer HATCH and EGG to each other; and Skinner supposes Egg to be the primitive. On the origin of HATCH, likewise, some difficulties occur. HATCH, with its parallel German word Hecken, is referred by some to HACK, Concidere, "quoniam sc. aves, cum excludunt ova, rostris suis Conscindunt, "et perrumpunt putamina."—HATCH might belong to a word under the same form, HATCH, a Bolt, HATCHES of a Ship, &c., under the idea of Confining - Shutting up or over - Covering up or over, in the process of Incubation. Whether HATCH, the Bolt, and Hatches of a Ship, belong to Hedge—To Fence in—Confine, &c., or to another idea, must be explained in a different place. I shall shew, that HATCH, the Bolt, HOOK, HUG, &c., in their? sense of Confining - Holding, &c., may be derived from the idea of Catching - Snatching or Twitching up; and may thus belong to terms, which relate to the Vellication of a Surface, as HACK, &c. We at once see, that Capio, To Hold, Confine, belongs to CARPO, To Carp, or Vellicate a Surface. — The term HATCH, in its metaphorical notion, to HATCH up mischief, is derived from the continued process of Incubation; which would lead us to think, that it belongs to HATCH, under the sense of Confining -Shutting

Shutting up or over, &c., whatever may be the source, from which this sense is derived.

Egg and Ovum seem to belong to two different Radicals, Oyum, with its parallels, Ocuf, (Fr.). Que, (Ital.) Huevo, (Span.) is attached probably to the Element 'B, 'V, and should be referred to Habeo, Have, &c. The Greek Ocon, (10m,) may perhaps belong to Ovem; but on this I cannot decide. Egg and Ovem might however have originally belonged to the same Element; as we find in a variety of instances, that when the sound of the Radical G is lost, the labial yowel sound of U (if I may so express it.) is substituted, which sometimes passes into the sound of the Labial Consonant. We are all aware of the union of the G and U, V, when the sound of U or V succeeds G; to express which, we know, the Latins adopted the Q with the U after it. The other case differs only from this, by the sound of U and V preceding that of G. Thus Saw, the Proverb and the Action of Scraping, belongs to Soeghe, Dictio, Sage, Serra, &c. " Mutato "G in W," says Junius, "cujus mutationis plurima slibi ad-"duximus exempla," May to Mago, (Sax.) &c. &c.; and Tough -Rough, &c. are pronounced Tuff, Ruff. Such is the difficulty with respect to the terms denoting Egg, under the forms 'G and AV.

Some might doubt respecting the word Owe, whether it should be referred to Have, or to Æean, Possidere, &c. Junius, under Owe, quotes only the Islandic Eg as, Debeo; and Skinner refers it to the German Uben, Exercere. In old English, Own signifies simply to Possess—Have—Own. It is frequently used by Shakspeare, as every one knows, in this sense,—

" Ant. B. What art thou, that keep'st me out from the house I Owe?" (Comedy of Errors, A. HI. S. t.)

which Mr. Steevens interprets by "I Quan" It occurs in a very obscure

then mean, If he has any Property or Possession left. Having is used in the same sense for Property, as " Of noble Having," in Macbeth - " My Having is not much," in the Twelfth Night, as every one knows; and Lye accordingly explains the Saxon Hafen by "Habens. Item, Illa, quæ habentur ab aliquo. Res, " Bona." Lye in his Edition of Junius has the term AUCHT. as used by G. Douglas, which he explains by "Res, facultates, " possessio." He refers this word to the Saxon Ahte, Æhte, from Agan, Habere, and the English Aught. AUGHT or OUGHT. Aliquid, might have belonged with greater probability to our Element 'G, 'T, &c., denoting This or That Being-Thing-Ir, &c. &c.; yet the form of the corresponding word Aut, which signifies Aliquid, and which is likewise the third person of the Preterite of Agan, To Have, fixes us, I think, to the expla-The English Nought is supposed to be nation above given. derived from the negative, and this word Ought; which is a most direct, and apparently true derivation. Yet if *Nought* belongs to the parallel words, produced by the Etymologists; to the German Nicht, corresponding with Not, &c. &c., this, I imagine, is not the fact. The terms Not - Nicht belong to the Negative and the Element 'S, 'T, denoting This or That Being—Thing.

From the form of Ey, when the Radical consonant is lost, the Etymologists have derived Airie, a nest, as Airie of Hawks; and the meaning of the term they have conceived to be quasi Ovorum repositorium. This may possibly be; but the Reader will be astonished, I imagine, to learn, that some conceive the French Aire or Air, in the sense of Mien, "De bon Air," to be derived from the same source, "Ab Aire, Nidus accipitrum, et, "secundario, Indoles, Ingenium; q. d. peculiaris quædam faciei indoles," says Skinner, to which Junius agrees. Nothing can be more preposterous than this idea. Aire is in French at once An Area, and the Nest of a Bird of prey; and the Airie may possibly

I imagine to be derived the fable, that Nisus was changed into a Hawk. The fable seems to be taken from a confusion in terms between the name Nisus, and the Nyas, the Howk. Nisus is the Latin for the Hawk, as alluding to the Story. (Virg. Georg. I. v. 404.) The Etymologists derive Nisus from the Hebrew v. NZ. which Mr. Parkhurst explains by "A Hawk," derived from 733 NZA, "To shoot, break, or burst forth or out"-" from his rapid " flight," says this Lexicographer, " or shooting away in flying." Others derive it from נשר NSR, which Mr. Parkhurst explains by "To lacerate, cut or tear in pieces. Thus the cognate V. "" NSR " is used in Chaldee, Syriac, and Arabic; in which last " language it is particularly applied to a Bird's tearing in pieces "its prey with its beak." The word אושר NSR means in Hebrew a Saw—an Eagle, from the same property; and to this Radical we must refer the Nisus, the Hawk. The name of the Hawk, under the Element 'NS, &c., and the Hebrew 'D' NSR, To tear to pieces, belongs to such words as Unguis, Onux, (Onex,) &c. When the breathing before the N is lost, we have the form Nux. In the Russian Dialect of the Schwonic, we have this form Nochte, the Nails; and let us note the explanatory term Nails, in German Nagel, &c., where the Nag has the same meaning as Nyas has, the Tearer. Thus, then, Nyas should be considered as the original form, and Eyas as the Derivative.

Scylla, his daughter, is supposed to be changed into a Lark. This too has arisen from a confusion in names. In Persian, Khawi is a Lark, and in Armoric it is Zhiluet. The Mauda is the Element ^L, when the first consonant S in S-L is lost, and the D is an organical addition to the L. The English term Lark is the Laud in Alauda. The Element KL, SL signifies in these words the Head—the Top, and belongs to the Latin Galea—the English Scull, &c. The Bird is so named "ab "apice, quem in Capite gerit;" and hence it is called Galerita.

In Greek it is called Korudos, (Kopudos, Galerita, Alauda cristatas) from the Korus, (Kopus, Galea;) and in another term for it, Korud-Allis, Korud-Allos, &c. (Kopudallis, Kopudallos,) The Allis and Allos belong to the Alauda. In the fable, to which I have above alluded, Scylla cuts off a Lock or Tuft of Hair from her father's Head; and here again the idea of a Tuft of Hair on the Head was introduced into the fable, from a confusion of terms in the name of the woman Scylla—and Scylla, the Head—or Scull. Through the whole compass of Language, SL, Gladenotes what relates to the Head, or Scull.—In the Irish Dialect of the Celtic, Coll is the Nead; and in Persian, Kulleh and is the Head. In short, SL, GL, &c. denotes the Earth—the Solum—the Soil; and hence it is used for the Surface—the Top—the Head, &c. &c.

That many of the Fables of Mythology have arisen from a confusion in names, we shall readily acknowledge; and those, who have undertaken to unrayel the mazes of that great Labyrinth, have not been unmindful of so obvious a fact, nor have they failed to produce various instances, in which this cause might be supposed to have operated. They have however seen nothing of the wide extent, through which this fact may be traced, nor have they formed any conception of those diversified appearances, under which it may possibly be concealed. — The doctrine of Elementary Language, which is unfolded in this Work, will alone enable us to discover its existence, and to pursue its operations, through all the intricacies in which it is involved. When the mind has once delivered itself from the guidance of reason, and is no longer solicitous to form those combinations, which are suggested by the evidence or the deductions of truth, it is marvellous to observe, with what rapidity it proceeds from folly to folly, and how fertile it is in inventions to confound and pervert its own faculties; though it is oftentimes totally unconscious unconscious of the process, by which these effects have been produced. The Jingle of similar sounds has been always regarded as possessing strange powers of fascination even on the best regulated minds; and we may appeal to the properties of alliteration and rhyme, as a most striking though familiar example of this unquestionable fact. Let us extend our views to other modes of action, under the influence of the same principle, and consider the operation of similar sounds conveying dissimilar ideas; when it is exerted on a mind, already occupied in the combination of images, the most wild and marvellous and remote. We may well imagine, what strange and discordant forms would be generated by such a process; and we shall not wonder to discover, that from this source have been derived the most absurd or monstrous of those fictions, which are to be found in the inventions of Mythology.

CHAP. II.

SECT. I.

^R.---C, D, G, &c.

Words denoting the Base or Foundation, &c., as of the Earth, Erde, Ark, Arg, &c. &c. on which things are Established—Set—Placed, &c.—From the idea of the Foundation, as the Main—Chief and Principal Support, or First Source of any thing; Terms signifying what is First or Fundamental,—Chief or Principal in Power, Command, Authority, &c., as Arche, (Aexa, Fundamentum, Principatus, Imperium.)—Words signifying to Place or Set out in Order, as on—in or from their Proper Base or Place—or their First—Original Situation, as Ordo, (Lat.) &c. From the sense of the Base or Foundation, as suggesting the idea of the First part or Extreme part; Terms denoting the Extremity or the Top of any thing, as the Top or Point of a Weapon, &c., as Ord, (Sax.) Initium, Acies, Cuspis, Apex.

ARCHE. (Gr.) The Base, Foundation:—Principal Power.

ORIGO, ORIGinis. (Lat.) The ORIGIN. (Eng.) The Base, or

first Beginning of any thing.

ORDO. (Lat.) A Beginning,

ORDER. (Eng.) &c.
ORDIOR. (Lat) To Begin, Set

in Order.

ORDINO. (Lat.) To Set in Order,
as from a Beginning, To

ORDAIN. (Eng.) &c.

URDD, EURDD, ORD. (Celtic,)
Order.

ARDEN. (Gr.) Funditus:—From the Base or Foundation; Wholly.

ORD. (Old Eng.) Initium, Acies, Mucro.

Arpis. (Gr.) The point of a Weapon.

Oan. (Sax.) Initium, Origo, Acies, Acumen, Cuspis, Apex.

ORD-Fruma. (Sax.) Principium, Initium, Origo; — Princeps, Præcipuus.

Arch, Archi, Arce, Erz, &c. (Eng. & Fr. Ital. Sax. Germ.)
The Chief.

ARCH-Bishop, &c. &c.

ERST, ÆREST, &c. (Eng. Germ. Sax. &c.) The First.

EARS — ARSCH, AERS, ARTZ, ORROS, quasi ORSOS, &c. (Sax. German, Belg. Dan. Greek, &c.) Fundamentum, Podex.

Archos. (Gr.) Podex, Princeps.

Ordior. (Lat.) To Weave, i.e. To arrange a work in Order, as from a Beginning.

OURDIR - ORDIRE. (Fr. Ital.)
To Weave.

OURT. (Old Eng.) Close Woven. ARS. (Syriac and Samaritan,) Princeps, Caput, Basis, Fundamentum.

URUK. (Arab.) Roots, Origins. ARD. (Arab.) The Base of a Hill, &c.

IRS. (Arab.) Heritage, a Root, Stability.

ARZ (Heb.) The Cedar, from being Firmly Rooted.

ARZ. (Arab.) The Pine: —
Firmly Rooted: — A Chief,
Leader, &c.

IN the preceding Chapter I considered those terms, belonging to the Element 'R. '.---C, D, G, &c., which related to the EARTH, under the idea of the Appropriate and Peculiar Spot-as Secured by Enclosures - Fences, &c.; and which from hence signified Fences and Enclosures of various kinds and for various purposes, - Security - Defence, &c. &c. &c. I shall in this Chapter consider those terms, belonging to our Element, which relate to the EARTH, under the idea of the Base or Foundation, on which things are Established - Set or Placed - from which they arise, and on which they depend, &c. &c. We shall all agree, that ideas of this kind would be most naturally and obviously derived from the name of the EARTH or Ground. The very term Ground, we know, has this signification of the Base or Foundation; - the Ground-work of any thing; and in the metaphorical application, "The Ground of an opinion—the Grounds of an argument," we perceive to what remote purposes the name of the EARTH may be applied. — We should be inclined to smile, perhaps, when we first heard of a metaphorical application of this kind, - " The "EARTH of an opinion" and "the EARTHS of an argument;" and we might be disposed probably to consider the writer, who should propose to us such a source for the origin of such metaphors, as the supporter of a visionary hypothesis; if perchance it did not occur to us in the example of Ground, that this metaphor was the most obvious and familiar, with which we are This single example is sufficient to shew us what acquainted. difficulties the writer has to encounter, when the original meaning of words has been lost, and the metaphorical sense only remains. It unfortunately happens, that the term EARTH does not supply us with any striking and acknowledged metaphorical applications of this sort; though that defect is supplied by the various senses, which are affixed to Ground. - The term Grounds is applied to that which Settles at the Ground or Bottom of any thing, as " Tea-

"Tea-Grounds," where we should be again startled at a similar combination of "Tea-EARTHS." Ground has been made a verb, signifying To Establish or Found, "He Grounds his title to the " throne;" where " He EARTHS his title to the throne," which is a similar metaphor, would appear to us a strange combination. The Latin Fundus, the Ground, passes likewise into similar metaphorical applications of the "Foundation-Bottom-the Chief " Author of a thing," &c., and supplies a verb, as we know, Fundo, "To Found, To lay the Ground work of a thing," of the same species. I have thought it necessary to detail this obvious and familiar metaphor in acknowledged instances, as it is marvellous to observe, how repugnant and almost alarmed the mind is to admit metaphorical applications precisely of the same or of a similar sort, when they are connected with a term, to which such metaphors have not been manifestly and familiarly annexed. - Nay, even in those acknowledged instances, as " The Grounds "of an argument," the mind has so removed itself from the original idea of the word, that it is almost surprized, when it is taught to recollect, that the "Grounds of an argument" are derived from the Ground on which we walk. - These observations may serve to open the mind of the Reader for the admission of those various metaphorical applications, which he will find unfolded in the succeeding discussions, and which I have conceived to be derived originally from the EARTH, or Ground.

This Chapter will be divided into three Sections; and the Reader will find in their due places the various senses, which I have conceived to be derived from the EARTH, or EARTH, &c. &c., as the Base or Foundation. In the first Section I shall consider the terms, which are found under the form of ^R.—C, D, G, &c., as ARCHE, (Apxn, Fundamentum,) Origo, &c. In the second Section I shall consider the race of words which appear under the form ^.—C,D, G, &c., when the r is not visible; as Estia,

(Εστια, Focus, lar; - Vesta, Dea; - Sedes, &c.), Ezomai, (Εζομαι, Sedeo,) Edos, (Edos, Sedes; - Firmamentum, Basis,) Istemi, (Iornju, Colloco, Statuo, &c. — In Aor. 2. Perf. plusq. perf. Sto, Consisto, unde Est; — Esse natum, Ortum Esse,) &c. &c. cannot but observe, how the verb of Existence, Est, is connected with the sense of Istemi, (Istyu,) under the idea of that, which is Placed - Situated, &c.; and we shall likewise perceive, that the explanatory term Existence from Ex and Sisto, "To Set, to " be made to Stand," is attached to the same metaphor. This will open into a wide field of new and interesting investigation; in which the various terms, belonging to our Element ^.--- C, D, G, &c., which denote Existence—This or That Being—Thing, &c., under whatever name they may be called, - Verbs of Being -Pronouns—Articles — Demonstrative adjectives, &c. &c., as Est, (Lat.) Is, (Eng.) &c. &c., ISTE, Hic, Is, Ego, (Lat.) IT, (Eng.) &c. &c., with their various derivatives, will be diligently examined This discussion will form the third Section of and explained. the present Chapter, and will unfold, I trust, to the curious and enquiring mind, a view of Languages, which may be considered as totally removed from all former conceptions on the affinities of Human Speech.

I shall now proceed to the consideration of those terms, which I propose to examine in the first Section of this Chapter, under the form AR. --- C, D, G, &c. We shall all agree, that the term denoting the Source or Origin, from which any thing springs, or the Base or Foundation, on which any thing rests, would be naturally derived from the Earth—the Source of all vegetable productions, and the Foundation, on which every thing is supported. The Greek Arche, (Agan, Principium, Exordium, Initium, Fundamentum;—Principatus, Imperium, Dominatus, Magistratus;—Causa, Origo,) is certainly derived from the Aretz, Ark or Earth; and, as I imagine, under the idea of the Base or Foundation.

The Reader will perceive, that I have exhibited both ideas; the Source, as of Vegetable Productions; and the Base, or Surface of the EARTH, on which things rest or are upheld. Though these ideas are sometimes distinct from each other, yet in many cases they are so blended, that any attempt to separate In the sense of Origo we them would be vain and fruitless. might seem to perceive the idea of the Source, as applied to vegetable productions; yet, on considering attentively this word, and the terms with which it is connected; I imagine that Origo, the Origin, is derived from the notion of the Base, and that it is only another form of Arche, (Aexy.) In a term like this, however, we cannot perhaps separate the idea of the Surface of the EARTH, as the Base from that of the Surface, as the Source of vegetable In the Latin Fundamentum, from Fundus, we see only the idea of the Ground, as denoting the Base; and nothing presents itself in the meaning of this word, which gives us any notion of the EARTH, as the Source of Vegetable Existence. So in the metaphorical application of the English word Ground, "The "Ground or Principle of any thing—the Grounds of a person's "conduct," we see only the idea of the Ground, as applied to the Surface or Rase. The derivatives of Origo appear under the form of the oblique cases, Origins, &c., as Origin, (Eng.) Origine, (Ital. Fr.) &c., where the n is an organical addition to the G. The Etymologists derive Origo from Orior, which they refer to Opu, Excito. The Latin Orior should be considered as belonging to our Element 'RT, and the true form of it is to be seen in Ortus.

In the adjacent word Ordior, "To begin," we see the same idea, as in Origo, "The beginning;" and we must acknowledge, I imagine, that they belong to each other. They coincide, moreover, with the sense of Orior, Ortus, "To be made, to have "a beginning," as Robert Ainsworth explains it. Another adjacent word,

word, Ordo, Order, likewise means a Beginning; and thus we see, that all these terms agree with each other in the same leading Ordo is explained by R. Ainsworth, "An Order, or Law. " of Nature;—A Beginning, series, tenor, and succession of time " or things; An established Rule, or Law." Ordino means likewise "To set in ORDER, To set or plant in Rows-To "ORDAIN." The term ORDIOR in the first sense, as given by R. Ainsworth, is "To Begin; properly To Spin or Weave.— "Aranea Orditur telas;" and in the next sense it means "To "Decree, or Ordain." From hence too we may learn, that the meanings of these words accord with each other. The primary idea, annexed to the terms before us, is To Place or Set, as on a certain Base, or Fundamental Position - To EARTH. - I imagine that these words denote EARTH - Place, or Position, with the idea of the First—Fundamental Place, from which things, Begin, and on which they are Founded—Established—or Set. The word Set, we know, is attached to the sense of Sedes, the certain Place, or Situation; and this brings us at once to the idea of Arrangement - Regulation, ORDER, or, as we express it, of Setting things in ORDER. This union of Set and ORDER will explain my hypothesis with sufficient accuracy, as I conceive, that ORDER in its primitive sense had nearly the same meaning as Set. I shall shew, that Set belongs to the Element ST, denoting the Ground.

Thus then Ordo, Ordino, Ordino, Ording, &c., as relating to the Arrangement of things, mean nothing but Earthing, or Situating, and Setting things in or on their proper Earths, their due Established Places, or Orte, (German,) or their appropriate Original Situations.—In the same column of my German Lexicon, where Ort, Place, is, we have Ordnung, Order. If Ordnung had been written Ortnung, we should have had no doubt, that Ortnung signified Placing; and if they both had been

been written ERT, Ertnung, or ERD, ERDnung, we should have understood, that they meant the ERDE, the EARTH, the Place, or Situation, and End-ing, or Earth-ing, Placing, Setting, &c. When Ondo, Ondior, Onigo, denote Beginning, they convey the idea of the EARTH—as the First Fundamental Place, the Original Spot, on which things are Set, and from which they Begin or are Set off, if I may so express it. The phrase Set off, (if we consider its primitive sense, and remove from it the notion of departure,) expresses this combination of ideas as nearly as it can be conveyed; and if Ordior were explained in the first sense by To Set off, To Begin, Orditur loqui, He Sets off speaking, and in the next sense. To Set in ORDER, the genuine idea of the word would be expressed with as much accuracy as language will admit. Set agrees with the race of words before us, as it relates to what is Established in a certain Place; but it does not convey so strongly the idea of the Fundamental or ORIGINAL R. Ainsworth explains Ordo in the second sense by "A beginning, series, tenor, and succession, of time, or things," where we see the genuine sense of a Set of things Placed in ORDER, as from or on some Base or Original Situation. It is marvellous to observe, how aptly words are adopted, from a strong impression of their primitive turn of meaning. Order is brought to its primitive idea, when it is applied to the Placing or Arranging of Parts in an Object, Established on a Base, as in the Orders of Architecture. Let us mark the word Architecture, which we know is derived from the same idea, and, as we now see, from the same race of words, the Arche, (April, Fundamentum,) the Base, or Foundation; and thus we understand, how, by a just feeling of the mind respecting the primitive sense of these words, they are again brought in union with each other.

Before I quit these terms, ORDE, &c., I should observe, that

if the sense of Ordo had not been manifestly connected with the idea of Origin or Beginning, as referring to the EARTH, under the notion of the Base or Foundation; I should have referred it to the same spot, under another meaning. - We might have supposed, that Ordo belonged to the Earth, under the idea of Furrows, made in regular rows; and we shall find, that words with such a meaning are often derived from this source. In modern Greek, a Furrow is Ordinion, (Opdiviov.) a term preserved by the Scholiast on Theocritus. " Αυλακα δε, τον Ογμον φησι, το " zowes leyomeron OPAINION." In Welsh, URDD is "An ORDER, " state, or degree," as Mr. Richards explains it; who quotes the parallel Armoric word EURDD. In Mr. Shaw's Galic and Irish Dictionary we have ORD, "An ORDER, Series;" ORDuigham, "To ORDER, set in ORDER, ORDAIN." In the same column of Mr. Shaw's Dictionary we have ORDA, "A piece, fragment," which belongs to the German and English ORT, originally denoting a certain Place—or certain Piece or Part of EARTH. Thus we see, how ORD and ORDA coincide with each other. as the one relates to a Place or Part, and the other to the idea of Placing - Arranging, &c. I find adjacent to these words, in Mr. Shaw's Dictionary, ORD, "A Hammer, Mallet," and Ordin, a Mallet, which may directly belong to Orda, " A Piece, "Fragment," as the Instrument, which breaks things into Pieces; or it may belong to a race of words denoting violence of action, as Hurt, Hard, &c. &c. It is not necessary to produce the terms in Modern Languages, belonging to Ordo, Ordino, which every one acknowledges, Ordre, Ordonner, (Fr.) &c. &c. The n in Ordinis, Ordino, &c. is an organical addition to the D, as it is to the G in Origin, &c.

ORD, ORDURE, ARDA. (French, Eng. Gr.) Filth, or Dirt, as of the *Earth*.

Ardo. (Gr.) Rigo, Irrigo, perhaps, originally, To Dawb, or Splash, as with Dirt; then

To Splash, Sprinkle in general, as with Water, &c.

ORDANion, (Gr.) An Earthen vessel.

JORDAN, Or JURDEN. (Eng.) Matula, an Earthen vessel.

WHILE I am examining these words in the Dictionaries of Modern Languages, I cast my eyes on Ordure, (Eng. and Fr.) Filth, Dung, which we now see denotes the Dirt of the EARTH. Skinner refers Ordure to the French word, under the same form, - the Italian Ordura, and the old French word Ord, Sordidus; and he derives them all from Sordes, "rejecto sibilo." Junius produces the Greek ARDA, Agda, which Hesychius explains by Μολυσμος, Inquinamentum. Junius likewise gives us, as the parallel Italian term, Lordenza, which Lye derives from the Islandic Lort. These Lexicographers might have produced the Italian Lordura, from which Skinner has by mistake got his Ordura.—Lordura has only an accidental coincidence with Ordure. This word and Lordezza belong to Lordo, Foul, and to Lort, (Island.) as Lye supposes, to the French Laid, the Latin Lutum, The French Etymologists derive ORD from Olidus. I am examining this term in Menage, I cast my eyes on another old French word, ORCE, which signifies 'The Sides of a Ship,' where we have the idea of the ERK-os, (Epxos,) the Enclosing To the Greek ARDA, (Aρδα,) Filth, should perhaps be directly referred another Greek word, ARDO, (Apdu, Rigo, Irrigo; - Potum præbeo, Adaquo,) which in its original sense might signify "To be-foul, be-daub, be-spatter, be-splash," and then

R is

then To Throw or Splash Water over, or To Water in general, Agolew τους κηπους, iππου. The Greek Φυρω has this double sense of To Dawb and To Sprinkle, Φυρω, Inquino, Fœdo, Perfundo, Rigo. In Ardmos, and Ardethmos, (Αρδμος, Αρδηθμος, Irrigatio,) I cannot decide, whether the DM, TM, be a significant addition, belonging to DM, the Ground. An adjacent term to Ardo, (Αρδω,) is Ardis, (Αρδις, Cuspis teli; — Arma, quibus cominus pugnabant,) the Point or Top of a Weapon, which on the first view appears very different to the origin of Ardo, (Αρδω:) yet a little reflection will at once explain this difficulty. Ardis, (Αρδις,) as denoting the Point or Top of a Weapon, must be referred to the Erde, the Earth, under the idea of the Surface or Top; and thus it coincides with the words produced above, Ordior, &c. The Surface of the Earth under one idea is the Top, and under another the Base or Bottom.

To Andis, (Aedis, Cuspis Teli,) we must refer the old English term Ond, "Acies, mucro, cuspis, [initium,]" as it is explained in Lye's Edition of Junius. The latter produces the line in Chaucer, "He sticketh him upon his speres ORDE." The Etymologists justly refer us to the Saxon ORD, where we unequivocally see, how Ardis, (Aedis,) is connected with Ordior, Origo, &c. Lye explains ORD by "Initium, ORIGO, &c. Item Acies, Acumen, "cuspis,—Apex." An adjacent word is ORD-Fruma, "Principium, "Initium, Origo,—Auctor.—Item Princeps, Præcipuus." In the sense of Princeps we are brought to the idea expressed by ARCHE, (Aexy, Principium.) Lye has another article, "Or, ORD. "Cimbr. Ar et Ard, Initium, Principium, Origo, Auctor." Lye produces the following passages from Chaucer: "That of "this story written ORD and End;"-" Of this broch he told "him Ono and End." We perceive, that On and An belong to ORD and ARD; and hence we shall understand, that ORior is attached to the race of words now before us. The sound of the 148

R is frequently connected with that of S. In Greek, we know, Arren and Arsen, $(A\rho\rho\eta\nu)$ and $A\rho\sigma\eta\nu$, are both written; and in the ancient form of the Latin Language, many words now written with R appeared with S, as Ara was written, Asa; Ero, Eso, &c. &c. In Mr. Shaw's Galic and Irish Dictionary we have Odh. "The point of a Spear, sharp end of any thing," where the sound of r in OrD, Mucro, &c. is lost.

That I have given the just idea respecting the derivation of Andis, (Apdis,) will be evident from the term preceding it, which actually denotes the Base; — Anden, (Aedy, Funditus, plane, omnino,) 'From the Base or Foundation, Altogether, Entirely, &c.' This the Etymologists derive from Aigu, Tollo. An adjacent term is Ardanien, (Αρδανιον, Vas fictile;—Vas ex quo pecudes bibunt;— Vas quod ante fores defunctorum ponebatur, ut ex eo se adspergerent introeuntes,) which the Lexicographers derive from Ardo, (Αρδω, Irrigo,) because it was a Vessel used for Water. This perhaps may be so; yet the genuine meaning of the word ARDANion, (Aplavior, Vas fictile,) may possibly be contained in its first sense, and denote literally the EARTHEN Vessel. DAN or JURDEN, Matula, seems to mean only the EARTHEN Vessel. We have seen the Danish names for the EARTH under the forms of JORD, JORDEN. Skinner derives Jordan from Gor, Stercus, and Den, Cubile, "et secundario quodvis receptaculum, "q. d. Gr. Σκατοδοχειον." The same Lexicographer thinks it necessary to inform his readers, that it is not derived, "ut prima fronte "videri possit, à Jordane fluvio, q. d. Urinæ alveus."

The English word Arch, as Arch-Bishop, &c., belongs, we know, to Arche, (Apxn,) &c. The term is applied likewise to bad and ludicrous objects, &c., which are eminent in their kind, as 'Arch Rogue,' and 'Arch Fellow.' Junius has produced the parallel terms in other Languages, as Arch, (Fr.) Archi, Arc, or Arci, &c. (Ital. Span.) Arts, (Belgic,) Ærce, Arce, Erce, (Sax.); and

and he might have added the German Erz, &c. &c. I shall not attempt to produce the acknowledged derivatives of Arche, (Apxy,) which every where abound, as Archives, the ORIGINAL - Fundamental - Authentic place for preserving records, &c., Architrave, Architecture, &c. &c. In Mr. Shaw's Galic and Irish Dictionary, ARD is used for Arch, as Ard-Easbuig, Arch-Bishop, Ard-Aingal, Arch-Angel; but whether it should be considered, as directly belonging to ARCH and its parallels, I cannot decide. means "High, Lofty, Eminent, Excellent;" and AIRDE likewise means "Height, Eminence, Highness." The term AIRDE is adjacent to AIRD, "A Coast, quarter, cardinal point," which I have shewn to mean the certain Spot or EARTH. As AIRD denotes a Cardinal Point by way of distinction, for ' The Coast, ' or Quarter,' so AIRDE may mean the EARTH, or Spot by way of distinction, or the High — the Elevated Spot; or it might denote the EARTH, the Top, or Surface of the EARTH, in which sense it would coincide with the turn of meaning annexed to ARCHE, (Apxy.) In these coincidences it is impossible to decide, without full evidence, respecting the original meaning of the word. I shall not attempt to produce the various terms in Irish and Galic belonging to these words AIRDE, ARD, which denote what is High—Great, Eminent, or Illustrious, as Airdchur, Power, Ard-Riogh, "A Monarch," Airdgheoin, "Great Noise, "Tempest, Hurricane," &c. &c. In the same column of Mr. Shaw's Dictionary we have "Aireach. Noble, a noble person," which is probably from "Aire. A name to the different ranks of Nobility;" but Aire itself belongs to the Elements ^RS.

In Mr. Shaw's Galic and Irish Dictionary we have EIRGam, "To Arise, pass, advance," and EIRIGH, A Viceroy, Chief "Governor," where we have the two senses of Archo, (Aexw, Incipio, Initium facio; — Principium, Auctor, vel Origo sum; — Principatum obtineo, impero, dominor, præsum,) the Foundation,

ORIGIN,

ORIGIN, from which things Arise, and on which they are supported, and the Principal or Chief, in general, as to power. command, authority, &c. In the same column of Mr. Shaw's Dictionary we have Eiris, "An Æra, an Account of Time," which may mean the point of Time, from which things Com-Imence: or the Duration of Time, that which Lasts, or Endures, as things Placed on a firm Foundation, &c. belongs to it, which I have considered in another place. In the same column of Mr. Shaw's Dictionary we have Eirsam, To Arise, and the preceding term is EIRRSCE, "A Trunk, stump," which means the Base or Foundation. In Welsh, Archafael is "To Ascend, to Exalt, to Rise, or Lift up," and Dyrchafael has a similar meaning, "An Ascending, a going up," &c. In the same column of Mr. Richards' Welsh Dictionary we have Arch, a Chief, as in Archesgob, An Arch-Bishop; and I find in the same column Ancnes, " Clothing, Apparel. It seems to signify " properly a Shoe, Patten, or any thing worn on the Foot." If the original idea of the word was that of something covering the Foot, it might be considered as the part treading on the Base or Surface of the EARTH; and from thence it was applied to a covering for other parts: Yet it may mean the Enclosure, and belong to a word in the preceding column, Arch, "A Chest, a Coffer"—An Ark; as I have conjectured in another place.

The term Admiral, which has so much embarrassed the Etymologists, might possibly be referred to this race of words, Ard, High, &cc. It occurs in various Languages, as in the Italian Ammiraglio, the Spanish Almirants, the German Ammiral, the Belgic Ammirael, the French Admiral or Amiral, the Modern Greek Auggalios, &c. &c.; and is derived by some from the Arabic Emir, Dominus — by others from Emir and Alios, Marinus, — from the German Ampt, Munus, Meer, Mare, and All, Totus, &c. &c. &c.

This is a word of great difficulty. It should certainly seem on the first view as if Mare, or its parallel words Meer, &c. were a part of the composition. When we learn, however, what the French Etymologists have unequivocally proved, that Admiral meant originally Chief or Governour in general, and not the Chief at Sea, this idea must be abandoned. It certainly seems, as the French Critics suppose, as if the word came to us from the East in the time of the Crusades, and that it is taken from the Arabic Emir. In this opinion we should probably rest; yet it ought to be observed, what no Etymologist has noticed, that in the Galic and Irish Dialects of the Celtic we have "ARDMHAIRach, "An Admiral," where surely the Ardmhair belongs to Admir in Admir-al; and the ARD, whatever might be the origin, was certainly intended to belong to And, High, &c. I state my position in these words, because, if the Galic Ardmhair belongs to Admir, and was recently introduced from it into the Celtic Dialects, the form of ARD in Ardmhair was assuredly adopted by the introducer of the word, that it might coincide with Ard, signifying High. But there seems in this Celtic term to be another significant portion. The Mhair was intended to express nearly the same as Ard, and to belong to Mon, (Gal.) "Great, "Noble." The Element MR has the same meaning through the whole compass of Language, and hence we have the Arabic term Emir. In Galic we find a compound of this Element MR, as Mormhaor, " A Lord Mayor, High Steward, an Earl, Lord." In Welsh, Maer is "A Mayor, Provost," &c. Hence is derived our Surname Moore, and the English term for Greatness or Abundance, More. Hence we have Maro, and Homer; which is nothing but Emir. The Omer-os, (Ourpos, Obses,) the Hostage, is still the Emir, or Illustrious personage, given up as a Security.

ARD, in the Persian Ardeshir, from which the Greeks have formed with great precision their term Artaxerxes, (Apragages,) means

means Ard, High. The name Arthur might be a word of the same kind, though it perhaps belongs to the Welsh Aruthr, Wonderful, which is a compound of Ar and Uthr, bearing the same meaning. The formation of this term Artaxerxes by the Greeks has been the subject of cavil; yet no word, passing from one Language to another, has been more faithfully recorded. Nothing can be expected or be performed in point of minuteness, but to preserve a record of the word by adopting cognate Consonants. In the representation ARDEshir no more has been or can be accomplished. The ARDE corresponds with the Apra, ARTA, of the Greek; and the Shir is the Xer or kSER; so that ARDE-Shir is ARTA-kser. The Es, we know, is the Greek ter-The X or KS after the R seems to have been a sound annexed to R, which to a Grecian ear resembled that at the beginning of the syllable or word Kser, quasi Kser-ks. The sound of S is perpetually connected with R. Hence it has arisen, that R and S are adjacent to each other in the Alphabet. The words in the present form of the Latin Language, which are written with R, were anciently written with S, as Ara, Asa, Ero, Eso; and in Greek, we know, Arren and Arsen, (Approx, Aporp,) In the modern Persian alphabet, are used for each other. adopted from the Arabs, the letters R and Z are adjacent to each other, and the characters, by which they are represented, are the same, except that one of these letters has a dot prefixed to it, jr, jz.—The Shir and Kser in these words belong, I imagine, to Sir, Sire, Czar, Kur-ios, (Kupios,) &c. &c. The name XER-xes is XERx-es in Arta-XERx-es, without the Mr. Richardson observes, that Arde-Shir was Epithet ARTA. called Bahaman. The term Bahaman is a compound, bearing the same meaning, from Baha, or Bahar, Great, and Man, corresponding with our term Man, the Illustrious Being. The DAR in DAR-ius is only another form of Shir, Xer, DS R. Mr. Richardson

has observed, that Dara is synonymous with Sha, and signifies in Persian a King; though he makes Darab to mean, Possessed by or found on Water. He attributes these two names, Dara and Darab, to the King, who reigned before the Prince, called by the Greeks Darius Codomannus; and he produces a narrative recorded by the Persian Historians, to illustrate the origin of this We cannot doubt that the Dara means the same in both these words, whatever real or pretended story the Persian Historians may produce to confirm this Etymological conjecture respecting the name of Darab. The Sha ain Modern Persian for a King, is quasi Shar, corresponding with Dar, Dara.

Another Persian word for a King, as a Royal Surname, is Ksru; which is commonly represented by Khosrou, with the breathing between the K and S, but which I consider to be quasi Ksoru, and to belong to the Element SR. In the name CYAXER-es, which is meant to represent Chosrou, we see the breathing before the R preserved. In Ahasuerus or Achasuerus, as it is sometimes, and as it ought to be represented, we see in Chasuer — the Cyazer and the Chosrou. Whether the Ac be quasi Arc or Ard, I cannot decide. In the name of Cyrus, the Cyr still represents the XER, Shir, &c. The sound of s, which I conceive to be annexed to R, seems to shew itself in Cyrus or Kuros, (Kupos;) as the addition of the s appears to have been intended to represent the name, though the form os was adopted for the purpose of complying with the analogy of the Greek Language, and the s was afterwards dropt for the same reason. The mode, in which this name is commonly expressed, is Coresh; and Isaiah represents it by כורש CURS, where we unequivocally see the s expressed. We see likewise the s annexed to the R in the name Achasuerus, אחשורוש AChSURUS. The Chsurus, in this Hebrew or Chaldaic representation, precisely, we see, coincides with the Greek Kuros, (Kupos.) Chosrou is likewise often represented

represented by Chosroes. We now understand, that the Greeks had good cause for adding their x or ks to the R in Xer-es or Kserks-es; and that their Xrx, Ksrks, or Csrcs, is a just representation of the Hebrew Crs in Curs, the Chaldee Chsrs in Chsurus; as likewise of the Crsh in Coresh, the Chsrs in Chosroes, and of the Krs or Crs in Kuros, (Kupos), and Cyrus. Nothing therefore can be more intelligible and consistent than the process, by which this apparent variety has been produced. Let us imagine, that the Elementary form is \overline{KS} , \overline{DS} , S, &c. R-s; that the s succeeding the R is an organical addition, which sometimes appears; and that a vowel breathing is sometimes inserted between the symbols representing the first letter of the Radical, as likewise between the R and the organical s.

The Chronologists find great difficulty in adjusting the æras, in which the Princes under these names lived, and in reconciling their history with the Persian records. The Sacred Writers, as well as the Grecian Historians, have been condemned for their negligence or perversion in their account of these Princes. 'We shall now understand, from this view of the question, without discussing the nature of the Historical facts, how these apparent incongruities may have arisen. First we must observe, that all these names are to be referred to the same origin; — secondly, that some of them are Royal titles, common to different persons, as Czar, a term belonging to the race, at present actually is; and thirdly, that others of them are names, applied to particular persons. Now, as long as these names, thus related to each other, remain in a Language well understood, under the same characters; their different forms, arising from different vowels and from different Cognate Consonants, distinguished from each other by different symbols uniformly applied to the same purpose, will be sufficient to mark out with all due precision the different offices, which they were intended to execute. But when these

names

names pass into other Languages and Characters, and have undergone the process of change annexed to this operation, the record only of their affinity remains to the eye of the Etymologist; while the distinctions, which marked their difference, have been obliterated. Thus the forms of Sir, Sire, and Czar, are fully sufficient to distinguish, in a Language well understood, the different offices, which they are intended to execute; but under any other representation, Σερος, Σειρος, Έαρος, or when again brought into the same characters, Seros, Seiros, Zaros, Xaros, or Ksaros, we are no longer able to discover the different personages, or titles of respect, which these terms originally marked and designated. If Sir and Sire represented the names of two successive Kings, we should not be able to discover, in the representation Seros, Seiros, &c., which of these Kings was intended. can decide on this point, but the coincidence of the Historical facts, which belong to each of these Personages. In a word, if a race of Kings are represented by the same Elementary characters, expressing either the names of Individuals, or used as common Titles, we cannot determine, when these names are represented in other Languages and under other Characters, to which of these Kings the names thus represented are to be referred, unless from the most accurate knowledge of the particular Histories, connected with their lives.

On the whole we may observe, that it would betray in us no inconsiderable degree of presumption and ignorance, if we should proceed to charge with negligence and perversion writers of good name and credit, who may appear to have confounded Persons and events; unless we are fully possessed with the nature of these Etymological difficulties, and unless we are amply provided with the means of acquiring Historical information in the most minute particulars; from which alone, in many cases, the identity of Persons can be decided.—These observations on the different forms.

forms, which names assume, will be found of considerable importance in various parts of our Etymological Enquiries; and they will operate, I trust, in correcting that vulgar error, so familiar and inveterate even among the most enlightened Scholars, which persists in repeating, that the Greeks have been the great confounders and corrupters of names. - The Greeks have in general performed all, which the nature of the case would permit. They have retained the Cognate Consonants, which are sufficient to preserve the record of the Person intended, when no difficulty arises from different names under the same Elementary characters. They have not done more, indeed, than other nations have done; but they have performed their duty with equal accuracy, and their labours have been more extensive and important. It is marvellous to observe, with what accuracy and precision the record of Names, or, I might say, of Human Speech in general, has been preserved in the symbolical representation of letters, not only among those, who have recorded their own Language, but even by those, who have recorded words belonging to other Languages, totally dissimilar in form and character.

We have seen, that AIRD-gheoin means "Great noise, tem"pest, Hurricane." Let us mark the explanatory word Hurricane,
which belongs to the French Houragan, or Ouragan. The
French Etymologists suppose, that Ouragan, Huracan, (Span.)
is a term in the Language of the Natives of Havanna, Jamaica,
&c. This might be the fact; and yet it might still belong to the
Celtic Airdgheoin. The word however is not related to its
original term through so remote a medium. The succeeding
word to AIRD, in Mr. Shaw's Dictionary, is AIRD, "State, order,
"improvement;" and the next is AIRD, "Happiness," which
no doubt are attached to each other. AIRD, ORDER, belongs, we
see, to the race of words which I have before examined. The
succeeding term is Airdbheandham, To Cut, which I must leave

the Celtic Scholar with this clue before him to explain. The terms for Cutting are commonly derived from the operation of Cutting the Ground in Ploughing, &c., as Tailler belongs to Tellus, &c. &c. AIRD in this verb might belong to AIRD, "A coast, quarter," &c., under the idea of a Part—To divide into Parts. The Latin ARDuus, denoting High, might belong to the Celtic ARD, "High, Lofty," &c.; yet it may be attached to HARD, HARSH, as denoting that, which is HARD or Difficult to ascend. ARDuus is explained by Robert Ainsworth, "Inac-" cessible, High, Lofty, Steep—HARD, Troublesome, Difficult," &c. &c. ARDuus is referred by the Etymologists to ARDeo; and they belong to each other, though with somewhat of a different turn of meaning, as I shew in another place.

We shall now understand, that our ancient term Erst must be referred to this race of words. The Etymologists remind us of Ere, and refer us likewise to the Saxon Ærista, Primus, and the German Erist. In modern German it is written ERSTE, the First; and in Saxon we have various forms of this word, as ÆRST, ÆREST, ÆROST, ÆRTHON, &c. Adjacent to these words we have Ærr, Ærra, Prior, Ærs, Anus, Podex. We have like-This will remind us of our word wise ÆREST, Resurrectio. Arise, which may mean either To come forward, as from a Base a First or Original Source, or it may be derived from the idea of Stirring up the Ground. We know, that Rise is another form of Arise; and the difficulty is to decide, which form was the primitive one. Under the Element RS we have a race of words. bearing the same meaning, and referring to the same object, as those under 'RS. In old English we have the form 'RS, with a breathing before the R, corresponding with Ærost, Arise, &c. In the Poems attributed to Rowley, Arist occurs. The Poet, speaking of a "Welked flourette," or withered flower, says,

"ARIST it blew, itte florished, and dyd welle." (Eclogue III. 51.)

The flower Arising blew and flourished.—The English word First or f-IRST should probably be considered as only another form of ERST, with the labial breathing f added. The Etymologists refer it to the Saxon First, the Islandic Fyrstur, the Runic Fyrst, the Greek Feristos, (Approxima) the Danish Forste, and the Belgic Veurst, Eerst, &c., all which they derive from Fore, Antea, or Fuhren, Ducere, &c. &c.

We shall instantly agree, that our vulgar English word for the lower part of the person, on which we sit, belongs to the idea of the EARTH, as the ARCHE, (Aexi, Fundamentum,) the Base; precisely as Fundament does to the Fundamentum or Foun-This vulgar term appears in various Languages; as the Saxon Ears, the German Arsch, the Belgic Aers, the Danish Artz, which the Etymologists have produced, who refer us moreover to the Greek Orros, (Office, pars subjects testiculis,) and Archos, (Apxos, Princeps, Dux; - Podex, Intestinum rectum.) The Greek Orros is probably quasi Onsos, as Arren and Ansen (Approx, Aport,) belong to each other. An adjacent term to this vulgar word in Skinner is Arseversy, which he derives from the French Revers. It means the bottom or Fundamental part, Versum, turned upwards; and it has the same meaning, though with an opposite process, as Topsy Turvy; where we have the Top thrown to the Bottom or Turf. Junius under the same vulgar term produces the Saxon name for a Medlar, corresponding with a gross English name for the same fruit, to which there is an allusion in Romeo and Juliet, (A. II. S. 1.) Junius observes, likewise, "Ab eodem quoque Ars, compositione non ineleganti, " Mergulus Ang. dicitur Arsfoot, B. Aersvoet, at Cym. Tindroed " nuncupatur, a Tin, Podex, et Droed, Pes: Prorsus ut Πυγοσκελιδα "Græci, Hesychio teste, non modo Mergulum dixere à pedibus " podici junctis, verum etiam brevi atque humili corpore homun-"cionem et paullum supra terram exstantem." — We shall now understand.

understand, that the Greek Ezomai, (Eζομω,) To sit, is nothing but To Earth, Erz, or Ez, To be or be fixed upon the Earth, as a Base, Seat. Hence Edos signifies a Base—Foundation, and that which is Fixed or Erected, on a firm Base or Foundation, as a House, Temple, &c., (Εδος, Sedes, sella;—Delubrum, templum, ædes;—Simulacrum;—Firmamentum, Basis.) In Edra we have another form, and this word likewise signifies Podex, for the same reason, (Εδρα, Sella, Sedes;—Basis;—Podex hominis;—Latrina.) In Saxon, Hærthan signifies "Testiculi, pudenda "virilia;" and again, Herth-belig is "Viscus;—i. e. Pellis in "quâ includuntur testiculi. Scrotum, (ab Hærthan, Testiculi, "et belig, Venter.)" I shall shew in another Volume, that Tail belongs to Tellus.

The Lexicographers explain Ordior by "To Begin, properly "to Spin or Weave,—Aranea Orditur telas." The sense of To Weave is derived, I believe, from the idea of Placing in due Order the threads. The Etymologists produce under Ordior the term in Hesychius, Ordema, Ordina, which he explains by H τολυπη των εριων, Lana carpta, et operi parata. To Ordior belong the French Ourdir, and the Italian Ordire, To Warp, &c. The term Ourt occurs in the Poems attributed to Rowley, and seems to be directly connected with Ourdir. In The Battle of Hastings, No. 2. William commands his Soldiers to "Dare to "closer fyghte,"

(Ver. 574. &c.)

Dean Milles strangely explains Ourt by "Out, or Open;" but we perceive, that the meaning is directly the opposite. The arraie

[&]quot;The Saxonne warryor, that dyd so entwyne,

[&]quot;Like the neshe bryon and the eglantine,

[&]quot;Orre Cornish wrastlers at a Hocktyde game.

[&]quot;The Normannes, all emarchialld in a lyne,

[&]quot;To the OURT arraic of the thight Saxonnes came."

arraie of the Saxons, says the Poet, set thick or close together, was Ourt or interwoven, one part with another, like the Brioffy Entwining with the Eglantine, or like two Wrestlers grappling with each other.

ארג ARG signifies "To Weave;" and to this Mr. Parkhurst has referred the Greek Arachne, (Apaxry.) The parallel terms to Arachnes, or Arachne, (Apaxyns, Araneus, vel Aranea, Apaxry, Aranea, Tela Aranea,) are the Latin Aranea, the French Araignée, the Italian Ragno, the Spanish Arana, &c. Whether these terms belong to the Hebrew word I cannot decide. In another place I have suggested a different source.— 1 cannot decide, moreover, whether the Hebrew word should be considered as directly attached to QRDior; but we shall not doubt, when we see the terms with which it is connected, that it must be referred to the same spot. In the three succeeding columns of Mr. Parkhurst's Lexicon are the following words: ארח ARCh, "To go in a track, and as a N. A common road, "highway, path, a constant course, or settled customary way." ארך ARK. "The idea of this word is Length, Long,"-ארך ARG, (Chaldee,) ארק ARZ, (Heb.) ארק ARK, (Chaldee,) the EARTH, as this Lexicographer has explained them. We perceive, that ארנ ARG, To Weave, denotes the regular Courses—Paths, (if I may so express it,) or Lengths of the Threads. We cannot but note, that Trama has the same relation to Trames. We see, that ארח ARCh belongs to the Greek Enchomai, (Eexopeau, Eo.)

The succeeding word to these two last Hebrew terms is ARS, which signifies "To betroth, or Espouse." Castell produces ארש ARS, "Sponsione promisit;" and the preceding word is ארשר ARS, הארשר ARST, "Pronunciatum, petitio, pec. "Fundamentalis Præcipua, Principalis," under which he produces, as parallel with the same Radical, the Syriac ARSCia, Monarcha, "Princeps, Primas," and the Samaritan ARS, "Caput, Autor, "Princeps;

"Princeps; — It. Basis, Fundamentum;" where, in the sense of the Base, or Foundation, we are again brought to the race of words, which I am now discussing. The sense of ארש ARS, "To betroth, or espouse," may mean the Firm, Established contract, or the Foundation or Beginning of the future Marriage, and afterwards the Marriage itself. Whatever be the union of this word with the EARTH; the terms, with which it is surrounded, will convince us, that such a relation must exist. Castell produces a Chaldee term, ארם ARS, with a final D S instead of w S, which he has explained by "Desponsavit;" and here we are brought to the same spot by other senses of the word. One derivative of this word means Hortulanus, as he explains it; and another, "Hortorum et agrorum cultura." He likewise produces under this word, as a parallel term, the Arabic ارس ARS, Aravit. Arabic, عروس Arus means "A Bridegroom," which the Persians have adopted. An Arabic word in the same column of Mr. Richardson's Dictionary, عروض ARUZ, among its various senses, denotes "A way, a track; a border, confine, limit;" where we have the original idea of the word. In the next column we have URUK, " Roots, origins," and عريف ARYz, " Broad, large, "much." The preceding word to Aryz is Эдиян, " A shade from the sun, an arbour, a bower," which is connected with عبش Arsh, " A Throne, chair of state—The roof of a "House." The sense of the Roof and the Throne refers to the Top—High Situation; and the Arbour is probably the Roofed or Shaded Place. These points, however, must be adjusted by the Arabic Scholar, from a diligent enquiry into the peculiar meaning of the word. In the same column, there is another Arabic term, under our Radical ^RZ, عرض Arez, which has a great variety of senses, and which the adepts in that Language must likewise reconcile with the original notion, whatever it may I must observe, however, that among other senses, it means " Breadth,

"Breadth, amplitude, width.—A Side, a tract, confine, border, "extremity.—The Foot or Base of a Mountain." In the same column we have likewise the Arabic S. Ard, Ard, Urid, "1. The Basis of a hill. 2. Hard, stiff, (penis.)" The same Arabic word Irs I which means "Inheritance, Heritage, Hereditary "right," and which I have supposed to signify the Possessor of Earth or Land, means likewise "A Root, stability, the principal, "any thing agreeable to ancient Hereditary Custom.—Ashes, "the Remains, Residue;" which belongs to the Earth, under the idea of the Base or Foundation, and not under the notion of Hereditary Custom. The Ashes may mean the dirt of the Earth, or what lies upon the Hearth, Earth, or Ground. The Arabic term Arez Sedenoting Breadth, and the Hebrew The Ark, Long, will remind us of the Greek Eurus, (Eugus, Latus.)

Another Greek word, OREGO, (Opera, vel pedes vel manus extendo,) denotes Extension --- in Space or EARTH; and we shall be convinced, that the word is derived from this spot, when we remember the adjacent term Orguia, (Opywa, Spatium interjectum vel inter pedes divaricantes vel ambas manus expansas; Ulna;-Passus, &c.) A Step, which signifies a measure on the Land or In the ordinary Vocabularies both these words are Orego and Orguia, (Opeyw, pedes extendo, considered as roots. Oeyua, Spatium interjectum inter pedes divaricantes, - Passus,) relate to a Step, Teis mer Ocegar' iur, Ter quidem protendit gressum. (Il. N. v. 20.) In the term Orignaomai, (Ομγναομαι, Desidero, appeto,) bearing the metaphorical sense of Orego, (Opera, In med. Appeto,) we have the n, as an organical addition to the G. The preceding word to this term is Origanon, (Opeyowar, Origanum,) a species of Sweet Marjoram, which belongs to Orego, Orignaomai, (Ορεγω, Οριγναομωι,) where we have a vowel breathing inserted between the G and the organical addition of the n. Etymologists imagine, that the Oreiganon, (Ogenyavor,) as it i sometim

sometimes written, is so called because it is said Operyarvortan, " Monte gaudere," as Martinius observes; but it means, I believe, the Desirable or grateful herb, from its sweet smell, for the same reason as it is called by the Germans Wohlgemuht, Well pleasing to the Mind, " Ab odore suavi, animum recreante," says Martinius, explaining the German term.—To the idea of the Root or Foundation we must refer the Hebrew name for the Cedar, ארז ARZ. Mr. Parkhurst produces this word under in RZ, "To Waste, "attenuate," &c., as it might denote the Slender tree, or the " Wasting Tree, by the exudation of its resinous juice; though he justly corrects these notions, by supposing, that the original idea is that of "Firm, Stable, Durable, or the like," as in the parallel Arabic term. In Arabic, J. ERZ, or URZ, signifies "The pine, cedar, pitch, juniper, or any come-bearing tree. * Exez. A Tree whose timber is very hard. Aniz. Contracting, " collecting, or Fixing one's self. - Firmly Rooted (tree.) -" A Chief, leader, demagogue;" which I produced at the commencement of my Work. The terms, which I have already produced under the form 'RC, 'RD, &c., as denoting the Base or Foundation of the EARTH, will amply illustrate the truth of my hypothesis; and I shall now proceed to consider the form of our Element ^C, ^D, where the r does not appear, conveying a similar idea. — As we advance forward in these enquiries, we shall admire still more and more those secret and subtle workings of the mind, by which the resemblance of ideas, apparently remote to each other, is discovered, and applied with such precision and effect, to that infinite variety of purposes, which are accomplished by Human Speech.

CHAP. II.

SECT. II.

^C, ^D, ^G, &c.

Words denoting a Base or Foundation, as of the EArTH, ArK, ESTia, (Εστια,) &c., as Edos, (Εδος, Basis:) — What is Set — Founded—Established—Raised up, or Stands up, as on a Base or Foundation, as Ezomai, (Εζομαι, Sedeo,) Istemi, (Ιστημι, &c. Statuo,—Sto.) &c. Terms signifying what is Firm—Substantial— Strong—Stout, &c., as fixed on a Base, &c., as Is, (Is, Vis,) Terms denoting Kindred, connected with the idea of the Base, Foundation, Stem - Stock, &c., as Atta, (Arra, Pater,) &c. Words denoting what is Placed - Situated, or Lies in the same Spot, in a state of Rest or Repose; and hence Rest, or Repose, &c., as Eudo, (Evow, Dormio,) &c. - Words relating to Time, derived from the idea of that, which is Established -Fixed, or Set, as on a Base or Foundation, so as to Last, Continue, Endure, as AGE, (Eng.) &c. Terms signifying a Dwelling — Habitation, &c., the appropriate — certain — fixed Spot, on which Persons are Situated—Settled—Established, &c., as House, (Eng.) &c. --- Section the IIId. What is Placed --Seated or Situated — Stands up, &c., in an abstract sense; What Exists or Is: Hence the verb of Being, Est, (Lat.) Is, (Eng.) &c. — Demonstrative parts of Speech, as Is, (Lat.) It, (Eng.) &c.

2. 6.

^C, ^D, &c.

The Base or Foundation. What is Set—Founded—Established—Raised, or Stands up, as on a Base or Foundation.

Epos. (Gr.) A Base, Foundation, a Seat, Temple, House, &c.

EDRA. (Gr.) A Base, Seat, Fundament.

IDRUO. (Gr.) To Place.

Izo. (Gr.) To Place.

Ezomai. (Gr.) To Sit—To be Placed, or Rest, as on a Base.

AS. (Arabic,) A Foundation, Basis.

AS-AS. (Arab.) A Foundation, Basis.

IZA. (Arab.) Supporting, Propping

ISB. (Arab.) Fundament.

ISTAT. (Arab.) Buttocks, Fundament.

Ast. (Pers.) Buttocks, Hips, Fundament.

IKSUS, ISKIS, OXUS, OSPHUS. (Gr.) Hips, Loins, &c.

OSKEA. (Gr.) Scrotum.

Ist-emi. (Gr.) To Place, Stand.

Ist-aden, &c. (Pers.) To Stand, Stop, Dwell.

AsT — EsT — Is, &c. &c. (Pers. Lat. Eng. &c.) Is — Placed, Locatur.

Istikhar. (Per.) Persepolis, from

ISTA. (Pers.) Place, Station, Dwelling.

Astı. (Syr.) To Found, Establish.

Astu. (Greek,) A City, the Foundation.

ISTANDEN. (Pers.) To Place, Fix, Stand up.

ASTANDAN. (Goth.) To Stand up, Remain, Endure.

EDEN. (Heb.) The Garden—
the appropriate Place—or
Settled Dwelling.

ADEN. (Ar.) The Garden of Eden:—A Permanent Dwelling.

ETHNOS. (Greek,) The People, Settled in a certain spot.

ATHENAI. (Gr.) ATHENS, the City.

Edin-Borough — Eden — Eton, &c. (Eng.) Names of Places, Men, &c.

166

WE have seen in the preceding Section a race of words, under the form ARC, ARD, &c., denoting the Base or Foundation, as of the EARTH. I shall produce in this second Section a race of words, conveying a similar idea under the form ^C, ^D, &c., when the r does not appear. We shall find, that this Radical meaning has afforded various senses, some of which may appear on the first glance remote from each other; though, on a more attentive view, it will readily be understood, that they are all impressed with the same common notion. I shall consider in this Section words which signify, What is Set - Founded - Established - Raised up or Stands up, as on a Base or Foundation; such as Ezomai, (EZonau, Sedeo:) Istemi, (Ιστημι, &c. Statuo, Sto;) &c. &c. — Terms, which denote what is Firm - Substantial - Strong - Stout, &c., as Is, (16, Vis.) &c. — Terms expressing Kindred, as connected with the idea of the Base or Foundation - Stem - Stock, &c., as ATTA, (Arra, Pater,) &c. &c. — Words signifying, what is Placed — Situated or Laid in the same Spot, as in a state of Rest or Repose; and hence Rest or Repose, &c., as Eudo, (Eudo, Dormio.) - Words relating to Time, derived from the idea of that, which is Established—Fixed or Set, as on a Base or Foundation, so as to Last, Continue, Endure; as AGE, (Eng.) &c. — Terms signifying a Dwelling or Habitation—the appropriate—certain—fixed Spot, on which persons are Situated-Settled, Established, &c., as House, (Eng.) &c. We shall understand, that the idea of the Enclosure must be sometimes connected with this race of words, House, &c., as denoting the Appropriate — Peculiar Spot — Separate and Distinguished from other spots,—Lastly, I shall produce in another Section a race of words, which signify what is Placed - Seated or Situated in an abstract sense; what Exists or Is. — Hence are derived the universal verb of Being, as Est, (Lat.) Is, (Eng.)&c., and the Demonstrative parts of Speech, Is, (Lat.) It, (Eng.) &c. &c. This

his enquiry will lead us into new and curious views on the rmation of Human Speech.

The Greek Estia, (Εστια, Focus, Lar, - Domus; - Ara; sylum; - Vesta, Dea; - Sedes, v. gr. Imperii,) will first present self in considering this race of words; as it contains in itself me of the leading senses, which are supposed in my hypothesis. he word, we see, not only signifies the Base - Bottom, as the EARTH, - the Seat, and the House, on or in which any thing person is Settled or Established; but it likewise brings us to e very spot, the EARTH, or EATH, &c., from which, as I supise, these ideas are derived. In the two examples produced by . Ainsworth under this Greek word, we find it connected with RCHE, (Aexn, Principium, Exordium, Initium, Fundamentum,) the rresponding term, under the form 'RC, &c., as Aph' EsT-ias RCH-esthai, (Αφ' Εστιας Αρχεσθαι, Consentaneum rei gerendæ itium capere,)—Aph' Est-ias Arch-omenos, (Αφ' Εστιας Αρχομενος.) the sense of the Focus, we perceive how the term agrees with e English HEARTH. The signification of the verb Estiao, στιαω, Lare vel Domo excipio; - Convivio excipio,) To Enterin at a Feast, appears very remote from the idea of the EARTH Ground; and yet we see how readily they are connected with ch other, through the medium of the House, Established or tuated on the Ground. In the Latin v-Esra we perceive, that e Labial breathing, if I may so express it, has assumed a Connant form. In the Greek Ezomai, (Eζομαι, Sedeo,) EDos, (Εδος, des, Sella, Delubrum, Templum, Ædes, Simulachrum, Firmaentum, Basis,) Edra, (Edea, Sella, Sedes;—Basis, Podex hominis, trina,) Ιστυο, (Ιδουω, Sedere facio, Statuo,) Ιzο, (Ιζω, Sedere io, colloco, sedeo,) Is 1 emi, (Ιστημι, Colloco; — in Aor. 2. perf. 1sq. perf. Sto,) all which I have before produced, and which y be considered only as different forms of Estia, (Estia,) we precisely the train of ideas, supposed in my hypothesis.

In the Latin Sto the breathing before the S is lost. The explanatory term Sedeo, and its parallel words Sit, Seat, Set, &c., belong to the Element SD, ST, &c,

In Welsh, Dechreu or d-Echreu, signifies, "A Beginning, "an Origin, an Original," which the Lexicographers of that Language have justly referred to A_{rche}, (A_{eX7}.) The d in this Welsh word is an addition from the construction of the Language, and the r in Echr-eu is the lengthening of the sound after the Elementary consonant Ch, as it is in Arche before it. In Welsh we have d-Ynchafael, which is the same as Anchafael, "To "Ascend, exalt, rise or lift," where we have the original form YRCH or ARCH. —In Welsh, ACH is "A Stem or Pedigree, the "lineage of one's Ancestors;" where we are directly brought to the idea of the Base or Foundation; and in Mr. Shaw's Galic and Irish Dictionary we have Aic, "A Tribe or Family," and AICE, "A Prop." We perceive, that these words belong to each other, and are to be referred to the idea of the Base. The Celtic terms, here produced, will be referred to other words of a similar kind in a future page. In Arabic, اس As or Uss, as Mr. Richardson represents it, means, "A Foundation, Basis. -"The Heart of Man, (as being the Foundation of life.) The " Beginning of any thing. — The earliest age, Eternity. — The "cinders or ashes remaining in a fire-place." In the succeeding رماس of Mr. Richardson's Dictionary we have اساس As-As, " A Foundation, Basis," which is a doubling of اس As, in order to express more strongly the idea. In the same Language اغاز Aghaz means "A Beginning, commencement." Whether this word should be considered as a compound, Agh-Az, of the same kind as As-As, I cannot decide.

There is an extraordinary term in Arabic, Al-Uz, specifically which I offer to the consideration of the Arabic Scholar to decide, whether this word likewise may not possibly be a compound

of a similar kind; or, if it be not a compound, whether Ajuz or AJZ does not belong to the simple form (M) As. This word has no less than sixty-seven different significations, according to Mr. Richardson. The first sense of the word, in the arrangement of this Lexicographer, is "An old Woman;" and in the tenth sense we have "The Universe, the World, the EARTH." We shall not be inclined to believe, as I imagine, that the sense of "An old Woman" was the origin of sixty-seven significations. In the preceding column of Mr. Richardson's Dictionary I find Ujuz جوز " Having large Hips. 2. Plural of عجوز " Ajuz, the term just produced. - " Ajuz. The Hinder or last part of the " back, the Buttocks, (of man or woman.)" The succeeding term is انجة " Ajza. Having large Buttocks (a Woman.)" We shall agree, I think, that all these words belong to each other, and that the sense of the Buttocks brings us to that of the As, the Base or Foundation. We shall likewise understand, that the sense of "An old Woman" belongs to the idea of "Large "Buttocks." I shall produce various words, denoting the Buttocks, belonging to this race of words; and we have already seen the Greek Edra, (Podex hominis,) Arch-os, (Aexos, Princeps, Podex,) and the vulgar English name for this part. I cannot quit the word Ajuz, without observing, that among its sixty-seven significations it means "A King.—A Kingdom.—A Governor of " a Province, or City," which again agrees with the sense of a Base or Foundation, as in the Greek word last produced. I must leave however the explication of this word, in its various senses, to the adept in the Arabic Language. — In Arabic, إيز Iza means "Supporting, Propping, causing to Sustain or Bear up." In the same opening of Mr. Richardson's Dictionary, where this word occurs, we have the Persian ایستادی Isτaden, " To Stand, stop, stay, remain, to tarry, wait for."— ایستاندن Istanden, "To Place, fix, make, constitute, appoint, to Stand up," &c., and

ובייביביט Istaniden, "To Place in the middle;" and ובייביביט Istiden, "To Stand." In Saxon, Astandan is "Durare, Stare, "Manere, Subsistere," as Lye explains it.

In Persian, است Ast or Ist, as Mr. Richardson represents it, means "The Buttocks, Hips, Backside, Fundament." following Greek words should probably be referred to the same idea: Iksus, Iskis, Oxus, Osphus, Oskea, (Ιζυς, Ισχις, Οζυς, Οσφυς, Lumbus, Οσχέα, Scrotum.) In the same column of Mr. Richardson's Dictionary, where اسا As occurs, we have اساب Asab, "Fundaments." To this form we must refer the Persian name for a Horse, اسب Asb, which is found in the same opening of Mr. Richardson's Dictionary. It means probably the animal, on which a person is Seated, or which is ridden. The succeeding Arabic word is lub, "The Fundament, Pubes," &c., which is another form of the term just produced. The preceding word to the Persian است Ast or Ist, the Buttocks, is another word, under the same form | Ast or Est, the familiar verb of Being, corresponding with Is, (Eng.) Est, (Lat.) &c., which, as we shall now understand, is derived from the idea of what is Placed — Seated — Situated, &c. &c. In the same column of Mr. Richardson's Dictionary is the Arabic است (AST,) Езт for Ass, اسر), says this writer, which in its first sense means " A Foundation, Basis," and afterwards Eternity — A Continued — Lasting Period, as Est does. We have moreover in the same column the Arabic استا Ista, " The warp in the loom, fitting "the warp to the loom," which will remind us of the Greek Ist-os, from Istemi, (Ιστος, Malus navis, - Malus, seu lignum, e quo stamina seu Tela suspenditur; - Ipsa Tela,) the Arabic استات المتات Istat, "Buttocks, Fundaments," the Persian استات Istadaniden, "To Constitute, establish, fix, make to Stand," and ויייט Israden, " To stand, stop, dwell." In the succeeding column we have the Persian استام "Usтам. Faith, confidence.

"Any thing to which we can trust, a confidant, prop, support, "pillar, column." The Arabic الستان Ізтан, Buttocks, and استان المعامة. " Roots of old trees," and the Persian استان Ізтандел, "To Stand, constitute, set up, establish."

استان Between these latter words we have the Persian Asitan, Ustan, "A Threshold, entrance. A King's Court, "Royal palace, the Ottoman Porte," and the name of Constantinople, استانمول Istanbul, which is sometimes written and spoken This term, though originally formed from Stanbul or Stambul. the City of Constantinople, (Constantine, Cnstantinople, Cstantinple, Stantnple, Stanbul, Stambul,) has perhaps assumed more particularly the form Istan, that it may correspond with the Persian In Arabic, www BLD is a City, belonging to Ustan, A Palace. Polis, (Πολις); so that perhaps Istanbul may convey to an Eastern mind, ignorant of its primitive meaning, the idea of the Court or Palace, City, the City where the Sultan has his Court or Palace. It is very common, when the origin of a word is forgotten, to adapt the sound and the form, remaining from its primitive idea, to a similar sound and form, more known, and expressing a sense, which might naturally be represented by the word in question. The Prince Cantemir has formed another derivation of Stanpol, which is that of Eis Teen Polin, Eig Tyv Toliv. The author of the Mechanisme du Langage, (Tom. I. p. 428.) though he is aware of the obvious origin of the word, seems to think that this is the true derivation, because that Prince was "bien instruit des faits." The Prince was furnished with no facts which qualified him for the office of an Etymologist. These terms (יישטטר) Istaden, "To Stand," &c. more directly connect themselves with the Greek Istemi, (Ιστημι, Statuo — a. 2. &c. Sto,) and the Latin Sto. In the Latin, the breathing before the ST is lost. and in the English Stand, we have the Radical St—N, which conveys the same idea, through the whole compass of Language,

Language, and on which I shall make a few observations in a succeeding page.

In the same leaf of Mr. Richardson's Dictionary, from which I have produced the Persian Istanden, &c. To Stand, &c., we have Istikhar, استخار the name of the Ancient Persepolis. Many opinions have been given respecting the origin of this word; yet I imagine, that the true idea is partly to be found in one of the conjectures of Mr. Richardson. He supposes that "ISTA denotes A Place, Station, Dwelling, (from the Persian " Istaden, To Stand, remain, dwell,)" which, I think, is the true idea belonging to the word. He imagines, moreover, that "Khur or Khar signifies the Sun; whence Istakhar will naturally "imply, the Place or Temple of the Sun." (Pref. p. 27.) This I do not conceive; as I cannot but think, that if such had been the origin of the word, we should have found it expressed in the Greek translation. The Persian Istikhar may be simply ISTKHA, the Place or Position, by way of eminence; or if Khar be significant, it has a similar meaning of the Place-Position, City, &c. In Arabic, کور Shahur and کورت Koorut (pl. کور Kuwur) signify a City, from the idea of a certain Spot - Place, &c. I am aware, that the Persian Istakhar was adopted, before that nation engrafted the Language of the Arabs into their own, as it is found at present; yet the force of the Element was equally existing at all times. — Whether the Khar be significant, or only 1st or ISTKA; it is manifest, that the word was considered by the Greeks as Denoting the Distinguished Spot—or Place—THE City, by way of Eminence, above other Persian Cities, from their translation Persepolis, The City of the Persians. Istikhar, which denotes Persepolis, means in Arabic " Praying for the blessing of God, praying for success," &c. &c.; and there are other words in the same and in the succeeding column of Mr. Richardson's Dictionary, which have a similar sense.

sense. The idea, I imagine, in these words is the same as in those terms, which I have examined; and the sense of Praying and Petitioning is derived from the notion of being Instant in Prayer, as we express it; where we have the metaphor of that which is Constant, Remaining or Persevering in an Action. The Latins use Insisto, which signifies To 'Stand upon,' in the first sense, after a similar manner, "To Urge, Insist upon, or be " Instant in," says R. Ainsworth. In the same column we have Istidamet, "Assiduity—Wishing to be Quiet, Permanent, Steady, "Eternal, Perpetual, Everlasting." In the succeeding column we have the Arabic استدعا Istida, " Petitioning, requesting " submissively," &c. From the Ist | denoting Petitioning, is derived the tenth conjugation of Arabic verbs. The succeeding word but one is the Persian [] Istaden, " To Arise, Rise "up, Stand, to work Standing." The Greek IKETes, (Iketys, Supplex, qui humiliter et more servili aliquid orat,) which is a very strong term, may belong to Istida, &c.; though it probably belongs to the Greek Ikneomai, (Ikveomai, Venio, advenio; -Supplico, obsecto,) where we are brought to the Ik - Ak, &c., or Earth, under the idea of Motion upon its surface.

The very name for the Sun, Khur, belongs to the idea of the Place—Spot—Station, or the Enclosed Spot, or Station—the Enclosure; which supplies a race of words signifying a City—Town, &c. &c. The metaphor of a Place or Station is often annexed to the Luminaries above us—those Spots—Places or Stations in the Heavens. The term Spots in the Heavens is applied to the Stars; and Spot we know means at once a Speck and a Place. I shall shew that Stella in Latin is derived from a similar idea; and we all remember in Milton—

"The Planets in their Stations listening stood."

This term for the Sun, Khur, has given the name to Syria, as Abulfeda

Abulfeda has justly conjectured; and Mr. Bryant has seen, that Suros or Seirios " (Συρος γαρ ο ήλιος the same as Σειριος)" belongs to this name for the Sun, as he is quoted in the page of Mr. Richardson's Preface to his Dictionary, from which I have taken the above quotation. All that follows they have not seen. Persian Khur belongs to our word STAR, and to the parallel terms in other Languages, as the Greek aster, (Astro,) the Latin astrum, the Saxon Steorra, the German Stern, the Danish Stierne, the Belgic Sterre, the Cornish Sterran, the Armoric Steren, the Welsh Ser, Syr, and Seren, &c. I cannot sufficiently express my surprise to find in Skinner a derivation of the Greek Aster, (Acres.) from the Persian Ster, "Vossius autem Gr. Acres, à "Persico Ster deflectit." It is extraordinary, that either Vossius or Skinner should resort to a Persian word: and it is more extraordinary, when we learn, that the Persian term appears to have a very different form, and to be removed from this race of words. Mr. Richardson represents the Persian name for a Star by Sitaureh; though in recording the letters, which compose it, we must represent it by STARH Diw. A Vowel breathing, we see, has been inserted in the pronunciation between the two letters, which in fact represent the first letter of the Radical. same has happened in the Latin Sider-is, which is quasi SDER-is, and which belongs, as we see, to this race of words. in Persian, اختب akter is "A Star, constellation, celestial " sign."

Dr. Vincent (Periplus of the Erythrean Sea, p. 98.) has remarked, that Seir, in the Language of the Troglodytes, is a Dog; from whence Sirius, the Dog Star, as it is called, is supposed to be derived. That Seir in the Language of the Troglodytes signifies a Dog, I can very well conceive; as there are few Languages, in which it has not that meaning, or a sense, from which that meaning is derived. Thus we have

Cur in English, Korre in Belgic, 713 GUR, in Hebrew, Catellus, the parallel terms produced by the Etymologists under Curri Lhuyd, under Canis, gives us among other terms the Irish Gayear, Gyr, A Grey Hound, Grex; and in the Appendix, under Canis, we have "Isl. Grey, Finnon. et Lap. Coira." We shall see, that GREY-Hound belongs to the Cur; and we shall readily understand, that all these terms for a Dog are attached to such ". In Arabic, ضبو Ziroo is "A Hunting Dog." words as Curro. It will now be granted, I trust, that Sirius in its original sense meant nothing but the SER—the STAR—the Distinguished Bright STAR; and that the idea of the Dog was added from a similarity in sounds between the Seir, Cur, the Dog, &c., and Ser, Syr, STAR, &c., the Luminary. In Orpheus, &c, Seirios, (Seigios,) is added to the name of the Sun, and literally means the STAR or Syr - the Sun.

> Ημος ότε τρισσην μεν ελειπετο ΣΕΙΡΙΟΣ αιγλην Ηελιος. (Argonaut. \neq . 118-9.)

In Greek, the name of a Star sometimes appears under the form TR, as Teirea, (Teirea, Astra,) which the Lexicographers derive from Teiro, (Teire, Vexo.)

Εν δε τα ΤΕΙΡΕΑ παντα τα τ' Ουρανος εστεφανωται. (ΙΙ. Σ. 485.)

The Triones, the seven Stars at the North Pole, meant originally, I imagine, the Teirea, (Teirea,) or sTars, and have nothing to do with Triones, the oxen, except by the accidental similarity of the sound of the words. I shew in another place, that the Arctus, the constellation at the North, has been supposed to be Bear, from a similar cause—the similarity of sounds. Arctus only means the certain Earth—Place—or Quarter, as of the n-Orth, &c. The Trion-es is the same form as sTeren, &c.

Mr. Richardson has observed, that "When Esther was "selected

" selected among other virgins for the royal choice, her former " name Hadassah was dropt, and a new one given to her, sig-" nifying in Persian a Star." (Dissertation, p. 20.) Thus we see, that E-Ster is the A-Ster, $(A\sigma\tau\eta\rho_{1})$ Starh, of Star. Hence has been derived the name of the Syrian Venus AsTAR-te; and this derivation will explain, why she is conceived by some to be the Moon. The Ashtaroth of the Philistines belongs to Astar-te, as the Mythologists understand. Mr. Parkhurst derives Ashtaroth עשה from עשה ASH, To Make, and הד TR, A Tour, compass, " from the Tours she makes about the Earth," where we see in In TR and Tour, the race of words, to which STAR belongs. Mr. Parkhurst observes, that "Perhaps the German idol Eostre " or EASTER was related to the Oriental ASTARte. "goddess our Saxon Ancestors sacrificed in April, which was "therefore by them styled Eostur Monath; and thence our word " EASTER, which the Saxons retained after their conversion to "Christianity, and gave to the solemn festival observed at the "same time of the year, in commemoration of our Saviour's " resurrection. See Bochart, Vol. I. 676, and Ancient Universal " History, Vol. XIX. p. 177." This conjecture is, I imagine, To this Saxon name for an illustrious Female might possibly belong the termination Estre, in that Language, for a Female in general; - " ESTRE. Terminatio Fœminina substantivi "agentis: sc. Ut nomina masculi generis, apud Latinos, in or " terminantia, formant Fœminina in ix; sic apud Anglo-Saxones, "in Estre, Istre, Ystre. e. g. Sang-Ystre, Cantatrix, &c." I shall shew, that the Element AS denotes Being, through the whole compass of Language; and to this belongs the Latin Ix, and perhaps the Saxon Estre. The Persian name Statira belongs to Sitaur, the STAR, as others have understood. It is likewise known, that Roxana is derived from another Persian word signifying Light; though it is not known, that Rorana belongs

Words denoting Search - Enquiry, &c. have been commonly derived from the idea of Routing or Scratching about-amongstinto-up, &c. the Dirt of the Earth. We know, that Scrutor is acknowledged to be derived from a similar metaphor, — Sanda Eruendi. Scrutor belongs more directly to Search - Scratch, and witimately to דרש DRS. The succeeding word to this in Mr. Parkhurst's Lexicon,—the term TS, must be referred likewise to the same race; and here the sound of r between the Radical Consonants is lost. The word To DS means, says Mr. Parkhurst, "To Thresh, beat or Scatter, to pieces," to which this Lexicographer justly refers Dash, Dust. Let us note another of these terms in the explanatory word Thresh, under the form TRS, and mark moreover the word Scatter, where the r does not appear. I am not attempting to adjust the degrees of affinity between these words: — I mean only to observe, that they are all to be referred to terms denoting the Dust, Dirt-Grit, &c. of the Earth; and that they were derived from actions performed on the surface of it. To the Hebrew דרש DRS more immediately belongs the Greek Derko, (Δερκομαι, vel Δερκω, Video.) In Persian, الاس DRK, with the auxiliary verb كردن Kurden, signifies "To comprehend, To perceive, To follow out, prosecute;" and Derk itself means "The lowest part. —The Pit (of Hell.)— " A Part of the Earth, a portion of the Ground." Here we are at once brought to the spot, supposed in my hypothesis. On the other side of the leaf in Mr. Richardson's Dictionary, where this word is found, we have كرك DRD, " Dregs, sediment, the " Tartar of wine, the mother of oil. — A Draught;" where let us mark the explanatory terms Dregs, Tartar, and Draught, all belonging to this race of words. In the Galic Dialect of the Celtic, Dearcam means "To see, behold, look stedfastly;" and in Welsh, Edrych means "To behold, to look, to view, to see," which the Lexicographers in this Language allow to belong

to the Greek Derko, ($\Delta \omega \omega$) We perceive in Edrych a vowel breathing at the beginning, as in Idris.

Mr. Davies has properly observed, that IDRIS or EDRIS was well known to the Arabians. His name in Arabic is الدريس Adris or Idris, as Mr. Richardson represents it, who tells us, that it is " the Arabian name for اخنوخ " Achnuch, " Enoch the This name is derived from Ders, " prophet, (Gen. v. 21.) " which signifies study or meditation." The Arabic Ders טנשן belongs to the same idea. The first sense, which Mr. Richardson gives of it, is "Reading, a lecture, a lesson;" and in the second sense, "A hidden path, the traces almost effaced," where we are brought to the original spot. The Persians have joined it with an auxiliary verb, and made it signify "To Tread or "Thresh out corn," where we are again brought to the original spot and action connected with it. Let us mark the explanatory words Trace, Tread, Thresh, all belonging to each other; and to the Arabic Ders, the path or Trace. After the most mature consideration on the origin of the great Celtic name for a Seer-Priest - Prophet - the DRUID, I finally imagine, that it belongs to this race of words, and denotes the Searcher. Mr. Shaw explains the Galic Draoi (which I consider to be quasi Draoj,) and Draoith, by "A Druid, Augur, Charmer, Magician;" in the next column to which, I find DRAOS, Trash; where let us again mark, both in the Galic and English words, other terms belonging to the same race—To DIRT, &c. I find likewise in the same column "Dreach. Form, figure, image. - Dreachach. That "Dresseth, polisheth; Drawn, figured, delineated. — Dreacham. "To Figure, delineate, adorn;" and "DREACHT. A Poem, " Draught, Pattern." We perceive, that all these belong to the same train of ideas, and mean To TRACE; and let us note the explanatory terms Drawn - Draught, directly corresponding with the Galic term in every point. The terms DRAG, Draw, DRAUGHT, DRAUGHT, relate to the action performed amongst the DREGS or DIRT of the Ground. The final Radical Consonant is lost in Draw, though it is preserved in the parallels Dragan, (Sax.) &c. &c. It is lost likewise in the term Draoi, though it is preserved in DRAOITH. Let us again note another explanatory term, Dress, which belongs to the same race, as we shall all agree, when we recollect the original application of the word, To Dress or Till Land. In Welsh, the Druids are called Derwyddon. No conjecture can be more probable, than that, which is commonly received, respecting the origin of these words from the Derw, or Oak; and the name in Welsh has no doubt been so written on the idea of this origin. Still, however, this, as I conceive, is not so; and I have produced, as I imagine, the true Etymology.

The name of Zoroastres appears under a great variety of forms; but that of the Greeks seems to be as precise, as the nature of the case will admit. By Mr. Richardson, who is very loud against the authority of the Greeks, he is called Zeratusht, which likewise is sufficiently exact, as the same cognate consonants remain to record the identity of the word. Though, if my derivation should be right, the Greeks, by the addition of the r, have been more precise in their representation of the name. This however is too minute a remark, and of little use or importance in these investigations. The words signifying To See — Search, &c. appear, in the Persian and other Languages, alike under the forms DRS, and DS without the r; which letter, as it may be considered only as a symbol to lengthen out the vowel with which it is connected, is of no consequence in the determination of the Radical. M. Anquetil, in his work on the Zend Avesta, sometimes represents the name of Zoroaster by Zerethoschtresch. Strange and uncouth even as this representation may appear, it preserves a faithful record of the name, as it is exhibited by the other forms; and has been only rendered thus uncouth in its appearance,

by an attempt at extreme accuracy. In the Zer we have Zor; and in the Ethoschtresch, or Ethschtresch, we unequivocally see the Oastres of the Greeks in the representation Zor-Oastres. This cluster of consonants, Thscht, was adopted for the same reason that the Greeks applied their two Consonants ST, in order to express the mingled sounds as conveyed to the ear in the Persian pronunciation of this word, or as represented by the letter or letters adopted by the Persians on this occasion. These mingled sounds, which were probably heard in the enunciation of the word, are very inadequately expressed in Mr. Richardson's form Zera-Tusht by the single symbol T. Yet this is perfectly sufficient for all the purposes of Etymology. There is no difficulty at all in the representation of the word by M. Anquetil, except, that a vowel breathing has inserted itself in this cluster of consonants Thscht, which we see has become Thoscht; since it is almost impossible to enunciate such mingled sounds without the insertion of a vowel. I have sufficiently explained the nature of these mingled sounds in the former part of my Work, (page 27,) where I have shewn, that the sound of a Russian letter has been represented by Chtch.

I cannot leave my observations on this title Oastres, or Idris, without once more recurring to the Greek Idris, (18646,) and confirming by a most unequivocal example the true origin of the word. In the instance which I shall produce, Idris, (18646,) is actually applied as the Welsh Idris is, to a Celtic or Chaldean. Sage—skilled in Astronomy.

Ου γαρ κεν τις ιδοι θνητων μεροπων κραινοντα,
Ει μη μουνογενης τις απορρωξ φυλου ανωθεν
ΧΑΛΔΑΙΩΝ· ΙΔΡΙΣ γαρ εην ΑΣΤΡΟΙΟ ΠΟΡΕΙΗΣ,
Και σφαιρης κινημ' αμφι χθονα ως περιτελλει,
Κυκλοτερες γ' εν ισω, &c. (Orph. Frag. 2.)

These

These lines are found in the Fragments, collected under the name of Orpheus.—It is not necessary to enquire, who was the writer of these lines, or to whom they allude, or what they precisely mean. We see plainly, what is enough for our purpose, that the IDRIS, (18915,) is applied to a Chaldean Sage—learned in the course of the Stars or of the Sun; and we can readily believe, that the Mystic, who wrote these lines, well knew a title belonging to his art, however skilled he might be in the nature of the Greek Language, or of Astronomy.

The origin of the word Istikhar, the City, has led me into a short digression, from which I shall now return to the consideration of terms belonging to our Element AST, &c. denoting the Fixed - Established, Place or Position - the Settlement, &c. We shall instantly agree, that the Greek Astu, (Astu, Seu Asty; peculiariter Athena,) belongs to this idea, which the Etymologists understand. Martinius derives it " à Etau, ut Stadt à " Stehen. Syr. ΥΝΝ " ASTI, " Fundare. Αστειος, Civilis, festivus, In Syriac, we see ASTI signifies To Found, " pulcher." Establish, &c. From Astu, (Artu,) is derived Asteios, (Artuo,) and to this word we must refer the Latin Astutus, though some even doubt on this point. As Tu is used peculiarly for Athens, "An in Asru venit? Terentius, Eunuch. A. 5. S. 5. Athenas " intelligit," says Vossius. "Ita et Cic. 2. de Legg. Ut vestri "Attici, priusquam Theseus eos demigrare ex agris, et in Astu, "quod appellatur, omnes conferre se jussit, et Sunii erant et "Attici." Perhaps Athens, Athenæ, (Abyrn,) is nothing but the Astu, the City. The n may be only an organical addition to the T, or the Then may be significant, corresponding with Town &c.; so that Athene or AT-THENE may be AST-Town—the Established Place - Settled Spot - the Settlement. In ATTica the n does not appear; and if my hypothesis should be right, the name of Attica must have succeeded that of the City. Whether

Whether the Goddess of Wisdom or of Weaving, Athena, (Abnua, Minerva,) is derived from the Place, over which she presided, or from some other source, must be the subject of a future Enquiry.

The Element ST-N, T-N, D-N, C-N, denotes, through the whole compass of Language, the Appropriate Place - Spot -Land—the Established Spot, &c. &c.; and to this Element we must refer Stand — Town — Country — Country, and the TN, DN, in the names of Villages, Cities, &c. &c., Hamp-Ton, Lon Dinum. This sense of DN in Lon-Din-um, &c. &c. &c. is so obvious, that it has been remarked by every adventurer in the craft of Etymology. Their researches however have stopped at the threshold of the enquiry. The DN in Medina has a similar meaning. In and the m only arises from the construction of the Language. We have seen the Persian word Istanden, or Ist-Standen, To Place, &c.; and hence we have the STAN in Hindostan, &c. The force of this Element is perpetually visible in the Persian Language. Hence we have the Taun or Staun in Boostaun, where let as mark the Den in Garden, or Gard-Den, which has a similar meaning. The same Element supplies the names for a Garden in various Languages, as in the Hebrew ال GN, the Arabic حنت Junnut, &c. Dr. Vincent has produced the various modes, in which one portion of a compound expressing the name of an Eastern River is represented, which are the following: "Dien, " Djan, Tschan, Tschen, Chan, Chen, Chin, Jen, Gen, Tschun, Chun, "Shan, San." We here see, that the union of consonants at the beginning of some of these words is meant to express the mingled sounds in the first letter of the Eastern word. We shall hence understand the nature of the Greek ChThon (Xbw, Terra,) and how County and Town may belong to this word, or how the forms

forms CN, TN may pass into each other. This word seems to be directly connected with the Eastern terms, expressing a similar idea; and the Ch and Th at the beginning of the word are meant to express the mingled sounds, belonging to Eastern terms with such a meaning. The Den in Eden, the Garden of Paradise, must be referred to this race of words, and denotes the Standthe certain fixed Place—Spot, &c., the Settlement, &c. in Eden or En-Den belongs probably to the race of words now under discussion, ED-0s, (Edos, Sedes,) Ist-emi, (Istyui,) Astu, (Αστυ,) &c. &c.

The Hebrew Lexicographers understand only by the word ODN, EDEN, that it signifies "Pleasure and Delight," which is certainly a familiar sense belonging to the word, as derived from the Garden, the Delightful Place; but in the corresponding Arabic term Aden, عدن as explained by Mr. Richardson, we see the genuine idea, " 1. A permanent dwelling. 2. The Garden of "EDEN." Mr. Parkhurst derives the Greek Edone, (Hdorn, Voluptas,) from the Hebrew TV ODN, which seems almost indubitable; yet we cannot but connect Edone, (Hoorn, Voluptus,) with Edus, (Hdue, Suavis,) in which no idea like that, which we have annexed to these words, appears to exist. Perhaps Edus, (Hous,) might have been formed by the Greeks from Edone, (Hdorn,) which they considered as a substantive form. — The Greek Ethnos, (Ethos, Gens, Natio: — Gens a verâ fide aliena,) is quasi Ethen-os, and means the People peculiar to a certain Aden, Settled Spot, or Whether Heathen and its parallel terms are derived Dwelling. from this, will be considered in another place. The Hebrew Lexicographers will see the original idea, which is annexed to ODN, EDEN, in a parallel term belonging to that Language, אודן ADN. Taylor explains this Hebrew word by "Dominus. "A Master, a Lord, a Sustainer; from Mr. ADN, "A Base or "Column, as Superiors are the Pillar and Support of Society;

"and the most high God is the Base and Support of the whole "Universe." This term perpetually occurs, and it is used oftentimes for the name of Jehovah. To this word has been usually referred the Greek Adonis; and we shall now understand, why Gardens have been connected with this name, Horti Adonidis, &c. It has arisen from a confusion in the names of Adon, the Man, &c., and Eden, the Garden. The same form and meaning, which we have in the Eastern terms Eden, or Aden, we find in our names of Towns and Men; the Edin in Edinborough, Eton, Eden, Hatton, Aston, &c. &c.; and Athenæ may be a compound of a similar kind.

While I am examining the word Astu, (Aστυ,) in Martinius, I cast my eyes on another term in the same column — Astandes, (Astardys,) which, as he says, is a Tarentine word for Nuncius, " ab a et στηναι, quod non Stet, sed ambulet." This term probably belongs to the race of words before us, under the idea of these Messengers being placed at certain Stands or Stations; and thus it will correspond with the metaphor in our word Post. Post is derived, as we know, from Position or Rest; yet, in the expression Post-Haste, it is applied to the quickness of motion belonging to the Messenger. - Our ordinary Lexicographers have supposed, that ASTANDES, (Actardys,) is a Persian word; and they have explained it by "Nuncius, seu tabellarius Persicus, An-The form ASTAND-es coincides with that of the Persian ایستاندن Istanden, To Place, &c. Let us mark the explanatory term Angarus, or AGGAR-os, (Ayyaços,) which in the latter form might be conceived as belonging to the present race of words under the Element 'G, 'S, &c., with a similar idea. In the interpretation, which is given of this word, we are brought to the very notion supposed in my hypothesis. Aggaros, Ayyaçoç, is explained by "Nuncius, vel tabellarius regum Persarum, qui, " in Statione sua Positus, literas ab altero Angaro acceptas alteri " tradebat.

"tradebat, ut ita celerius perferrentur." This word, however, will be considered in another place. If the true form is AGGAR-os, it might belong to the Persian "Uskudar, "An Ambas-" sador, Envoy, Messenger, Courier." In the same column of Mr. Richardson's Dictionary I find the Arabic "Iskan, "Causing one to stay, remain, continuing to dwell."

An adjacent word to the terms quoted above, in Mr. Richardson's Dictionary, is the Persian استخوان Ustukhan, " A Bone, "kernel stone of fruit," which means the Substantial part of any thing. The word Substantial itself, we know, belongs to this race of words, Sto, &c. We shall now understand the origin of the Greek Osteon, (Oction,) and the Latin Os, Oss-is. In Hebrew, עצם OZM denotes, says Mr. Parkhurst, " Strength, Solidity, " Firmness. — A Bone, from its Strength and Solidity," where the OZ belongs to the words before us. Some Etymologists derive Ostreia, (Ostreia, Ostreia, Ostrea, pisces testis tecti,) Ostrakon, (Οστρακον, Testa nativa — Testa figlina,) from Osteon, (Οστεον,) and Os, Oss-is, the Hard Bony part, as it were, which is probably right; that is, they are probably derived from the idea conveyed by these words, — what is Substantial. Oyster occurs in various other Languages, as the Saxon Ostre, the German Auster, the Belgic Oester, the Danish Oster-ling, the French Huistre, or Huitre, the Italian Ostria, &c., the Spanish Ostia, the Welsh Oestren, which the Etymologists have produced. In Persian, too, Istiridia, استرديا is "An Oyster;" and it is curious, that this word occurs in one of the two columns of Mr. Richardson's Dictionary, from which I have taken the Eastern terms above quoted. The preceding term to this is the Persian Usrurden, "To Shave, Erase;" and as this word occurs among the terms, signifying what Stands firm - is Substantial, &c., it must probably be referred to the same idea. We know, that terms for opposite actions are derived from the same word, or

same idea, sometimes with a variation to mark the difference, and sometimes by the use of the same word. Thus, To Root, and Up-Root, E-Radicare, &c.; and in To Peel, To Stone, &c., the very words are used to express the removal of the Peel—Stone, &c., quasi, To Un-Peel, Un-Stone. So, I imagine, Usturden signifies To Erase, i.e. To Un-Stand—To remove a thing from its Stand, Seat or Position. The Greeks have a compound from their Istemi, (Iστημι,) To Place—Stand, &c., which at once means to Place and to Un-Place, if I may so say, To Erect, Build, &c., and To Erase, Destroy, &c. An-Istemi, Ανιστημι, in one sense means "Exstruo, Ædifico," and in another, "Everto, Subverto."

The adjacent word to Os, Ossis, is Os, Oris, which must be referred to the idea of the Extremity; and this sense of the Extremity is derived from that of the Surface, considered either as the Base or Bottom, or the Top. R. Ainsworth explains Os in some of its senses by "The Face or countenance of any "creature. — The Front of an army. — The Mouth, Passage, or "entrance into any place. — The Head or Fountain;" where, in the 'Head or Fountain,' we see the idea, as of the Base-Foundation - Orig-in, from which any thing arises. The genuine notion of the word is that of the Surface - Extremity, at which any thing ends or begins. We see, in the oblique cases, the form Or, as in Oris, &c., which will remind us of the adjacent word ORA, "A Coast, region, part, or country - Extremity, "edge, brim, margin, hem, or border of any thing;" where in the sense of Extremity, annexed to ORA, we see the true idea of Os, Or-is; and in that of the "Coast, Region," &c., we are brought to the original Spot, from which these terms are The Phrase "Ora vulneris, the Lips, or edges of "a wound," as explained by R. Ainsworth, might have been equally ORA vulneris, or Os vulneris. ORO, "To Speak"-Pray, &c. belongs to Os, ORis, as the Lexicographers imagine, who

who likewise justly observe, that Oraculum belongs to Oro, Dico, Oro pronuncio, as Advan does to Anya.—We see by my explanation of Ora, how it is connected with Orier, "To have a beginning:" Ostium, "A Door.—An entrance, or passage.—The Mouth of a river or haven," belongs probably to Os, as the Etymologists suppose. If it does not, it belongs to House, &cc., under a similar idea of the Establishment, &c. &c. Osculum is justly derived from Os, and Oscito from Os and Cito, Moveo. The adjacent words, Ostendo and Ostento, are imagined by some to be taken from Ob and Tendo; or from Os and Teneo, i. e. Teneo ob oculos. They seem to be derived from Os, and perhaps Tendo, and to relate to the Extended or Widely-exposed Surface, to the Extremity—or Outside of any thing, as we express it.

We have seen, that in Arabic, اس AS signifies " A Foundation, "Basis. The Heart of Man (as being the Foundation of life,)" Perhaps the explanatory word, the English HEART, and the parallel terms to be found in other Languages, have the same The HEART of any thing, of Oak, &c., means the Solid Substantial part of it; that which is the Main support and Foundation of the Tree. The word Substantial, which precisely expresses the idea annexed to HEART, is derived, we know, from Sio, which belongs to the race of words before us. is acknowledged to be derived " à Substando;" and Substo Robert Ainsworth explains by " To Stand still, to bear up, to Stand his "Ground." In the phrase "To Stand his Ground," we are brought to the original Spot, and genuine idea, from which, as I imagine, these terms are derived. Heart occurs in various Languages, as the Saxon Heort, the Gothic Hairto, the German Herz, the Danish Hierte, the Belgic Hert, the Runic Hiarte, &c. Some derive these words from Kear, Keer, Kardia, (Kng, Keag, Kaplia,) or from Ector, (HTOP,) and others from Hard, Durus. Surely Cardia, (Kaedia, Cor,) must belong to Heart; and Cordis

we shall own, I think, to belong to Cardia. We shall then agree. as I imagine, that Cor, Ceer, and Cear, (Kyp, Keap,) must be referred to each other. The Greek EETor, (HTWP,) ought surely to be considered as belonging likewise to HAIrTo, &c. &c., and thus all these terms are attached to each other. These words however present considerable difficulties. The verb attached to those terms, as the English HEARTEN, and the Saxon HYRTAN, "Refocillare, animare, confortare," &c. may be the original, and may belong to the race of words, which signify To Stir up-Excite. If this should be the case, HEART, and HART, the animal, may belong to the same idea. The HEART is the seat of boldness—that which is Stirred up or Excited to deeds of valour; and the HART is the Stirrer up - the Exciter - the Annoyer,-Pricker or Pusher, with his Horns—the animal, which HURTS. The preceding term to Hyrtan, Refocillare, &c. in my Saxon Dictionary, is "Hyrt, Hurt, Læsus, Vulneratus." Still however I must observe, that the name for the HEART is commonly taken from the idea of that, which is Solid and Substantial. In the Ægyptian Language, Атн or Етн is the Heart; and hence the Capital of the Delta was called ATH-Ribis, Cor Pyri. says Bochart, "Ægyptiis A8 vel H8 est Cor, ut scribit Horus "Hieroglyphicôn, lib. i. cap. 7. et Pic, vel Pici, Pyrum; inde " Athribis Cor Pyri, quia in medio Pyri, id est, Ægypti partis, " quam à Pyri forma Ægyptii Rib, id est, Pyrum, vocabant." (Geograph. Sacr. p. 259. Ed. 1707.)

We have seen, that the Arabic As, on to only signifies the Foundation, Basis, and the Heart; but it means likewise "The Earliest Age, Eternity. — The Cinders or Ashes remaining in a fire-place." In Arabic, likewise, under the form ^RS, ARS, or IRS, not only means "Inheritance, Heritage, Here-ditary right. — A Root, stability, firmness, the principal part, any thing agreeable to ancient hereditary custom;" but it signifies

signifies likewise "Ashes. — The Remains, Residue;" and we cannot doubt, I imagine, that the Arabic Ars and As are only different forms of each other. The senses of HERITage, the Root, and Ashes, unequivocally bring us to the EARTH. Arabic Ars and As, in the sense of Ashes Remaining in the Fire-Place, bring us to the English HEARTH, and the Greek Estia, (Εστία, Focus, Lar; — Domus; — Ara; — Asylum; — Vesta, Dea; —Sedes v. gr. Imperii.)—In Estia, (Εστια,) as I before observed, we unequivocally see the original idea of the Base — Foundation — Seat, as connected with the Ground, or EARTH, or, when the r is We may observe, likewise, how Estia, (Estia,) connects itself with the adjacent term Esten, &c. (Ectat,) belonging to Istemi, (Istym,) as it ought to do, according to my hypothesis. Whether Ashes and its parallel terms belong to Estia, (Estia,) the Base or Bottom, as of the Earth, on which they lie, or to the Dirt of the EARTH, I cannot decide.—The sense, which the Arabic word bears, of "The Earliest Age, " Eternity," is taken from the idea of that which Lasts - Continues—or Endures, as things do, which are Established on a proper Base or Foundation. The words containing this train of ideas will be considered on another occasion. — I shall examine in the next article a race of words, which signify, What is Firm— Substantial - Stout - Strong, derived, as I imagine, from the idea of that, which is Firmly Established, as on a Base or Foundation, The same Radical idea still remains, however various may be the purposes, to which it is applied.

Terms signifying what is Firm
—Substantial, Stout—Strong;
derived originally from the
idea of that, which is Firmly
Established, &c., as on a Base
or Foundation, &c.

OJ. (Hebrew.) To Fix, make Firm, or Steady, A Tree, the Back-bone.

Osteon, Os. (Gr. Lat.) A Bone. Ozos (Greek,) The Knot, or Branch of a Tree. What is Substantial.

OAK — Ac — EIK — EICHE — EYCK. (Eng. Sax. Run. and Dan. Ger. Belg.) The Firm Substance.

Ast. (Germ.) A Branch.

AsTs. (Goth.) Ramus.

ATSATJAN. (Goth.) Sistere.

OZ. (Heb.) To be Strong, vigorous. Strong Cities, Garrisons, Holds.

Is. (Gr.) Strength, A Fibre,
Nerve.

Iskus. (Gr.) Strength, Power. Vis. (Lat.) Force, Strength. Ogan. (Irish,) A Bough, Twig, Branch. Ogain. (Ir.) A Young Man. Eogan. (Irish,) The name Owen.

Og. (Ir.) Young.

Oig. (Ir.) A Champion.

AZ. (Arab.) Rare, Excellent, Corroborating.

OZ, &c. (Chald. Syr. Samar. Æthiop.) Strong, &c.

Eus. (Gr.) Good, Stout, &c.

EITH-eos, Aiz-eos, &c. (Gr.)
A stout Young Man.

OZ-UZ. (Heb.) Very or exceedingly Strong.

Hizz-Uz. (Syr. Chal. Arab.)
Dominus Fortis.

Az-Iz. (Phœn.) Mars.

HES-Us. (Celt.) The God of War.

AID — AIDER, &c. (Eng. Fr.) The Firm Support.

Aosseo. (Gr.) To Assist.

Assa, Ass—Asinus, Athn, &c. (Sax. Eng. Lat. Heb.)
The Bearer—Supporter.

ATN. (Hebrew,) Strong, as a Fortress.

ISD. (Heb.) To Found, Establish.

1ZA. (Heb.) To come forth or out.

out. To Arise, as from a Base.

IDH. (Heb.) The Hand, the Member of Strength. — A Pillar, &c. &c.

Axis, Axon, Ex, Achs, Axis, Axie, &c. (Lat. Greek, Sax. Germ. Eng. &c.) The Main Substantial Part, on which

a thing is Founded — Upheld, &c.

Achsel — Esl. (Germ. Sax.)
The Supporter.

Assis — Asser. (Latin,) The Board—what is Substantial, Solid.

Æs. (Lat.) A Pound—the Solid Substance.

THE Greek Ozos, (Οζος, Nodus arboris, Ramus,) the Knot of a Tree—Bough—Branch, &c., must be referred to the idea of what is Strong — Substantial — Firm, &c. The Ozos Areos, (Olos Appos,) is supposed to be Amoyovos, the Descendant, the Branch or Shoot of Mars, as it were. If it does mean so, it connects itself perhaps in this case with the more original idea of the word. Perhaps, however, the Ozos Areos, (Oζος Αρηος,) means nothing but "Columen belli." Ast in German signifies "A Branch, "Arm of a tree. Ein Ast in Holz, A Knast, Knob, Knur, "Knurl, Knot," according to the notable explanation of my Lexicographer. In Gothic, Asts is "Ramus,"—Atsatjan, Sistere, and Atstandands, Adstans. In Hebrew, עצה OZH or OJH signifies, says Mr. Parkhurst, "To fix, make firm, or steady.— "As a N. "Y" OZ or OJ, "A Tree, from its fixedness, stability " or firmness." This word likewise means the Back-Bone, " from " its Strength and Firmness." To this word Mr. Parkhurst justly refers the Greek Oz-os, (Ozos,) to which he might have added the Latin Os, Ossis, and the Greek Ost-eon, (Osteov.) In the First Chapter of Genesis we have TO OZ PERI, which means "A Tree of Fruit, A Fruit Tree;" from whence Mr. Parkhurst has derived the name of the Gardens of the Hesperides, HES-PERI-des.

This conjecture is consummately ingenious; but I fear, that it is not the true derivation. The explanation of this point would open into a wide field of discussion.

The Hebrew עצם OZM denotes, says Mr. Parkhurst, "Strength, "Substance, Solidity, Firmness. - A Bone, from its Strength and "Solidity," where OZ in OZ-zm may perhaps belong to the race of words before us. The two preceding terms to this word are עצל OZL, "To be slothful, idle, to loiter," where OZ in OZ-zL has probably a similar idea of Stability; and OZ, "To " Fix,—A Tree." The two succeeding terms are עצר OZR, "To restrain, retain, stop, detain;" and vy OK, "To Confine, " straiten, contract, compress," where we have a similar idea of Fixing. As a Noun, מעקד m-OKH means "A Battlement round "the roof of a House, to confine people from falling off." Here the word recurs to its more original sense of The Erection -Establishment, &c. Mr. Parkhurst derives OAK from this term, " and perhaps Yoke." We shall instantly agree, that OAK belongs to this race of words, and means the Strong - Firm Wood; as Robur, we know, means this species of Tree, for the same reason. OAK occurs in various Languages, as the Saxon Aac, Ac, &c., the Runic and Danish Eik, the German Eiche, and the Belgic Eyck, &c. Lye observes truly, that the Saxon word Ac not only signifies Quercus, but Robur, Strength, as Robur itself has this double meaning; and he accordingly derives these words from Alke, (Adam, Robur.) If he had derived Ilex from this Greek word, he would have approached more nearly to the truth. The Acorn, with its parallel terms Accaren, Accorn, Æcern, (Sax.) Aggern, (Dan.) is derived from AAC, the OAK; but whether the Corn be significant in Ac-Corn, as denoting Granum, which. Skinner supposes, I cannot decide. In German it is Eychel, Ecker; in Belgic, Aker, Eechel; and in Greek, Akulos, (Axulos, Glans ВВ

Glans quercus,) which are produced by the Etymologists, and which all belong to the Oak.

In Mr. Shaw's Galic and Irish Dictionary we have Ogan, "A Bough, Twig, Branch." The succeeding article to this is Ogain, Oganach, Oigair, "A Young Man." In the same column we have "Og. Young. Одн. A Virgin. Одн. Whole, Entire. "OGH. OGHA. Pure, Sincere;" which are derived probably from the more complete state of the frame in health—vigour, &c. during youth. I find likewise in the same column "OGHA. " A Grandchild. Oglach. A Servant, a Youth, soldier, vassal. "Ogmhart. A Heifer, a Young Beef. Ogmhios. June. Ogri. The "Youth, Young, young men;" and in the next column, "Org. " A Champion;" and "OIGE. Younger." In the Irish Language, "All nouns ending in Og and Eog are of the feminine gender," (Vallancey's Gram. p. 60.) and in Galic, "All diminutives of the "feminine gender end in Og or Ag." (Shaw's Gram. p. 101.) These terminations might belong to Ogn. The Virgin, or Young female; or they may be referred to the Element 'G, denoting Being - This or That Being, by way of Distinction, whether under the idea of exaggerating or lessening. To this race of words, Ogain, The Twig, or Young Man, belongs the Celtic name Owen. In the Irish and Galic Dialects we have EGAN. which Mr. Shaw explains by "Owen, the name of several great "men in Ireland." The terms preceding and succeeding this in Mr. Shaw's Dictionary are " Eochair. A young plant, sprout;" " Eoghunn, Young;" and in the same column we have " EOCHA. "Name of a Man, Lat. Euchadius," and "Eochair. Brim, " Brink, Edge," where, in the sense of the latter word, we are brought to the original idea of the Extremity or Base.

The Arabic is Az signifies in the first sense, according to Mr. Richardson, "Rare, excellent, precious, incomparable, "honourable.

"honourable, glorious, powerful, great;" and in another sense we have "Corroborating." The original notion is that of Strong, Corroborating; and hence it denotes any Excellent quality in To this idea we should perhaps refer the Greek Eus, (Eug, Bonus - Strenuus.) The idea of Goodness would be derived from the quality most regarded in the ancient world, that of Strength; and hence we learn, that the original sense of the word In the Eug TE MEYAG TE, we see the primitive was that of Strenuus. The Greek Axios, (Azios, Dignus, &c.) notion of the word. might be derived from the same idea; though I have annexed to it a different notion in another place.—The Greek names for a Youth or vigorous Young Man, Aizeos, (Ai (1905, Juvenis, qui Robore juvenili viget,) Ειτμεος, (Ηιθεος, Adolescens, Juvenis,) Azoi, (Αζοι, Servi, Servæ,) Ais-ueter, (Aisuntne, Adolescens valde robustus,) should perhaps be referred to the idea of Strength, as attached to this race of words. The Lexicographers, among other conjectures, refer Aisueter, (Αισυητηρ,) to Aisso, (Αισσω, Ruo, cum impetu feror;) and it is certain, that the terms denoting Youth may be naturally derived from the idea of a Violent or Impetuous Motion. I have produced some of these terms in another place, among words impregnated with this train of ideas, that the Reader may form his own judgment on the question. Azo, (AZo, veneror, colo,) may belong to Azoi, (A(o1,) Servants. Perhaps the Homeric word AIETON, (Αίητον,) Πελωρ Αίητον ανέστη, which the Scholiasts explain by Meya, may have originally been derived from the idea of what was Stout - Substantial. On this, however, I cannot decide. Theoritus, Aires, (Airns,) occurs as a Thessalian word for a Youth, who is the object of Love. It seems simply to have meant The Youth. — The name of the Grecian Chief, Aias, (Aias,) may belong to this race of words, under the idea of the Stout Warrior. It may perhaps be quasi Ajas, as in Latin Ajax; and the word may be a compound, as AJ-As, AJ-Ax, where the Element

Element 'J may be doubled, in order more strongly to convey This mode of increasing the force of a term perpetually the idea. Again, in Hebrew, to OZ, with t Zain for the second letter, and not y Jaddi, as in the former word, means "Strength, "Vigour, To be Strong, Vigorous, To prevail." This word perpetually occurs, and it is applied to Strong Cities - Garrisons-(Isaiah xxvi. 1. xxiii. 11. xvii. 9. Prov. x. 15. Dan. xi. 19, 39. &c.) Mr. Parkhurst refers the Latin Os, and the English Ox, to this term; which may be so, though I have given a different idea to this latter word in another place. Mr. Parkhurst imagines, that the name of the Goat, ty OZ, belongs to this radical, to which he refers likewise the Greek Aix, (A)E,) though Taylor arranges these Hebrew words as different The Aix, (A.E.,) might be placed among the race of words, belonging to our Radical, which denote Agitation or Motion. Mr. Parkhurst observes under w OZ, "As a N. masc. plur. " משם " m-OZim, " Protectors, Defenders, guardians, mentioned "as objects of worship. Dan. xi. 38, 39. So Eng. margin at " yer. 38. God's Protectors;" and he derives the Hercules of the ancient Gauls, called Magusan, from this source. To the race of words now before us, denoting Strength, as iy OZ, &c., we should perhaps refer the Greek Is, Iskus, (Ic, Fibra, Nervus;— Robur, Vis, Ισχυς, Robur, Vires, Potentia,) the Latin Vis, &c.

In Hebrew, the in OZ is doubled for the purpose of expressing more forcibly the idea, which it contains. Hence in OZZ signifies, "To make exceedingly strong, strengthen very much—no" OZUZ, "Very or exceedingly strong." To this combination Bochart has attributed the name of the God of War among the ancient Gauls, Hesus—"Horrensque feris altaribus Hesus," and the Syriac Aziz-os, (Αζίζος.) "Hesus cur putetur esse Mars" disce ex Gallorum veterum historiâ, quam ante aliquot annos "edidit Antonius Gosselinus ὁ μακαφιτης in hâc ipsâ Academiâ, "professor

" professor eloquentiæ. Hesus proprie fortem sonat, ut Hebræis "ny Hizzuz, et Syris, Chaldæis, Arabibus, ry Haziz. " vers. 8. Ps. xxiv. ubi Deus dicitur esse Dominus fortis et potens, " Dominus potens in bello; Dominus fortis Hebraice est niv min " Jehova Hizzuz, et Arabice אלרב אלעוי Arrabbo-lHazizo. Inde " Marti factum est nomen etiam apud Phœnices. Quod ex " Jamblicho docet Julianus Apostata Oratione in Solem. Verba " sic habent. Ετι μετριασαι βουλομαι της Φοινικων θεολογιας, &c. Οί την " Εδεσσαν οικουντες ίερον εξ αιωνος ήλιου χωριον, Μονιμον αυτώ και Αζιζον " συγκαθιδρυουσιν, αινιττεσθαι φησιν Ιαμβλιχος, &c. ώς ὁ Μονιμος μεν Έρμης " εη, AZIZOΣ δε Aρης. Volo adhuc è Phœnicum Theologia nonnihil "depromere, &c. Qui Edessam habitant locum ab omni ævo "Soli sacrum, Monimum et HAZIZUM una cum Sole collocant, " quod sic Iamblichus interpretatur, &c. ut Monimus quidem sit "Mercurius, Hazizus autem Mars." (Geograph. Sac. p. 662.) In Mr. Shaw's Galic Dictionary, AgH is "A conflict, battle;" and AGHACH, "Warlike, Brave." HESUS may possibly belong to this latter word, but on this I cannot decide. The Element ^Z denotes Strong in the Chaldee, Syriac, Samaritan, Æthiopic, and Arabic, as appears by the parallel terms produced in Castel under the Hebrew my OZZ. In Arabic, the corresponding terms are Az, produced above, and عزيز Az-Eez, " Excellent, Precious," Mr. Parkhurst refers Hesus to the Hebrew wy OS, "To "consume, destroy." He observes, however, that it occurs not as a verb in the simple form, but as a compound www OSS, "To be consumed, consume, or waste away," I have referred this Hebrew word in another place to a different idea. Perhaps the Greek Agerochos, (Ayeewxos, Superbus, Ferox,) may be a similar compound of Ag-Och.

The Abbé Caperan, in his Observations on the Exurgat Deus, (the sixty-ninth Psalm,) has produced various names for God; some of which are to be referred to the race of words now under discussion;

discussion; as the Armenian Astuadz, the Iez-Dan of the Zendavesta, (p. 92.) the Isten of the Hungarians, (p. 96.) &c. derives the Astu in Astuadz from the Hebrew WN AS, Fire; and Adz from AOD, "Principe, Producteur;" so that the compound expresses "Feu Principe, Feu Producteur." The lex in Iez-Dan he derives from the same source of UN AS or Esh, Fire; and Dan he refers to the Hebrew אדן ADON, "Base, Fondement, "Principe;" so that both these words convey the same idea of "Feu Principe." The derivation of Dan is, I imagine, just; and Abbé Caperan has seen likewise, (p. 89.) that the Hebrew ADN belongs to the English Down. This is well conjectured, as the terms are somewhat remote. Mr. Parkhurst. who is a bold Etymologist, has not observed this under 7 DN, which he justly considers as the Root. The Abbé has moreover produced, as a derivative, the Greek Dun-amis, (Δυναμις, Potentia,) which I believe to have a similar origin. The Abbé might have been reminded of the Arabic (') A DAWN or Dun, " 1. Base, " Mean, Inferior, ignoble, despicable. 2. (è contra) Noble, Here we have both senses, naturally belonging " Excellent." to the same idea of the Ground, as the Base, &c. The Greek Essen, (Econy, Rex,) belongs to the form IEZDAN, &c. In ZEN, (Z₇, Jupiter,) we have only the Element ZN, or DS-N, &c. This will bring us to King, and its parallel terms in Modern Languages, and to Khan, the title of dignity in the East. We now see, why, in the Eastern Languages, KHAN is the House and the Prince; as Arche, (Aexi, Principium, Fundamentum, Principatus,) relates at once to the Building and to Power. In AST-UADZ we see the same compound as in Hızz-Uz, AZ-IZ, &c. Iezdan coincides with ארן Adon, Adon-is, the Lord, the Chief, as connected with Adon, the Base, precisely by the same metaphor as Arche, (Aexn, Principium - Fundamentum, Principatus, Imperium,) relates to the Base and to Power. ISTEN

ISTEN of the Hungarians is only another form of IEZDAN; and to these must be referred Odin, the Hero, or the Deity of the North. The Abbé Caperan has properly seen, that ISTEN belongs to Istemi, (Istania,) Stare; though he is not right in supposing, that the Hebrew "Mw Shouth, Placer, Etre stable," is connected with these words. The Hebrew SUT belongs to the Element ST, to Sedes, Sisto, &c. &c.

The Abbé Caperan observes, moreover, that Istinno signifies, in the Russian Language, Truth; and he justly connects it with Ist-emi, (Iotnui,) and with the idea of Stability. Istinno, Isten, Iezdan, Adon, &c., all belong to each other under the same idea of the Base — the Spot of Establishment, Settlement, &c., and are connected with Istemi, (Istemi, Stand, &c. &c., as I have before The Abbé remarks, likewise, that Езнем із a Rabbinical name for God, which he derives from the Hebrew הסה Ese, confiance; and that Odel, or Ozel, is a name for the Deity " chez les Zingiens, peuples qui habitent une large contrée "de l'Ethiopie," which he considers to be a compound, and derives from "17 OZ, force; d'ou le Grec 15, le Vis des Latins; et de אל AL, Dieu." Eshem השם belongs to the Hebrew OZM, "Strength, Substance, &c., A Bone," and the Arabic Ахут, عظير "Great, Large," عظر AZM, A Bone, Yzem, Magnitude, عظام Yzam, Bones, &c., terms so familiar to that Language. The AZ in AZ-zm should probably be referred to the race of words now before us. Among the Cabalists, Атн лж is the name of God, which Bochart conceives to have been formed from * A and n T, the first and last letters of the Hebrew Alphabet, according to the idea in the Apocalypse, "I am Alpha and "Omega," &c. (Geograph. Sac. c. 745.) The preceding term to Yzam in Mr. Richardson's Dictionary is عظاظ Yz-Az, which he explains by "1. Biting one another. 2. Vehemence, intrepidity "in battle," where we have a similar compound to that in Hizz-

Hizz-Uz, &c. The Oz in Ozel belongs probably to these words. On the second part of the compound we cannot decide, as the Elements ZL and 'L have a similar meaning. When the sound of Z is lost in the Element ZL, it becomes L. Among the Athiopians, Agza אווא signifies " Seigneur," as the Abbé informs us; and this he derives from &u GZA, Tresor, to which he refers the Latin Gaza, and the English Cash. The Hebrew GZA &c. belongs to the Element GZ. The Agza must be referred to the race of words before us. - The Turkish title, the AGA of the Seraglio - Janissaries, &c. belongs, I imagine, to the same stock. Mr. Richardson observes under the Persian افا " Адна, " (or Aca in the Mogul and Khouasmian dialect,) A great Lord, " nobleman, head, chief master, commander." Again, among the Magi, as the Abbé observes, Onst signifies God; and this he refers to the Hebrew ערץ Onts, Fort, and the Greek Anes, (App.) On the origin of the term ORTS I can decide nothing; but I have referred, on another occasion, the Greek and Hebrew words to a different idea. Orsi he conceives to be Osiris, but this is not so. - Menage has produced the Turkish word Aga, "Seigneur;" though he has given no derivation of its original The succeeding word in his Dictionary is Aga, an interjection of Admiration and Astonishment among the French, which some have derived from the Greek Agao, (Ayau, Demiror.) The Aga of the French—the Agao, (Ayaw,) and Agios, (Ayas, Sanctus,) of the Greeks, might belong to this race of words, under the idea of what is Excellent or Exceeding in Strength-Power, &c. &c.; but on this I am unable to determine. Without the history of the word nothing can be done. The French AGA seems to belong to Ach! Ah! &c. &c. Some of these words must be referred to the terms denoting Being, This, or That Being, by way of eminence; which I discuss fully in ____ 317__1_

TR, to Terra, &c. In Saxon, Eder, Edor, and Heder, signify "Sepes, Septum, Tectum." Edor is explained by "Domus." These words appear to belong to ATRium; and to the same form we should probably refer the Greek Echur-os, and Ochur-os, (Εχυρος, Munitus, Firmus, Tutus, Οχυρος, Munitus, Firmus,) Fortified, Firm, &c. To the Hebrew אור OZR belongs אור AZR, To Surround, Encompass, — עמר OTR, To Encompass, Surround, — אטר To Obstruct, Shut. The Latin Hedera means, perhaps, that which Surrounds, or Entwines. Under the form ^CR, ^GR, ^TR, &c. we have the Latin and Greek Ager, Agr-os, (Ayeos,) the English Acre, with its parallel terms Æcer, Æther, (Sax.) In the same column of my Saxon Dictionary, where we have Æcer, Æcr, Ager, we find likewise ÆDDRA, "Vena, "Fibræ, rimæ, fissuræ;" which, with the German Ader, I have supposed to belong to this race of words, denoting an Enclosurethe Enclosing Hollows for the blood.

Under the same form, ^DR, we have the Hebrew הדר HDR, which signifies, according to Taylor, "Honor, gloria; honorare. "Glory, honour, majesty, splendor, beauty;" which must be referred to this race of words, under the idea of an Enclosure. These senses of the word seem very remote from this notion; but a little consideration will establish my conjecture. Mr. Parkhurst explains the first sense of this word by "To Adorn, Decorate, Here we are brought to the original idea,—that of Encompassing, Surrounding, Covering, in the explanation of To Deck or Decorate, as with the Covering of garments. very explanatory word Deck is acknowledged by the Etymologists to be derived from the German Decken, Operire, Vestire, and the Latin and Greek Tego, Stego, (\$\sum_{\tau\nu}\varphi\varphi\); and I shall shew in another Volume, that Decorate, Decus, Decor, Deceo, belong likewise to We have seen, that the Saxon Heder is explained by "Septum, Tectum," the Enclosure; where we have in Tectum a derivative

a derivative from Tego. The Hebrew הדר HDR belongs to עטר To Enclose, Sepire, and signifies Tegere, To Deck. In short, the Hebrew הדר HDR I consider as the verb, Tegere, To Deck; and the Saxon Heder, as the substantive. To the Hebrew הדר HDR, To Adorn, Decorate, Deck - Glory, Honour, Majesty, " Splendor, Beauty," must be referred another Hebrew term, ארר ADR, which Mr. Parkhurst explains by "To be or become "magnificent, pompous, illustrious, glorious;" and to which he justly refers the Greek Adros, (Algos,) "Great, rich, strong," as he explains it; and the Latin Adorea, "Glory, praise, renown." This Hebrew word is used in its genuine sense, when it denotes, as a noun, "A magnificent Mantle or Robe;" and sometimes simply a Garment, as the Hairy Garment of Elijah, (1 Kings, xix. 13.) The idea of a Magnificent or Glorious appearance is perpetually connected with that of a Garment or Covering. We all remember, in the Hundred and fourth Psalm, "Bless the Lord, "O my soul. O Lord my God, thou art very great; thou art "Clothed with Honour and Majesty. Who coverest thyself with " light as with a garment." The word translated by Majesty is ארר HDR, the term produced above, where we see it connected with the very idea of Clothing or Covering, which I conceive to be the original notion. The word translated by Honour is HDH, which might be referred to our Element, under the same This word, however, has considerable difficulties. term translated by Coverest, עטה OTH, belongs likewise to our Element, and contains for its original idea the sense annexed to this race of words. This term שמה OTH, "To throw or wrap " as a garment over one," is adjacent to עמר OTR, " To En-"compass, Surround," produced above; and the words in Mr. Parkhurst's Lexicon, which we find between these terms, are OTN, the Bowels, where OT and ATN are both perhaps significant, and mean the Base or Lower Part; שמר OTP, "To "Obscure.

"Obscure, Cover, cloke, hide," which means, we see, To Enclose. I have before expressed a difficulty respecting the words under the form 'TR; and have observed, that the Element TR denotes likewise an Enclosure. Whatever we may think of the Element TR, the words 'D' OTR and 'D' OTP shew, I think, that the 'T is significant. If the TP and TR are likewise significant, these words are compounds.—Under any hypothesis respecting the origin of these terms belonging to the form 'TR, we shall at least agree, I imagine, that they all belong to each other. The Saxon Heder, Septum, must however surely connect itself with the adjacent term Hedan, To Heed, Cavere.

Let us note, in the explanation of the Hebrew word produced above, the term AID, which must perhaps be referred to our Element 'D, under the idea of the Firm Support, as attached to what is Fixed - Established, &c. The explanatory word Assist belongs to the same metaphor of Standing up. AID is referred by the Etymologists to the French Aider, the Italian Aitare, or Ajutare, the Spanish Ayudar, the Latin Adjuto, Adjuvo. In Italian, Ajutante signifies "Stout, robust," and Aitante means "Cou-"rageous, vigorous." We have likewise in the Italian Lexicons an adjacent term, Ajo, the Tutor, which signifies the AIDER or Assistant. I find likewise another adjacent term to these words, AJA, "A Threshing-floor;" which brings us at once to the Ground or EATH, &c., from which I imagine all the words, now under discussion, to be originally derived. — I find still another adjacent term, Ajuolo, a Net; which refers more directly to the idea of an Enclosure or HEDGE. The Latin Adjuto may not belong to Adjuvo, but to the race of words now before us. Casaubon derives the French Aider from the Arabic Iad, signifying the Stand; and others refer it to the Syriac Adar, a term of the same import. Perhaps the Aux in Auxilium may have the same meaning, and is not derived from Augeo; unless Augeo,

Spot. This word means likewise "A She-Ass, from her passive "strength." The TN and SN in the Hebrew ATN is significant, as in ADON, the Pillar, &c., ASTANdan, &c. &c. before produced.

The Hebrew vy OJ is joined with no ISD in the Psalms, viii. g. יסרת עץ ISDT OJ, Fundasti Fortitudinem. The Hebrew יסר ISD signifies "To Found, lay the Basis or Foundation." It is a compound of IS and SD; the latter of which Elements appears through a great variety of Languages with a similar meaning, as in Sisto, Sedeo, Sido, &c. &c. The succeeding word in Mr. Parkhurst's Lexicon is To ISK, which he explains by "To Smear over," and which seems remote from the train of It occurs only once in Exodus, ideas now under discussion. (xxx. 32.) where it is interpreted by Pour. - " Upon man's flesh "shall it not be Poured." The word seems precisely to correspond with the English Put, and the Latin Pono, Posui, &c. "Upon man's flesh shall it not be Put;" where in Put we see the idea of Place or Position. The next word is 70° ISP, interpreted by "To Add, Increase," which seems likewise remote from the present train of ideas. This Hebrew word is only another form of "" To sit, sit down. To Sit down, Settle, " to fix one's abode, or dwell in a place,"—of יצב IJB, " To-set, " settle, place steadily or firmly, in a certain situation, or place, "Statuere, Constituere;" and of Dur Ism, "To Place, Set, Put." They are compounds of IS and SM or SB, bearing the same meaning. The succeeding word to שב ISB is ישה ISH, which denotes " Existence, Subsistence, Reality, - Is, are, was, were," &c. &c. The word 50° ISP, To Add, seems to mean nothing but Pono, Appono, To Put to. It is curious, that the word is sometimes interpreted in our Translation by To Put to. "Nothing can "be Put to it, nor any thing taken away." (Eccles. iii. 14. See also Numb. xxxvi. g. 2 Chron. x. 11.) The succeeding word

word is "B' ISR, which signifies "To restrain, check, discipline." Here again we have the sense of the Element 'To make to Rest, 'To Fix,' &c. The succeeding word is "B' IOD, To Appoint, 'Constitute." An adjacent term is B' IOZ, which signifies "To "Strengthen." The next word is 'D' IOT, "To Cover," which belongs, I imagine, to the Base, as the Superficial Covering, or to the idea of Putting on, as we express it. We all know, that Eso; (Eo, Eow, Colloco, Ew, Eow, Induo,) relates in Greek both to Placing and Cloathing, or that it means To Put and To Put on. Hence we have Esthes, (Eodys, Vestis, ab Ew, Colloco;) and thus we see, how Esthes, (Eodys,) connects itself with the adjacent word Estia, (Focus, Lar,) the Hearth—the Ground, and Vestio or v-Estio with v-Esta, the Goddess of the Earth.

A word similar in form to Esthes, (Early,) the Garment,— Estho, $(E\partial\theta\omega_{r})$ signifies To Eat. Nothing appears more remote from each other than the ideas annexed to Esthes, Estho, and Estia, (Εσθης, Εσθω, Εστια,) the Garment, the action of Eating, and the Earth; yet we shall soon understand, how readily they are connected together. I shew in another place, that Estho, (Εσθω,) and EAT, belong to Estia, (Εστια,) under the idea of Tearing up-Scratching upon, or Fretting upon a Surface, as of the Ground—the Estia, or Earth; and Esthes must be referred to the same Spot, under the idea of Placing or Putting one thing on another, as on a Base or Superficial Ground. Another form of the Hebrew שמה IOT is עשה OTH, before produced, which Mr. Parkhurst has explained in one sense by "To throw or wrap, "as a garment, over one;" and in another by "To Put a Covering "upon, To Cover," which again refers, I imagine, to the Base, as the Superficial Covering, Enclosure, &c.; or To Put or Place on, To Cover, &c. It is idle in many cases to attempt to separate the idea of the Base - considered as the Bottom - the Extreme Surface, On or Upon which any thing is Placed or Put;

and that of Placing or Putting one thing on another, as on a Base. The explanatory term On may serve as an illustration of the matter, as it conveys at once the notion of the Base, On which things are Placed or Put; and likewise that of a Covering, as connected with this Placing or Putting, as To Put On your cloaths. In short, I imagine that these various words are derived from the On, if I may so say, as the Base; and that they signify either To On, if I may thus express myself, that is, To Place On, Put On, referring to an Establishment, or To Place On, Put on, referring to a Garment. I shall shew in a future Volume, that Cover, Super and Sub, belong to each other. Cover and Super we acknowledge to coincide in sense with each other. we see but little of the idea of the Surface; but in Super—the Superficial Covering, it becomes manifest. We see, how Sub and Super belong to each other under a different idea. The next word is your OTN, "The Bowels, Intestines," which Mr. Parkhurst supposes to mean Involutions, and to be derived from oTH, To Involve, or Cover. This term for the Belly means the Lower Part, as belonging to the Base or Foundation, and must be referred to the form of ארן ADN, the Pillar. This idea I am enabled to confirm by the Arabic word, which Castell has produced, as parallel to عطري OTN. The Arabic word is عطري ATEN, which Mr. Richardson explains in one sense by "The Bottom or " Base of a Mountain."

An adjacent term to the Hebrew words Dy IOT, &c. is Ty IOJ, "To advise, give counsel, advice, or information." This too seems remote from the ideas which are now before us; yet the original notion is probably that of Settling—Arranging, as plans—schemes, &c. Taylor has brought us to the idea of Placing, when he explains the word by "To Lay a scheme, to "form a design." In Judges, xix. 30. we have "Consider of it, "take Advice, and speak your minds," where the Hebrew word

"that shall Issue from thee." In this application of these terms, the Hebrew IZA and the English Issue coincide with the sense of the Welsh Acu, "A stem or Pedigree; the lineage of one's " ancestors."—" ACH is used for Merch," A Daughter, &c. Issue has been justly referred to the French Issir, Issue, the Italian Uscire, and the Latin Exire. Isser means in French "To Hoist "up the sails," that is, To cause to rise forth, or Up. It should seem, as if the word Hoist belonged to Isser; and yet Heist seems to be annexed to High, &c., which I have referred to a different idea. After having proceeded thus far, we should at once admit, that the Latin Ex and the English Our belong to this race of words, and are derived from the EATH, as denoting the Base, Foundation, or Source. The Ex eo nati of the Latine are those, who are born from him, as being the Base - Foundation-Stem, &c., Source-Ach, (Welsh,) &c. In such words as Extruo, Existo, Exist, we see Ex in its more primitive use. Latins used E, Ec, and Ecs, for Ex; and the Greeks, we know, have Ex and Exs, (Ex and E.) Extra means Ex Terra, which directly brings us to the Spot, supposed in my hypothesis. Our occurs in various Languages, as the Gothic Us, Ut, Uta, Utana, the Saxon Ut, Uta, Utan, the German Aus, the Belgic Uit, Uyt, Wt, the Islandic and Runic Ut, the Islandic Ud. To Our belongs UTTER, with its parallel terms Itter, (Swed.) Itte, (Isl.) Utter, Yttre, (Sax.) &c. There are however some difficulties respecting the word Out - Ex, &c. &c., which will be explained on a future occasion. We shall at least agree, that they are all ultimately derived from the Earth, as the Place, on which things are established; but whether they directly belong to this idea, will be then understood. In Persian, if Az signifies " From, of, for, In the phrase ال مساس Az Musaus, " by, Our of, with." From the Foundation,' we are brought to the original idea of the word; and Az is connected with the term, to which we might suppose

suppose it to belong, In Hebrew, As-As, the Foundation. -- In Hebrew, PM IZK aignifies " To pour, pour Our." Taylor compares it, in some of its senses, with another Hebrew term, pre ZUK, which signifies " To Set fast -Consistere, Collocari, Firmari, Durescere." This latter word may belong to the Element SK, to Sisto, &c., or it may belong to the race of words before us, by the loss of the Vowel breathing before the S, quasi ISK. The preceding term to My IZK is My IZG, which signifies "To Place, Set, or " leave in a certain Situation or condition." One of the passages, in which my IZOK occurs in this doubtful sense, is the following, " Iron is taken out of where the word is interpreted by Molten. the Earth, and brass is Moltan Out of the stone." (Job xxviii. g.) The idea annexed to Molten may be taken from that of Pouring Our - Fundendi - Æs, as the Latins have it, or as we have it, from the opposite idea of Founding, Fundandi, or making Firm and Solid, as in A Brass-Foundry. Robert Ainsworth explains Fundo, To Pour Out, in its ninth sense, by "To Cast Metal, " to Found." The succeeding word to per IZK, To pour out, is 12R, "To form, fashion, shape, model to a particular shape." In one passage, Taylor explains it by "I will form, raise, " Establish thy Kingdom," &c., where, in the word Establish, we see the genuine idea. The adjacent words are "" "To burn, "or be burned, as fuel;" TKD, "To Burn, as Fire." The latter term signifies "A HEARTH," which may be the original idea annexed to both these words. An adjacent term is איקר IKR, "To be bright, splendid, shining," which may be derived from the Fire on the HEARTH; but on this I cannot decide. succeeding term to this last word is up " To Lay, Set, or spread, " as a snare or toil," where we have the genuine idea.

The Hebrew Scholars will now be enabled to understand the origin of the familiar term in that Language for the Hand. Mr. Parkhurst explains TP by "To Cast, cast forth, cast Our—To." Put

"Put or hold forward, or forth, either by the voice, or some "overt act, to profess, confess, openly or freely." This seems to be only another form of MY IZA; "To Come or go forth or "Out." The word likewise signifies The Hand of Man, "so "called," says Mr. Parkhurst, "from its being naturally capable " of being protended or thrust forth from the body. — And since " the Hand of Man is the chief organ or instrument of his Power "and Operations, hence the Hebrew T ID is used in a very extensive manner, for Power, agency, ability, means, instru-"mentality, dominion, possession, assistance, custody." As the Hand would supply the idea of Power, &c., so I imagine, that this was the original notion from which it was derived. The Hebrew IDH denotes, as I conjecture, Strength - Firmness, as derived from the Base or Foundation, on which things Rest, and from which or Out of which they Proceed, or arise. Hence, it IDH signifies "To Cast, cast forth, cast Out;" though this sense may be likewise connected with the action of the Hand. The word denotes "A Side, border, extremity;" because "the Hands are " placed on each Side of the Body," says Mr. Parkhurst. Hence, as the same writer observes, an "Extensive Country is said to be "רחבת ירם" RChBT: IDim, "Wide of Hands, i. e. Wide on " all Hands or sides, as we say." We see, that this Hebrew word, in the sense of a Side - Extensive country, is employed in its original idea of a certain Place-Situation-Spot of EATH. I shall shew, that the word Side belongs to a similar idea — to Sido - Situation, &c. &c. This word means "To put or hold "forward, or forth, either by the voice or some overt act, to "profess, confess, openly and freely, whether as an object of "Praise or Worship." In this sense it precisely corresponds with UTTER, which is derived, as we know, from Out. There is another Hebrew word, הדה HDH, which Mr. Parkhurst has compared with TT IDH, and which signifies "To send, thrust,

" or dart forth: - Glory, Majesty, Honour. - To Glorify, Honour, * Praise," that is, To UTTER Praises, &c. This word however has its difficulties. The Hebrew The IDH means, moreover, "A Trophy or Monument of Victory, probably," says Mr. Parkhurst, "because made in the shape of a large Hand (the emblem "of Power) erected on a Pillar." In the sense of a Pillar we see the original idea of some thing Set up, Established, &c., as on a Base or Foundation. It is expressly referred to a Pillar, as Mr. Parkhurst has justly observed, in the following passage. "Now Absalom in his life-time had taken and reared up for "himself a Pillar, which is in the King's dale; for he said, 5 I have no son to keep my name in remembrance; and he called the Pillar after his own name: and it is called unto this "day, Absalom's Place." (2 Sam. xviii. 18.) The term, which is translated by Place, is 7' ID; and we perceive, that Place coincides with my idea of the word; which I imagine to signify, 'To Place, Settle, Establish, Fix, &c.' The term for a Pillar is מצבת mZBT, and for Reared, צב IZB, "To Set, settle, place "steadily or firmly, in a certain situation or Place." I have shewn, that the IZ in IZB belongs to the race of words now The term for the Pillar, m-ZBT, is derived from this.: In Arabic, J ID is the Hand. The Hebrew 7' likewise. means "Axle-Trees, q. d. Handles for Wheels."

Let us note the explanatory word Axle, and remember its corresponding terms in other Languages, the Latin Axis, the Greek Axon, (Azw,) the Saxon Ex, Ex, the German Achs, Achse, the Belgic As, Asse, Axe, the French Essieu, Assieu, the Italian Axo, Assile, and the Spanish Exe, the Welsh Echel, &c. The Axis means the Main—Substantial Part, on which the Instrument is Founded—Upheld—Supported. Some derive Axis "ab Ago," Axi. ant." The story of Ixion and his Wheel has arisen from a confusion of terms in the name Ixion and Axon, (Azw,) the Axis

Axis of a Wheel. Ixion seems to mean the Illustrious personage, and to be the same as Adon-is, Mr Adon, Isten, Iezdan, &c. &c. The succeeding word to the German Acus, Acuse, the Aud-tree, is Acusel, the Shoulder, which surely belongs to the same idea as the Axis or Axel, and means the Supporter-Bearer. Saxon, Est is Humerus. In the same column of my Saxon Dictionary is Esol, Asinus, where a similar idea is found. The succeeding word to Esl is Esn, "Adolescens, Juvenia: Vir, "Masculus: Servus; — Plebs." The n perhaps in this word: 16 only an organical addition to the S. The ES may denote the Strong, Stout fellow, or it may belong to the general name for Being, Is, Est, &c., which I shall shew to be derived from the idea of what is Placed - Situated, or Is. The use of this Saxon word coincides with that of the Hebrew www AIS, Man, (Gen: xxiv. 61. xlii. 11—19. Exod. ii. 1.) which belongs to the verb ישה ISH, denoting "Existence, Subsistence, Reality, -- Is. Are, The Saxon Esne is likewise written Aspe, -"Was. Were." which occurs in the same page of Lye's Saxon Dictionary with Æsc, Fraxinus, the Ash. Whence this term is derived, I know not, unless it be taken from the idea of what is Stout -- Strong. In some states of this wood, it is considered as a Firm Substance. Spears would not have been made of it, unless this had been the Among the Greeks, we know, this wood was used for Spears, (Melia, Fraxinus;—Fraxinea Hasta,) and so it was among the Saxons; (Asc Fraxinus. Scutum et Hasta à materia.) The word Æsc likewise means in the Edda, "Homo primus, ex Frax-"ino quem dii condidêre." This fable of the first man being made of Ash arose from a confusion in the terms for Ash, the Tree, and for Man or Being, WW AlS, ÆSne, Is, (Eng.) His (Eng.) Is, (Lat. and Goth.) the Man, &c. &c. &c. among the Saxons was placed in the lowest rank of their Soci Orders, as we use Man for Servant. Ash occurs in vario Language

Languages, as in the Saxon Æsc, the Danish Ask, the Belgic Esch, the German Esche, Eschen-Baum, An Ashen Tree, &c. Skinner wonders, that the Hellenists do not derive this term from the Greek Auw, Accendo, because the wood is an excellent Burning wood. If an idea of this kind be annexed to the word, the Ash might be referred to its adjacent term Ashes—as being readily reduced to this state. Æsc means in Saxon, "Dromo, Navigium, "liburna," probably from being made of Ash; and to this has been referred the term for Pirates, Asco-Manni, Æsce-Men. Junius has justly observed, that since Ash was used for Spears, hence Soldiers were called by Cædmon, Asc-Berende, Ash-Bearing.

The Latin and Greek Axis and Axon, (Agor,) mean the Boards, on which the Laws were engraved. These might be so called from the idea of their turning round, as upon an Axis; but they probably refer to the original idea of the Board — the Substantial object. The Laws of Solon were said to have been written Axibus ligneis; and some have thought that Axibus is put for Assibus. We shall now understand, that Assis and Axis are only different forms of each other, and that Assis or Asser means nothing but the Substantial object—Firm—Solid Timber. Assis, and As, the Pound weight, &c., have the same meaning of the Substantial Object. The Etymologists have derived As from Æs, Æris, which perhaps may be taken from a similar Æs might be the Substantial-Solid Metal-" Æs Grave," -as it is called; though it is probably taken from a different idea. We see in the Ar of Ar is, that the S has been changed into R. Perhaps Ana, the Period of Time, may be quasi Asa, and mean Duration - that which Lasts - Endures. Thus then Era or Esa will agree with AGE, ÆTas, to which I attribute, in another place, a similar idea. Some Etymologists derive Era from Ex, Æris, " quòd Hispani post cladem à Calvino acceptam Romanis " Æra

" Æra persolverent." In Mr. Shaw's Galic and Irish Dictionary. Inis is "An Æra, Epoch," where we have the full form of the Element; and in the same column of Mr. Shaw's Dictionary we have IRIS, Brass, where we see likewise the full form. In German, Brass is ERTZ, which means the Mineral or EARTH. The Celtic IRIS and the Latin Æs belong probably to the same The other senses of IRIS I must leave the Celtic Scholars to unravel. In the same column of Mr. Shaw's Dictionary, where these words occur, we have "IRE, Ground, Land," which is probably quasi Irs. In the same column we have Irionn, "A "Field, Land, Ground." Perhaps Iron, and its parallel terms Iren, Isen, &c. (Sax.) Jern, (Dan.) Eisen, (Germ.) Iiser, (Belg.) Eisarn, (Goth.) Haiarn, (Welsh,) &c., produced by the Etymologists, may simply mean the EARTH or Mineral, or it may mean the Firm Strong Substance. We see in Eisen, &c. the true form Mr. Richards, under the Welsh word, produces the parallel terms in other dialects of the Celtic, as the Cornish Hoarn, the Armoric Houarn, and the Irish Iarann. The preceding terms in Mr. Shaw's Galic Dictionary to larrunn and larunn, Iron, are Iarram, "To Ask, seek, look after," and Iarrum, "To Ask, seek. "look for, enquire," which mean To Stir up the IRE, "the Ground, "land," or EARTH. We shall not wonder to find terms denoting Search and a Metal adjacent to each other, when we remember, that the very words, to which Metal belongs, Metallao, (Merallao, Scrutor, inquiro,) means To Search, Enquire, &c.

Assus, the adjective, means in one sense, "Without mixture, "Alone, Pure," which might have been explained by the Pure Substance of any thing, unmixed with foreign matter—Assa Caro—the mere Substance of Flesh. Assus however may belong to terms, denoting This or That Peculiar Being—Thing, as Is, Hic, Heis, (Eig.) &c. &c., fully illustrated in another place; as in the explanatory term Al-one, we have One, meaning This or That—Peculiar

is Asethu, "To bind, to fasten;" to which belongs the preceding Word Asern, "A sharp pointed lath or spar to Fasten: A Wagget; "also a Wedge, saith R. M." This latter word means the Fastener - Compresser. The Wedge has two actions, that of Splitting some parts by Compressing others. In the same opening of Mr. Richards' Dictionary, we have Assio, the same as IASSAU, "To Solder or Sodder, to join, fasten or glue together," Asu, "To join," and Aswa, "One that joineth or addeth." We find likewise in the same opening, and next to Astell, "A Board," Astalach, "A Shield," which seems to be only another form of Astell, the Board of Defence—the Substantial Firm Instrument of Defence—Security. The Welsh Lexicographers justly produce another term in that Language, "AES, A shield, a buckler, "a target;" and under this word we are referred to the Greek Aspis, (Arms, Clypeus,) where the As probably belongs to the same idea, the Firm Defence. Whether the Pis in this word is significant, I cannot decide. Perhaps the P is only an organical The Welsh Etymologists imagine, that addition to the S. Astalch is derived from Aes, The Shield, and Talch, Broken, "Such as that of a brave soldier is wont to be." This must be settled by the adepts in that Language.

The English word OATH, and its parallel terms Ath, (Sax.) Aith, (Goth.) Eed, (Belg. and Dan.) Eid, (Germ.) Eidur, (Run.) might be derived from the idea of that, which is given to make any thing Firm—Secure, &c. These words do not, I imagine, directly belong to the Orkos, (Opros, Juramentum,) which I have derived from a similar sense, though it is annexed to a different race of words. I cannot help producing a strange coincidence between OATH and the EARTH; though, if they are connected in this case, it is not by the intermediate notion of Firmness and Security, which I have here suggested. In Richard II., the Lord, in throwing down his gage, as a pledge to fight with Aumerle,

as Percy had engaged to do in a former speech, "There I throw "my Gage," says,

"I task the EARTH to the like, forsworn Aumerle." (Act IV. S. 1.)

In one Copy, for Task we have Take, and Dr. Johnson reads, "I take thy OATH;" on which Mr. Steevens observes, that there is a similar corruption in Troilus and Cressida, 4to, 1609, where we have "Untraded EARTH" for "Untraded Oath." The passage in Troilus and Cressida Mr. Malone writes thus:

- " Hect. O, you, my Lord? by Mars his gauntlet, thanks!
 - " Mock not, that I affect the untraded Oath;
 - "Your quondam wife swears still by Venus' glove,
 - "She's well, but bade me not commend her to you."

(Act IV. S. 5.)

The Quarto, 1609, reads,

" Mock not thy affect, the untraded EARTH."

These passages are very curious. In the first instance, "I task "the EARTH to the like," the reading EARTH is certainly right, and probably means, 'I impose the same task on the EARTH in having my Gage thrown upon it, as Percy has done by throwing his Gage.' In the latter passage the mind of the Poet is occupied by the same train of ideas, the Gauntlet and the Glove of Defiance; and here too the word EARTH is adopted. I do not understand the meaning of the latter passage; yet we must own, I imagine, from this coincidence, that EARTH is the true reading. Mr. Steevens has quoted a curious line from Warner's Albion's England:

" Lo, here my gage, (He Terr'd his glove,) thou know'st the victor's meed."

To Terre the glove, as he supposes, was to dash it on the Earth. This is certainly curious; though we cannot as I suppose, imagine, that Oath was connected with the Earth under this idea. I must add, however, that the Gothic Aiths, Juramentum,

occurs

OCCURS in the same column of Lye's Saxon Dictionary with the Gothic AIRTHA, Terra. In the same column we have the Saxon AITHAN, Eliminare, Exterminare, which means, I imagine, To EARTH out, or to drive out from a certain EARTH or Place. We have likewise the Gothic AISTAN, Revereri, and the Gothic AITHEI, Mater. Whether AISTAN belongs to the name for a Mother, I cannot decide.

Certain words denoting Kindred, derived from the idea of the Base — Foundation — Stem—Stock, &c.

ATTA — ATHAIR — OZHA, &c. &c. &c. &c. (Greek and Goth. Ir. Scl., &c. &c.) Father.

AITHEL (Goth.) Mother.

AITHA. (Goth.) EATH.

ACH. (Welsh,) A Stem, or Pedigree, a Daughter.

ICS. (Heb.) To number by

Families.

ACC. (Chald.) To Join, connect, consociate.

AC. (Heb.) A Brother. — A Hearth.

ACA — ACH. (Syr. and Arab.)

AIC. (Gal.) A Tribe, Family.

AICE. (Gal.) A Prop.

AICDE. (Galic,) A Building,

Foundation.

AIGHE. (Gal.) A Beam, Prop:—

Stout, Valiant.

Ac. (Gal.) A Son.

UIOS. (Gr.) A Son.

ACA-Damh. (Gal.) An

Aca-Demy, &c. Where Sons or Youth receive Learning.

IN Gothic, as we perceive, AITHEI is Mother; and in the same Language ATTA is Father. We shall see, in the progress of these discussions, that the name for a Father belongs to the Element ^T, through a great variety of Languages; as in the Greek ATTA, (Vox, quâ juniores Senes appellant, sodes, Amabo, Pater, Lat. ATTE, Senes,) the Irish ATHAIR, the Sclavonic OZHA,

signifies what rises from the same Ach, (Welsh,) Stock, Stem. The preceding term in Mr. Parkhurst's Lexicon to The ACC, To join, connect, &c., is The ACD, or The ICD, which signifies "To Unite, Make one.—Also Compactly, Firmly, Wholly.—"As a N. The ACD, "One, the first, a certain one." The Hebrew The ACD belongs to the terms for One, as the Arabic Add, the Chaldee The CD, the Syriac HD, the Æthiopic ACD, the Coptic and Sahidic Houit, Houid, the Gipsey Tek, the Persian Lek, the English Ace, with its parallels, the Greek Eis, (Ec.) &c. These terms may be considered as belonging to the words now under discussion, and likewise to a great race of words, to be found through the whole compass of Language, denoting Being or Existence, such as Is, Hic, (Lat.) It, (Eng.) &c. &c., which I shew to be derived from the idea of what is Established in a certain Spot—what is Placed—Situated—or Is.

The succeeding terms in Mr. Parkhurst's Lexicon to TITH ACC, To join, &c., are the ACZ, "To Catch, lay hold on."-אחר ACR, Behind, and אחר AT, " As a N. or Particle, In an "inclined posture." The difficulty about "THE ACR consists in determining, whether it belongs to the Element ^C or CR; and the same difficulty occurs in the Greek Eskara, (Es xueu, Perhaps the ^C and CR may be both significant. Hebrew AN AT means what Inclines to the Low situation of the EArTH. In the same opening of Mr. Parkhurst's Lexicon, I find * AI, which I have considered to be quasi AJ, and which signifies "A Settlement, habitation," where we are directly brought to the idea of the Spot of Ground, on which a Person is Established— Fixed—Settled, &cc. This word I have fully explained on a former occasion; and I have observed, that it belongs to the Celtic Ai, Aoi, quasi AJ, AoJ, signifying "A Region, tract, or territory.--"Inheritance of Land, Possessions."

In the same column of Mr. Shaw's Dictionary, where these words

ACHA. (Gal.) The Mound, or Bank.

AKTE—OCHTHE. (Greek,) The Bank or Shore—as the Supporting Mound or Earth.

AIK. (Arab.) The Sea-side, shore, coast.

Ochthos. (Gr.) The Shore: the Heap of Earth.

Achthos. (Gr.) The Heap or Load of Earth.

Ocheo, (Greek,) To Sustain,—Carry.

Ocheuo. (Gr.) Admissarium Admitto, vel Sustineo, i.e. To Sustain, or Carry.

THE Greek AKTE, (Arty, Littus; - Farina, Fruges-Sambucus,) the Shore, may be referred to Acha, "The Mound or Bank," as meaning the Ground or Land of the Shores or Banks, forming a Firm barrier or Support against the Waters. In the sense of Farina, Fruges, we are brought directly to this Spot, under the idea of what is the Produce of the Ground. Whence the sense of Sambucus is derived I cannot decide. Martinius tells us, under Sambucus, that the Ebulus is called Xauanary, "tanquam Humilis "Sambucus;" which would lead us to suppose, that AKTE, (ARTY,) meant the Low or Ground Plant. In Arabic, Aik is "The " Sea-side, the shore, coast." The Greek Оситив, (Охон, Ripa, Ora,) seems to be only another form of Akte, (Arty); and in Ochthos, (Οχθος, Littus; — Terræ tumulus, locus editus, collis,) signifying the Heap of EARTH, we are again brought to the same In the adjacent word Ocheo, (Oxew, Veho, Porto, Sustineo, Suffero,) we see directly the idea of that, which Bears—Supports The term preceding this in my Greek Vocabulary, or Sustains. Ocheuo, (Oxeum, Admissarium admitto; — Coeo, Ineo, Subagito,) which is considered as a Root, is properly applied to the Female, and means the same as Ocheo, (Oxea, Veho,) To Carry. Ride

may belong to the terms denoting Being — This or That Distinguished Being or Object, by way of eminence.

The Greek Есно, (Ехи, Habeo, Possideo, Teneo, Obtineo; — Sustineo; - Resisto, Obsisto; - Cohibeo, Reprimo; - Cingo, Circumdo; — Habito, Incolo, &c.,) contains the various senses, belonging to the race of words, which I have before examined, and which I am now explaining. Есно, (Εχω,) signifies to EArth, or, under another form, Erch—To Possess a certain Spot or Place of EARTH, or Ech, if I may so say. We perceive, that it signifies "Incolo, Habito;" in which it agrees with the Saxon verb EARDian, Habitare, Incolere, belonging directly to EARD, EARTH.—Echo, (Exw.) in the sense of Possideo, is connected with Ez-omai, (EZouau, Sedeo,) the Appropriate Fixed Seat, or Spot, as Possideo itself is connected with Sedes—the Seat. We perceive, how Есно, (Ехи,) contains the sense of the Seat—or certain Possessed, Fixed Spot, under the idea of the Base-or Firm Position, when it signifies To Sustain or Support, Sustineo; and we again see the idea of Firmness or Strength in the sense of Resisto, Obsisto, - Cohibeo, Reprimo, &c. Let us mark the Sisto in the explanatory words 'Re-Sisto - Ob-Sisto,' where we have the same metaphor of the Firm Seat, or Situation. In the sense of Cingo - Circumdo, we have the Appropriate - Fixed Spot or Possession, under the idea of the Enclosure, as in YARD - WARD, &c. (Eng.) Erkos, (Equos, Sepes,) belonging to the form Earth. Есно, (Ехи, Cingo,) in the sense of the Enclosure, coincides more directly in form with HEDGE, &c. The sense of Proximity is often derived from that of Holding fast any thing, or to any thing - of Adhering to any thing; and hence we have, as one of the meanings of Echo, (Exw.) "Prehendo, atque prehensum teneo, " Adhæreo, Conjunctus sum alicui, loco, sectæ," &c.; and Echomenos, (Exoussus,) is explained by " Proxime, Contigue." Hence

Words denoting the Base or Foundation, the Surface, &c. &c., considered either as the Bottom, or Top.

UACHdar. (Gal.) The Top, Surface.

Uas. (Gal.) Above.

UASAL. (Gal.) Noble, Well Born.

Asil. (Arabic,) Foundation, Source, &c., Race, Birth, &c., Firm, Radical.

Ach-Uch. (Welsh,) Above.

Is. (Welsh,) Below, Under.

ISEL. (Welsh,) Low.

Isos—Æguus. (Greek, Latin,)

Level, or Equal as with the Ground, Level, Equal, Alike in general.

ÆQUO. (Lat.) To "Level or Equal with the Ground."

Iso-Pedon. (Gr.) A Plain or Level Ground.

ÆQUOR. (Lat.) "A Plain or "Level Superficies. The "Earth."

EESSA—EETTA. (Gr.) The Low Spot, Bringing Low.

Esssaomai. (Gr.) To be Laid Low, To be Inferior, Vanquished.

Esk-atos, Ust-eros, Ust-atos. (Gr.) The Lowest.

ESKARA. (Gr.) The *Hearth*, Base, &c.

In Mr. Shaw's Galic and Irish Dictionary, Uachdar signifies "The Top, Surface, cream, Summit, upper part." In the same column of Mr. Shaw's Dictionary we have "Ua. From, of, "a descendant, grandchild, commonly in English written O, as "O'Connor, O'Neil, O'Brian." The Ua is quasi Uach, and belongs to Ac, (Gal.) A Son, Ach, (Welsh,) "A Stem, Pedigree, "the lineage of one's Ancestors," as derived from the same Foundation, Stem, Stock. We shall now understand the origin of the Greek Uios, Uieus, (Tios, Tieus,) where we have the true form; but in the oblique case Uiou, Uii, (Tiou, Tu,) the Radical consonant

Arabic اصل As, (the two first letters in اصل Asil,) which Mr. Richardson explains by "The Root, Origin, Foundation." Hence is derived اسلام ESLAM, or ISLAM, " The True or orthodox faith, "among the Mahometans." The original sense of the word is that of well Founded or Grounded. Another meaning of the term is "Being in Health, peace, and safety." The two first letters of this word is () As, or Uss, denoting "A Foundation, Basis," the very term, which has conducted me to this vein of discussion. The Arabic Eslam is Es-Slam or Salam. To Slam or Salam belongs the familiar term of Salutation among the Arabs, , , , , SELAM, "A Salutation. - Peace, Safety. - Saluting, Wishing "Health, or Peace." We shall now understand, that SALAM is only another form of SALVEO,—SALVE Domine. The m or v is an organical addition to the L. The simple form is in SALus, SALutation, &c., all belonging to the Solum, meaning that which is Solid—Firm—or Founded. Health—Hail—Whole, &c. belong to Salus, &c., when the sound of s is weak.

The Greek Isos, (1005, Æqualis, Par,) and the Latin Æquus, might be referred to the Celtic Is, &c., Below; though there is some difficulty in the case. They might have signified in their original sense, To Level with the Ground, as we express it; and hence Level in general. In the compound Iso-Pedon, (Iconedon, Planities,) from Isos, (Ioos,) and Pedon, (Medov,) the Ground, the word is brought to its original Spot. It is applied often, as it should seem on this hypothesis, with great propriety to a Balance, where the weights tend to the Ground; and in the compounds Isoelkes or Isoklines, Isorropeo, (Isoelkes, par pondere, Isoelkes, Æqualiter vergens, de Æquilibrio, Ισορροπεω, Æquilibrium facio,) from Isos and Elko-Klino, Repo, (Elka, Traho, Klina, Vergo, Peru, Vergo,) Tending equally Downwards; the term still retains, as we might suppose, its original peculiarity of meaning. But in the Latin Æquus, and its derivatives, the force of this meaning appears

In examining the word Eskatos, (Eoxatos,) I cast my eyes on: Estia, (Estia, Focus, Lar; — Domus; —Vesta, Dea,) the Hearth, where we unequivocally see the idea of the Place, upon the Ground or EARTH, and Eskara, (Eoxaga, Focus et Craticula in foco; — Basis, &c. — Crusta ex adustione vulneri adhærens,) where we have a similar idea. The Esk in Eskara, (Εσχαρα,) has the same sense, I believe, as in Eskatos, (Εσχατος); but I cannot decide, whether the Kar in Eskara, or Esk-Kara, be significant or not. It may belong to the Element KR, denoting the Ground It is even possible, that the Esk or Surface, to Scar, &c. &c. may not be significant in this word, but that the E may be only a prefix. Yet my first conjecture is, I think, right. Uster-os, (Totagos,) is open to the same difficulty; and to these we may add Askaris, (Ασχαρις, Genus Lumbricorum,) Asirakos, (Ασιρακος, Locustæ genus, carens pinnis,) Askaros, Askera, (Asuagos, Calceorum, seu Sandaliorum genus, Ασκερα, Calceamenti Attici genus, &c.) terms which appear to be derived from the Ground, as the names of Animals crawling on the Ground, and of Shoes, striking against the Ground.

Terms derived from the idea of that, which is Placed—
Settled—that which Rests or Reposes in the same spot:—
Hence, Rest—Repose—Quiet, &c.

OTIUM—EASE, EATH, AISE—AGIO, ADAGIO, (Lat. Eng. Fr. Ital.) Rest, the act of Reposing, or being Settled in

a certain Spot. Being in a Settled state.

Eudo. (Greek,) To Sleep—To Rest—Repose.

As-Aish. (Pers.) Ease, Rest, Repose.

Asaish Dashten. (Pers.) To enjoy Tranquillity—To Abide, Dwell, Stop, Stand still.

EES-UCHIA. (Gr.) Quiet, Tranquillity.

EEKA. (Gr.) Quietly, &c.

Junius has the term Eath, signifying the same as Easy, Facilis, which he derives from Ethos (E605,) Mos. In Saxon, Eath is Facilis, from whence is taken Un-Eath, (Sax.) as Skinner justly observes, who refers the word in Chaucer, Unneth, Vix, to this term. Ease occurs in the same column of Skinner's Dictionary with Earth, which will more strongly suggest to us, that Ease and Eath belong to the idea of being Earthed, or of being Placed — Fixed, &c., or of Resting — Reposing — Remaining on a certain Spot of Earth.—It is curious, that Shakspeare uses Ease, as connected with a term, which most strongly expresses the idea of being Fixed in a certain Spot—or Earth:

- "And duller should'st thou be than the fat weed,
- "That Roots itself in EASE on Lethe wharf,
- "Would'st thou not stir in this." (Ham. A. I. S. 5.)

In the Poems, attributed to Rowley, Ethie is applied to Lying down, or Reposing on a Bed:

- " As when a bordelier onn ETHIE bedde,
- "Tyr'd with the laboures maynt of sweltrie daie,
- "Yn slepeis bosom laieth hys deft headde."

(The Storie of W. Canynge, v. 85. &c.)

We shall now understand, that the Greek Eudo, (Eudo, Dormio,) signifies, To Rest or Repose; and shall perceive, how it is connected with Edos, (Edos, Sedes,) &c.—Aise in French signifies "Une Region." I shew in another place, that Asia, the quarter of the Globe, means simply the Land or Country. In barbarous Latin, Asiatim occurs in a passage, where prayers are ordered to be read "Non cursim, ac festinanter, sed Asiatim, et tractim;" which Menage has explained by Posement in French, and Adagio in Italian, the corresponding word to Agio, Aise, &c. Let us mark the word Posement, which contains precisely the same metaphor, and belongs, we know, to Poser, "To lay, Set, Put, Place,—to Rest," &c.

There

another compound, as in As-Aish. Lye produces, under the English Ease, the Gothic Azers, Facilis, the Irish Easgaidh, and the Armoric Æs. The Gothic Azetizo, Facilius, succeeds, in Lye's Dictionary, another Gothic word, Azjo, Cinis, Ashes, where we are brought to the EARTH, probably under the idea of Dirt. Lhuyd, under Facilis, produces the Welsh Hawdd, "Easy to be "done, very feasible." I must leave the Celtic Scholars to decide, whether the Celtic words produced above belong to the train of ideas, which I am now unfolding. In the same opening of Mr. Richards' Dictionary, where this Welsh word is found, I see HEDD, Peace, and Heddwch, "Peace, quietness, tranquillity." To this latter term he has referred the Greek Esychia, (Houxia, Quies.) This word must be added to the terms now under discussion, as I have before suggested. The Greek Eesuchos (Houxos, Tranquillus, Otiosus,) is used in its genuine sense, when it is applied in such phrases as these, Houzou Gasono' en' annais, &c. Otiosi Sedent ad littora, &c. (Euripid. Hecub. 35. 6.) where we see the idea of being Stationary in a certain Spot. Sedatus, (Lat.) "Appeased, " Quieted; Smooth, Still; Sober, Sedate, and Sedate, (Lat.) "Quietly, Stilly, Calmly, Patiently," as they are explained by R. Ainsworth, have a similar meaning, and belong, we know, to Sedes. I shall shew in a future Volume, that Placidus, Placid, is derived from Place for the same reason, and that it is brought in contact with the original idea in such phrases as Sedibus Placidis. Perhaps the ES-YCh in these words is the same compound, as in the Persian AS-AISH and AS-UDGI. The Greek EEKA, (Haz, Leniter, quiete, sensim, submisse,) must be referred to a similar idea.

EETHOS. (Greek.) The iFixed Place or Spot of Ground for Dwelling — Appropriate and Peculiar to each person:

And hence, what is Appropriate or Peculiar to each person, as certain Habits of Life, manners, &c.

Ethos. (Greek.) Manners—Customs, Peculiar to certain Persons.

Eетно. (Gr.:) To Strain, Sift; that is, To Separate things according to their Peculiar Sort—Quality—Property—То Sort.

In the same column of my Greek Vocabulary, where HEE occurs, I find ΕΕΤΗΟS, (Ηθος, Domicilium, mansio, sedes consuetæ,) where we have directly the Fixed, Established Spot or Place-Appropriate or Peculiar to each person, as in Edos, (Edos, Sedes, &c.) Eethos, (Hoos, Ingenium, indoles, morum quædam proprietas,) likewise denotes the Fixed-Settled Manners or Habits, Appropriate to each person, derived from the Fixed-Appropriate The ordinary Vocabularies consider these words as separate The Greek Ethos, (Elos, Ritus, Mos, Consuetudo,) belongs to ΕΕΤΗΟS, Ηθος, Sedes Consuetæ, et Mores Consueti, or, as it might be explained, Quod unicuique Stabile vel Proprium manet, sive The German Sitte has a similar meaning of sit Domus, seu mos. "Custom, Fashion, Mode, &c .- Sitten-lehre, the Ethics, or Mo-"rals, &c." as my Lexicographer explains it, with a similar relation to Sitz, and Sitzen, corresponding with our words Seat, and My Lexicographer explains Sittsam, among other things, by "Well-mannered, -Stayed, Sedate, -of good Morals, -Composed." The form of Ethos, $(E\thetaos$,) will perhaps seem more directly to connect itself with EDOS, (ESOS, Sedes, &c.) The succeeding word to Ethos, (Efos,) in my Greek Vocabulary, is Ethou, which is said to be put for Етнеѕо. ETHeso, from Tithemi to Place, (Εθε, pro Εθεσο, à Τιθημι,) where we see the true notion, and the original form, not derived from construction. In Theo, (Oew, Pono,) To Place, the vowel breathing before the T has been lost, or the word was formed by the Greeks in order to agree with the analogy of Theso, (Onow.) An adjacent word to Ethos, (Elos,) is Ethnos, (Elvos, Gens, Natio,) which coincides with EDEN, ADEN, (Heb. and Arab.) the Permanent Dwelling, as I have before shewn. An adjacent word in my Greek Vocabulary to Eethos, (HOos,) is Eetho, (HOw, Colo,) To Strain, which may perhaps belong to Eethos, (H805, Proprius Locus, et Propria Qualitas,) the Proper or Peculiar Spot or Quality, under the idea of Separating things into their due Proper Places, according to their Peculiar Properties-Qualities, or Sorts. short, Εετμο (Hθω,) signifies To Place—To Appropriate, or To Proper, (if I may so express it,) whether it relates to Separation by Placing things in their Proper Spot, or by arranging things according to their Proper Quality. — If Eetho, (HOw,) relates more immediately to Eethos, (Hoos, Natura,) under the sense of Sort or Quality; then it would signify, as we express it, To Sort. us mark Colo, Colare, which belongs to Colo, Colere, and to Solum, under the idea of Tilling, or Meliorating, Dressing, Cleansing, &c. The AITA in the Greek di-AITA, (Διαιτα, Vitæ seu vivendi institutum, Vitæ ratio, Vitæ genus ;—Habitatio, Domicilium, Cubiculum,) the Certain Spot for Habitation, and the Certain Mode of Life, seems to belong to ΕΕΤΗΟS, (Ηθος.) From Diaita, (Διαιτα,) the term in Modern Languages, Diet, is, we know, derived. we suppose the verb Διαιταω to have been the original, the Di or Dia might belong to the preposition $\Delta \omega$.—Before I quit these terms, denoting certain Modes and Habits from the Fixed Appropriate Dwelling Spot, I must remind the Reader, that the very explanatory term Habits is derived from the same idea—from Habito, To Dwell.

Terms signifying To Heal, Cure, &c. derived from the idea of Making Firm—Stout—Strong, &c., or Establishing or Setting up, the Health—Constitution, &c., as on a Firm Base or Foundation.

As. (Arab.) A Base, or Foundation.

Asa. (Arab.) Healing,—Composing or Settling differences.

IACH-ACH. (Welsh,) A Stem, &c.

IACH. (W.) Healthful, Sound,
Whole, &c.

IACHAU. (W.) To Heal, Cure.

Ak-eomai. (Greek.) To Heal, Cure.

UGIES. (Gr.) Sound, Whole, Healthy.

ISH. (Heb.) To Save.

Jesus. The Saviour.

Icam-Ic. (Gal.) To Heal, Cure; A Cure, &c.

IKLUS. (Gal.) Healing.

UKELOS. (Gr.) Whole.

Asil. (Arab.) Foundation, Firm, Permanent.

Osaquille. (Biscany.) A Physician.

Æscul-Apius.

AscL-Epius.

WE shall find certain terms, belonging to the Element ^C, ^D, &c. which signify To Heal, Cure, &c., and which are derived, as I imagine, from the notion of the Base—or Foundation. These ideas may appear on the first view to be remote and dissimilar; yet we shall soon acknowledge that they are intimately blended with each other. — To Heal, or To Cure, &c. is, To make Firm — Stout and Strong—To Establish the Health, or to Set up the Constitution, according to our expression, as on a Firm Base or Foundation. We have seen the Arabic As signifying "A Foundation, Basis;" and in the same column of Mr. Richardson's Dictionary we have AsA, "Curing, Healing.—Composing differences, "making peace.—Leaving Remains of meat." These words belong

belong to each other. We here see, that the sense of Healing and Composing differences is derived from the idea of Settling or Establishing, as on a Base or Foundation, what is weak or unstable. The sense of Remains of Meat belongs to the same idea of a Base, on which things Remain - Last - Continue, &c. Now precisely the same union of the Base, and the sense of Healing; occurs in the dialects of the Celtic. Ach in Welsh means "A.Stem or " Pedigree; the Lineage of one's ancestors." This word is used in its due sense, when it means the Stem, that is, the Base and Foundation, from which things or persons spring. IACH in the same Language is used "commonly for Ach," says Mr. Richards; and in the article of that writer's Dictionary succeeding this term, we have "IACH, Healthful, sound, whole, wholesome, in health. "So in Arm. Also not damaged, corrupted or spoiled." IACHAU is the succeeding term, which Mr. Richards explains by "To Heal, "Cure, or Remedy." To these words he refers the Greek Ugies, (Tying, Sanus,) and Akeomai, and Iaomai, (Akeomai, Iaomai, Sano.) We shall at once agree, that Ugies, and Akeomai, (Tying, Akeopai,) belong to IACHau; and yet on this latter Greek word some difficulty might be raised. The Greek Akeomai, (Akeomai, Sano, medeor, medicor, - metaph. Expio, sarcio, resarcio, &c.) means, To Heal, and To Repair or Mend torn garments, &c. Axusbas va. Supp ρωγετα, υποδηκαται Now Akestra, (Ακεστρα, Acus,) means a Needle; which may belong to Ake, (Azy, Acies ferri,) the sharp-pointed instrument—the Acus. I shall show in another place that AKE (Ace) and Aouo, &c. belong to the idea of Stirring up the Surface of the EARTH, -Occandi Terram. Here another difficulty might be suggested. I have supposed, that ORD, (Sax.) ARDis (Aedic, Cuspis teli,) denote the Point of any Instrument, from the simple idea of the Base - Surface or Top, without any notion of Stirring. up that Surface; and AKE, (Aky,) might be derived from a similar idea. In such a case, the EDGE of an Instrument, and the EDGE

EDGE of the Water, the Extreme part, would agree in their original idea. Still however I imagine, that AKE, (AKN,) and Acuo, &c. belong to Occo, &c.; yet I should not omit observing, that AKE, (AKN,) as it appears in the ordinary Vocabulary of Hederic, is interpreted in one sense by Quies, where we have only the idea of the Base, or Surface, and the Stability annexed to it, and not that of the Surface, as combined with the notion of agitation.—Whatever we may think of AKeomai, (AKEOMAI,) we shall be satisfied, that IACHAU, and Ugies, (Tyins,) belong to the metaphor of Settling, as on a due Base or Foundation, what is Unstable—Weak, &c. &c.—In our phrase, "To Set up a person," as applied to Health, we have a similar metaphor. The Welsh Assio, "To Solder "or Sodder, to join, fasten, or glue together," and IASSU, bearing the same meaning, must be referred to IACHU, To Heal.

The Welsh Lexicographers refer IACHAU to the Hebrew ISH, or ISG, which signifies To "Preserve or Deliver." Whether they should be referred to each other, I cannot decide. Mr. Parkhurst refers to the Hebrew word the Greek Soo, Sozo, Soter, (Σοω, Σωζω, Salvo, Servo, Σωτης, Salvator,) which appear to belong to the Element ST. From this Hebrew term is acknowledged to be derived the name Jesus, IEES-ous, (19085,) &c. &c. the Saviour or 'Deliverer, and hence we have Joshua, &c. The Hebrew ISH should probably however be referred to the race of words now under discussion. The preceding term in Mr. Parkhurst's Lexicon, ישו ISN, "To sleep, to be in a sound sleep," certainly belongs to און the Pillar, Eden, the Place of Settlement, &c. The original idea of the word is that of Being Laid down or Settled in a certain fixed Place, Spot or Situation. Mr. Parkhurst explains it in one sense by "Laid up in store, Laid by or asleep, " in a quiet, undisturbed state;" and Taylor says, that it is applied to things, which "have Continued long in the same State " or Situation, unaltered, unmeddled with, unmolested." HH preceding

preceding word to this, in Mr. Parkhurst's Lexicon, is Der ISM, which signifies "To Place, Set, Put," where IS in IS-SM belongs to the race of words before us. The preceding term to this is Der IST, "To Extend, Stretch out, as a sceptre," says Mr. Parkhurst, which means only 'To Place or Put out.' The term before this is Tim' ISH, which denotes "Is, are, Was, Were," or, Is—Are Placed—Situated, &c.

We have seen, that the Greek Iaomai, (Iaouai, Sano,) has been compared with the Welsh IACHAU; and if it belongs to this Celtic term, the radical form is to be seen in Insomai, (Iarouau, fut.) In Mr. Shaw's Galic and Irish Dictionary we have Icam, "To "Heal, Cure, Supply, Eek," and Ic, "A Cure, remedy, supply, "Eek." An adjacent word is Iclus, "Healing by Herbs." seems to be a compound of Ic and CL, corresponding with AsiL, Firm, Established. In the Language of Biscany, OSAGUILLE, is a Physician which belongs to Iklus. Hervas, in his work on Languages, has the following remark: "Medico dicesi Osaguille " da Osatu, Sanare, e da Guille verbale di Eguin, fare: onde "OSAGUILLE colui, che fa sanare." (Catalogo delle Lingue by Hervas, p. 204.) Hence is derived our name Asgill; and hence the Æscul in the name of Æscul-Apius. The Apius in this word seems to be the same as Iapis in Virgil, which is a name, as I imagine, derived from his Art. In AscL-Epius we have another form of this word. In Greek, UKELOS, (TREAOS, Sanus,) agrees with the form Iklus, Asil.—We must, I think, own, that Apius and Iapis belong to each other; though I cannot satisfy myself respecting the source, from which they are derived. In Arabic, lul Asa is "A Physician, a Surgeon," where we have the simpler form; and the same word signifies "A pillar, column," where we are brought to the original idea of that which makes Firm-Establishes, &c. as on a Sound Base. In the same page of Mr. Richardson's Dictionary we have the Arabic اسية Asiyet, "A " Female

"Female Physician or Surgeon, &c.—A Column, large pillar, "prop, support, the main beam of a House," &c.—Asis, Important Asu, "Curing, Healing.—Composing differences.—Leaving Remains (at dinner, &c.)," another form of Asa, Impoduced above; and the Persian Impoduced from the idea of making any thing to Rest, or to remain Fixed, as on a Base or Foundation, as I have before observed.

Words denoting Time or Duration, derived from the idea of that which IS, or Endures; or of that which is Set—Established, &c., as on a Base or Foundation; so as to Last—Continue—Endure, &c.

As. (Arab.) The Foundation,
Basis: Earliest age, Eternity.
Age. (Eng.) What Lasts, Remains, Endures.
Aei, quasi Aej. (Gr.) Always,
for
Ay. (Eng.) Ever.
Aye—Yes. (Eng.) It Is.
ÆTAS, ÆTERNUS. (Lat.)
OED. (Welsh,) Time, a Set
Time to come.
QEDD. (Welsh,) Was.

OES. (Welsh,) An Age; There OESTAD. (Welsh,) Constant. EADH. (Gal.) Time, Yea, Yes. Yog, (Sanscrit,) An Age. OED, OAT, Uz, Aos, Aois, AIDHNE, ETTE. (Celt.) Ætas. Is, Is-Is. (Heb.) What Is, Old, Ancient, Og-Ug-ios. (Gr.) Old. AD-AG-ium. (Lat.) The Old Saying. Eca. (Sax.) Æternus. Eтos. (Gr.) A Year. ETOS - ETEOS. (Gr.) True what is Well Founded.

Etumos, or ET-tumos. (Greek,)

True.

Etymology.

I SHALL produce in this article, terms belonging to our Element ^C, ^D, ^G, &c., which relate to Time, and which, as I conceive, are derived from the idea of the Base or Foundation, or of Settling-Establishing on or in a certain Place—Situation—Position—State, Here again these notions appear very remote from each other; but we shall readily understand, how intimately they are blended in the same train of ideas. In whatever point of view we consider the subject, we shall be brought to the same point. What is Fixed or Established, as on a Base or Foundation, is best calculated To Remain - Last or Endure; and from the idea of that which Lasts or Endures, we are brought directly to the notion of Time. — We know, that the very term Duration, which is applied to Time, belongs to a similar metaphor of that, which Lasts—or Continues, &c., as things, which are Firm—Solid, &c. This very union of ideas, which I have conceived to exist between the Base and Time, is to be found, as we have seen, in an Arabic word, which I have thought it necessary to produce on various In this Language, the word (M) As or Uss signifies occasions. in its first sense, as Mr. Richardson explains it, "A Foundation, "Basis." In other senses it denotes "The Heart of Man (as " being the Foundation of Life.) The Beginning of any thing.— " The Earliest Age, Eternity.—The Cinders or Ashes Remaining." In the sense of the "Earliest Age, Eternity," we see the idea of Time or Duration, - Past as well as Future, - derived from the primary sense of the Base or Foundation.

The words adopted in Mr. Richardson's explanation, AGE and Eternus, must be referred to the same idea as Uss in Arabic. The Etymologists, under AGE, refer us to the French Age, the Saxon A, Æwa, the Runic and Danish Æ, Semper, Æternum, the Greek Aei, (Au); and they record, moreover, the English Ay. Where we see the vowel Breathing only, we must conclude that the Radical Consonant has been lost; though it may not be easy

to decide, what that Consonant might have been; but in the Greek Aci, and the English Ay, or Aye, the I and Y remain as the record of the lost consonant J, quasi Aej, Aje. The Etymologists refer us, under Ay, Semper, to the Gothic Aiw, the Saxon A, Awa, the Danish Æ, the Belgic Ewe, Euwe, &c., and the Greek Aion, (ALWV, Ævum, Æternitas, Seculum,) which is quasi Ajon. We shall find, that the Element 'N denotes Time; but it seems that Aion, $(A\omega v_i)$ is a compound of Aei, and On, (Ωv_i) Being for Ay.' There is a difficulty respecting some of the words, where the vowel Breathing only remains, as Æwa, &c., in deciding whether the Consonant \mathcal{F} or V is lost; since the Element 'V denotes Time, as in the Latin Evum. But in Ay or Aye the matter is evident, as the Υ remains to record the lost Υ . We shall now understand, that Ay, the term of Assent, and Ay, denoting Time, belong to a similar idea. Ay, the term of Assent, quasi AJ, conveys the same idea as Est or IS, It IS—or It IS so and so—It IS true: and Ay or AyE, denoting Time, quasi Aj, means likewise IS—It IS—It Remains—Endures— Lasts - Continues, &c. In the English Yea, "Sic, certe, sane, "Ita Est," and the corresponding terms, Gea, (Sax.) Ga, Gai, (Goth.) Ja, (Germ. and Swed.) Ie, Ya, (Wel. Arm.) the vowel breathing succeeds the Consonant of the Radical G, J; but in YES, we have the true form Is, Est, &c. The Latin A10, or, as it should be, Ajo, contains the same idea as the English Aye or YES; quasi 'I AYE a thing—I YES—Is, (Eng.) EST, (Lat.) 'a thing,' if I may so express it; —' I assert a thing Is so and so.' The Etymologists have seen this idea, and have accordingly justly referred the word to the Hebrew הזה HIA, or Најан, " Fuit, Est, In the explanatory phrase Ita est, we have terms belonging to the same race. ITA, So, is nothing but EsT — Is, It Is—so and so; or if ITA be not considered as the verb Est, it belongs to the same idea, to IT—ID, &c. This—That—mode or manner.

manner. Est is the verb of *Position* or *Being*, expressing the Position of the Thing—the ID—IT, the *Placed*, or of the Is—the *Being*, *Existing*, and ITA the Position or State of the Thing or Being, so placed and Existing. In, That thing—the *Placed*, Est, Is (*Placed*), ITA, Thus, in such a *Place* or *Position*; *Positum Ponitur* in *Positione*—hâc vel illâ, &c.

I have before observed, that the term Existence, which is derived, we know, from Sisto, belongs to the same metaphor of Place or Position; and the ID Est ITA I conceive to be precisely the same, as that, which we might perhaps be permitted to express by 'Existens Existit in Existentia.' This mode of considering the relation between such terms as EsT—ID and ITA, will sufficiently convey to the Reader my conception respecting the nature of their formation.—We shall find, that the race of words denoting Time is connected with such terms, as EsT-ID, &c. &c., as denoting Existence - Situation - State, under the idea of Continuance - or Duration in that State; and I shall not stop to enquire, whether such terms denoting Duration belong to the first idea of Existence, as in Est, or to its secondary Demonstrative idea, expressed by In.—In short, we shall agree, that words denoting Time would be naturally connected with words denoting Existence; since we cannot so properly express all the three divisions of Time — Present, Past, and To Come, as by the verb of Existence, as the 'Tempus, quod Est - Erit aut Fuit.' We all moreover agree, that the idea of Existence from Sisto is directly connected with that of Settling—Situating—Placing, as on a Base or Foundation; and thus we see, how words denoting Time may be derived from this source. I must again repeat, that I shall not stop to adjust on every occasion the links of the chain, by which such words are connected with the original notion.

The Latin Æternus is derived from Ætas, and Ætas is supposed to be quasi Ævitas from Ævum, though some derive

it from ETos, (ETos, Annus,) a term belonging to the same race. In Æxernus, Eternal, we see the genuine idea of a Long-Continued R. Ainsworth explains it by "(1.) Eternal. (2.) Continual, "Perpetual, (3.) Lasting, of Long Continuance, During life;" and ÆTAS is applied in its primitive turn of meaning, when it denotes "A Long indefinite Space of Time," as R. Ainsworth explains it in one of its senses. In Welsh, OEs is "An Age, or "the whole time of a man's life;" and OED, "Time, an appointed "time to come, a set day to come. A delaying or putting off, "a delaying of the Time;" where we see likewise the idea of a Long Continuance, or of Duration. In the same Language, OES means "There Is, or Is there?" where we have the very idea, with which I suppose the sense of Time to be connected. The succeeding word to OES, There Is, in Mr. Richards' Dictionary, is OEstad, "Constant, Constantly, Always;" where we might-doubt to what word it should be immediately referred, whether to OES, Time, or OES, There Is; -What Is-Remains-Endures, &c., from which likewise we see the union of these ideas. OEDD means in Welsh, "He (she or it) Was." Mr. Richards has another article for OED, Age; and we find likewise OEDRAN, "Aged, stricken in years," where we have the same I have supposed, that these terms for form as in ÆTERN-us. Time belong to the Element ^C, ^D, &c., under the same metaphor, which we see in Existo from Sisto. Let us mark the explanation to OED, "A Set Day to some," where in Set we have a term belonging to Sisto; and let us note, moreover, the explanation of Æternus by Continual. R. Ainsworth interprets Sisto, in the first sense, by "To Set," &c., and in the second, by "To "Continue." These coincidences are worthy of our notice, if we need any additional proofs for the confirmation of my hypo-In the Galic, Aois is "Age—EATA, Old, Ancient— "EADH, Time, Opportunity, Season." This latter word EADH, which

which Mr. Shaw has placed in a separate article, likewise means "Yea, Yes;" where we have the same union of ideas, and from the same cause, as in AyE, the term denoting Time, and Assent to a proposition.—To AGE, &c. belongs the Sanscrit Yug, the period of time, the AGE, &c. In Welsh, Haws is "A good "while;" and the preceding term to it in Mr. Richards' Dictionary is Hawes, "A She Ass." I have shewn, that Ass belongs to the idea conveyed by the Base or Foundation, as denoting the patient animal, which Supports — Sustains — Bears or Carries. In Lhuyd, the Celtic terms for Ætas are, "Oed, Oat, Uz, Aos, Aois, "Aidhne, Ette."

The Hebrew ישה ISH, שי IS, unequivocally shews us, how the sense of Time or Duration is derived from the idea of what IS—what Endures, or what IS—so Placed, Situated, &c., as to be During—Lasting, Continuing. This term B IS not only signifies "IS, Are, Was, Were - Subsistence, Permanency," &c.; but it means likewise, when doubled, as ששי or יששי ISS, IS-IS, " Very " old or ancient, very far advanced in years, one who has been, " or lived a great while." Mr. Parkhurst justly refers to this Hebrew word, Is, YES; and he imagines too, that IcE is a derivative. Whether Ice belongs to this race of words, under the idea of what is of a Solid Consistency, as we express it, I cannot Let us here mark the term Consistency, which we decide. know may refer to the Solidity of Ice, and which belongs, as we know likewise, to the metaphor of Establishing—Fixing, &c.— Sistendi. It is curious, that we find this very metaphor and word applied to the formation of this very substance Ice, as we all remember, in Horace: "Geluque Flumina Constiterint acuto." Let us mark, moreover, in Mr. Parkhurst's explanation, the term Subsistence, where we have the same metaphor from Sisto-such as I conceive to be attached to the Hebrew word itself. In Hebrew, את OT signifies "Time, season, opportunity," which still

still belongs to the idea of what Is or Exists, but not under the sense of Continuation, as that which Is—Lasting or Enduring: but as that, which Is now present—which now Exists, or, as we might precisely express it by a kindred word drawn from the same metaphor, Tempus, quod jam Instat—the Instant Time—This Mr. Parkhurst explains it in one sense by "At very Instant. "This time, now:" and he refers to it Ætas and Otium. to enquire in this case, whether OT belongs to the secondary sense This or That - Hoc - ID, &c., or Est, the difficulty of which I have before unfolded. We shall understand from the present discussions, in what manner these Latin words may be said to belong to the Hebrew term. The Hebrew Out. which is supposed to belong to my OT, signifies 4 To incline, "cause to incline downwards, or more to one side than another," as Mr. Parkhurst explains it. I have supposed, that the sense of Time is derived from the idea of that, which Is — Placed, Laid, as on a Base - Foundation; and the sense of Inclining downwards brings us at once to the Base, or Low situation. From this idea of Inclining or Declining downwards, the word then passes into the mense of Declining in virtue-morals, &c. The form IS-IS of the Hebrew term will remind us of the Greek OG-UG to express The same idea in the word OG-UG-ios, (apuros, Ogygius; Antiquus, Vetustus; Ab Ogyge, rege Antiquissimo.) In a former Work I have made the following observations on this word: "The te learned Editor of the Phoenissæ will now understand from what source that confusion has arisen, which he finds in ancient "writers, respecting the Gates of Thebes. ' Maxima est in " Apollodoro difficultas, qui inter Ogygias portas et Oncaïdas "diserte distinguit. Oncaïdas et Ogygias easdem portas vocari 4 auctor est Hesychius. Ογκας Αθηνας τας Ογυγιας πυλας λεγει.' "(Vide Porson. Phæniss. v. 1150.) The passage of Hesychius " is pregnant with difficulties; yet if he means to express (what " this

"this learned and accurate Critic appears to imagine,) that the " same gates were called Onkai and Ogugiai, which others have "supposed to be different, we shall find a ready solution of this " apparent contrariety. It will be instantly perceived, by repre-" senting these two words under their true forms, Ogkai or Oggai, " and Ogugiai, that one word has passed into the other by the " insertion of a vowel breathing between the consonants. A Thus " a variation, the most minute in the original sound, became an " important difference, when represented by the symbol of letters." In an article of Hesychius, adjacent to that which I have just produced, I find Ogugia, signifying the Limbs, (Oyvyia, µedy.) We shall now understand, why Ogugia may relate to what is Old, and to the Limbs. The word Substo, and its derivative Substantia, have precisely the same metaphor. The Og-Ug-ios, (Ωγυγιος,) The Old Man, is the person, "qui Substitit," who has Stood it out, if I may so express it, who has Lasted or Endured; and the Og-Ugia (Οχυγια, μελη,) The Limbs, are those things, " quæ " Substare possunt, quæ Substantiam habent," which are able to Stand it out, which are Substantial, so as to be able to Last-12 Endure, &c. We have seen, that Os, Ossis, the Bone, has been derived from a similar idea of Firmness - Strength, &c. Whetherthe Arabic عنيف Ar-Yk, "Old, Ancient, Antique, the Past,"; belongs to this race of words, I cannot decide. --- The: Latin Ap-Ag-ium, o, is precisely the same compound as in Og-Ug-ios, (Ωγυγιος,) and means the Old Saying. The Etymologists suppose, that Adagio, is so called, "quia ad Agendum apta sit;" or that it is quasi Abagio, or "Ambagio. h. e. circumagio." Eca and Ece mean Æternus; and the two phrases produced under these words bring us to the original idea, from which they were taken, as Ecu, Rest, - Eca-Setl, Perpetuum solium; where the idea of Rest and the Seat coincides with the notion of what is Situated or Settled in a certain fixed Place or Spot! Before I quit

I quit the terms denoting Old, which belong to the form ^GG, I ought to observe, that they may possibly be attached to the Element ^NG, ^NK, ^N, &c.; since we find a race of words conveying the same idea, under that form, as Antiquus, Ancient, &c. &c. These words will be considered in another place, where it will be discussed, whether these forms originally belonged to each other.

The ETOS, (ETOS, Annus,) the name for a Year, is derived from the idea of that, which Is - Lasting, Enduring, &c.; which will be unequivocally manifest from a term under the same form, Eros, or Ereos, (Eros, Verus, bonus, Eros, Verus,) True, which has the same meaning of what Is-Firm-Stable-well Founded. It is curious, that the writers of our School Vocabularies should acknowledge this radical idea in the term ETOS, (ETOS, Verus,) True; who derive it from Equi, Sum. A word under the same form, ETos, (ETOS, Frustra, temere, perfunctorie,) and its derivative Etosios, (Ετωσιος, Inanis, cassus, inutilis,) 'Vain, Futile, Idle,' seem to contain ideas, very remote from those, which I have now unfolded; but a little consideration will unravel this difficulty. I have before produced a race of words, which denote Inactivity, and which are derived from the idea of what is Laid down-Rests or Reposes, as on the Base of the Ground, in a quiet-inactive state, as Otiosus, &c. Now we perceive, that the very explanatory term *Idle* bears at once the sense annexed to these words, of Vain - Futile, and is likewise connected with this idea of Such I imagine to be the metaphorical meaning Inactivity. annexed to these words Ετος, Ετοςίος, (Ετος, Frustra, Ετωσιος, Inanis); and thus we see, that they coincide in their original idea with Eros, (Eros, Annus,) the Year, and Ereos, (Ereos, Verus,) True, as being all derived from the notion of what is Laid or Fixed, as on a Base or Foundation,—so as to Last and Endure—To be Stable and Firm, or To Rest and Repose in a state of unprofitable inactivity.

inactivity. The very term Otiosus means in one of its senses, as R. Ainsworth explains it, "Insignificant, idle, of no value, "trifling." It is marvellous to observe, how words retain their original idea, and how they continue to be attached to the objects, from which they are taken. Now it is extremely curious, that the word Etosios, (Etwowo,) is actually associated in two passages of Homer with the Ground, under the idea of Falling down, or Lying down on the Ground. In one passage, Arrows are said to fall to the Ground—Etosia, (Etwowa,) Inert, quasi Otiosa; and in another, a person is said to be Fixed to a certain Spot, like an Etosion—an Inert Lump of Earth, quasi Otiosum pondus Terræ.

*Ημιν δ' αὐτως πασιν ΕΤΩΣΙΑ πιπτει ΕΡΑΖΕ. (Il. p. v. 633.)
Nobis vero incassum omnibus Irrita cadunt in Terram.

Αλλ' ήμαι παρα νηυσιν ΕΤΩΣΙΟΝ αχθος ΑΡΟΥΡΗΣ. (Il. ε. v. 104.)
Sed sedeo apud naves Inutile pondus Terra.

This latter passage is indeed singularly curious. We cannot, I think, but perceive, that ET-Os-ios, (Ετωσιος,) is a compound from ET-os, (Ετος, Frustra,) quasi ET-ET. I have supposed, on a former occasion, that Es-Uch-os, (Ησυχος, Quietus,) is a compound of a similar kind; and I have compared it with two Persian words السون المجاهة Asa-Ish, and السون المجاهة Asa-Ish, and السون المجاهة Asa-Uch المون المجاهة (Ετησιος, Anniversarius,) Annual, we have likewise a compound from ETos, (Ετος, Annus,) the year.

To this source we must probably refer a portion of a word, expressing the art, which belongs to the nature of these discussions—Etymology. It is derived, we know, from Etumologia, Ετυμολογια, which is compounded of Etumos, (Ετυμος, Verus,) 'True,' and Logos, (Λογος,) 'Speech, Discourse, Reason, Account,' &c. It is not quite easy to decide on the original idea annexed to this word. Cicero translates it by Veriloquium, and appears to be dissatisfied

dissatisfied with the composition. A term denoting A Declaration of Truth, if that be the meaning of the word, will be considered, I imagine, as applied with more than ordinary presumption to an Art, which the Artists have supplied with no principles, and which has commonly been regarded, as the most uncertain and perplexed of all Human investigations. In the ordinary definition of Etymology, that it "Teacheth rightly to know or distinguish "words or the parts of speech," it should seem, as if the meaning of the compound was conceived to be The Truth respecting Speech. or Words., In the definitions of some, it should seem, as if Logos, (Λογος,) was supposed to signify, at the same time, a Discourse declaring something, and likewise what relates to a Discourse; so that, according to them, Etymology would signify. 'A Discourse about True Discourse or Words,' or 'on the Truth of ' Discourse or Words' - Ετυμολογία ΛΟΓΟΣ επαληθίζομενην δείκνυς την ΛΕΞΙΝ τη φυσει του πραγματος. (Eustath. apud Martin.) Some con-. ceive, that Etymon, (ETUMON,) means "Vera nominis, sive appel-"lationis, ratio, vel quæ saltem pro verâ adfertur." This, we see, is giving a very ample sense indeed to the first portion of the Perhaps the inventor of this word meant simply to express by Etumologia, (Ετυμολογια, Vera Ratio,) 'The True Nature or Relation of one thing to another; and it was afterwards particularly applied to the Relation of words to each other, with respect to their formation. In this sense it is now acknowledged. to be used, whatever might have been its original meaning.— I have wandered from the office of an Etymologist, in detailing the various opinions about the meaning of a word, when the consideration of that meaning was not connected with any question respecting its origin. Its origin from Etumos, (Ετυμος,) and Logos, or Lego, (Λογος, Λεγω,) is acknowledged.

We might however still enquire about the origin of Etumos, (Ετυμος.) In our ordinary Vocabularies, Etumos is considered as a Root;

a Root; yet some have seen, that the Er in this word belongs to ETOS, (ETOS, Verus.) This, I imagine, is the fact; and in that case, the ET and EET in Et-Eetumus, or ET-EET-Tumos, (ETTTUMOS) will be repetitions of the same Element, as in the cases produced If we should have doubted, whether the ET in Etumos, (Ετυμος,) belonged to the ET in Etos, (Ετος,) from the evidence only of this single word; our doubts would, I think, be removed, when we saw the other word Et-Eetumos, or ET-EET-Tumos, (Ετητυμος,) where the ET is unequivocally exhibited, as a separate and significant portion, belonging to ETos, (ETOS, Verus.) In the same opening of my Greek Vocabulary, where this latter word is, I see Estia, (Εστια,) and Estoos, (Εστως,) belonging to Istemi, (Ιστημι,) which shews us the origin from which the ET in these words is derived.—The Eton, (Etov,) is the Est-os, (Eotos, Stans,) That which Stands Firm—or well Founded. We find likewise, in the same opening, Eres, Erairos, Ereros, (Erns, Socius, Eraegos, Sodalis, Erepos, Alter,) the two former of which might have been directly referred to Etos, (Etos, Verus,) under the idea of the Person Truly and Firmly Attached to another; but on account of the latter word, and its parallels, Either, Other, &c., which I shall produce on a future occasion, I refer them to the next sense of this race of words, - to the adjectives denoting Being, Ls, (Lat.) &c., rather than to the original—the verbs of Being— Est, (Lat.) Is, (Eng.) &c., under their primitive idea. distinction, which may appear to be too minute, and which indeed may be considered as such in many instances, is oftentimes necessary to be made. — We might now enquire respecting the origin of the Tun in Etumos, or ET-Tum-os, (ETUMOS.) The Tum belongs to another Element TM, denoting the Earth or Ground, under the same idea of the Base or Foundation. We see the force of this Element in the THEM of THEMelion, (Osmedion, Fundamentum.) The adjacent word Etoimos, (Etoipos, Paratus,) is only

only another form of ETUMOS, (ETUMOS,) with another turn of meaning, derived from the same metaphor of the Base or Foundation. This will be evident from a word belonging to it, which actually signifies A Base or Foundation, Etoimasia, (Ετοιμασια, Preparatio; Basis, Sedes Firma, Fundamentum.) To the same Element, under this idea, our word Timber belongs. Junius explains Timber by Ædificare; and Lye interprets the Saxon Timber by "Timber, Lignum, Materia, Arbor,—Structura,—"Ædificium," and Timbran, "Ædificare, struere, condere, fabricare." I shall not proceed farther at present in the illustration of this race of words.

ECAN. (Sax.) Augere.

Augeo. (Lat.) To Increase,
i.e. To Raise up or Establish
anything, as on a Foundation.

Auctor. (Lat.) The Founder, the Base, origin of any thing,—the Increaser, Enlarger, &c.

THE words preceding and following Eca, (Æternus,) in my Saxon Dictionary are "Ec, Eke, and Ecan, To Eke. Augere." All these words must surely belong to each other; and if that should be the case, Eke, Augere, must be referred to the idea This seems very remote; but a little reflection of the Base. will perhaps incline us to adopt this derivation. The sense of Addition may be derived from the idea of one thing Proceeding rom - Established upon - Arising from or out of another, as on or from a Base - Foundation or Source. If the terms Our and Ex re derived directly from the idea of the Base, Eke and Our will belong to each other, as congenial terms. It is curious, that EKE s peculiarly attached to Out; — To EKE Out; — " Ros. The little 'strength that I have, I would it were with you. Cel. And ' mine to EKE Out hers." (As You Like it.) To EKE Out might have

have conveyed the idea of To Establish — Confirm — Strengthen; and with the sense of the word Established before us, we shall see how Eke, Augere, and Eca, Æternus, may belong to each I produce Ec, Eke, Etiam, in another place, with a race of words, which signify This or That Existing Being or Thingor This or That Being or Thing in a certain State or Position.— Under this idea of conceiving it, we come to the same point. I shew, that Is, ITA, and Est, belong to each other; and thus EKE belongs to EAcan, To Establish, Raise up, Increase, as ITA belongs to Esse, To be Fixed, Established, Placed, or Be.— Still however it is not always easy to adjust, whether the term belongs more directly to the original or the secondary idea; and therefore it is difficult to decide, in which class of words the term should be most properly arranged. I have supposed, that words signifying 'To Heal, Cure,' which belong to our Element, have been derived from the metaphor of Establishing, as on a firm Base or Foundation; such as we find it in our familiar phrase, 'To Establish the Health.' The Galic term, which I have produced, as bearing this sense, Icam, is interpreted in Mr. Shaw's Dictionary, by "To Heal, Cure; Supply, EEKE." Among the terms for Increase, in the first part of Robert Ainsworth's Dictionary, is Astruo, which directly conveys the idea of one thing Established or Built on another. " Astruo. To build near to, " or join one building to another.—Met. To Super-Add, or Accu-"mulate." So intimately is the idea of *Increase* connected with that of one thing proceeding from another, as the Origin, Stock, or Foundation, that Virgil uses the word Incrementum, Increase, for the Off-Spring of another, "Magnum Jovis Incrementum." Another form of the Saxon Ec is "EACAN, Addere, and EACA, Additamentum," as Lye explains them; and it is extremely curious, that the latter word, in another sense, signifies "Pra-" sidia," according to the same Lexicographer; where we actually

see the idea of the Firm or Strong Establishment. An adjacent term to this in Lye's Dictionary is Eacnian, Concipere, Parturire. I have supposed, on a former occasion, that the terms for a Father and Mother, Atta, Aithei, (Goth. &c.) are derived from the notion of the Base—Source or Origin; and I have shewn, that the term for Mother in Hebrew, DN AM, means a Past, Pillar, &c. &c. The English word Yean, and the parallel Saxon term Eanian, produced by the Etymologists, must surely belong to Eacnian.

To the same idea of the Base, &c. we must refer the Latin Augro, the explanatory word, to Ecan, To Eke, and the parallel Greek terms Aexo, Auxo, and Auxano, (Aska, Auka, Aukava.) The first sense, which Robert Ainsworth gives us of Augeo, "To "Create or Make," "Quodcunque alias ex se res Auger, alitque. "Lucret.," &c. &c., affords us the original idea. We here mark, how Augeo is joined with Ex, and that the sense expressed by "quod Auger alias res Ex se," what causes all other things to Proceed from itself, as a Source, or Foundation, brings us at once to the notion, which I have supposed in my Hypothesis. Reader should be already inclined to this opinion, what will his conviction be, when he remembers the word Auctor, which, as the Etymologists themselves agree, belongs to Augeo, and of which the leading idea, as every one knows, is that of the Origin, Robert Ainsworth explains Auctor by Source, Foundation. " Properly an Increaser, or Enlarger. - A Father, Founder, or " Principal person. - Primus Pater Urbis et Auctor," &c. &c. Here we have every thing, which could be desired, to confirm an Hypothesis. From hence, we know, are derived AUTHOR, AU-THORITY, Auctoritas, &c., and their parallel terms in modern Languages. The word Ground is used, we know, for the original Cause; and Shakspeare has combined Grounds in the plural with AUTHORS, under a similar idea:

"But, when we know the Grounds and AUTHORS of it."

(Twelfth Night, at the end of A. 5.)

Robert Ainsworth has connected the idea of Increase, annexed to AUGEO, with that of the Foundation, or of the AUCTOR; and his explanation nearly coincides with my conceptions on the word: though I have supposed a different order, "Quia Avoere fit " creando, efficiendo, vel instituendo, aliquid, Patris, effectoris, et "institutoris, notionem habet." Let us mark the explanatory term Instituo, which belongs to the same metaphor of Settling or Establishing on its proper Base or Stand. The Latin Auctrio. The Auction, the Sale, is supposed to be derived from the sense of Increase; Augendi actus. Whether this be the precise idea? by which these terms are connected, I cannot decide. - According to the explanation now given, the sense of Augeo should appear somewhat after this manner in our Latin Lexicons, 'To Set one 'thing Up-On or To another; as a Super-Structure, on a Base or ' Substratum, Adstruere; To Raise up -- Promote or Advance any thing, as proceeding from its Source or Origin. Hence, to 'Raise - Advance - Promote - Add to - Increase, in general.' AUCTOR should be explained thus: ! The Original Founder or Establisher of any thing: - the AUTHOR, &c. - the Origin, Source, from which any thing Proceeds - is Raised: - the Setter up or Promoter of any thing, &c. &c.

Terms denoting a Dwelling—
Habitation, &c., derived from
the idea of the Appropriate
certain or fixed Spot, Earth,
Ark, &c., on which a person
is Situated—Settled—Established, &c.

House-Hus-Huus-Huys-

HAUS, &c. (Eng. Sax. Goth. and Run. Dan. Belg. Germ. &c.) The Spot or Place, on which a person is Situated.

Husband — Husbandman, Locum Colens.

HUT — ÆDES — OIKOS, (Eng. Lat. Gr.) The House.

ESTIA. (Greek.) The Hearth,
House,

or from the Earth or Ground, in which this Place or Position must necessarily be found. From hence would be derived, as we shall all likewise readily acknowledge, the names of the Dwellings and Habitations of men, where they are Placed—Situated—Settled, or Earth'd, if I may so express it. We have seen, that the word, adjacent to the Saxon Eard, The Earth, is Eardian, or EARdigan, Habitare, which, as we see, literally signifies To EARTH; and from hence is derived the Saxon EARDung, Habitatio, Tabernaculum. I shall here collect the words, conveying this train of ideas, which appear under our Element ^C, ^D, ^G, &c. &c. In a former part of this Work I considered those words, which were derived from the certain - peculiar or appropriate Spot of EARTH or Ground, considered as an Enclosure; and the Reader will perceive, that the terms, which I have now explained to be the objects of my present discussion, might have been introduced with equal propriety in that part. - In terms of this sort, denoting the Appropriate Spot, on which men are Settled - Fixed - Dwell, &c., these ideas of the Enclosure and the Establishment are entangled often with each other.—It will be instantly granted, that House and its parallel terms are to be referred to the notion of the Ers, Erz, the EATH, or Spot, on which a person is Situated or Abides. House is to be found in various Languages, as in the Saxon-Gothic and Runic Hus, the Danish Huus, the Belgic Huys, the German Haus, &c., most of which the Etymologists have pro-Again, in Gothic, Heiwa is Domus, which is probably Junius has properly compared these words with quasi Heiwag. the Greek Ezein, (E(EU),) which he explains by "Ponere, Statuere, "Collocare;" and this relation he justly compares with the Greek Δομος or Δωμα, from Δεμω, or Δωμαω, Extruo, Ædifico. I have referred Domos, (Domos,) to the Element DM, denoting the The Hustings is the temporary House or Building for transacting public business. Spelman derives it from Hus, Domus.

Domus, and *Thing*, Causa, Lis. Whether the latter part be just, I cannot decide. Some derive the Hust from *Hausser*, Attollere, Elevare, quasi Alta et Excelsa Curia, and others from the Saxon *Hyhst*, Supremus, and *Thing*, Judicium.

. With the idea of the House - the certain Spot of Ground. which a person possesses, we annex the various ideas, with which that Possession or Establishment is connected; such as the Management of Affairs in the Dwelling, and in the Cultivation of annexed Ground. Hence we have Husband - Hus-Wife - and Husband-Man, the Master and Mistress of the Establishment, the Cultivator of the Ground or Land. Some derive Hus-Band from Hus and Band, q. d. Domus Vinculum; and others from Hus and Bonda, Pater familias, Maritus. A similar composition appears in the Danish Hosz bonde, "Herus, Dominus." cannot doubt, that Husband, Maritus, and Husband, Œconomus, HUSBAND-Man, Agricola, have the same origin. The difficulty is to decide, from what idea BAND is derived. Junius says, that in Danish, Bonde or Bendemand is Colonus, " ac talis quidem, qui "alteri operam suam locat." This appears to bring us to Bond, The tie, contract, bargain, &c. Junius however accurately explains the sense of our English term Husbandman, by " Patrem " familias agrorum cultura se suosque sustentantem." He seems to imagine, that the Band or Bond belongs to Buende in the Saxon Land Buende, which he explains by "Terram inhabitantes. colentesque, à Byan, Inhabitare, Colere. This, I think, is just. He refers us likewise to the ancient Runic word Buandmanne, Coloni; and he observes, that from the participle Buand, Colens, has been formed by contraction Bund, Rusticus. The proper form of the participle is Bugend, or Bigend, as we have it in Lye, Land-Buend or Bugend, Lond-Bigend, belonging to the Element BG, as in the Saxon Bigan, Colere, Bigangan, Colere, Byggan, Ædificare. From these our name Biggin is derived. When the sound

sound of G is lost, we have the Saxon Bian, Habitare,—the Dutch Bouwen, recorded by Junius, and the German Bauen, To Build, &c.—The Husband and Husbandman literally signify The BAND, Bund, Buand, the Farmer, belonging to the Hus—the Spot on which a person is situated, comprehending at once the Building, in which he dwells, which we now call House, and the Place of Land attached to it. The word Place has the same meaning, as 'In Such a Person's Place,' that is, the Building, in which he actually Dwells, and the Property belonging to it. We perceive, how Byan signifies "Inhabitare et Colere." We cannot separate the Dweller on the Land from the Cultivator; and hence Colo signifies "To Till, Husband, Ground," as R. Ainsworth explains it; and "To Inhabit, live, or dwell in" it. Hence Hus Band and Husband Man would be safely rendered by "Locum Colens," with the double meaning, annexed to Colens, which appears in Band, &c.

We likewise find exhibited among the parallel terms to House, &c., the English Hut—the Latin Æpes, and the Greek Oikos, (Oxoc, Domus,) and Estia, (Estia, Focus, Lar, (2.) Domus.) HUT occurs in various Languages, as in the Saxon Hutte, the Islandic Hydda, the German Hutte, which the Etymologists produce, and justly refer to the idea conveyed by the German Huten, To take Heed, beware, have a care, &c. This brings us to the race of words, which I have before illustrated, denoting the certain Spot of Earth or g-Uarded Place—protected and secured by Fences, &c. These ideas are perpetually passing into each other, and cannot on many occasions be separated or distinguished.—In Skinner's Index of Forensic words, we have HAGA, Domus, which he derives from the Saxon Hegian, Sepire, and HEDGE. In this portion of my Work, I am employed in considering those terms, in which the idea of Safety or Security is not particularly prominent; yet we shall find, that this notion

must

must frequently present itself. The Latin Æpes has been derived from Εσθιω, " quod ibi edere soleamus,"—from αιδια, " perpetua, es seu ordinaria nostra mansio: vel quod aei δυομέν, semper in-"gredimur, seu subimus," &c. Some however have referred us to the Greek Edos, (Edos,) and others have reminded us of the Greek Aisones, (Aisones,) and Aisomenos, (Aisonesos,) which are explained by Φραγμοι, Sepes, and Φραξομενος, Septurus, " Primæ " ÆDES," says Martinius, " absque dubio fuerunt Septa, et Septa "Latini quoque dicunt omnia loca munita, unde et Lucretius, ". lib. i. Septa domorum." Here it is impossible to decide, whether ÆDes conveys simply the idea expressed by EDOS, (ESOS,) The Place or Position—the EArTH, ErDE, &c., or is connected with that expressed by Huten—the secured Earth—the y-Ard—the g-UArd-ed or w-Atched Place, &c. &c. To attempt any distinction of this sort, in cases like the present, would be an idle and unnecessary refinement. The Greek Oikos, (Oikos,) is accompanied by terms, which relate to Settling - or Fixing on any Spot or Place, as Oikizo, OikiZo, In Ædibus, seu Sede colloco; -Loco, Colloco; — Coloniam in Locum mitto. Though it is not a portion of my duty to note a peculiar sense in words, which is not connected with points of Etymology, yet I cannot forbear remarking a coincidence of meaning between the English House and the Greek Oikos, (Oikos.) In English, House is used to denominate a peculiar part of the whole House or Dwelling. In Warwickshire it is used for the Kitchen - in the North, says Mr. Grose, for "The room called the Hall," and "House-Place " for the common room in a farm House." In Greek, OIKOS, (Queos,) is in like manner used for a particular apartment. Lucian, we know, has a treatise, The readers of Vitruvius will find, that the Latins have adopted this word, to express a portion of the House—either the room, in which the mistress

mistress of the family performed her spinning, &c., (Lib. vi. c. 10.) or the Saloon for dining. (Lib. vi. c. 5, 6.)

Estia, (Estia, Focus, Lar; — Domus,) not only denotes the Hearth, but the House. Let us note the word HEARTH, which I have before produced, and which, as we shall all agree, signifies the EARTH or Ground. The Etymologists refer us to the Saxon Heorth, and the Belgic Haerd, Heerd, Heert, Hert, Hertstede, the German Herd, &c.; and they record likewise the German Hertha, the Terra Mater, the Greek Estia, (Eoria,) and the Latin Vesta. In Gothic, HAURJA is "Focus, carbo."—We shall now understand, whence it is, that Estia or Vesta is at once the Fire-Place—or the Goddess of Fire, and the Goddess of the EARTH. To proceed from the humble Fire-Place to the Goddess of the Earth, seems at the first view a large stride; but we see these ideas inseparably united in the EARTH. The Greek Estia or Erstia is at once the h-Earth and the Earth. Some consider VESTA as the name of two Goddesses, which they derive from different sources. The one - the Goddess of Fire, they derive from Estia, (Εστια, Focus,) the Fire-place, and Μκ AS, Ignis, &c. &c.; and the other—the Goddess of the Earth, from Estanai, (Korava, Statuere,) denoting the Foundation, &c. records on this occasion the Syriac אשתי ASTI, Fundare. Let us note the Greek Isτemi, (Ιστημι, Colloco, Statuo,) and the Syriac ASTI, which belong likewise, as we have seen, to our Element ^S, ^T, &c., denoting the Ground. — We perceive, that the adjacent words to Vesta, as Vestibulum, the Vestibule, and Vestigium, belong to the Vest or Est, the Ground, the part, on which we Tread; and it would be idle to enquire, whether these words are attached to the Element V-S or 'S. We here see, how these forms pass into each other. The adjacent word Vestis, the Covering, with its corresponding term Esthes, (Eorns,) is attached to the Estia, (Estia,) the Ground, under the idea of the Surfacethe Top—the Superficial Covering. The Etymologists derive these words from Velis—from Vellus and Vello—from $V\alpha$ and Errorbas,—from Ew, "Mitto, quia immittitur." The adjacent word to Esthes, (E $\sigma\theta\eta\varsigma$, Vestis,) the Covering, Esthio, (E $\sigma\theta\iota\omega$, Edo, comedo;—Absumo,) and its parallel terms Edo, (E $\delta\omega$,) Gr. and Lat. Eat, &c. &c., are taken from the idea of Fretting or Vellicating a Surface—as of the Earth.

. It is foreign from the purpose of these discussions to detail the Mythological History of the Goddess Vesta or Estia, (Εστια); yet we must remember, that among the Goddesses of the EARTH, with whom VESTA is confounded, the Mythologists record Rhea, Ceres, Proserpine, Cybele, Ops, Tellus, and Isis. Let us note in this catalogue the Goddess Isis, which, we shall now see, belongs to our Element, and is only another form of Estia, (Estia,) the EATH, Ers, &c. &c. Amidst all the fables respecting the Goddess Isis, the idea of her presiding over the fertility of the Earth is still predominant. The Greeks compared her with Ceres; and even when she was represented among the Ægyptians under the character of the Moon, she was imagined to be the cause of the Earth's Fertility. "Eam cum Græcorum Cerere "conferunt," says Jablonski, "Cereremque appellitant. Illam enim "Terræ Fertilitatem, quam Cereri suæ, numini maximo, Græci "in acceptis ferebant, Ægyptii aseribebant Lunæ." (Jablonski de Iside, §. 9.) Among the Ægyptians, however, Isis was the " Præter Isidem cælestem, quæ Luna est, name of the Earth. " religiose quoque colebant" (Ægyptii,) " terrestrem, ipsam sciet licet Terram, quæ proinde Isidis nomine designabatur," as Jablonski observes, who, among various well-known authorities, which prove this fact, produces the following testimony of Macrobius: "Isis est vel Terra, vel natura rerum subjacens soli.-" Isis nihil aliud est, quam Terra, naturave rerum," and that of Servius, who expressly says, that Isis signifies the Earth in the

Language of the Ægyptians: "Isis linguâ Ægyptiorum est Terra." (Ibid. §. 7. 9.)—We shall now understand, why Asis in Greek signifies Mud, Dirt, (Aoic, Limus, sordes, cœnum.) To this word belongs the ASIO en Asimum, the Prolific meadow, the meadow abounding with rich Soil, as some of the Scholiasts have conjectured. Hence is derived the quarter of the World, called Asia, the Country, the Earth—the prolific, fertile Land.

The ancient word Hostery, and the modern word Hotel, signify the House. The Etymologists produce the parallel terms Hostelry, (Eng.) Hosterie, Hostellerie, (Fr.) Hosteria, (Ital. and Span.); and Skinner derives them from the French Hostel, "ant. "Domus, nunc Aula, Palatium." The French Hôtel, we know, signifies "A Nobleman's or Gentleman's House.—A Large Inn.— "A large Lodging-House," as my Lexicographer explains it. HOSTEL is still used in our University, as the name of a Public Building in Trinity College; and it may either mean, in its first sense, 'The Great House or Building,' or, in its secondary sense, 'The Inn-The Lodging-House.' In Italian, OSTELLO, OSTELLIERE, not only means "An Inn, or Abode, Lodging," or, as I have explained it, the appropriate Spot, on which a person is Fixed-Settled-Established, or Founded, if I may so express it; but Ostelo likewise denotes the Foundation part of a thing, "as the "Stalk, Blade, Stem, or Shank of a Plant," as my Lexicographer interprets the word. The Host, Hotelier, Oste, Ostiere. Ostellano, Hostalero, (Eng. Fr. Ital. Span.) is the Master of the Hostery or Hotel. The Hostler, which meant the Hótelier, or chief person of the Inn, is now applied to the person who takes care of the Horses. Skinner produces the Law term Horstilers. which he explains by Caupones. Junius, under Hoste, produces a Scotch word of the same meaning, Oist, used by Gawin Douglas; and Lye, under this latter term, gives us, as parallel, the Armoric Ostis. Junius moreover observes, "Qui certi "aliquid de eorum origine," HOSTE, Hosterie, &c.; "statuere "volet, recurrat ad illa, quæ Vossii Etymologicon habet in Hospes "et Hostis."

We shall now understand, that Hospes is the Host, or the Hôte, which in French signifies both the Landlord and the Guest.—Hospes, we know, has this double meaning, and denotes at once the Entertainer and the Entertained in the House. sius derives Hospes from Hostis, which signified, in the ancient Latin Language, a Stranger. Thus we see, that Hostis, the Enemy, meant originally the Stranger, who came to your House. It afterwards signified an Enemy, from the idea of a Unless this original sense of Hostis had been preserved, how vain would all our conjectures have proved, respecting the origin of the word! "Hostis," says Festus, "apud antiquos " Peregrinus dicebatur, et qui nunc Hostis, Perduellis." The origin of Hostis, Vossius owns to be, "satis-obscurum;" and he adds, "nec quicquam melius occurrit, quam ut sit ab of tis, quivis, " quicunque, vel potius, quod etiam Martinio videbatur, ab Ostium, "ut notet eum, qui foris est, hoc est, extra tentorium nostrum, " ut qui alienis legibus utatur."

To Hospes belongs, we know, Hospitalis, and the words in modern Languages, Hospitable, Hospitalier, Ospitale, (Eng. Fr. Ital.) &c. Hence we have the Hospital, the place of reception for the necessitous, &c., Hospice, (Fr.) Hópital, (Fr.) Spedale, (Ital.) and the corruption in English, Spittal. Robert Ainsworth derives Hospes from Sospes, "quia Hospes cum Hospite tutus esse "debet;" but he derives Hostis from the Celtic Osb seu Osp, a term, as he says, of the same meaning. A Celtic derivation from a Latin Etymologist is an extraordinary effort in the prosecution of his art. Under Hospes, Lhuyd produces the Welsh Osp, Ostis, and the Irish Ostaire. Mr. Richards explains the Welsh "Osb." A Guest. pl. Ysb;" and an adjacent word is Oseb, "A hansel, a "present,

"present, a gift." In the next column I find Ostri, Gedw Ostri, To keep open House, and Oswypp, Enemies, &c., which belongs In Mr. Shaw's Irish and Galic Dictionary I find to Hostis. "OSDA. An Inn. OSDAIR. An Inn-holder, Host, Landlord;" and "OSTOIR. An OSTLER." To Hospes belong the Sclavonic titles of respect, corresponding with the German Herr,—the English Sirthe French Monsieur, &c., such as g-Ospodare, g-Ospodine, g-Osoudare, &c. &c. The precise meaning of the OS, or g-OS, in these words, is not the House, but its more general idea, the Spot on which a person is Fixed or Settled—which he owns or Possesses; and the g-Ospodare exactly corresponds with our word Land-Lord, or Land-Holder. Thus we see, as Host, the Master of the House passes into the Master of the Inn; so Land-Lord, from the idea of the owner of the Land, passes into the sense of the owner of the Inn. We have seen, in Husband and Husbandman, how the House and Land are connected. My Russian and German Dictionary explains g-Ospoda by "die Herrschaften," which signifies 'Lordships - Seignories, &c. -g-Osposdare by "Ist der titel der fürsten in der Wallachey " und Moldau," or, 'It is the Title of Princes in Wallachia and 'Moldavia,' g-Ospodine, "Der Herr," the Lord, Master, &c. g-Osoupare, "der regierende Herr, der Monarch, ein titel der " jeder Mannsperson beygelegt wird," 'the reigning Lord, the 'Monarch; a title which is attached to every Male.' g-Ostinnitsa is explained by "Gaft-haus," An Inn, which conveys the same idea as Hostery, &c. We have likewise the Sclavonic "g-Оснтснои, Ich bewirthe," I entertain, and "g-Оснтснепіе. "Die bewirthung," An Entertaining, &c. I here represent a Russian letter by Chtch, as I am directed by my French Gram-Let us mark the German g-Ast, corresponding with the English g-Uest, which is only another form of the OS, or h-OS, in h-ospes—h-OTe, (Fr.) &c.

The Latin Hostio, referre gratiam, To return like for like, may be derived, as some Etymologists have observed, from Hostis, the Stranger received as a Guest, "ut sit, pendo et solvo, quem"admodum Hostis, (¿ ματαλυτης,) solet, pro officio curæ in
"Hospitio impensæ." Yet Hostio may be taken from Hostis, under the idea of treating as an Enemy, returning Tit for Tat, as we express it, or of 'giving a person a Rowland for his
Oliver,' according to another of our expressions. In a passage of Ennius, as Scaliger reads it, we have

"Quem mea comminus machæra atque hasta Hostivit è manu."

And again in Pacuvius, quoted by Festus, as some read it:

"Nisi coërceo protervitatem, atque Hostio ferociam."

In these instances we have the idea of violent actions, as connected with the Hostis, or Enemy. From the notion of returning like for like, Hostire is translated by some Æquare, in a sense, where nothing of violence is understood; and hence are derived Hostorium, "Lignum, quo modius æquatur," and Hostus, "Men-" sura quædam in re olearia"—the just—equal measure.

The Latin Hostia, the Victim, or Sacrifice, was supposed originally to have been that, which was offered on obtaining Victory over the Hostis or Enemy. From hence is derived Hostie, the Host, the consecrated wafer, representing the body of Christ,—the great Sacrifice or Victim for the sins of Mankind. To the Hostia, Hostie, belongs, I imagine, the Saxon Husel, &c., and the Gothic Hunsl, &c., "Victima Sacrificium;" and hence we have the old English word Housel, "the Sacrament, Un-"Housel'D, disappointed, unaneld." Skinner derives Husel-Gang, "Sacramenti Eucharistiæ perceptio," in his Appendix of Law terms, from Husel and Gange, Aditus; and Husel, as he informs us, is derived by Somner from ostia; though he adds, "Mallem Hostiola," which is probably the precise case. Hostage, Otage, Ostaggio, is supposed to be the person demanded

manded of the Hostis or Enemy. Skinner adds, likewise, another derivation; in which he seems to refer these words to the Latin Obses, as he explains them by Obses; and adds, moreover, "q. d. Obsidagium vel Hospitagium, quia Obses instar Hospitis "est." Some consider Obsides to be quasi "Obfides, quia ob "fidem patriæ præstandam dantur." Others imagine, that the Obses is derived from Obsidio, " quia Obsidionis gratia dari con-" suevit." The B in Obses may be an organical addition to the S: and the Oses, Osid-is, may coincide with Hostage, Otage, &c. b and p appear after the S in Osb, and Hospes; but in Obses the Our word Host, A Company, Army, the Etymob precedes. logists derive from Hospes, and produce, as parallel, the French Host, Ost, and the Italian Hoste, or Oste. In Italian, Oste is "An Army, and a Guest." While I am examining the word Ost or Host in Menage, I cast my eyes on Oster, or Oter, which Menage derives from Haurire, Hausi, &c., and others from Othein, ($\Omega \theta e i \nu$, Trudere.) The latter may be the true derivation; that is, it may be referred to this term, and other similar words, which I shall produce with Otheo, (Ωθεω,) on another occasion. But if Mr. Caseneuve is right in supposing, that the original sense of Oster or Oter was "Defendre à quelqu'un le chemin, et s'opposer "au passage," it may be derived from Obsto, as he imagines. seems from his quotations to be directly taken from Obsto, as used in barbarous Latin: "Si quis-de viâ suâ Obstaverit, &c. Si " Porcarius de vià suà Ostatus vel battutus fuerit."

I shall now proceed to examine a race of words, which may be regarded, as at once the most familiar and the least understood, in the construction of Languages. The Reader will advance with care, and, I trust, with candour, in the prosecution of this Enquiry; which professes to unfold a series of truths, totally remote from all former conceptions, on the affinity of words in the formation of Human Speech.

CHAP. II.

SECT. III.

^C, ^D, ^G, &c. &c.

is denoting Existence, derived from the idea of that, which is aced, Set, Situated, Stands up, &c. &c., as Ist-amai, (Ιστημι, illoco, Statuo;—at in Aor. 2. perf. plusq. perf. Sto, Consisto;—ise, Natum, Ortum Esse;—quæ vis et in med. Ισταμαι obtinet,) e Verb of Being, Est, (Lat.) Is, (Eng.) &c. &c. Demonstrate and other Pronouns, denoting the Existing Being or Thing, e Being or Thing so Placed—Situated, &c. This—or That ving, Thing, &c. &c., as Iste, Hic, Is, (Lat.) It, (Eng.) to, (Lat.) Os, (Os, Qui,) &c. &c. Adverbs, Prepositions, Concitions, &c. which either directly express This or That—Situation, ite, &c., or are ultimately derived from words, conveying such as, as Ita, (Lat.) Ad, (Lat.) At, (Eng.) Ut, (Lat.) &c. &c.

In this Section I shall consider a great race of words, under the form ^C, ^D, ^G, ^J, ^K, ^Q, ^S, ^T, ^X, ^Z, as Est, (Lat.) Is, (Eng.) &c. ISTE, HIC, Is, Ego, &c. &c., (Lat.) which denote Being or Existence, and which I conceive to be derived from the idea of that, which is Placed-Situated-Stands up, &c. These notions may seem on the first view remote from each other; but we shall instantly understand, that they have been perpetually connected in the most familiar and acknowledged instances.— The very term Existence, which I have adopted on this occasion, is acknowledged to be derived from Sisto, which relates, as we know, to Place or Position. R. Ainsworth explains Sisto by "To Set, to be made to Stand.—To Continue.—To Settle,—to " Place, or Set up." I have supposed, that the words, belonging to our Element, ^C, ^D, ^G, &c., which denote Position, Place, &c., have been derived from the EARTH, or EARTH—the ESTIA, (EGTIG. Focus, Lar;—Domus;—Ara;—Asylum;—Vesta, Dea;—Sedes. v. g. Imperii,) &c. &c., the Ground, the Firm, Fixed Spot, or Seat, on which things are Situated—Set, Put, Placed, &c. these terms denoting Situation—Place or Position, which belong to **O**= the Element ^C, ^D, &c. without the r, I have classed Ez-omai, e i, (Εζομαι, Sedeo,) and Ist-emi, (Ιστημι, Colloco, Statuo; In Aor. 2. perf. plusq. perf. Sto, Consisto, Unde Est;—Esse, Natum, Ortum Esse.) In the latter word, Istemi, (Istymu,) we have the same union of the ideas of Existence and Position, which I have supposed in my Hypothesis; and we perceive, likewise, that Est is among the me In the Latin Sto, and in some of its parallel ====| explanatory terms. words, Stand, (Eng.) Stehen, (Germ.) &c., the vowel breathing is sense. lost before the ST; but in others it is again found, as in the Spanish Estar. This Spanish word Estoy, Estas, Esta, &c. is the familiar auxiliary verb, corresponding with Sum, Es, EsT = and this word still bears the original sense of Place or Position. Mr. Neuman justly explains Estar by "To be in a Place." Italian =

Italian Star, To Stand, is used in a similar manner for To Be, 'Come " Sta V. S.—Star bene, Sono Stato," 'How Is your worship, To Be well. I have Been: and in German. Stehen means To Be.

Hence are derived the Demonstrative and other Pronouns, belonging to our Element, which denote Being, as referred to Living animals, or which relate to Things-Being, or Existing, in certain States, Positions, &c .- as Is, ID, HIC, HEC, HOC, ISTE, ISTA, ISTUD. All this is plain and intelligible. As the verbs Est, Is. (Lat. Eng.) denote the same as Existit, so Is, ID, (Lat.) IT, (Eng.) Hic, Hæc, Hoc, Iste, Ista, Istud, Ego, &c., correspond with Existens, as denoting the Existing Being or Thing; that is, I conceive, that certain terms, belonging to our Element ^C, ^D, &c., which now perform the part of Pronouns, Demonstrative, Personal, or Relative, as they are called, such as Is, ID, ISTE, (Lat.) &c. &c., Ego, (Lat.) &c., Os, (Gr. O5,) &c., originally belonged to the verb of Being, under that Element, as Est, &c. &c., with a relation in point of meaning similar to that, which the Participle may be conceived to bear to its verb; so that Is, ISTE, Ego, &c. &c., were quasi Is=Ens, IsTE=Ens, Ego=Ens, or Ess-Ens, &c. As I conceive that Est, the verb of Being, has precisely the same metaphorical signification as Existit; so, according to my idea, Is, Iste, &c., being in their original meaning quasi Is=Ens, IsTE=Ens, Ego=Ens, bore precisely the same relation to Est, as Exist=Ens does to Existit. When we speak of Existing beings or things, that is, of beings or things Placed in a certain state; it is for the purpose of expressing that state by way of declaration, comparison, or distinction in different or distinct persons or things; and hence we see, how terms denoting the Existing Being or Thing, receive the idea of Demonstrative parts of Speech, and of Personal Pronouns, denoting This, That Existing . Being or Thing, or This, That in general; as Exist= Ens, Is= Ens, ISTE=Ens, Ridet; Exist=Ens, IS=Ens, ISTE=Ens, IS, ISTE Ridet;

Ridet; Is, Iste Flet, Ego=Ens, Ego Rideo, Fleo.—We see, how from this source words have assumed different forms, and have been applied to different purposes and persons. In Is, Iste, &c., we see the forms, which the term denoting the Existing Being assumes, when the speaker refers to others; and in Ego, we have the form, when he refers to himself.—The Relative Pronoun, we know, is nothing but the Demonstrative Pronoun, applied in a different manner; and it is accordingly perpetually connected with it, as every one understands. In English, as in many other Languages, the same term is both Demonstrative and Relative.—'That is a man, That I esteem.'

I shall consider likewise, in this Section, other parts of speech. as the Adverb—Conjunction, and Preposition, which belong to our Element, and which are derived from the same idea of Situation-Place-Position, or of any Animal or Thing Existing. or being Situated-Placed, &c., in This or That Situation-Place -Position, State, &c. It will be found, that such words are more or less remote from their original idea, or that some words refer more immediately to the idea of Place or Situation; while in others, the idea has disappeared, and they denote merely Being. or perform the part of Demonstrative Adjectives - Adverbs, &c. Thus Estar, and Star, as we have seen, though they relate to Being or Existence, still retain their original sense of Situation or The term Existence, though it is known to be derived from the same idea, yet we see, that the notion of Place is not so apparent in its ordinary use, and even the substitution of that original notion would seem strange and perhaps improper. I make this observation, that the Reader, when I refer any term to its original notion, may be prepared to understand, that it is done · for the purpose of illustration only, and not under the conception, that the original notion most aptly expresses the present use of the term, which has been thus illustrated. I shall, nevertheless,

3

- t

theless, sometimes recur to this mode of illustration, however uncouth it may appear, that the Reader may be constantly alive to the original idea, from which this race of words is derived. And I must observe, moreover, that, in most cases, this mode of illustration will be sufficiently appropriate and intelligible.—Again I must repeat, that I do not pretend to unravel the links of the chain, by which one word has passed into another, nor to define the distance, at which any of these links may be placed from the original idea. It is curious to observe in Spanish, how ESTAR, which is directly connected with the sense of State or Situation, is applied to objects, where that idea most predominates; and how Ser, belonging to Soi, I am, being somewhat remoter from this original sense, is applied in a more abstract manner. Grammarian thus distinguishes between the different uses of these verbs of Being: "Ser signifies the proper and inseparable Essence of a thing, its quality or quantity; as Ser hombre, to " be a man; Ser valiente, to be courageous; Ser alto, to be tall; " Ser chico, to be little: but Estar denotes a Place, or any "adjunct quality; as Estar en Londres, to be in London; Estar " con salud, to be in health; Estar enfermo, to be sick. So Estar " is used to express and denote any affection or passion of the " soul, or any accidental quality of a thing; as Estar Enojado, "to be angry; Esta mesa Es buena, pero Está mal hecha, This "table is good, but it is ill made; where you may see the "essential being of the table expressed by the verb Ser, and the "accidental by the verb Estar." This distinction is in many cases too minute to be perceived; yet it is certain, that Ser and Estar are not used promiscuously, and that the turn of meaning annexed to Estar is that, which relates to its original idea of Place—Situation—State, &c.

The Etymologists allow, that ITA belongs to Is, as Outoos does to Outos, (Ουτως, Ουτος); and thus we see, how in the phrase

ID EST ITA, words, containing the same fundamental idea, perform different offices. This is precisely the same as Statum Sistit in Statu, or Existens res Existit in Existentia, except that this adjective and noun have not passed into Demonstrative parts of Speech. In Spanish, Este, Esta, Esto, mean This; and the above sentence might be expressed in Spanish by Esto Esta en Este modo, where we have precisely the same combination as in ID EST ITA. The Spanish ESTE, the Demonstrative part of Speech, which corresponds with Iste, and which we see directly attaches itself to Esta, signifying Sistit, Stat, Locatur, &c., will shew us how the Demonstrative part of Speech is connected with the idea of Place. If the sentence had been ID EST ITA, UT debet, we see in UT, the Conjunction, another mode of applying the same idea. Thus we perceive, that UT, and its corresponding terms, belong to this race of words, and perform the same office of Marking or Demonstrating a certain State or Position of things. The English That is used likewise as a Conjunction precisely in the same manner, and the sentence might be 'That thing Is Placed in That state, That it ought to be.' Let us suppose the sentence to have been 'Est' or 'Stat Ap Januam.' which might have been, Sistit Statione Januæ: Hence we perceive. that AD, and its parallel English term AT, belong to this race of words, denoting Station-Place. This will be sufficient to be laid before the Reader at present, in order to understand the subject of Enquiry in this Section; and the extensive purposes to which this race of words now before us may be applied. shall find, that the Elements 'M, 'B, 'F, 'P, 'V, and 'N, 'ND, 'NT, 'NG, &c., likewise denote Being; and that from these Elements, and our Element ^C, ^D, ^G, &c., have been derived the Auxiliary verbs, and the Pronouns, through a great variety of Languages. It will be found, moreover, that the inflexions of the other verbs in these Languages have arisen from the Auxiliary Verbs,

Verbs, or from the Pronouns; or, as it might be expressed, that the verbs in various Languages consist of a Radical part, expressing the sense of the verb, and of another part representing its inflexions, which are generally derived from the Auxiliary Verb, though sometimes perhaps from the Pronoun, corresponding with the Auxiliary. As it will be necessary for me, in the progress of my Enquiries, to combine the consideration of the words, which belong to the Elements ^M, ^B, &c., and ^N, ^ND, &c., with those, which belong to our Element ^C, ^D, ^G, &c., I shall first offer a few observations on these Elements ^M, ^B, &c., and ^N, ^ND, &c., and ^N, ^ND, &c., in order to prepare the Reader for the due understanding of the following discussion.

The Element 'M, 'B, 'F, 'P, 'V, denotes Being through a wide extent of Human Speech. We shall not wonder at this fact, when we learn, that it supplies the name for Father and Mother through a great variety of Languages. Those, who have written on the theory of Languages, have collected these terms, which they have supposed to be derived from the first attempts of the Infant to utter sounds by means of the Lips-PA-PA, MA-MA, &c. &c. I shall not enter into the consideration of this theory at present; but I shall content myself with producing certain words, belonging to the Element 'M, 'B, &c., which denote Father and Mother-and other relations of Being. I shall compare different senses of these words, thus denoting Being, with some of the terms, to which they appear to belong; and we shall find, that they are connected with ideas attached to the Ground, just as we have seen in other instances, in which the Hypothesis, relating to the Earth or Ground, as the origin of words, has been maintained. Whatever may be the fact, as to the first origin of this race of words, if I may so express it, or of a certain portion of them; we shall find, that the name of the Earth or Ground is attached to the Element 'M' in the most marked

marked characters, and may be considered as predominating in the formation of words, which belong to it. I shall therefore still talk of the *Earth* or *Ground*, as affording the origin of this race of words, without meaning to reject a theory, which is indeed very plausible, and which might be admitted to a certain extent, without disturbing any of the main points of the argument, which I shall unfold in the succeeding discussion.

The word which signifies a Mother in Hebrew, DN AM, means, in its original sense, as Mr. Parkhurst imagines, "To "Support, Sustain, Confirm." It occurs not as a verb in this sense; but it means, as a Noun, "Posts, pillars, supporters;" and it likewise means, "A Mother, either," says Mr. Parkhurst, "from "Supporting the child in her womb, or afterwards in her arms." She is called Mother, as the Chief-Main Support of the Family. from which it arises, and on which it depends. The two succeeding senses of this word in Mr. Parkhurst's Lexicon are, " A Metropolis, or Mother City.—The Mother of a way, the place "where a way parts into several;" where the word is taken in its original sense of the Chief Main City, on which other cities depend, and the Chief - original Spot, from which other spots arise. We know, that Father and Mother are perpetually used in this metaphorical sense, which in some instances is in fact their original idea. R. Ainsworth explains Pater in one sense by the "Author, or Founder of a Sect;" where in the term Founder we have the original idea, which I conceive to be annexed to these words. We shall all acknowledge, that the names of Father and Mother would be naturally derived from the Earth; yet perhaps we should not agree on the precise notion, with which these terms were connected with that object. We should suppose, that they were derived from the Earth, as the great source of Vegetable production, as that which Generates, Produces, &c.; and when Mother is applied to the Earth, by Metaphor, from its signifisignification of the *Mother* of Animals, we perceive, that the word is obviously referred to this idea of *Generation* and *Production*:

" Common Mother, thou,

"Whose womb unmeasurable, and infinite breast,

" Teems and feeds all."

Here the idea of Mother is connected with the Earth, not only as the Teeming or Producing object, but as that, which Feeds, or Nourishes. In the Latin Parens, from Pario, we have the idea of Producing. Still however I must observe, that the name of Father and Mother, though taken perhaps directly from the Earth, is not always connected with this obvious and natural idea. Thus, in the present instance, the Hebrew AM DN denoting Mother, is taken from or is connected with the sense of the Prop or Support, and not from the notion of Generating or Producing.

In Arabic, the corresponding term AM , has various senses, which are not derived from the idea of a Mother, but which belong to the original notion. Among other things it means "That in which any thing is contained, as a House, Habitation, "Sepulchre." Here we are brought at once to the Ground, the Spot, on which persons Dwell—Abide—Rest, &c. &c. word likewise signifies, "The Root, origin, principle, the primary "cause upon which any thing depends;" where it means the Base or Foundation. The word is directly referred to its original Spot, when it is connected with درين Derin, Withered. terms וה טרעיט Ummi Derin signify, according to Mr. Richardson, "Ground without grass." In Greek, Amma, or Ammas, means a Mother and a Nurse, and likewise the Great Mother, Magna Mater, Rhea, the Goddess of the Earth, " Αμμα, ή τροφος και ή Μητηρ " κατα ύποκορισμα, και ή 'Ρεα' Λεγεται και Αμμας." The Hypothesis respecting the origin of this race of words, as it relates to the Theory of Languages, about which we have heard so much, is comprised within the most contracted limits, and may be at once explained and exhausted. We here see, that Αμμα,) means

means both a Mother and the Earth, or the Goddess of the Earth. This union of ideas, which we should conceive to be most obvious and natural, we find here actually to exist; and we have only to decide, which of these two ideas, the Mother or the Earth, was the original one. If we should suppose, that the name for Mother was the original, and that it was derived from the first labial sounds of infants, — AM-UM — AB-UB, MA-MA, PA-PA, then the name of the Earth will be the secondary idea. To this Theory I have no objection. I have only to add, what is the great fundamental point in the question, that the name of this important object, Am, the Earth, when it was once formed, whatever might have been its source, would operate, as it does on other occasions, according to my hypothesis, and would supply the origin of the various words belonging to the Element; except those terms directly derived from the primitive idea. Such terms == 2 supposes that the names for Father and Mother, belonging to the Element 'M, 'B, &c., were derived from the labial sounds of Infants, will but little profit us, in discovering the origin of words belonging to this Element. It is the next step, which is the foundation of all our Etymological enquiries; and unless this be added, our Theory, however true it may be, is unavailing and useless. The term Ammas, (Aμμας,) occurs in a well-known passage, preferred by Clemens Alexandrinus, which Bochart thus reads:

" AMMAZ

[&]quot; Ιγνητων και Τελχινων εφυ ή άλυκη Ζαψ.

[&]quot; Telchinum Ignetumque parens Zaps salsa creata est."

[&]quot; Aμμας," says Bochart, " pro Matre deductum ex Syro къж Імма

[&]quot; vel Еммо, quomodo ex אבא Авва Аππα pro Patre in Hymno

[&]quot;Callimachi in Dianam." (Can. lib. I. c. 7.)

In Arabic, بو ابو ابا اب AB, ABA, ABU, BU, signify Father.

In Hebrew AB signifies a Father. Mr. Parkhurst gives us, as another sense of this Hebrew word, "A first author, origin;" where we have the genuine idea. Mr. Parkhurst justly refers to this Hebrew word, "ABBOT, ABBESS, ABBEY." The Etymologists likewise see, that the Latin ABA, a term of respect from the younger to the Elder, belongs to the Eastern name of Father; and they produce likewise the phrase APPA Pater, $(A\pi\pi\alpha \Pi\alpha\tau\epsilon\rho.)$ They remind us likewise of Appa, or Appla, (Aπφα, Suid. Απφια, Hes. Frater vel Soror, velut à blandientibus sic appellantur,) a term of Endearment, with which Brothers and Sisters are addressed, where we have the Being of another sort. In Greek we have likewise Apphus, (Amous, Pater,) which belongs probably to the AB, Father, and not to Phus, (Φυς, à Φυω.) Perhaps the Radical of Phuo, (Φυω,) may appear in the present tense, and not in the future, Phuso, (Duow.) If the Radical appears in the future, it belongs to Pater. The Element AB, AF, &c. supplies the name for Father in the Polyglott Lord's Prayer in various Languages, as in the Hebrew, Samaritan, Chaldee, Syriac, Æthiopic, Amharic, Arabic, Abyssinian, &c. We shall now understand the origin of the Latin AB, and the Greek Apo, (Amo,) denoting the Source or Origin, from which things arise, either as attached to the AB, denoting Father, or as belonging, without that intermediate step, to the Element 'B, 'P, signifying the Earth. To the Element ^M, ^V, &c., denoting the Venerable Female, or Male, we must refer the Latin Amita, Avia, Av-us, Av-Unculus, At-Avus, Ab-Av-us, the Spanish Amo, Master and Mistress, &c. &c. we have the word EAM, signifying Uncle, recorded by Skinner, with its parallel terms Eame, (Sax.) Oom, (Belg.) Oheim, Ohm, &c. (Germ.) Skinner likewise adds the German Amme, Nutrix. Some justly understand, that the Latin Amo belongs to the Eastern term for Mother, Am.—The Latin Homo, and its parallel terms, must be referred to this race of words. Omnis belongs to Homo.

The n in Homin-is and Omn-is is only an organical addition to the m_{\bullet}

I conceive, that the Element ^M, ^B, &c., as denoting the Earth, is connected with the Element ch-^M, as it appears in the Greek ch-AMAI, (Xaµaı.) The Etymologists understand, that h-Umi belongs to this Greek word; and we shall see from hence, how one form passes into the other. To h-UM-us belongs the English word h-OME, with its parallel terms in other Languages, as Ham, Ham, (Sax.) Habitatio, Pagus, Heym, (Germ.) &c. To Ham we must refer, as the Etymologists acknowledge, the term HAM-let, and the addition to the names of Towns and Villages, as HAM-ton, NottingHAM, &c. &c., and the spot, near to which and at which I am writing these Discussions, as Hing-HAM, Harding-HAM, &c. &c. The English word AM, the verb of Being, is derived from the h-OME, h-AM, &c., the Dwellingplace—the certain Place or Spot, on which a Person is Situated— Settled, &c.; and thus 'To Am,' if I may so express it, or 'To Be,' means precisely the same as Existere, or Sistere, Sisti, To Be in a certain Place—Station or Spot—To be Settled—Situated, Stationed Placed, &c. I use the verb in the Infinitive mood 'To Am in order to abstract the attention of the Reader from its famili use, as a verb of Being, and to avoid repeating the word wi that sense in my explanation, when it is used in the Pres Tense.—We here see, that the verbs of Being, Am and Is, F ESTA, (Eng. Lat. and Span.) &c., belong, under different Eleme to the same metaphor of Being Placed, Stationed, Situated, &c.

The Arabic word signifying Mother, AM, has prec the same meaning, in one of its senses, as the English hand the Saxon h-AM, "Habitatio, Mansio;" as it de according to Mr. Richardson's interpretation, "A House, "tation." Thus we see, that the Arabic AM, the Mothe the English AM, To Be, convey similar ideas, Sistor, Sisto

the

Fundamentum, vel prima causa, or Sistor, Sisto, Existo, in certo loco, quasi Fundamento, Sum. The Greek Up-Archo, from Arche, the Base, the Foundation, or Fixed Spot, on which any thing is Situated, Settled, Founded, &c., (Υπαρχω, Initium do,—Sum, Existo, Aexy, Principium, Exordium, Initium, Fundamentum,) will at once express the sense of Am, the Mother, and Am, the term of Being, as connected with the Foundation, or Fixed Spot. Let us mark the preposition Upo, (Tmo, Sub,) which we shall now understand to belong to our Element 'B, 'P, &c., denoting the Base, as we have seen in AB, (Lat.) Apo, $(A\pi o_r)$ &c. In Uper, $(\Upsilon_{\pi e \rho_r}, Super_r)$ as likewise in the English Over, Up, we have the idea of the same Spot—the Surface of the Earth, as denoting the Top. notion annexed to the Top and Bottom, as the Extreme part of any thing, is only a different mode of conceiving the same We see, how the Elementary forms s-P and ^P are connected in Upo, Uper, $(\Upsilon_{\pi o}, \Upsilon_{\pi e \varrho},)$ and s-UB, s-Uper, as I have supposed.

We shall now understand, that the term Have, under the form of the Element 'B, 'V, &c., belongs to h-Ome, h-Am, Am, &c., and signifies the Possession of a certain Spot—Place, &c. The parallel term in Latin, Habeo, actually signifies, as R. Ainsworth explains it, "To Dwell, or Continue in a place;" from whence, we know, comes Habito, with its parallel terms Habitation, &c.; and in another sense Habeo signifies, as the same Lexicographer interprets it, "To be in a State, To go, Stand, or be affected," (Habere bene, Præclare—Male, &c.); where Habeo and Am have precisely the same sense. We observe, that in the above interpretation, the words State and Stand, "To be in a State, To Stand," present to us the very metaphor, from which the term is derived; namely, that of a Stand or a Place, to 'Dwell' and 'Continue in.' Ve perceive too, in the same interpretation, the term Be, To Be," which, we know, is the verb of Existence. Let us mark

the term Be, which belongs to this race of words; when the breathing before the Radical Consonant is lost, as B[^], &c. parallel terms to Have, are Habban, (Sax.) Haban, (Goth.) Haben, (Germ.) Avoir, Avere, Aver, (Fr. Ital. Span.) Hebben, (Belg.) Haffue, (Dan.) Habeo, Abeis, (Gr. Aβως, εχως,) &c. &c.—Under the form 'F, 'V, &c., we find a similar race of words relating to the Place of Abode, as under the form 'M. In Scotch, Hoif, Hoff, Hove, Houff, Huff, signify 'A Hall—A Burial Place,' or the Spot, in which a Person is Settled-Situated-Abides, &c. &c. Dr. Jamieson produces this word Hoir, &c. in his Scottish Dictionary, and justly refers it to the Saxon Hofe, Domus, Spelunca, Hof, (Germ.) A House, and in Barbarous Latin, "Hob-a, Hov-a, Hov-ia, Villa, "Prædium." Wachter derives the term as used in this sense from A. S. Hiw-an, "formare, fabricare." Our familiar word Hovel, we see, belongs to the above terms. HAFT means likewise, in the Scotch Language, "Dwelling, Place of Residence."

The Greek Echo, (Εχω,) has exactly the same relation to Esti, (Εστι,) Est, (Lat.) Ez-omai, (Εζομαι,) which Have bears to Am. The term Have is used, we know, to denote the past tense of verbs, as I Have Loved; and so is the verb of Existence used, as Io Sono stato, I Am been, that is, I Have been, Je suis Venu, I Am Come, or I Have Come, where Am and Have are both used. Greek Есно, (Ехи,) is used to denote a past tense, as the English Have, &c. is, as Malw Exw, Homoac Exw, for Emalov, Excinca, I Have learned, I Have Done, &c. In such phrases as "Vinculis illum " constrictum Habeo," Αυτον εχω δησας, 'I Have him, (that is, ' I Hold him) bound, I Have bound him; ' we see, how the verb of Possession slides into the signification of a Past Tense. The ideas annexed to AM and HAVE are inseparable from each other, both in their original sense, and in some of the various modes, in which they are applied.—In my observations therefore on the Element ^M, ^B, &c., I shall not always stop to enquire whether that part

of verbs, in which the Element ^M, ^P, is found, belongs to what we distinguish by the name of the verb of Being, or the verb of Possession, to Am or to HAVE. In French, as we know, the verb of Possession is oftentimes best translated by the verb of Being, as Il y a, There Is, There Are, It Is; Il y Avoit, There Was, There In Spanish the Grammarians justly translate the tenses of the verb of Possession used impersonally, Hay, Havia, &c., by There Is, There Was, Were, &c. The writer of the Grammar, now before me, explains Haver, as an Impersonal, by "To Be in "what concerns a Place." On other occasions in Spanish the use of the verb of Possession coincides with the sense of the verb of Being in other Languages, as 'Havia de dar' is translated by I Was to give, or, as we might say, 'I Had to Give;' and in French, 'J'Aie à Etudier' is translated by 'I Am to study,' which might be rendered, 'I Have to study.' I must again repeat, that HAVE and Am should be considered only as different forms of each other, conveying the same idea of Place—Situation, &c.; and they differ in nothing but in this respect, that HAVE is commonly used as a transitive verb, as the Grammarians would call it, and AM, as a Neuter or Passive, I HAVE, AM. Yet this minute difference of application perpetually disappears. The Latin Habeo, as we have seen, like the parallel word in modern Languages, passes into a neuter sense, and means Am or Be-" To Be in a state or con-"dition," &c.— Habere, male'—To Be Badly. We know too, that the Greek $E_{\chi\omega}$, Habeo, passes likewise into the neuter sense, (" Adfectus Sum,") and signifies I AM, Ευνοικως Εχω, I HAVE or AM benevolently, i. e. I Am disposed benevolently, &c. The forms of 'M and 'B, 'V, 'F, &c., are sometimes applied indifferently in the transitive and the neuter or passive senses. In the Welsh and Armoric, we find the verb of Being, or the verb with a Neuter or Passive sense, under the form 'F, 'V, as Wyr, Ov, I Am; and in Russian, the transitive sense appears under the form

form 'M, as Imeio, I Have.—In the Hindostan Dialect, Hoova means I Am. In Scotch, as we have seen, Hoif, Hoff, &c. means the Hall, the place in which a Person is Situated—Settled, &c., and Haff, "Dwelling, Place of Residence;" and we find likewise two verbs, belonging to these words, one of which is used as an active verb, and the other as a neuter. Haif and Have signify To Have; and Hove, Huff, Huff, signify "To "Lodge, to Remain," as Dr. Jamieson explains it, where we see the neuter sense of Am.

The Element 'N, 'NC, 'ND, 'NS, 'NT, &c. &c. denotes Being-The Man-The Powerful-Illustrious Man, &c., and is employed to express Pronouns—verbs of Being, &c. &c., through the whole compass of Language. I do not attempt to decide on the original idea annexed to these words. I shew in another part of this work, that the Element 'N, 'NC, &c. affords a great race of words, which signify 'To Hold, Gripe, Grasp,' &c., as Hand, Hank, Hang, &c., Uncus, Unguis, Onux, (Ovož.) &c.; and we know, that some of the terms must appear in Greek, under the form of our Element ^GG, ^GC, &c., as Agcho, (Αγχω, Constringo,) &c., which will shew us, how the forms might pass into each other, and how the races of words under both these forms might be related. I will not attempt to decide, whether this relation takes place; and I must observe, moreover, that the terms, under the form ^N, ^NG, &c., whatever might be its origin, would constitute, when it once existed, a distinct race of words, with a turn of meaning peculiar to itself. To the Element 'N, as denoting Man-The Distinguished Being, &c., we must refer the Greek An-er, And-r-os, (Ange, Andros,) Anth-r-op-os, (Andromos, Homo,) Ana, Anax, Anakt, (Aνα, O rex, Αναξ, Ανακτος, Rex, η Regina, Herus, Dominus.) The Anax is nothing but The Man—The ANAX Andron, (Avaž Avδρων,) The Distinguished Man among Men. The X and KT, in Anax and Anakt, seem to be only organical additions

additions to the N, as the D and T in Andros and Anthropos. If the name of Man should be derived from the idea of the Seizer the Griper—the Strong Being; then the form and idea of ANAKS, (Arak,) would coincide with Onux, (Oruk,) and And-Ant in Andros. Anthropos, (Ανδρος, Ανθρωπος,) with HAND, &c. The Er in An-Er belongs to the Element 'R, denoting Being; and it is retained, we see, in And-^R-os.—The Anthr, in Anthr-op-os, should be considered as belonging to Aner, and the op should be referred to the Element ^P, denoting Being. I shall shew, in another Volume, that the Element 'RM or 'RP denotes Man likewise; and the only difficulty is to decide, whether Rop may not be the second part of the compound, instead of Op. The same difficulty occurs in Merops, Merop-os, (Μεροψ, Divisam vocem habens, Μεροπες, Hominum Epith. Homines,) which has nothing to do with Meiro, (Meipe, Divido,) To Divide, and Ops, (O4,) the Voice; but it is a compound of MR, denoting Man, and RP, or 'P, bearing a similar The Latin Homo, as we have seen, is attached to the Element ^M, ^P, &c. In English we have Hine, Hind, which belongs to Aner, (Armp.) In Hebrew אנש ANS signifies Man, and so it does in Chaldee and Syriac. In Arabic, انس Ans or Ins signifies Mankind, and انسار، Insan means likewise "Man and Mankind." In the English Aunt and Unc-le, we see the Element 'NC, 'NT, &c. denoting Being. The Uncul-us in Av-Uncul-us, belongs to UNCLE. In Syriac, ANTTA signifies a Woman; and in Arabic, الثا ANSA or UNSA is a Woman, Female. In Irish, AINDEAR is Young Woman. (See Lhuyd sub voce Mulier, and Vallancey's Gramm. p. 67. Ed. 2.) The Latin Ens was adopted from the Treek Oon—On, Ont-os, &c. (Ων, ουσα, Ον, Οντος, &c.) I have given some of the more general terms, denoting Being, under the Element 'N, &c.; but the Pronouns—Verbs—Participles, belonging to it, will be noted in the progress of these Enquiries.

Before I proceed to the investigation of the terms expressing Being,

Being, under our Element ^C, ^D, &c., I must beseech the Reader diligently to observe, that the origin, from which the races of words denoting Being, under these different Elements, are supposed to be derived, is totally unconnected with the truth of the discussion, which is employed in unfolding the existence of such terms, and in detailing their relation to each other. If, for example, the Reader should not imagine, that the race of words, denoting Being, under our Element ^C, ^D, &c., belongs to the EARTH; the facts which I detail, respecting the existence of these words, and of their affinity with each other, remain precisely the same. The Reader may either suppose, that the evidence, which I have given for their connection with the EARTH, Estia, &c. &c. (Εστια,) &c. is not sufficiently strong and convincing; or he may think, that the nature of the question will not admit of any proof, sufficient to establish a position of this kind. In other races of words, we are almost perpetually able to discover some peculiar vein of meaning in the terms examined, which present to us the original idea, and lead us to the primitive spot, from whence they But in this race of words we can expect only to see the bond of union, between the primary and the secondary idea, preserved in a few terms; and thus the evidence of their origin, whatever it may have been, will of necessity be obscure When the idea of This or That Existing Being and imperfect. was once attached to certain terms, they would propagate a race of words belonging to each other, in which only the secondary sense of This or That Being would appear, while the primary idea of Existence, as belonging to Place—to Sisto, &c., if such should have been the origin, would be entirely lost. The writer is aware of these difficulties; and he has only to observe, that he has endeavoured to perform all which the case would admit. It = It became his duty, in the progress of his work, to unfold the relation of certain terms to each other, which denote Being, under the

Elemen

Element ^C, ^D, &c.; and this part has been accomplished, I trust, to the satisfaction of the enquiring Philologist, in a series of numerous and striking facts, which were before altogether hidden and unknown. As these words for Being or Existence must be derived from some primary idea, I have suggested, in the commencement of my enquiry, that the original notion was probably that of Place, which directly connects it with the Ground, or ' EARTH. I have shewn, what every one must acknowledge, that this union of ideas between Place and Being actually occurs in the very word Existence, and in other terms belonging to our Element ^C, ^D, &c. All this is plain and probable; yet I am still aware, that the primary idea, whatever it may be, can be recalled to our view in a few examples only; and that the spirit of the discussion consists in discovering the relation of the terms to each other, when they are used in their familiar secondary sense of This or That Being, Thing, &c. I shall therefore direct my attention to the detail of these facts, which exhibit this secondary idea, and which I regard as the essential part of the discussion; though I shall not fail to introduce any proofs, presenting themselves in the course of my enquiry, which I may conceive to be illustrative of the primary idea supposed in my hypothesis.

^C, ^D, ^G, &c.

Verbs denoting Existence, or Verbs of Being, derived from the idea of that, which is Placed—Set—Situated—Stands up, &c.

Ist-amai. (Gr.) I am Placed, Situated, I Stand up, &c. I am. Est-ar. (Span.) To be in a Place, To Be, as an auxiliary verb.

[^]S_T-are. (Ital.) To Stand, To Be.

Est, Esti, Es, Ess-er, Is, Ist, Ast, Este, &c. (Lat. and Fr. Gr. Span. Saxon and Belg. Goth. and Germ. Pers. Russ. &c.) —

Is. (Eng.) Or To Be.

ISH. (Heb.) Existence, Substance, Reality.

IS. (Heb.) Is, Are, Was, Were. AIS—AISh. (Heb.) A Being or thing Subsisting or Existing, Man, Woman, Each, any one.

ATA, ^TA, As, Is. (Irish.) Is. ATA—^TA—Is. (Gal.) Is. OES, SI. (Welsh.) Is.

Ez, Ysy, Otte, Ydzhi. (Corn.)

Ez = Eo, So. (Armor.) Is.

So, SE. (Anc. Ital.) I am, thou' art.

SE. (Gipsey.) Is.

S1. (Sax.) I am, thou art, he is. $^{\circ}S=Um$, ES-Um. (Lat.) I am. ES=Me, HsT=M. (Russ. & Pers.) ATA=Im, $^{\circ}TA=Im$, $^{\circ}TS=Aim$, $^{\circ}S=Am$, $^{\circ}S=Om$. (Irish.) I Am.

I SHALL now return to the consideration of our Element ^C, ^D, ^G, ^J, ^K, ^Q, ^S, ^X, ^Z, as it relates to Being, &c.; and first I shall consider the verb of Being, Est, Is, &c., which I have supposed to belong to such terms as Ezomai, Ist-emi, (Εζομαι, Sedeo, Ιστημι, Statuo,) and to convey precisely the same idea, as that annexed to the term Exist, which means, Quod Sistit, or Sistitur, What is Placed—Situated, &c. &c. The verb of Being, Is, and its parallels, are found in a great variety of Languages;

as in the Latin, Greek, Italian, Spanish, French; the Dialects of the Teutonic and Sclavonic, in Persian, Hebrew, and in the Celtic and Hindostan Dialects. In Latin, the Element '8, &c. appears in Es, Est, Estis, Essem, Esse. In the Laws of the Twelve Tables, Eso h written for Ero; and this might lead us to conclude, that Eram was quasi Esam. In Greek we have Eis, Esti, Est-on, Est-on, Esmen, Este, Eisi, (Eimi, eig, vel ei, esti, εστον, εστον, εσμεν, εστε, εισι,) Es omai, &c.—Isthi, Eso, Este, &c. (Εσεμαι, &c. Ισθι, vel εσο, εστω, &c.) In Italian we have Essere, &c.; and in the Participle, we have Stato, which is acknowledged to belong to the idea of Place or Position. In Spanish, as I have observed, we have Estar, To be, which is acknowledged likewise to be derived from the idea of *Position*; and there is another verb, Ser, To be, Soi, I am, the second and third persons of which are Eres, and Es. In the third person of the Italian, E, He Is, the S is lost; though it is preserved, as we see, in the Spanish Es. In French we have Estre or Etre, Es, Est, Etes, Etois, &c.-Some of the French Etymologists tell us, that this verb of Being, with its various tenses, derives its origin from three different sources, as Suis from Sum-Fus from Fui, and They inform us, moreover, that Stare was used Etre from Stare. for Etre, as in Horace:

"Hoc miseræ plebi Stabat commune sepulcrum."

They add likewise, that in the ancient French writers, ESTRE is used for Stare, as in Froissard ESTANT sur ses pieds. An adjacent word to this in the Dictionary of Menage, is ETREE or Estree, Chemin, A Road, Path; which we see at once brings us to the Ground—the Spot, from which I suppose the term under a similar form, ETRE, to be taken.

The Etymologists have produced the parallel terms to the English Is, as the Saxon and Belgic Is, the Gothic and German Ist, the Greek Esti, (Esti,) and the Latin Est. In the Russian Dialect

Dialect of the Sclavonic, we have Esme, Ese, Este, for Sum, Es, Est; where in Esme we see the true form of the Latin Esm. In Persian, Am, Ai, Ast, Em, or Aim, Ed, or Aid, —And, — &c. mean 'I am, Thou art,' &c. and Mastan or Hstn signifies To Be. The present tense of this verb is a compound of Am and Hst, Hst=^M, I am, where there is the same compound, which I have supposed to exist in Es-Um.

There is some difficulty, which on the first view presents itself, on deciding on the Auxiliary verb Sum, and its parallels under that form. We all agree, I imagine, that S=Um and Am belong to each other; and they might be connected by supposing the loss or the addition of the s in the forms of the Element S=M, ^M, or s=^M. In this case the s would not be significant. We see, however, in the ancient Latin word Es=Um, that the ES appears to be a separate and significant portion, belonging to 'S, Est, &c.; and this is confirmed by observing the same form in the Sclavonic Es=Me—the Greek Es=Men, (Eomes,) and the law of formation in the Persian Hst = M, which is unequivocally Hst, or Est, the verb of Being, belonging to the Element 'S, and 'M, or Am. This Persian form I imagine to represent precisely the law of formation in the Latin ES-Um, or 'S-Um; and we shall perceive, in the progress of our Enquiries, that every thing confirms Thus then $^{S}=Um$, Es, Esr, S=Umus, Esris, $^{S}=Unt$, are quasi ES=Um, Es, Est, ES=Umus, Estis, 'S=Unt; and hence we see, that the Auxiliary verb is made up of three different Elements, or of three different forms of Auxiliary verbs, as 'S, 'M, 'N; and we shall find, that these Elements, with the addition of the Element 'R, compose the inflexions of Auxiliary and other verbs in a great variety of Languages, together with the Pronouns, &c. &c. The Element AR should probably be considered, as belonging to the 'S. We have seen, that Ero was originally Eso, and in ancient Language the S frequently frequently appears, where R is now written, as Asa, Honos, for Ara, Honor! We see the form of the Auxiliary verb, as belonging to the Element 'M, distinct in the English Am, the Gothic Im or Am, the Saxon Eom, the Persian Am , and the Greek Еімі, (Εμμ.,) &c., unless we should imagine, as I have sometimes thought, that the Greek Eimi, (E1µ1,) was originally EJ-Mi, as in ES-Um; yet in the Æolic Emi, and the Doric Emmi, (Hu, Æol. Dor.) we see nothing of this form. In Hebrew, Turn ISH denotes, says Mr. Parkhurst, Existence, Substance, Reality, as the general idea; and in the first sense, "IS means, as he tayt, "Is, Are, Was, Were." This word contains every thing to illustrate my Hypothesis. Mr. Parkhurst, we perceive, not only explains it by Existence, but by Subsistence; where we see the more original idea, connected likewise with the same metaphor of Sisto. This Hebrew word affords the appropriate terms, perpetually recurring in that Language, for Man and Woman, or Being in general. "As a N." says Mr. Parkhurst, "with a formative &, "איש fem. איש dropping the '," A, AIS-ASH-I, "A Being, or "thing, Subsisting or Existing.—" It may be and frequently is ren-"dered, Each, Every one." This is precisely the idea, which I have annexed to the origin of Hic, Is, IsTE, (Lat.) &c. &c. Mr. Parkhurst refers to this word, Is, YES, (Eng.) in which he is right, and likewise Ice, which is considered on another occasion. connection of this Hebrew word with other terms in that Language will be particularly examined in a future page.

In detailing all that can be known respecting the formation of verbs, we must proceed with caution in the enquiry; and in analysing their different parts, we must endeavour to discover the office performed by these parts, and to trace their progress from the most simple state to the more complicated forms. We are not to expect, that we can determine with precision on all occasions the original meaning of each part, or that any system can be adopted,

adopted, which will explain all the varieties of their formation. I mean only to observe some general facts respecting their construction, which have not been sufficiently understood, and which will exhibit to us, in the strongest point of view, how intimately the different kinds of Human Speech are connected with each other in their essential and fundamental properties. I mean to shew, that the Verbs in various Languages, where different inflexions are used to mark different tenses, may be considered as compounds; one part of which is the Radical expressing the action of the verb, and the other part, constituting the inflexion, is derived from the Auxiliary verb of Being, and performs the same office as that verb. Thus various Languages, with verbs having inflexions, as the Latin, Greek, &c., are founded on the same principles as our own; the great business of which is performed by Auxiliary verbs, and the word expressing the action of the verb; except that in one case the Auxiliary verb has been joined with that word, and in the other it is separate. This idea is obvious, and has accordingly been adopted; yet our enquirers have seen nothing of the extent or the genuine principles of the process, by which this formation has been effected; and the present observations may be considered, as supplying the curiosity of the Reader, with a new theme of meditation, on the constitution of Languages. The first object to which we should direct our attention is the Auxiliary, and this should be examined with great care and diligence. The Auxiliary verb itself is subject to inflexions, and therefore we may sometimes expect to find a composition, of a kind similar to that, which takes place in ordinary verbs; namely, of one part expressing the action of the verb, and the inflexion or the verb of Being in a simpler state. composition will only differ from that in ordinary verbs by the union of two parts, expressing the same idea of Being, either under

the same or different Elements. Nay, even this inflexion itself,

or the verb of Being in its more simple state, may still be a compound, formed of the same or similar materials, which may likewise be separated from each other. I have endeavoured to speak as distinctly as I can on this subject, and to proceed with the analysis as far as I am able, without losingmy own meaning in the minuteness of the enquiry. All this, I trust, will be sufficiently intelligible, when it is illustrated by the example before us, Sum, Es-Um, &c. &c.

on a former occasion I made some enquiries into the composition of verbs, in which many facts were disclosed, before little understood; and in which the general principles of the question may be regarded as justly established, though they were not so fully unfolded, under such various points of view, as the nature of the subject may perhaps seem to demand. I have there supposed, with some others, that the inflexions of verbs were originally Pronouns; and when in the present discussion I consider them as verbs, still the same fundamental idea is preserved; and in many cases it is impossible to discover, to which of these parts of Speech the addition of Inflexion should be ascribed, or rather it is idle to attempt a distinction between the two. that the Pronouns and the Verbs belong to the same Elements, and are only different forms of each other, discharging different Now this difference of office can hardly be said to exist, before Languages have assumed a regular form; and therefore it would be idle in some cases to attempt a distinction of this nature; when we refer to these simple and original forms, from which the composition of Languages has arisen. I must observe moreover, that the arrangement of such Grammatical distinctions does not fall within the province of my Enquiries, which relates only to Elementary forms and Elementary meanings. It is my business to discover the Elementary character and idea, as abstracted from the various modifications of meaning and office, into which

which they may pass in the formation of words.—When that has been duly performed, the duties of my office terminate. chowever, I have thought it expedient on some occasions to attempt these Grammatical distinctions, and to adopt that phraseology which is familiar to other Philologists. We may observe indeed, that in some cases those distinctions, when strongly marked, may be considered as important points in the nature of the discussion.—We shall find, that some Languages are even distinguished from others by this circumstance, that the addition or Inflexion to the verb has been directly taken from that part of Speech, called by all Grammarians the Pronoun. If it should likewise appear, from evidence sufficiently distinct, that in some other Languages the Inflexion of the ordinary verbs is derived from that part of Speech, which Grammarians would agree to denominate the Verb of Being, this distinction is important to be exhibited; as from such facts we obtain a strong characteristic difference between those Languages, in which they are found to exist.

Let us again place before us the present tense of the Latin verb of Being, 'S-'Um, Es, Est, 'S-Umus, Estis, 'S-Unt; and let us take the first state of the composition in this word. In examining the ordinary verbs, and the verb of Being itself, in other tenses, we shall at once see, that a law of Inflexion exists, which must be referred to Um, Es, Est, Umus, Estis, Unt; or to the Elements 'M for the first person; 'S, 'T, &c. for the second and third singular; 'M joined with 'S, &c. for the first plural; 'S, 'T, &c. joined to itself for the second plural; and 'N, 'NT, &c. for the third. Thus in Leg=Am, Leg=As, At, Leg=Amus, Leg=Atis, Leg=Ant, we unequivocally see, that Am, As, At, Amus, Atis, Ant, are additions to the part Leg, which represents the action of the verb; and that they correspond with Um, Es, Est, Umus, Estis, Unt. Now this would be enough to convince us, that the Auxiliary

Auxiliary, as it appears in S=UM, S=UMUS, S=UNT, and in S=IM, S=IS, S=IT, S=IMUS, S=ITIS, S=INT, was a compound, in which S was a separate part; and that UM, ES, EST, UMUS, ESTIS, UNT, IM, IS, IT, IMUS, ITIS, INT, represented in fact the simpler form of the Auxiliary Verb. But we have seen in Persian, that the present tense of the Auxiliary is AM, AI, (which I conceive to be quasi AJ, corresponding with ES, Lat. EIS, EIS, &C.) AST, AIM, AID, AND, I AM, Thou ART, He IS, We, Ye, They are; and we now perceive, that this form coincides with UM, ES, EST, UM, EST, UNT, of the Latin UM, ES, EST, UM-US, EST-IS, UNT.

Thus then we understand, that Um, Es, Est, Um, Est, Unt, is the simplest and first state of the Latin Auxiliary, and that the Um=Us and EsT=Is are compounds. We may represent therefore the simplest state by 'M, 'S, &c., 'S, &c., 'M, 'S, &c. 'N, 'NT, &c. Now I conceive, that the 'S or Es, as we see it in Es=Um, denotes Being, and bears precisely the same relation to the Um, which Leg does to Am in Leg=Am; and that the one denotes 'I Am=Being' as the other does 'I Am=Reading.' differ only in the circumstance of the Verb of Being being added to another term, expressing Being, either under different or the same Elements; as $^{S}=Um$ or Es=Um, and EsT=Is. that in the present tense of the Auxiliary, as it is now written. the composition of 'S and the Auxiliary only appears in the first persons singular and plural, ^S=Um, ^S=Umus; and we see moreover, that the vowel breathing before the S is lost. another tense we have the vowel breathing before the 'S, as in Ess=Em; and we find moreover, that the composition of Ess with the auxiliary Em, Es, Et, Emus, Etis, Ent, remains through all the persons; as Ess=Em, Ess=Es, Ess=Et, Ess=Emus, Ess=Etis, Ess= Ent. We here see the auxiliary Em, Es, Est, Emus, Etis, Ent, similar to the form Um, Es, Est, Umus, Estis, Unt. Again, in the imperfect

Er-Am, we have the Er prefixed to the Auxiliary Am, As, At, Amus, Atis, Ant.

The Ess in Ess-Em is plainly the part denoting Being, and it coincides in form with Ess-e. The Er in Er=Am is probably quasi Es=Am, as the Ero is acknowledged to have been anciently written Eso. Thus, then, as S=Um is Es=Um, and Ero, Eso, if Er=Am, S=Im, S=Umus, and S=Unt, are quasi Es=Am, and Es=Im, Es-Umus, Es-Unt, we shall have all the tenses regularly compound of Es and the Auxiliary Am, &c., except that the Am does not appear in the first person of the future Ero or Eso, nor the composition of Es in some persons of the present. Vossius, however, has given us an ancient form for the present tense, in which the composition of 'S with the Auxiliary appears in all the persons, as Es=Um, Es=Is, Ess=It, Es=Umus, Es=Itis, Es=Unt; where we see the Es or Ess is annexed to the Auxiliary Um, Is, It, Umus, Itis, We shall see, in the course of our Enquiries, a similar kind of composition; and the Persian verb сыйы Няти, от Назтан, To be, exhibits an acknowledged union of this species. The present tense of this verb is HsT=M, HsT=Y, HsT, HsT=Im, HsT-Yd, HsT=Nd, which is acknowledged to be, as all verbs are in Persian, a composition of the part expressing the sense of the Verb and the Auxiliary. The third person singular, Hyst, may either be considered as a compound, or as existing in its simple state. The composition of the Latin Es=Um, in the Plural Es=Um-Us, is, according to the analogy here exhibited, HsT=IM; but the office which Us performed is not quite apparent. It was added probably to distinguish it from Es=Um in the singular, and the Us might denote Being, as the ES does at the beginning. If that should have been the fact, the addition of Us is contrary to the analogy of Es, by being put after instead of before the verb of Being. In Est=Is, if we have the same union, as in Hst=Yd, the Est represents

represents the Hyst, denoting Being, and the Is is the verb of Being. Perhaps, however, the first part, Est, originally expressed the verb of Being, and Is is an addition after it, as the Us undoubtedly is in the word Es=Um=Us. The Preterite Fui belongs to the Element ^F, or F^, denoting Being. In the other parts of the tense we have Fu=Isti, Fu=It, &c., where, in the Isti, It, Imus, Istis, Unt, we have the same form which I have now exhibited.—The Er, we know, is inserted before the Unt, as Er-Unt, Fu=Erunt; and Ere appears by itself, Fu-Ere, where in the first we have the same combination as in the Erunt of the Future; and in the second the Ere is the simpler form, as in the Latin Ero, and the Italian Ero, Eri, Era, I was, &c. In the Fu=Eram, Fu=Erim, Fu=Ero, Fu=Issem, we have compounds of Fu, and Eram, Ero, and Essem.

In the other Latin verbs, we plainly see, as I before suggested, that they are compounds of the part, which expresses the idea, conveyed by the Verb, and of the Auxiliary Verb. As Am=As, Am-AT, &c. Mon=Es, Mon=Et, &c. are compounds of Am, and Mon, signifying to 'Love' and 'Advise,' and of As, AT, AMUS, ATIS, ANT, Es, Et, Emus, Etis, Ent, which express the Auxiliary verb Es, Est, Umus, Estis, Unt. The 'M, or Am, we see, does not appear in the first person of the present tense, but it does in most of the other tenses of the active voice, as Legeb=Am, Leg=Am, Leger=Em, &c. &c.; and thus we have in Leg=Am, Leg=As, &c. the Am, As, At, Amus, Atis, Ant, for the Auxiliary Um, Es, &c. added to Leg, denoting the action of the verb. The addition of 'M and ^M=^S, without the preceding ^S, to Leg, Mon, &c., expressing the action of the verb in the first persons singular and plural, Leg=AM, Leg=AMUS, Mon=EAM, Mon=EAMUS, is alone sufficient to convince us, that the S in S=UM and S=UMUS was originally a part distinct by itself. If Sum, Sumus had been always united. representing the genuine state of the verb of Being, we should

have had Leg=Sam, Leg=Samus, Mon=Seam, Mon=Seamus, &c. &c., or something of that sort. In the Imperfect tense, $^{\wedge}Am = Ab = A_{M}$, Mon=Eb=Am, &c., we have the Am at the end of the word. bearing the same sense as the English Am; but we have likewise. as we see, the AB, and EB, belonging to the same Element. The office, which AB and EB originally performed, precisely corresponded with that of h-Ave. It was applied to mark the past time; 'I h=Ave Loved, Advised,' &c. The AB and EB in the Imperfect tense will bear the same meaning, as the Av, Iv, U-i, quasi ^V-i, do in Am=Av-i, Aud=Iv-i, Mon=U-i or Mon= ^V-i. It has been conjectured by others, that the Av in the Latin Am= Av-i corresponded with the English HAVE, as it might be in the phrase 'Lov'd=HAVE I.' The Av precisely agrees in sense with HAVE, if my conjecture should be right. We have the AB and EB again in the Future Am=AB-o, Mon=EB-o. Here again the AB and EB must belong to HAVE or AM, whatever might be the precise office which they performed. They might have been merely terminations, as the Am at the end of the word Am = AB =Am, Mon-EB-Am; and in that case, there would be no significant portions in this Future tense to express the time of the Future; or they might have been significant terminations for HAVE or AM to express a Future time, as we use these words in the phrases 'I Am to do a thing,' or 'I HAVE to do a thing;' so that Am=AB-0, Mon=EB-o, would have signified 'I HAVE to Love, Advise,' &c.

In the Spanish Language the use of Haver is very various, and it is particularly applied to express a Future action; 'Haver 'de Dar, To give hereafter,' 'He de Dar, I will give.' My Grammarian has four Future tenses, in three of which the verb Haver is used,—"Yo Dare, I shall or will give"—"He de dar, I will give or must give"—"Yo Havia de dar, I shall be obliged to give"—"Yo Havia de dar, I shall be obliged to give"—"Yo Havia de dar, I was to give." In Leg, Audi} Am of the future, the Am seems to be only a termination, as in other tenses.

The formation of the Spanish verb Estar, To Stand, or To Be, which we may consider altogether to coincide with the Latin *Stare, will fully illustrate and confirm my hypothesis, respecting the mode in which the Latin verbs have been generated.—First 1 may note, that the verb Haver in Spanish assumes, in some tenses, the AB of HABEO, as well as the AV, as HuBieramos; and thus in Italian we have Avere, and ABBIA. The Preterimperfect, the first Preterperfect, and the second and third Preterperfect, and the Preterpluperfect, as they are called by the Spanish Grammarians, are respectively under the following forms; Est=ABA, I was, Est=Uve, I had been, He or Huve Estado, I have been, Havia Estado, I had been. Now I think no one can doubt, that the Uve after the Est in Est=Uve is the h=Uve before the Estado; and we cannot, I think, doubt, that the ABA in Est=ABA has the same force, as the Uve in Est=Uve. We certainly should not have doubted about this, if in Havia the B had been adopted, quasi h-ABia, as it is in h-UB=Ieramos. By these minute circumstances it is, that such facts are hidden from our view. we cannot doubt, that the AB in Est-ABA belongs to the AB in $^{\wedge}St=AB=Am$; and if the future had been in the regular form St=Av-i, we should not have doubted, that the Uv in Uve belonged to the Av in Avi. In Italian, the tense, which we may consider as corresponding with Est=AB-a, $^{S}t=AB=Am$, appears under the form of $^{\text{V}}$, $^{\text{S}t}$ =AV-a.

In the Arem, and Erem, of Am=arem, Mon=Erem, &c., we have the Eram of the Auxiliary. In the past tenses, Amav=Eram, Amav=Eram, Amav=Ero, Amav=Issem, we have the Eram, Ero, Essem, as in the past tenses of the Auxiliary, Fu=Eram, &c. In the passive of Latin verbs we have the form Am=Or, Am=Aris, &c.; or, if we put the terminations only, Or, Aris, Atur, Amur, Amini, Antur; and here I cannot decide on the nature of the Composition. We have the Element Ar however introduced,

and likewise the Element 'N, the latter of which we shall see familiarly adopted in the Greek. We shall find, that the Element 'N or 'NT is peculiarly applied in the third persons plural of The Element 'R denotes Being, through a wide extent of Language; and hence we have the terminations OR and ER, as in Amat=OR, Lov=ER. As a verb, we see it in the English Are. The Element ^ R, as I before observed, is perpetually connected with the Element 'S, and was, I believe, originally derived from it. In German, Er is the familiar pronoun for He. Some of the tenses of the Passive are acknowledged to be formed from the Auxiliary verb Amatus Sum vel Fui; and thus we see, that they are constructed in a similar manner to those in the Active voice, except that in one case the auxiliary is separated from the participle, or part expressing the action of the verb, and in the other it is united with it.—Let us note, in the AT, AM, ANT, of the Passive inflection, Or, Aris, AT=ur, Am=ur, Amani, ANT-ur, the auxiliary of the Active. The AR, as the characteristic of the Passive verbs, seems to be derived from the Celtic Air, (Gal.) Iar, (Irish,) which are used to form what is called the Preterite, or the Passive Participle, as Air Cruinuchadh Assembled, Congregatus.

Let us now consider the verb of Being in Greek, and the composition of other verbs in that Language. The Greek Eimi, (Equ., Sum.,) may be either quasi Ej= ^Mi, and therefore may correspond with Es=Um, or it may directly be referred to Am. In some Dialects we have at once Emmi, or Emi, (Emmi, Hmi,) as I before observed. The whole tense runs thus; Eimi, Eis or Ei, Esti, Eston, Eston, Esmen, (in some Dialects, Eimen, Emen, Eimes,) Este, Eisi; and in another Dialect, Enti, Equ., (Emmi, Hmi, D. Æ.) Eis, Ei, Eoti, Eoto, Eotov, Eotov, Eotov, (Eimev, Emev, Eimes, I. P. D.) Eote, Eisi, (Evti, D.) The simpler state of this tense is Eimi, Eis, Esti, Em, Este, Enti, as in Latin Um, Es, Est, Um, Est, Unt. The imperfect runs thus: En, Es, E, Eton, Eten, Emen, Ete, Esan, (Hv, Hs, H, Htov, Htov, Huer,

HHEV, HTE, HOAV.) Here we see the Element 'N appears. Let us mark in the Esm of Esmen, (E $\sigma\mu\epsilon\nu$,) the true form of the Es in Esum-us, as it would be from Esum. This might lead us to conclude, that Eimi was originally EJMi. In the Em, Eso, Eto, Emeth, Esthe, Ento, of Emeen, Eso, Eto, Emeth=on, Esth=on, Esth=en, Emeth=a, Esthe, Ento, (H $\mu\eta\nu$, Hoo, Hto, H $\mu\epsilon\theta\sigma$, Hofo, Hoto, Hofo, Hof

The Greek verbs, like the Latin, are compounded of the part expressing the sense conveyed by the Verb and the Auxiliary. As Tupto, Tupt=Eis, Tupt=Ei, Tupt=Eton, Tupt=Eton, Tupt=Omen, Tupt=Ete, Tupt=Ousi, (Τυπτω, τυπτεις, τυπτει, τυπτετον, τυπτετον, τυπτετον, τυπτετον, τυπτετον, τυπτετον, τυπτετον, τυπτετον, οmen, Ete, Ousi, corresponding with the Eis, Ei, Eston, Eston, Esmen, or Emen, Este, in one Dialect Ete, Eisi, (Eis, Ei, Eston, Eston, Eston, Eston, Eston, Este, Eise, P. Eisi, of the Auxiliary. We see here, that one form of the second person of the Auxiliary Ei, (Ei,) is adopted for the third in the ordinary verbs. Perhaps the Ei was originally Ej. The M we see is lost in the first person of the present tense of the Active voice, as it is in the Latin; but it is found in the same tense of the Passive and Middle voices, and in various other tenses, Tupt=Omai, &c. &c. (Τυπτομαι,) which means literally, 'Beat=Am I.'

The 'M is likewise found in that class of verbs, which are called Verbs in M1, Tith=Em1, $(T_i\theta\eta\mu\iota)$ In the composition of these verbs we see likewise the Auxiliary, as Tith=Em1, Es, Es1, Eton, Eton, Emen, Ete, E1s1, $(T_i\theta\eta\mu\iota)$, $\tau_i\theta\eta\varsigma$, &c.) Here the third person singular contains, as it commonly does, the Element 'S, as Es1; and though in the third person plural we have Eisi, yet in a Dialect we have the familiar Element 'N, Enti, Tith-Ent1 (Tiberti, Dor.)

In the Passive voice of the ordinary verbs we see a similar composition of the part expressing the sense of the Verb and the Auxiliary; as in e-Tupt=Omen, e-Tup=En, Tup=Esomai, (Ετυπτομην, ετυπην, τυπησομαι,) which are formed from Tupt, Tup, and Omen, or Emen, (Hμην,) En, (Hν,) and Esomai, (Εσομαι.) The Auxiliary Emen, (Hμην,) is thus formed; Emen, Eso, Eto, Emethon, Esthon, Esthen, Emetha, Esthe, Ento; and e-Tupt=Omen is thus formed, e-Tupt={Omen, ou, or Eso, Eto, Omethon, Esthon, Esthen, Ometha, Esthe, Onto, (ετυπτομην, ετυπτου, vel ετυπτεσο apud veteres, ετυπτετο, &c.) The present tense is formed in a similar manner, though without any addition in the first person to the 'M, or Am. It coincides most in the singular and plural with the Latin, though it is somewhat in a simpler state. Thus we have Tupt={Omai, Esai, Etai, OMETha, Esthe, Ontai, (Τυπτομαι, τυπτη, vel τυπτεσαι apud veteres, τυπτεται, τυπτομεθα, τυπτεσθε, τυπτονται,) which coincides most with the Latin form, Um, Es, Est, Umus, Est=is, Unt.

The Infinitive of the Greeks follows the two forms of Einai, (Eivai,) and of Esthai in Es=Esthai, (Εσεσθαί,) as in Tupt=Ein, Tetuph=Enai, Tupt=Esthai, (Τυπτείν, Τετυφεναί, Τυπτεσθαί.) In some forms of the infinitive we have a compound of the Elements ^M. and AN, as Em=En, Em=Enai (Euer, Euerai, Ion.), and in the other verbs Tupt=Emen, Tupt=Emenai, (Τυπτεμεν, Τυπτεμεναι, A. D.) The ESTHAI of the Greeks corresponds with the Esse, Estre or Etre, Esser, of the Latins, French, Italians, &c. If Einai should be quasi E_i -Nai, then the Nai, and En, in E_j =Nai, and Em=En, will be the form of the Infinitive added to the verbs of Being, Ej and Em. In some of the Dialects of the Teutonic, the Infinitive terminates in N. Thus in German and Saxon we have Lob=En, Lufi=An, To Love; in Gothic, Sokj=An, To Seek, &c. &c. In the Hindostan Dialects the Infinitive ends in NA, as Mar=NA, To Beat, Jaou=NA, To Go, (Hadley's Gram. p. 37,) where let us note the Mar and the Jaou, corresponding with the English Marr and

Go. The verb of Being in these Dialects is Hona, To be, which corresponds with the Greek Einai, (Eval); and the present tense is formed by using Hyn, the verb of Being, after the word expressing the action intended, as "Myn Dourtay Hyn, I am running," (Hadley, p. 37.) where if the term Dourtay, Running, was joined with Hyn, as Dourtayhyn, it would be precisely the same composition as e-Tupton, (Etunton,) from Tupt and On, or En, (Hu, Eram,) I was beating. We perceive sometimes the 'M in the Infinitive of Greek verbs, as in the Tupt=Em-en, (Tuntouev); and this likewise takes place in some of the Celtic Dialects, as in the Irish and Galic, as DeanAm, DheanAmh, To Do, a verb common to both Dialects. The present tense may be considered to be the same, Dean=Am, I Do, or I Am Doing, where the sense of Am is the same in both instances.

In the Irish Dialect we have ATA=Im, ATA=Oir, ATA Se, ATA=Moid, ATA=Thaoi, ATA=Id, for all the persons of the present tense, I am, thou art, &c. We have likewise ATA and As used for all the persons, when accompanied by the pronouns, ATA or As Me, I am, ATA or As Tu, Thou art, &c. &c. We have likewise An with the Pronouns used for all persons of the present, An Me, An Tu, &c., Am I, Art thou, &c. We see, that the An coincides with the Een, (Hv,) of the Greeks, though they are applied to different tenses. It may perhaps be worthy of remark, that the Celtic and Greek verbs, An and Een, (Hv,) agree even in point of the time, which they express; as some have observed, that the Greek Een or Eeen, (Hv, Env,) was used for the Present tense.

Ουκ αρα μουνον ΕΗΝ εριδων γενος, αλλ' επι γαιαν Εισι δυω. (Hes. Op. A. V. 11.)

"Non sane unum Est contentionum genus, sed in terrâ sunt duo." The later writers seem to have adopted this use of the word, in order to give their compositions an air of antiquity. (See the Poem under the name of Musæus, v. 16.) In the perfect

tense of the Irish verb, we have BHA Me, I was, or have been; where in Bha we see the same form as in Fui, and the English Be. Some might conjecture, that Fui was quasi Fui, and that it belonged to the Element FD, FJ, &c.; yet we shall conclude, I think, from this instance, where Bha and Fui coincide in form, and from other examples of the same kind, that the Elements ^B and BD, FD, &c. are distinct from each other. The Element BD, FT, &c. denotes Being through the whole compass of Language, and accordingly, in the same tense with Bha, we have Bhadhas, I was, and likewise in other tenses, Do Bhios, I was, Biodh, Be thou, &c. &c. In Irish, we have both Is and As, as the impersonal verb, corresponding with Is, (Eng.) &c. We perceive in ATA=Im, ATA Me, that ATA is the verb of Being; and we see, that Im is an addition, which, according to my hypothesis, belongs to Am, (Eng.) We have from hence another proof, that Es=Um is the true form in the Latin verb of Being,—that Es and Um are distinct portions, and that Es is the part, corresponding with the terms for Being, under the same Element, Es, EsT, &c.

all the persons of the present, Is Mi, Is Tu, Is E, &c., I am, Thou art, He is, &c.; and, moreover, Am mi, An tu, An e, which mean, Am I, Art thou, Is he, &c., where Am, unless put for An, corresponds precisely with the English Am. In Galic likewise we have Bha or Bu mi, I was, &c., and in other tenses and moods we have the Element BD, as Bithidh mi, I shall be, Bith thu, Be thou, &c. &c. The form of a regular Galic or Irish verb, as given by Lhuyd, in the Present tense, is, Sgriobh, Aim, Air, Aidh, Am=Aoid, Aoidh=Esi, Aids=Ion, I write, &c. In the first and third persons of the singular, and in the first and second of the plural, we see the Latin form, Scrib Am, At, Am=Us, At=Is, which corresponds with Sgriobh Aim, Aidh, Am=Aoid, Aoidh=Esi.

In Welsh, the verb of Being is Wyr, I am, Wyr or Wyd, Thou art, Tw, Mae, OES, Sydd, Si, He is, YM, YCH, YNT, We, Ye, They are. The Yw denotes, we see, Being, under the vowel form; and this we shall find sometimes to take place, as in the English He. The English He is derived probably from the Consonant form, as HYSE (Sax.) Is (Lat.) as the Etymologists suppose; and so, I imagine, are the other words denoting Being, which are expressed In Mae we see the Element 'M, and in Sydd we see a similar composition to the Latin Sit, which I conceive to be Es-IT. In 'S-YDD the vowel breathing before the 'S is lost, and so it is in S1, as it was in the Irish and Galic TA. In Wyr we have the Am of the Galic, English, &c., where F and M have passed into each other; and in the other persons, WYT or WYD, OES, YM, YCH, YNT, we have the simplest state of the verb of Being, corresponding with the Um, Es, Est, Um, Est, Unt of the Latins, in AS=UM, Es, Est, AS=UM=us, Est=is, AS=UNT. The simplicity of the Welsh verb accords most with that of the Persian, conveying the same idea; and this resemblance will be more striking in the Plural, YM, YCH, YNT, (Welsh), AIM, AID, AND, (Pers.) Welsh verbs, like others, are compounds of the part expressing the

sense conveyed by the verbs and the auxiliary verb. The present tense in Welsh is likewise expressed by YD or YTT, and the auxiliary verb, before produced, added to it, as YD=WYF, YD=WYT, or WYD, Td=To, YD=YM, YD=YCH, YD=YNT. Here we have the verb of Being joined with itself. The YD or YTT I conceive to express the verb of Being, corresponding with WYT, WYD, OES, (Welsh,) Es, Est, (Lat.) &c., Is, &c.; and to form precisely the same species of union, when joined with Wyf, &c., which we see in the Latin Es=Um, Es=Is, Ets=It, Es=Um-us, Es=It-is, Es=Unt, or Ess=Em, Ess=Es, Ess=Et, Ess=Em-us, Ess=Et-is, Ess=Ent. The Persian verb, like the Welsh and other verbs, is a compound, as we have seen, of the part conveying the idea of the verb, and the auxiliary. The Persians likewise have combined the term denoting Being, and belonging to the verb of Being, with that verb of Being, or with itself. We have seen, that ... ## Hstn, or Hast-an, signifies To Be, corresponding with Est, Esse, &c. &c. present tense of this verb is formed of HAST and the Auxiliary, as HAST-M, HAST-YM, HAST-YM, HAST-YD, HAST-ND. We see in the Persian verb, that the third person is HAST, which is either the verb of Being in its simple state, or a contraction for Hast-Ast, as I before observed.

In Welsh we see that YD is added to Υw , another form of the third person, as $\Upsilon d = \Upsilon w$; but in what is called the Passive, we have YD=Ys, which is sometimes simply Ys. In Welsh, as in the other Languages, which we have noticed, the Element 'N appears as an auxiliary verb, and is adopted in the inflexions of verbs, as in the Greek Etupt-ON, &c. $(E\tau v\pi\tau - ov)$, from En, (Hv, Eram.) Thus in the Welsh we have Oedd=WN, I was; and in the other persons we find Oedd=It, or Oedd=\Upsilon t, Thou wast, Oedd, or Υd =Oedd, He was, &c.; where there is a similar union, OEDD=IT, &c., which we have before seen. In another tense we have Bu=M, Bu=Ost, Bu, Bu=Om, Bu=Och, Bu=Ant or Ont, I have been, &c. Here we have

a compound of Bu and the auxiliary. The Bu corresponds with the Bha and Bu in the other Celtic Dialects, and with the Fui of We may observe, in the Bu=M, that the 'M or AM is used, which is the ordinary form in other Languages, instead of We find the same termination in other verbs, as Aeth=Y_M, In general, however, the ^F, or Wyf, &c. is used, when added to the verb, as in Bydd=Af, I shall be, Bydd=Wyf, Byth= Wyf, B=Wyf, which latter is formed of Bu and Wyf, and is not a contraction of Byth and Wyf, as the Welsh Grammarians imagine. Let us mark the Bydd and Byth, which in other moods and tenses is Bod, Buas=Wn, &c., where we see the Element BD, as in Bhadhas, Bhios, Biodh, &c. in other Dialects of the Celtic. In Persian, the same auxiliary is used, and in the same manner. Infinitive, אָנ אָנט אָ Bud-en, Bud signifies To be; and in the Preterite, Bud=M, Bud=Y, Bud, Bud=Im, Bud=YD, Bud=ND, mean I was, Thou wast, &c.; where the plural of this tense, $Bud=I_{M}$. Bud-YD, Bud-ND, precisely corresponds with a similar combination in the Welsh, as Buas=Em, Buas=Ech, Buas=Ent, We, Ye, They had been.

The Welsh Language supplies us with the idea, from which the Element BD denotes Being; and we shall find, that it is precisely the same as that, from which I suppose Est, Is, &c. to be derived. I conceive, that Est, Is, &c., as denoting Existence, is taken from the idea of what is Placed—Situated, and belongs to the sense conveyed by Istemi, (Istalia, Colloco, Statuo; at in aor. 2 perf. plusq. perf. Sto, Consisto; unde Est;—Esse, Natum, Ortum Esse,) or in other words, that Est, &c. has precisely the same original and metaphorical meaning as Existo, To Be, To Exist, from Ex and Sisto, "To Set, or be made to stand;—To continue," &c. Bod signifies in Welsh "To Be," and likewise "An aBode, a dwelling, a "mansion, an habitation." Thus we see the Welsh Bôd belongs to the English a-Bode, Bide, Bed, Booth, &c. &c.; and the Hebrew

na BT, a House, Temple, &c. &c. The word signifies a Daughter in Hebrew, from the idea of the Being—the 'Existens Persona.' We may now see, that B6d, a-Bode, Bide, &c. belong to Bod-en, (Germ.) Ped-on, (Πεδον, Solum,) the Ground, for the same reason that Est, Is, Istemi, (Ιστημι,) do to Estia, (Εστια,) &c. &c. the Earth. Through the whole compass of Language the Element BD denotes Being: Hence we have the great Deity worshipped all over the East—Budda. We shall see, that the Armoric form for the verb To Be is Beza; from which, as we shall now understand, the name Beza is derived; and thus we see, that the Budda, the Deity of the East, and Beza, have the same meaning.

In some compound tenses in the Welsh Language, the Bum, Buaswn, Byddaf, become Fum, Fuaswn, Fyddaf; and the Welsh Grammarians have illustrated this composition in the verbs Henyw. Cenyw, Deryw, Goryw; as Han-Fum, &c. &c. We may represent the terminations of the ordinary Welsh verbs thus; 1st Person sing. Car WN, AIS, ASWN, AF, (I loved, I have loved, I had loved, I shall love,) &c. 2d Pers. It, Aist, As=It, i. 3d P. ai, Odd, Asai. 1st P. Pl. Em, As=Om, As=Em, Wn. 2d P. Ech, As=Och, As=Ech, WCH. 3d P. ENT, As=ANT, As=ENT, ANT. In some tenses Cer is written Car. The formation of these tenses is manifest. see in the first person singular, that the auxiliaries belonging to the Elements 'N, 'S, 'F, are adopted, as Wn, Ars, Ar, in a simple state, or AS=Wn in a compound state, as in OEDD=Wn. second and third persons singular belong to the Element 'S, &c. according to the ordinary analogy, except in Ai, which is quasi Aj; and the plural, through all the tenses, is formed likewise according to the ordinary analogy, either in a simple or compound state, 'M, ^S, &c. ^NT, or ^S, &c.= ^M, ^S, &c.= ^S,&c. ^S,&c.=NT; except in one tense, where in the first person plural we have the Element 'N' or Wn, as in the Greek Tupt \ Om=En, (Τυπτομεν,) though here we have both the 'M and the 'N.

In Cornish, Baz, or Bos, signifies To Be; and this we see coincides with the Bod of the Welsh, &c. The first person of the present tense is Ov, Ass=Av, Ass=Am, where, in the Ov, Av, Am, we see both the forms of the Element, as that of AV, and likewise the ordinary form 'M. In Welsh we have seen it to be 'F, as Wyr. These forms, Ov, Av, will decide our opinions on the origin of Av, Iv, in the Latin Am=Av-i, Aud=Iv-i. Let us mark in Ass=Am the true form of ^S=Um, as in the old word Es=Um, and the Russian ES=ME. The second person is Oz, Ass=Az, YDH=Oz; the third Ma, Tu. Ez, Ysy, Otte, Ydzhi; the first plural Oni, Ass=on, the second Oh, Ou_{χ} , Υz - Ou_{χ} , and the third Υnz , $^{\Lambda}M$ =Onz, Υm =Onz. In the third person singular the Ma is the Mae of the Welsh, where the Element 'M denotes Being, as in the first persons singular and plural, ^S=Um, ^S=Um-us, &c. In the third person plural, ^M=One, or $\Upsilon m=ONZ$, we see a compound of the ^M and the ONZ, the ^NT, the ordinary form of that person. In Cornish, we have By= ^M, I have been, corresponding with Bu=M, Welsh; where the By and Bu coincide together. The B is turned into a V in Cornish, as By-An, or Vy-An, &c. In the Armoric, Beza means To Be, as in the other Dialects. The term So is used in all persons of the present; where the breathing before the 'S is lost, as it is before the 'T in the Galic and Irish ^Tha, ^Ta; though it is again found in ATA. The present tense in Armoric is likewise expressed by Oun, Our, Eo, or E, OMP, OCH, INT, and Ez-Oun, Ez-Out, Ez-Eo, I am, Thou art, He is; and in the plural, Ez=OMP, Ez=Och, Ez=Int, we find likewise the same composition, which we have seen in the Welsh YD=YM, YD=YCH, YD=YNT,—in the Persian Hast=YM, Hast=YD, Hast= 'ND,—and in the Es=UM, Es-IT, Es=UNT, belonging to the ancient Latin form, which Vossius has recorded, Esumus, Esitis, Esunt.

In the Hindostan Dialects, Hona signifies To Be, where we have the 'N, as in the Greek Einai, (Ewai, Esse,) &c. The Grammarians

marians acknowledge, that from this Hona is derived the Na of the Infinitive mood, of the verbs in these Dialects, as Mar=NA, To Beat, Jaou=NA, To Go. I have shewn, that Jaou belongs to Go. and that in the Teutonic Dialects the Infinitive ends in 'N. Thus then, Jaou=NA is precisely the same combination as the corresponding word and tense in the German Gehe=N, the Saxon Ga=N, the Belgic.Gae=N, and the English Ga=Ng. The Greek Infinitive ends, we know, in Ein, &c. from Einai, (Eivai,) as Tupt= The Persian ends in 'N, or in Idan, as the Grammarians The Idan in Persian verbs must be considered as having arisen from (MASTAN, To be; and in Hastan we plainly see the composition of Hst, Is, the part expressing the verb, and An, the termination of the Infinitive. In Persian the Infinitives frequently end likewise in ^Dan and ^Tan. In the Hindostan Dialects, Hyn means "There is, It is, We are," &c. which we see precisely coincides with the Greek En, (Hr, Erat,) and the An of the Irish; An E, He is, It is, An sinn, We are, &c. Hindostan Dialects, TA or TAU, TEE, &c. are used with the Pronouns in all the persons of the present, as the Irish TA is. Thus in the Hindostan we have Ma, To, Oo{TA, and in Irish TA} Me, Tu, Se, for I am, Thou art, He is. In these Dialects, Hoova signifies Am, which is the same form as the Ov and the Av of the Cornish. I have before observed, that TA and KA form participles, Dour=TA, Running, Dour=KA, Having run. In the Irish, says General Vallancey, "the Supines end in TA and TE, which form the " participle of the Passive voice, which, with the auxiliary verb " Sam, or Tam, go through all the tenses; as Gonaim, I wound, "Taim Gon=TA, I am wounded." (Gram. p. 115.) In Gipsey, SE is Is, which answers to the Hindostan TA, &c.; and still more agrees in form with the Celtic terms S1, So, &c. In Gipsey, likewise, So-SA means How, What; as So SE Romané, What Is it in Gipsey?—SA Shan Ria, SA Shan Raunéa, How do you do, Sir? How

do you do, Madam? The Ria and Raunéa belong to Rex, and Regina, (Lat.) Re, (Ital.) Roi, Reine, (Fr.) Rajah, (Hindoo,) &c. The Shan I conceive to be a compound of Sha, a variety of Se, to denote the participle Being, and An, which may be called the verb, corresponding with the Hindostan Hona, To Be. The Ta or Tau of the Hindostan, when added to the part denoting the action of the verb to express the participle, is precisely the same. Thus, when they say Dour Ta Hoon, 'I am running,' Dour Tau Hyn, 'We are running,' the Ta and Tau may be considered as separate parts of Speech, denoting Being; and Ta=Hoon, Ta=Hyn, mean precisely 'I am, we are being,' just as I conceive Sha=An, or Sh'=An, to do.

I shall now examine the formation of the verbs in some of the Modern Languages; and we shall find, that they follow a similar analogy to those, which I have before unfolded. In the Estre or ETRE, ÉTÉ, &c. of the French, we have the simple representation of the Element 'S, 'T, denoting Being; and in ET-Ant, the Gerund, as it is called, or the Participle, we have the ANT corresponding with the Latin Am Ans, Ant-is. In the S=Uis. S=Erai, S=Erois, S=Ois, we have the 'S, as in the Latin 'S-Um, where the breathing before the 'S is lost; and the Uis, ERAI, Exors, Ors, should be considered as the simpler state of the auxiliary verb. In ET-Ois, &c. &c. the breathing before the 'S or 'T. appears, as in Es-Um, Es-It, Ess-Em, Ess-Es. In Fû-SSE we have a compound of the Elements F^{$^{^{\circ}}$} and ^{$^{\circ}$}S, as in the Latin $Fu=IssE=^{^{\circ}}m$, the Welsh Bu=As-wn, &c. &c. The ordinary French verbs are compounded, as the auxiliary is, of the part expressing the action of the verb and the auxiliary in its simpler form. In the Is, Es, Est, Ommes, Etes, Ont, of S-Uis, Es, Est, S=Ommes, Etes, S=Ont, we have one simple state, which agrees, we see, with the Latin form; except that the first person singular belongs to the Element Another simple state is the Ois, Ois, Oit, Ions, Iez, Oient, of the compound of Et{Ois, Ois, Oit, &c. &c., which differs nothing

from the former, except that the first person plural belongs to the Element 'N, and the second person plural is in its simplest state. In the Erai of S=Erai, we have the simplest form, coinciding with Ero. (Lat.); and the Erois, of S=Erois, supplies us with another simple form, though this is still a compound of Er and Ois. Er=Ois, Er=Oit, coincides precisely with Er=As, Er=At, (Lat.) a compound of the Elements 'R='S. We shall find, when we examine the French verbs, that they are generally composed of the part expressing the verb, and the auxiliaries under these forms. We shall observe, that the exception is chiefly to be found in the first and third persons singular, which sometimes end in a vowel. In Sent \ Is. Is, It, IMES, ITES, Ir-ENT, we have the first form, except that the 'R is added to the 'N in the third person plural. In the Sent Ois, Ois, Ois, Ions, Iez, Ent, we have the second form. In the future and conditional, as Sent{IRAI, IR=OIS, &c., we have two other forms. Though in the first person singular of Sent=IRAI, we have the simpler form IRAI; yet in the second person, and in the plural Sent { IR=As, IR=Ons, we have the compound one, as in Sent IR=Ois, IR-Ions, &c. In Iss=Ions of Sent=Issions we have a similar combination to ET-The Gerund or Participle is commonly formed, as Et=ANT is, by adding 'N to the part expressing the sense of the verb, as Parl-Ant; but it is sometimes formed by adding what corresponds with Etant, as Ag ir, Ag=Issant, quasi Ag=Etant, &c. &c.

In the French verb of Possession, Av-oir, we have Eu, Aurai, Eus, Eusse, which are quasi Ev, Av-^Rai, Ev-^S, Ev-^Sse. In the Ai, As, A, Ont, I, You, He, They Have, the V has been lost. In the English verb of Possession, Have, we find the Radical ^V, or ^B, lost in the Past tense Had, as it is in the German Hatte. The ^D and the ^T represent the past time; and thus Had and Hatte are quasi Haved, Hav-D, Hab-Tte. In the English Had, used as a participle, 'I Have Had,' the radical ^V or ^B is likewise lost; but in the German it is preserved, with the T after it, corresponding

with ^D, as 'Ich Habe ge-Hab-T, I Have Had.' The Element ^V or ^B is likewise lost in German and English, in the second and third persons of the Present, as 'Du Hast, Er Hat, 'Thou Hast, He Has.' In the plural, the Germans use Hab=En, Hab=T, Hab=En, We, Ye, They Have, where the Radical again appears. The Saxon form will decide on the justness of my observation; as Hæbbe, Hæf=St, (I Have, Thou Ha=St,) Hæbb=Ath, Hæf=T, (He Ha-S,) Habb=Ath, (We Have,) &c., Hæf=De, I Ha=D,) Hæf=T, (He Ha=D.) In the Gothic, Hab=Aida is 'He 'Ha=D', &c. &c.

In the Italian and Spanish Auxiliary, where the S exists at the beginning of the word S=Ono, S=Aro, Sia, S=Arei, (Ital.) Soi, S=Ere, Sea, Ser, S=Ido, (Span.) it is to be considered as derived from the same source as the S in the Latin and French Sum, Suis, &c. in which I have shewn the breathing before the S to have been lost. In the Essere of the Italians we have the true form; and in Essendo, Sendo, we have both forms. The Italian participle Stato is directly borrowed from Stare, to which, as I have shewn, Essere ultimately belongs; yet the ancient Italians used Ess=Uto and $^{S}=Uto$, to which latter form the Spanish $^{S}=Ido$ belongs. present tense of the Italian verb is S=Ono, Sei, e. S=Iamo, ^S=Iete, ^S=Ono, where in the plural we see the verb of Being in its simplest form, IAMO, IETE, ONO, 'M, 'T, 'N, as in the Persian AIM, AID, AND,—in the Armoric OMP, OCH, INT,—and in the Welsh YM, YCH, YNT. The form 'M, 'T, 'N represents the plural of the Italian verbs, in many of the tenses. In the Imperfect Era, Eri, Era, Er=Amo, Er=Ate, Er=Ano, I was, &c., we see the Er=am of the Latins in its simple state, as it is in Ero, (Lat.); and in the Amo, Ate, Ano, we have the ordinary termination. The singular, we see, is no compound; and the plural, though a compound, is still in a simpler state than the Latin Er=Am-Us, Er=At-Is. the Er=Amo and Er=Ate are sometimes written Er=AV=Amo, Er=AV = Ate.

AV=Ate, where the AV is inserted, corresponding to 'B and 'V in the Latin $Am\{AB-Am, Av-i; and hence ^V\}a$, i, a, Amo, ATE, Ano, added to the part expressing the action of the verb, forms the imperfect in Italian, as Amava, Amavi, Amava, Amavamo, Amavate. Amavano, I did love. In Fui, F=Osti, Fu, F=Ummo, F=Oste, F=Urono, 'I was,' &c. we see the simpler form of the Latin Fui; and in F'={Ossi, Ossi, Osse, Oss=Imo, Oste, Oss=Ero, we have Fu=Iss-em, in its simple and more original state. We have here likewise the termination of Ero. The future and conditional tenses are S{Aro, Arai, Ara, Ar=Emo, Ar=Ete, Ar=Anno; S{Arei, Ar= Esti, Ar=Ebbe, Ar=Emmo, Ar=Este, Ar=Ebbe=Ero. We see in Ebbe the *Ebbi*, I Had, *Ebbe*, He Had, and the AV in Er = AV = Amo; and in Ero, the termination, we have the Ar and Era, I was. In the Latin, the AR likewise supplies the termination Fu=Ere. Thus in ^S=Ar=Ebb=Ero, from S=Ar, and Ebb=Ero, They Had, we have a compound, consisting of four parts, belonging to three Elements, N. A. A. A. B. each of which was originally significant.

The Italian Grammarians represent, in a concise manner, the mode of forming their ordinary verbs, thus, Imp. Vo, Vi, Va, Vamo, Vate, Vano. Fut. Ro, Rai, Ra, Remo, Remo, Ranno. Imp. Subj. Ssi, Ssi, Sse, Ssimo, Ste, Ssero. Conditional, Rei, Resti, Rebbe, Remmo, Reste, Rebbero, as Am=Ava, Am=Ero, Am=Assi, Am= EREI, where we perceive the formation of the ordinary verbs from the simpler forms of the auxiliary, such as we have seen in all the other instances. In the verb of Possession we have three forms in Italian, Av, AB, and EB, as Av-Ete, ABBIA, EBBI. We have seen, that the Preterite of this word has supplied a part in the formation of the conditional of the ordinary verbs; and the Av, as we have likewise seen, furnishes another portion in the Imperfect, Am= Av-a. The Preterite is formed thus; EBBI, AV=Esti, EBBE, AV= Emmo, AV=Este, EBBERO. The Hanno, They Have, of the present tense, was formerly written Habb=Ono, which is probably the true form.

form. The present singular was likewise formerly written Abbo, Abbi, Abbe, instead of Ho, Hai, Ha. As the tenses of the verb of Being, in its ordinary state, are formed by the union of parts, denoting Being, with each other; so, in the verb of Possession, the same union takes place, as Av-Ev-a, Av=r=Ebbe, Av=r=Ebbero, which is of the same kind as the union in English, I Have Hav-ed, or Had, &c. &c.

It is the common opinion, that the Italian Language is a corruption of the Latin; and so indeed it may be considered, if we regard it in its present state, under one point of view, as abounding with more words directly taken from the Latin than any other. Yet if we look to the Radical part of the Language, as it appears in the formation of the verbs—the state of the Pronouns, the Particles, and the artifices of construction; we cannot say that it is more related to the Latin than the French, or any other of those Languages, whose affinity we have detailed in the preceding discussions. Indeed it is, in many respects, more remote from the Latin than various other Languages; as it appears to be more directly connected with some forms of the Celtic Dialects, from which the Latin itself is taken. It is difficult to speak on this subject with precision. That the great body of the Italian Language, as it is now written, has been directly taken from the Latin, as Educazione, Contemplazione, &c. &c.; we shall all agree; but these words seem to have been engrafted on the fundamental part of the Language, which I have before described, just as the corresponding words Education; Contemplation, &c. have been added to our own Language, and engrafted on the Teutonic Stock. The two cases only differ in this respect, that the Italian Language is furnished with a greater number of these borrowed terms than any other form of Speech. As we go back to the earlier stages of our own Language, these terms diminish, and may, at last, be said to disappear; and the Antiquaries in Italian Literature will discover.

discover, I imagine, that this fact is, in some degree, true of their Language likewise; when the words, of which it was composed in the earliest states of its existence, shall be well sifted and examined.—In a great variety of cases, all our judgment and caution will be necessary to decide on this question.-The Italian word, which is the object of our enquiry, may indeed have a parallel term in Latin; yet this, of itself, affords us no argument to conclude, that it is derived from that source. The word may be common to many forms of Speech, or there may be a parallel Celtic term, more particularly connected with it; and thus the Italian word may have arisen from the same source, to which the Latin word itself is to be directly referred. In some cases, we perhaps might more justly say, that the Latin word is derived from the Italian. Without, however, entangling ourselves in this idea, which, indeed, is somewhat difficult clearly to explain; it will be sufficient for us to enquire, whether the Italian word has passed into that Language through the medium of the Latin, or whether it was derived from any other source. This is the statement of a fact, the force of which we all understand, and which may sometimes be fully ascertained, either by internal or external evidence, that is, either by examining the nature of the word itself, or by historical evidence on the first introduction of the word into that Language.

In short, I imagine that the Fundamental part of the Italian Language should be considered as the remains of the more ancient form, from which the Latin Combinations were themselves derived. In the Roman times the original Language probably always remained in some parts of Italy, and so it possibly does at this very moment. That this is true in one sense, we all know; as the different Celtic dialects still remain, and are still spoken with little variation, as I imagine, from their more ancient forms.—I should not be surprized to hear of a tribe still existing in some quarter of Italy, among whom a Celtic dialect was preserved, which we should

should all agree to have been the immediate origin of the Latin Language, and the foundation of the present Italian. attention of Mankind has never been turned to this question, nor have any investigations been instituted to elucidate subjects of such a We are contented with the ordinary division of the Celtic Dialects into Irish—Welsh—Armoric, &c. &c.; and we are satisfied with discovering the more striking points of their resemblance and their difference. Perhaps, however, other varieties may be still found even in Europe, which might justly entitle them to the rank of new dialects; and from the consideration of these varieties, a series of important truths might be deduced in the study of Languages. As these, however, are speculations which would lead me into a vein of discussion, remote from the present purpose, I shall not now enlarge on this subject, but shall return to my observations on the Italian verbs, by which they were suggested.

These verbs cannot be said, I think, even on the most superficial view, to be derived from the Latin; and the principles, which I have unfolded, as operating in the formation of verbs in general, will shew us, that the more simple and genuine form, which the Italian verb exhibits, is not derived from the operation of corruption. — It would be indeed a dextrous and intelligent effect in the process of corruption, which should destroy only all the materials that were unnecessarily attached to the composition, and leave the mass in its most simple and original state. Now this, we see, is precisely the case in the Italian verb. The 'M, 'S, 'N, in Am {IAMO, ATE, Ano, represent, as we have seen, the original state; and Us, Is, in the Latin Am Am-Us, IT-is, are unnecessary additions, belonging to a more complicated system. In the first person of the present tense of the auxiliary, denoting Being, we have Sono, which is not derived from S=Um, that is, from 'S' and 'M, but it belongs to another form, 'S and 'N, and it is directly taken from the Celtic,

Celtic, Ez=Oun, (Armoric,) which, when the breathing before the Z is lost, becomes Zoun, coinciding with Sono. The second person Sei may be quasi Sej, in which case we should have a compound ^S=Ej; and the E might be quasi Ej. Yet we find, that one ancient mode of representing the three first persons of the Present was So, Se, and Ene; where the So, Se are used in their uncompounded state, as in the Irish and Galic Ta, and the Armoric So, which is used in all persons of the Present. We see, that the Armoric and Italian So directly coincide with each other; and the Ene of the third person will shew us, that the Italian ^S=Ono, or SO=^NO, is a compound of the two distinct parts So and Ene, or S^ and ^N^. We have seen, in a former page, that the Gipsey verbs of Being are Se and Shan, which, we perceive, coincide with So, Se, and Sono. I have observed, that the Gipsies are called, in their own Language, Romani.

The Gipsey is acknowledged to be an Hindostan Dialect, or a Dialect of the Sanscrit; and the resemblance of the Latin to the Sanscrit has afforded a subject of great astonishment. "It will " perhaps be discovered by some future enquirer," as I have ventured to suggest, "that from a horde of vagrant Gipsies once issued "that band of sturdy Robbers, the companions of Romulus and of "Remus, who laid the foundations of the Eternal City on the " banks of the Tibur." We now see, that the Italian verb of Being, So, SE, and the Gipsey SE, coincide with each other. It is curious, likewise, that some should have observed the resemblance between the Cloak or Blanket, thrown over the shoulders of the Gipsies, and the Roman Toga. I was not aware, that this resemblance had been noticed, when I ventured on the above conjecture. tinius, under the article Cingarus, has the following passage: "Bro-Miscellan. cap. 17. ait ipsam Romanam Togam " dæus, lib. 8. " eandem pene cum eâ fuisse, quâ, quos Galli Bohemos, Itali Cin-"garos nominant, amiciuntur." This is, I think, exceedingly impressive impressive and singular. The mode in which the Gipsies wear the Cloak or Blanket, which is thrown over their shoulders, is certainly unlike any other mode of wearing a similar covering; and the Romans, we all know, were so marked and distinguished from every other people by the dress of their *Toga* or Cloak, that they were called the *Gens* Togata:

" Romanos rerum dominos, Gentemque Togatam."

The Spanish verb of Being is composed of the same materials The present tense runs thus; Soi, Eres, Es, as the Italian verb. S=Omos, S=Ois, S=On; where, in Omos, Ois, On, or $^{\Lambda}M=^{\Lambda}S$, $^{\Lambda}S$, $^{\Lambda}N$, we have the mode of formation in the ordinary Spanish verbs. We see in Omos the Latin form Umus in S=Umus; though in the second person plural we have the more simple state of the verb of Being. Spanish Language, as I have observed, exhibits two verbs of Being, or rather two forms of the verb of Being, Estar, To be Placed or To Be, and Ser To Be, where in Estar we see the original idea. The verb of Possession, as I have shewn, appears under the forms ^ V, ^B, Havia, 'I Had;' Huve, I Have Had; Hab=Riamos, We could Have. I have shewn, that Est-Uve, 'I have been,' is manifestly an inversion of Huve Est-Ado, bearing the same meaning; from which we see, that Est=ABA, I was, is a similar composition; and this will unequivocally decide on the origin of the AB and AV in the Latin Am = AB = am, and Am = Av - i, namely, that they belong to HAVE, h-AB-eo, (Lat.) I shall produce the form of two or three tenses in the verb of Being, with the scheme, which appears in the Spanish Grammarians, for forming the first conjugation of the ordinary This will abundantly shew us the mode in which they are generated, and that they arise from the simpler state of the verb of Being, as we have seen in the Italian, &c. $Er\{a, As, a, Amos,$ Ais, An; I Was; Fu{i, Iste, e, Imos, Isteis, Eron, I Was, Have been, &c.; ^S{Er}e, As, a, Emos, Eis, An, I shall be, &c. The same

tenses of *Canto* are thus represented, where the part expressing the verb, as *Cant*, is supposed to precede these terminations; o, As, a, Amos, Ais, An, (Pres. Tense,) AB a, As, a, Amos, Ais, An, (Preterimp. Tense,) e, Aste, o, Amos, Asteis, Aron, (Preterperf. Tense,) AR e, As, a, Emos, Eis, An.

In Gothic, the present tense of the verb of Being is Im. Is. Ist. ^ Siy=Um, ^Siy=Uth, ^S=Ind; where Im, Is, Ist, Um, Uth, Ind represent the usual form. We perceive that the plural Siyum, Siyuth, Sind, coincide most in form with Sim, Sit, Sint, of the Latin Sim=Us, Sit=Is, Sint. In Saxon, the present tense is Eom, Am, Om, &c. Eart, Ys, for the singular, and S =Ynd for all the persons in the plural. In Saxon, Si is used for all the persons of the present singular. In English, the persons of the singular agree with the Saxon 'I Am, Thou ART, He Is,' which differ in nothing from the ordinary form, except that in the second person our Element appears fully represented with the R, -ART. Saxon, Es is sometimes used for Eart. In the plural we use Are, and in the past tenses Were, or w-Ere, which are represented by the Element 'R, as the ER of ER-am, ERO. We have seen, that ERO is written Eso, and Eram, I imagine, is Esam: The English w-As, and its corresponding terms w-Æs, w-As, (Sax. and Gothic,) may create some difficulty. They might belong to our Element 'S, or to the Element BS, BD, which we have seen likewise to denote Being; or the W may belong to the Element B[^], F[^], &c., and Æs, As, to 'S. The Plural of the Imperfect Was, in Gothic, is Wesum, Wesuth, Wesun; and, in the subjuctive, Weseima, Weseith, Weseina; where the Esum, Esuth, and Esum, and Eseim, Eseith, and Esein, certainly agree with Essem, Esset, Essent, in Essemus, In Saxon we have the Element B' denoting Essetis, Essent. Existence, as in the English Be, To Be, Be=On. In Saxon, we have both Be=on and Wesan, Esse, and Was, Eram; and thus we might conjecture, that Wesan may be quasi Be=Es=An, a compound

of the Elements B[^] and [^]S. In the singular of the future tense we have Beo, Byst, Byth. In German, this Infinitive Mood has been transferred to the Present, as Bin, I am, B=Ist, Ist, Thou Art, He Is, $^*S=Ind$, S=Eyd, $^*S=Ind$, We, Ye, They Are. In the first person Plural, we see that the Saxon form is adopted; but in the second we have the regular form of the Eyd, belonging to the Element *T , *D , &c., and we have the same compound, as in the S=It of S=It-is, (Lat.) Si=Yuth, (Goth.)

In the Infinitive, the Germans have $^{\text{S}}=Eyn$; and, in the same Language, W-Es=En means "The Being, Ess-Ence, Substance, " or Nature of any thing," as my Lexicographer explains it, who interprets the phrase, "Das selbst Standige, W=Es=En, the Self-Existing, Self-Subsisting, Self-dependent, or Self-Excellent Being " of God;" and W=Es=En by "Stand," (Germ.) "State, Condition, "Habitude." I have supposed, that the verb of Being, Est, &c, belongs to Ist-emi, (Ιστημι, Statuo, Ισταμαι, Sto,) or to the idea of that, which is Placed—Established—Stands up, &c.; and I have referred it to the same metaphor as that which appears in Existo— Exist, &c. Let us mark the words in this explanation of the term for Being, drawn from the same metaphor, as Substance (from Sto,) Subsisting, Existing, (from Sisto,) Stand, Standige, (Germ. from Sto.) State, (from Statue, To Place, Status, "(1.) A Standing.—(6.) State,)" &c., as R. Ainsworth explains it.—In English, B=Ist is used, as in the German and Saxon, and Bin is sometimes applied in colloquial Language, as in the German, "Here I Bin."—In the Be=En of the Participle, the En is used as the mark of that part of Speech, as in Se-En, &c. The ordinary analogy is, that the 'N is used for the Present Participle, as Be=Ing, Lov=Ing, &c. &c. We unequivocally observe in these words, B=IsT, (Eng.) &c., that the IsT is added by the analogy in the formation of the verb, and that it does not belong to the Element BD.

The Saxon ordinary verb is formed, as in other instances, of the

the part expressing the sense of the verb, as the Radical, and the verbs of Being, 'S, &c. and 'N. The present tense runs thus; Luf-{IGE, Ast, Ath, IAth, IAth. In English, the Lov Est, Eth, or Es, of the second and third persons, agree with the Saxon Ast, Ath, and with the familiar analogy in the formation of verbs, 'S, &c. 'S, &c. As, At, of the Latins, &c. &c. Am} As, AT, &c. &c. &c. In the other persons, the simple form of the verb is adopted, I Love, We Love, &c. In the Saxon Preterite we have Luf{ODE, OD=Est, ODE, OD=ON, OD=ON, OD=ON. Luf=ODE of the Saxon, and the Lov=ED of the English, (I Lov=ED,) are the participles Luf=OD, Lov=ED, where the Element ^D ^T appears, as in the Latin Am=AT=Us. In the second person Love= ^D=ST, we have the Luf-OD=EsT of the Saxons. Let us mark however, in the On of the Saxon, Luf-Od=On, the ordinary termination of 'N in the third person plural, Am=Ant, &c.; though in Saxon it is applied to all the persons. In German the first person of the present tense is Lobe, and in the other persons we have Lob={Est, Et, En, Et, En, Thou Lov=Est, He Lov=Es, We, Ye, They Love. In the Imperfect we have Lob ETE, ET=EST ETE, ET=EN, ET=ET, ET=EN. We here observe, that the second person plural ends in 'T, &c., as it commonly does. The past Participle in German is ge-Lob=ET, Lov=ED. In Gothic the present tense Sing. and Pl. runs thus; Sokj-a, Sokj=Ais, Sok=Eith, Sokj=Am, Sok= EITH, Sokj=AND, I seek, &c. &c. We here see, that, except in the first person singular, the verb is formed by adding to the Radical part, expressing the action of the verb, the verb of Being, &c. under another form. The Ais, Eith, Am, Eith, And, correspond to Is, IST, UM, UTH, IND, and to the Es, Est, UM, Est, UNT, of the Gothic Is, Ist, and Siy=Um, Siy=Uth, S=Ind, and of the Latin Es, Est, 'S=Um-us, Est=is, 'S=Unt. The Imperfect is thus expressed; Sok IDA, ID=Es, IDA, ID=ED=UM, ID=ED=UTH, ID=ED=UN; where we unequivocally see, that Um, Uтн, Un, of the plural, represent the

the Auxiliary. The past or passive participle is Sok IDs or ITHS.

It is curious to observe this marvellous agreement, in the formation of verbs, through various Languages; and if we should select any one portion, as exhibiting the most striking coincidence, we might note the general termination of the third person plural in 'N, 'NT, &c. In the Saxon Language, the plural number of all the tenses terminates in 'N, except in the present tense, where it admits another ending besides N, and the second person plural of the Imperative, in which there is a small variation. In the Gothic the third persons plural of the Indicative terminate in ^ND, and in all other tenses in N^. In the Passive, all the persons plural terminate in 'ND'. In the German the third persons plural of all the tenses have the final 'N. In our old English, as Mr. Tyrwhitt has justly seen, the writers were not agreed among themselves respecting the termination in the plural of the present tense, "some adhering," says he, "to the old Saxon form, We loveth, ye loveth, they loveth; "and others adopting, what seems to have been the Teutonic, "We loven, ye loven, they loven." This was equally a Saxon form in the present tense, as Junius observes, "Eædem etiam per-"sonæ," (i.e. personæ plurales præsentis indicativi) "desinunt tam " in an, en, on, un, quam in ath; ut Hæbban, Witun, Witath, Scitis," &c. &c. With respect to the plural of the past tenses, Mr. Tyrwhitt observes, that We loveden, ye loveden, they loveden, universally prevailed. In the present form of the Italian Language, the third persons plural of every tense, except two, terminate in 'N; but in the Spanish Language the same persons all terminate in 'N, and in French in ANT. If we examine the Dialects of the Celtic, we find, according to the arrangement of Lhuyd, that in the "Irish or ancient Scottish "Language," the third person of the present tense terminates in N. In the Armoric the third person of the present Indicative ends in ^NT.

'NT, which we see likewise in other tenses; (Lhuyd's Armoric Gram. pages 187-8;) and in the Cornish the general termination for the third person plural is 'NZ. Mr. Lhuyd is aware of the idea, which has passed over many minds, that the verbs have derived their distinction of persons from Pronouns, and he accordingly observes, that the Anz, Onz, or Oinz, the third person plural of Armoric verbs, is the same as the Welsh Uynt or I differ only from this idea, by supposing, that the terminations originally performed the part of the verbs of Being, and not that of Pronouns. Yet as the Pronouns and the verbs of Being belong to the same Element, it is not always easy to distinguish between these parts of Speech. The Reader however will, I trust, agree, on a diligent consideration of the question, that I have arranged with due precision the formation of verbs. In the Welsh Dialect we find the 'NT the ordinary termination of the third person plural. In the Persians all the third persons plural terminate in 'NT.

The Hebrew Language and its Dialects, the Chaldee, Arabic, Syriac, and Samaritan, follow a different analogy, and cannot, I think, be referred to any of the Languages, which I have before exhibited, in the mode of forming verbs. In these Dialects the distinction of persons is acknowledged to be effected by Pronouns, either prefixed or postfixed, and sometimes both, to the part expressing the action of the verb. The mode of prefixing the distinction, which marks tenses and persons, is alone sufficient to separate these Dialects from those Languages, which I have before examined. Yet even in these Dialects the N sometimes appears in the third person plural derived from the 'N, employed as the pronoun They. In Hebrew the third person plural feminine in one of the three tenses, terminates in 'N'; and there are likewise other persons, marked by this Element. The Reader, who is unacquainted with these Dialects, will perhaps hear with some surprise

refers

surprise of the gender belonging to a verb; yet nothing is more obvious or conceivable. In those forms of Speech, where one part of the verb has arisen from pronouns, we shall not wonder to find, that the pronoun imparts to the compound the distinction of gender which it possessed in its original state. In the Arabic and Chaldee, all the third persons plural feminine terminate in N; and the same ending is likewise to be found in other persons. In the Syriac and Samaritan, among the three tenses belonging to these Dialects, I find in one the termination N attached to the third person plural feminine.

Though the verbs in Hebrew-Arabic, &c. are not formed on the model of those, which we have before examined; they are still formed by the addition of the same Elements. As these Elements unequivocally represent personal Pronouns, and not the verb of Being; the mode of forming such verbs will more properly become the subject of enquiry, when the nature of the Pronouns shall be elucidated. Though I have before produced the Hebrew verb of Being, corresponding with Est, &c., I shall again recall it to the attention of the Reader, in conjunction with other terms which appear to belong to the same train of ideas. In Hebrew, HIH, which I imagine to be quasi HJH, means "To Be, "Exist," "To Be, Subsist, Remain, Continue." It seems nearly related, says Mr. Parkhurst, to Min HUH, "To Subside, Subsist, "Exist, Be." Here a difficulty occurs. The Hebrew Min HUA may be quasi HVA, and belong to the Element 'V, &c., or it may be derived from היה HIH, under its vowel form. The Hebrew HUA is used as a Verb 'To Be,' and as "a Permanent "Being, one who Subsists, a Person.—He, She, It—That," says Mr. Parkhurst. Here we see, what I suppose in my Hypothesis, where the same word, which denotes Existence or Permanency, as in a Place, is used in all the relations of Verb-Participle, and Demonstrative Pronoun, as in Existit, and Existens. Mr. Parkhurst

refers to this word the term тит IHUH, Јеноvaн, "the peculiar " and incommunicable name of the Divine Essence." The term JEHOVAH has considerable difficulties. It should seem, from hence, that the word was attached to the Element 'V, 'B. We . should imagine too, that Jehovah belonged to the Jove-Jov-is, the Jupiter of the Greeks, as it is commonly understood. One sense of the word היה HIH, is, "To be Heavy," as applied to Sleep; and another, "To be oppressed, depressed, afflicted;" and min HUH. (which Mr. Parkhurst places in a separate article from HUA,) means, "To fall down, subside, settle;" from whence. as this writer says, "are derived its two secondary senses of Sub-" sisting, Being, or Continuing, and of Depressing, Oppressing, or " Overwhelming." Here we are brought to the idea of the Low Spot, or Ground, on which things Fall or Subside,—are Depressed, &c., whatever may be the Radical to which they belong. While I am examining these words, I cast my eyes upon mm HZH, . which signifies "Sleeping, Sleepy, Drowsy," and which should be referred probably to the same idea as היה, HIH, To be Heavy, or Bend down, for Sleep. In this word non HZH, we have unequivocally exhibited our Element 'S, &c. Under the word הזה HIH, Mr. Parkhurst produces the term jr JH, "as if," says he, "by " abbreviation for יהיה or יהיה ' IHIH or IHI, "one of the Divine "names, JAH, the Essence, He who Is, simply, absolutely, and "independently, O ON." He afterwards adds, "From this Divine "name "," JH, "the ancient Greeks had their In, In, in their " invocations of the Gods, particularly of Apollo, i. e. The Light. " And hence II (written after the Oriental manner from right to "left). afterwards EI, was inscribed over the great door of the " temple of Apollo, at Delphi." The Delphic EI belongs to these terms denoting Being, and probably was originally meant as the second person of the verb of Being, EI, Thou Art.

Mr. Parkhurst derives from the Hebrew my HUH "the Greek

" Eu, To Sit, or Set, and Eu, To Be." The Greek EIMI, (EIMI,) is supposed to be derived from this obsolete word Eo, (Ew, Inus. Hinc f. Εσομαι, pres. Ειμι.) In Es-omai, (Evoquai,) and other parts of the verb, we see the true form. These vowel verbs in Eo, (Ew,) are generally either corruptions from Ej-o, or are brought into existence by the Greeks, or supposed to be in existence by their Grammarians, that their futures, in which the Radical form is to be found, may have a Present tense in Eo, from which they ought to be derived. In Eo, Eso, (Eu, Eou, Colloco,) which relates to Place, we see the genuine idea, as supposed in my Hypothesis, from which Esomai, (Ecopas, Ero,) To Be, is derived. Another obsolete word Eo, with its attendant Eso, (Ew, Inus. hinc f. Eow, Induo,) which signifies 'To Put on,' as a Garment, means only, as we now see, 'To Place on.' The explanatory word Put relates, we know, to Place, or Position. There are still two more words under the form Eo, from which are supposed to be derived the Greek Eimi, (Eum, Eo,) To Go, and Iemi, (Inui, Mitto,) To Send. Eimi may be quasi Ej-mi; but its true form, and that of Eo, (Ew,) in Greek, and Eo, Latin, signifying To Go, appears in Eis, Eisi, &c., (Eis, Eisi, &c.,) ITHI, Iτo, &c., (1θ, 1τω, &c.,) and in Is, It, Itum, Iter, &c. English Go, and its parallel terms Gan, (Sax.) Gaen, (Belg.) Gehen, (Germ.) and the Greek Kie, (Kw, Eo,) produced by the Etymologists, the breathing before the Radical 'T', 'G' is lost, and retained after it, as T^, G^, &c. The N in the parallel terms GA-n, Ga-en, is only the representation of the Infinitive, from which Gang, To Gang about, is derived. Gang, the company, signifies Persons collected in the same Gang or Ways; 'They are all of 'the same Gang, they all follow the same Ways;' 'They all Gang ' or Go together.' In 'GE, 'GEA, 'GAIA, (Γη, Γεα, Γαια, Terra,) and . in the Irish CE, the Earth, the breathing is likewise lost before, and retained after the Radical Consonant. In the Hindostan Dia-TT

lects, JAOU-Na is To Go, where the Na is the mark of the Infinitive, as in the other verbs; "Sauheb kay pauss Jaou, Go to " (near to,) Master," as Mr. Hadley explains it. (Gram. p. 24.) The particles for the Genitive and Dative in these Dialects are KAU, of, KAY, and Ko, To; which all signify the same as the English To, and were originally applied to Place. Our particle To belongs to the same idea. The true form of Iemi, (Ique, Mitto,) appears in Ies, Iesi, &c. (195, 1901, &c.) Iethi, Ieto, &c. Es, ETO, &c. (1εθι, 1ετω, &c. Ες, Ετω, &c.) Eso, ΕκΑ, (How, f. Hree, perf.); and its sense of Sending here and there is derived from the idea of Causing to Go here and there. Iemai, (Isuas, Eo cum impetu, Isua, Cupio, desidero,) signifies to Go forward with some violence, and To Desire, from the idea of Going after any thing In the same column with IEMI, (In.,) and ITHI, (Is, with ardor. Age, Agedum, Imp. ab Εμμ,) Go on, Go forward, ITHma, (1θμα, Gressus, Passus,) a Step, &c., I find ITHus, (1805, Rectus, directus,) which means nothing but Going or Proceeding forward in a right line, or Straight Path. In the verb ITHUO, (1800, Recta feror,-Impetu feror, Desiderio alicujus rei feror seu agor,) we have a similar union of ideas of Going forward with some violence, and of Desire. In the same opening of my Greek Vocabulary are Ikneomai, (Izreouau, Venio,) Iko, (Izw, Venio,) which will remind us of Eko, (Hzw, Venio,) terms all relating to the same action of Going, and all naturally derived from the same Spot, the EARTH, or EATH, &c. &c. In the same opening we have Ikano, (Inana, Convenio, adeo, adsequor, supplico,) which the Lexicographers refer to Eko, (Hzw, Venio); and perhaps Iketeno, (Ixereuw, Supplico,) may be derived from the same idea of Approaching. We have seen ERCH=omai, (Eexopas, Venio,) where we have the form ^RC.

Let us now return to the verbs denoting Being—or Existence in Hebrew. Whatever we may think of the Hebrew HIH, whether it be quasi HJH, and belongs to our Element ^J, ^S, &c.,

we see the Is and the Est, &c. &c. of the English, Latins, &c. &c., most unequivocally, in another Hebrew term ישה ISH, which I have before produced, and which means, says Mr. Parkhurst, "Exsistence, Subsistence, Reality." As a verb, & IS signifies "Is, Are, "Was, Were;"—As a noun, "Substance, Reality, the true riches;" " As a N. with a formative, א ששה, fem. אשה," (A, AIS, fem. ASH,) "dropping the '," I, "A Being, or thing Subsisting or Existing. * This word has no relation to kind or species, though, according "to its different genders, it has to Sex, but is applied to almost any distinct Being or Thing.—It may be and frequently is " rendered Each, Every one." In the Hebrew ישה ISH, we see the ideas, which I have supposed in my hypothesis. One sense of this Hebrew word, when doubled, ששיש ISIS, is that of " Very old or "ancient, very far advanced in years, one who has been or lived a great while." I have shewn, that a race of words relating to Time, as AGE, ÆTas, ÆTernus, has been derived from the idea of that, which has Subsisted,—Existed,—Stood,—Remained, Lasted, Endured, &c.; and here we see the same union of ideas between Age and Subsistence. We talk of a Place or Person of some Standing.

Mr. Parkhurst has seen, that Is, Yes in English belong to this Hebrew word; and he adds, "Also perhaps the Saxon Is, or Iss, "when English Ise, or Ice." The English Ice and its parallel terms may be derived from the idea of Substance, Consistence, or Solidity; and, if it is derived from hence, it must be classed with this family of words. It might belong, however, to the terms denoting Water, as AQUA, &c., which I produce in another place. The term Ice and its parallels Is, Isa, (Sax.) Eise, (Belg.) Eisz, (Germ.) &c. may remind us of Iron, which under some forms becomes Iiser, (Belg.) Eysen, (Germ.); and this word might properly be derived from the idea of Solidity—Firmness. Horace employs the very same metaphor of Consistency in describing the operation of Frost, as we all remember, "Geluque Flumina Constiterint acuto;" and the Saxon

Saxon Is, Ice, succeeds in my Saxon Dictionary Is, denoting Is or Est. In the succeeding column we have Isen, Ferrum. In the same column of Mr. Parkhurst's Lexicon, where ישה ISH occurs, we have סיטי ISM, To "Place, Set, Put;" where the Is has the same idea of Place or Position as in שה ISA, To Exist, and likewise ושן ISN "To Sleep, be in a sound sleep," which means nothing but to be Placed or Laid down. This will be manifest by another sense of the word "Laid up in store," says Mr. Parkhurst, "Laid "by or asleep, as it were, i. e. in a quiet undisturbed state." both these senses it might be explained by Reposed, Laid in Repose, or Laid in a Repository, or again, by the same metaphor, Deposited, as in a safe Place or Position. The SM in Ishem belongs to by SM, "To Place, Set, Put;" and belongs to ארן ADN, from ארן DN, the Base, the STAND, &c. &c., which I have discussed on another occasion. The explanatory word Down I have shewn to belong to 77 DN, the Base.

As I have now detailed all which I think necessary to be observed on the Verbs of Being, belonging to our Element, as they appear in various Languages; I shall next proceed to another portion of my work, and examine the Pronouns, which belong to the same Element, and which I consider to be only different forms of these verbs, discharging different offices. On the most careful review of the analysis, which has been exhibited, respecting the composition of verbs; I have unfolded, as I conceive, the true state of the question. Still, however, I must again repeat, (see page 295,) that it is often difficult to decide in every particular instance, whether the Inflexion of the verb should be considered as a Verbal or Pronominal addition. On some occasions, this point cannot be decided, and in others, an attempt at a distinction of such a kind, in discussions on Elementary Speech, would be idle and unmeaning. My object is to prove, that the verbs of Being and the Pronouns, belonging to our Element.

Element, are all connected with each other; and that the Inflexions of verbs, in various Languages, are derived from this source.—I have endeavoured likewise to discover, to what part of Speech the Inflexion in its primitive state should be considered, as more particularly and properly attached; and in the course of this enquiry, I have performed, as I trust, all which the nature of the question would admit, without falling into the opposite errors of confounding what is capable of distinction, or of separating what cannot be distinguished.

Pronouns belonging to our Element ^C, ^D, &c., C^, D^, &c., with or without a vowel breathing before the C, &c., which denoted, originally, the Existing being or thing—This or That Existing being or thing—This, That, &c.; as ISTE, Is, Hic, (Lat.) It, (Lat.) &c. &c.

Pronouns with the Vowel breathing before the ^C, ^D, &c.

- 1. ISTE, HIC, IS, ID, (Lat.) &c., Out=os, Aut=os; Os, (Gr.) &c. &c. &c.
- 2. IT, (Eng.) with its parallel terms ITA, Es, HIT, &c. (Goth. Germ. Sax.) His, (Eng.), &c. &c.
- 3. Words for One, as Eis, (Eig,) with its parallels Eek, (Pers.) &c. &c.
- 4. Ego, (Lat.) with the parallel terms Egoo. (Gr.) Існ, (Germ.) &c. &c.

&c. &c. &c.

arrest of

Pronouns with the Vowel breathing after the C[^], D[^], &c.

- 1. Thou and its parallel terms Su, (Gr.) Tu, (Lat.) &c. &c.
- 2. The Relative Qui and its parallels CHE, QUE, (Ital. Span. and Fr.) Who quasi Qwho, &c.
- g. The, (Eng.) and its parallels SE, Tha, DIE, &c. (Sax. Germ.) To, (Gr.) &c. &c. &c.
- 4. SHE with its parallels Si, SEO, (Goth. Sax.) &c.
- 5. Other Pronouns, SE (Lat. Fr. Ital. Span.) Self,—CE, C10, (Fr. Ital.) &c. &c. &c. &c.

In the former article, I considered the verbs of Being or Existence, belonging to the Element ^C, ^D, ^G, &c., as Est. (Lat.) Is, (Eng.) &c. &c., which I have shewn to be derived from the idea of that, which is Placed—Situated, Stands up, &c., and to belong to such terms as Ist-emi, (Iorgu, Colloco, Statuo;at in aor. 2. perf. plusq. perf. Sto, Consisto; unde Est; -Esse, &c.) Est-ar, (Span.) To be in a place, To Be, &c. &c., all which I have ultimately referred to Estia, (Estia, Vesta Dea,) the EATTH, &c. &c. This is the same metaphor, as I have before observed, which belongs to the explanatory term Existence, from Sisto, "To Set, or to be made to Stand." I shall consider in this article the Pronouns-Articles-Demonstrative adjectives, &c. &c. which are attached to the same Element ^C, ^D, ^G, &c., such as Is, ID, HIC, ISTE, (Lat.) IT, (Eng.) &c. &c., which are only, as I conceive, different forms of the verbs of Being, Est, (Lat.) Is, (Eng.) &c. &c. applied to different purposes. Thus Is and Est originally belonged to each other, just as Existens belongs to Existit, or Positus to Ponitur; so that Isre has the same sense as Iste-Ens or Est-Ens might have had, as participles from Est. From the idea of the Existing person or thing, which Is, ID, Hic, (Lat.) originally bore, we directly pass into the sense of This or That—Existing, person or thing, by way of distinction, or This-That in general. We shall find, that the Elements ^M, &c., ^N, &c., and ^R, contribute their share likewise in the formation of Pronouns, as we have seen in the Verbs of Being; and we shall perceive, that these Pronouns and Verbs are only different forms of each other, applied to different purposes. All these Elements ^C, &c., ^M, &c., ^N, &c., supply Pronouns of every person, and of every description. vowel breathing attached to these Elementary Consonants sometimes precedes, and sometimes follows, as we have seen in the verbs. - I have shewn, that the familiar Verbs of Being

are often compounds from more simple forms, and that the inflexions of the ordinary verbs are derived from these simpler forms.—I shall shew, in this article, that many of the familiar Pronouns are likewise compounds from Pronouns under a simpler form; and that the inflexions of Substantives and Adjectives are derived from these forms.—The order, which I shall adopt in this enquiry, will be such, as I conceive to be best suited to the elucidation of the question; and I shall not scruple to introduce other parts of the argument, which directly connect themselves with the objects before me.

I shall first produce, under one view, the more familiar Pronouns—Articles—Demonstrative adjectives, &c. &c., in various Languages, under the form of the Element ^C, ^D, ^G, &c., with the breathing before the Radical Consonant, and sometimes likewise after it, which denote the Existing Person or Thing - This or That - Existing Person or Thing, &c. &c. Under this form we may enumerate the following terms: ISTE, Hic, Is, Id, &c., (Lat.) Out-os, Aut-os, Os, Os or Eos, EK=AST-05 EK=Ein-05, &c. &c., (Gr. Outos, Hic, Autos, Ille, Os, Qui, Oc, Eoc, Suus, Exactoc, Unus quisque, Exeroc, Ille,) the English IT, with the parallel terms produced by the Etymologists, as ITA, Es, HIT, HITT, HET, (Goth. Germ. Sax. Run. and Dan. Belg.) At, (Scotch) That which, Et=Was, (Germ.) Some thing, Hig, (Sax.) They, Them, His, (Eng.) Is, Eis, and Ije, Ize, (Goth.) He or of him—It, They, Who, and of Them, Ixe, Eco, (Russ.) Them, Of Him, &c. Esso, (Ital.) Esse, Este, (Span.) This, That, Ash, Esh-an, (Pers.) Its, His or Hers, Ise, IDSE or IAD, UD or OD, (Gal.) He or She, They, That; Isa, IAD, (Gal.) He, They, Eiddo, (Welsh) One's own; Haza, (Ar. اهذا) This, That, AT, (Heb. את) That, The; Ais, Ash, (Heb. אשה, אשה) Every one, Any, Man, Woman, Ash-^r, (Heb. אשר) Who, Which, &c. &c.

2dly, The words we must add to the terms denoting the numeral

One in various Languages, as Eis, EEK, YEK, EK, AHD, ACHD, ^CHD, HD, HOUIT, HOUID, OD=Ene, &c. &c., (Gr. Pers. Gips. Hind. Arab. Heb. and Æthiop. Chald. Syr. Coptic, Sahidic, Russian, &c.) To the above terms, which familiarly express the numeral One, in the series of Cardinal numbers, we may add these, which denote a Single, Peculiar, person or thing, as the English Ace and Odd, and the Greek Ios, Oios, Id-ios, (Ios, Solus, Unus, Ow, Solus, Idw, Peculiaris, Sui generis, Suus, Privatus); to the latter of which belongs, we know, Ideot, Idiotes, (Iduates, Privatus, Plebeius.) The parallel terms to Ace, as produced by the Etymologists, are As, (Fr. and Span.) Asso, (Ital.) Ess, (Germ.) Esz, (Dan.) Aes, (Belg.); and Junius observes, that these words "præ se ferunt vestigium Græci Eig, Unus." The parallel terms, which they produce for Odd, are Oed, Ood, (Belg.) Oed, Ode, Od, (Teut.) Udda, (Swed.)

adly, Words, denoting other persons, besides the third, as Ego, (Lat.) with its parallel terms, Egoo, Ic, Eg, Jeg, Ich, Ick, (Gr. Eyw, Sax. Run. Dan. Germ. Belg.) I, Io, Yo, Je, (Eng. Ital. Span. Fr.) Ati, (Heb.) &c., At, (Heb.) Thou; Euch, (Germ.) You, &c. &c. In some of these, as we perceive, the breathing before the Radical has disappeared. Whenever different forms presenting the same idea occur, I insert the words under the forms less familiar among these terms, which compose the more common form. The above words under the form, with the vowel breathing before the Radical Consonants ^C, ^D, ^G, &c., agree with the form of the verbs of Being, which I have before produced, as Is, Est, Esti, Es, Ess-er, Is, Ist, Ast, Este, Is. ATA, As, Is, ATA, Is, OES, Ez, YSY, OTTE, YDZHI, Ez, &c. (Eng. Lat. and Fr. Gr. Span. Ital. Sax. and Belg. Goth. and Germ. Pers. Russ. Heb. Irish, Galic, Welsh, Cornish, and Armoric.)

We have seen, likewise, that when the breathing before the C[^], D[^], G[^], &c. is lost, and is preserved after it, we have the verbs of Being under the form TA, SI, So-SE, SE, &c. (Irish and Galic, Welsh, Old Italian, Gipsey, &c.) We shall find a great race of words, performing the part of Pronouns, &c. under this form, among which we may enumerate the following: 1st, The English Thou, THEE or THY, with its parallel terms, Su, Se, Soi, Tu, Te, Toi, &c. (Gr. Su, Se, Soi, Tu, Te, Toi, Dor.) Tu, Te, (Lat.) Tu, Te, Toi, (Fr.) Tu, Te, Ti, (Ital. and Span.) Thu, (Goth. Sax. Isl.) Du, (Dan. Belg. Swed. and Germ.) To, (Pers.) Toui, (Russ.) Ti, Tau, Dy, (Welsh,) Tu, (Ir. and Gal.) TY, TE, DA, DHY, THE, (Corn.) TE, DA, Az, (Arm.) Too, TA, (Hind.) TA, KA, (Heb.) KA, At, Ik, Iki, (Chald.) KA, KI, (Ar.) GE, Gu-^AS, Chwi, Chui, Chui and Hui, (Sax. Goth. Welsh, Arm. Corn.) Ye or You, quasi Je, Ge, Jou, Gou. In Hebrew, likewise, Ata, At mean Thou; in Armoric, Az means Thee; and in German, Euch means You; and in Welsh, Eich is Your. In Gothic, You in some of the oblique cases is Izweis; and in Spanish, Os is You.

2dly, The Relative Qui, Quæ, Qu=Od, &c., Cui, (Lat.) and its parallel terms, performing the same office, as Chi, Che, Cui, (Ital.) Que, Cuyo, (Span.) Qui, Que, Quoi, (Fr.) Cia, Ce, Se, (Ir.) Co, Cia, Ci=Od, (Gal.) Jo, Keea, Kai, Ki=S, (Hind.) Koi, Kto, Tchto, Tchei, (Russ.) Keh, Ki, Cheh, Chi, (Pers.) Se, Seo, (Sax.) Sa, So} Ei, (Goth.) We must add to these, Who, Wha=^T, (Eng.) and its parallel terms Hwa, Hwa=T, (Sax.) Hwa, Hwa=^S, (Goth.) We=^R, Wa=^S, (Germ.) quasi Owho, Owha=^T, &c. &c., Oway, (Scotch.)

3dly, The, (Eng.) the article, with its parallel terms, Se, Seo, Tha, (Sax.) Sa, So, Thai, (Goth.) To, (Gr. To,) Die, (Germ.) De, (Belgic,) &c. &c. &c.

4thly, SHE with its parallel terms, as produced by the Etymologists, SI, (Goth.) SCHE, SCÆ, (A. N.) SEO, (Sax.) SIE, (Germ.) SII, (Belg.) SI, (Ir.)

5thly, Others, Pronouns, &c. &c., as SE, Sui, (Lat.) SE, Soi, (Fr.) SE, Si, (Ital. Span.) Si=^S, Si=Ch, (Sax. Germ.) &c. &c. denoting Self; Sie, (Germ.) They; Je, (Germ.) The, as in Je=Der, Every one; CE, Cio, (Fr. Ital.) That; CEI, (Russ.) That; Gy, Dzhei, Dhi, Dho, Dhe, (Corn.) They, Them, Her, It, Him; SE, Ti, (Gal.) This, He who; SE, SA, Si, So, Ti, (Ir.) He and Self, His, Hers, Theirs, This, That; Cia, (Irish,) Man; Di, (Chald. Samar. and Syr.) He who; Ti, (Gr. Ti,) That, Such a thing; SA, So, Ki, (Gips.) How, What, Where; Koee, Jo=Koee, (Hind.) Any One, Every One; Zh, Zo, Ch, Ci, S^, (Heb. אור) This, That, &c., Who, Which, &c.; ZA, TA, (Ar. كان كان) This, That, &c. &c. &c.

I shall now give a general view of the Pronouns, which appear attached to the Labial Consonants, B, ^F, ^P, ^V, ^M, with the breathing, in its three different positions, before or after, or both before and after, these Radical Labial Consonants. 1st, ME and MY, with their parallel terms, Eme, Me, Moi, Eem-eis, (Gr. Εμε, Με, Μοι, Ημεις,) Me, We; Me; &c. (Lat.) Me, Moi, (Fr.) Me; Mi, (Ital. and Span.) Me=Ina, Mi=^S, (Goth.) Me, Mi=^N, (Sax.) Me=Iner, Mi=^Ch, (Germ.) Me=^Nia, Mai, (Russ.) Of Me, We, &c.; Ma=^N, Ma=ra, Ma, Am, (Pers.) I, To Me, We, My; Mi, Fi, (Welsh,) Me, Om, (Gal, and Ir.) Mi, Ma, Am, (Arm.) Mi, Me, Vi, Evi, Am. (Corn.) My, May, Hum. (Hind.) We, We=is, Wi=r, (Eng. and Sax. Goth. Germ.) Wi=t, (Goth. and Sax.) We two, &c.

2dly, The English Him, with its parallels Him, and Imma, (Sax. and Goth.) signifying To that Person and thing, To them; Im, (Goth.) To them; Ihm, (Germ.) Hem, (Belg.) Eum, Eam, (Lat.) Em, Th-^Em, (Eng.) &cc.

gdly, Efe, Ef, Efo, Fe, Fo, (Welsh,) He; Ip-se, (Lat.) Mia, (Gr. M₁ α ,) One; N=Ep, N=Eb, (Welsh,) Who, He that; Aup, (Hind.) Self; Hem, (Cornish,) Hem, (Heb. and Arab.) They; Um=Eis, Bai, Voi, Vi, V=os, V=Ous, &c. (Gr. Russ. Ital. Lat. Span. Fr.) You; Ma, $M^* = En$, (Ar.) That which, He who, &c. words under this form coincide with the names for Father and Mother in various Languages, Am, Ab, Abu, Bu, Ma, Pa, &c. &c., and with the verbs of Being, which I have produced above, and which we have seen in so many Languages, as Am, Be. (Eng.) Eimi, (E1 μ 1,) Um in s=Um, (Lat.) Am, (Pers.) Im, (Ir.) Wf, Mae, (Welsh,) Ov, Av, Am, Ma, (Corn.) Hoova, (Hind.) &c. &c. &c. In Welsh, Pwy, Pa, in Armoric, Pe, Piou, Pe=^T, Pe=Hez, Pe=Hini, in Cornish, Pina, Ra, mean Who, What, &c. These may belong to the Element Q^, as in the Latin Qui, &c., just as we have seen Who, Wha= AT, to be quasi QwHo, QwHA= AT. The Greek Poi, (IIa, Quo, Quonam, Quorsum,) in Poi-as, oPoi-as, (110105, Qualis, Orrough Qualis,) &c., certainly belongs to these Celtic terms PA, &c.; and in some Dialects we know, that oKor-os, (Ozoo, Ion. pro Omoo,) is written, where Kor coincides with the form Que, &c.

The Element 'N, 'NT, &c. &c. supplies a race of Pronouns, Demonstrative Adjectives, &c. &c. through a great variety of Languages; among which we may enumerate the following: 1st, The English Article An, with its parallel terms An, (Sax. Ir. Gal. and Arm.) Un, (Corn.) &c. 2dly, Hins, Hine, Ina, (Goth. Sax. and Goth.) He, Him; Ins, (Goth.) Them; j-Ains, (Goth.) He; y-On, Any, (Eng.) Ihn, Thn-en, j-Ene, (Germ.) Him, Them, That; Ain, An, (Pers.) This, That; One, Oni, (Russ.) He, They; On, En, D'-Ont, (Fr.) Some, a Person, Them, &c.; 'Ne, (Ital.) Them; Hun, Hon, Hunnw, Honno, Hynny, Hwynt, &c. (Welsh.) This, That, They, Them, &c. &c.; En. (Arm.) He; Hen, Honan, Honyn, (Corn.) That, Self; An, (Gal.) Them; Hen, (Heh. and Arab.) They; Enth-op,

Enth-op, (Copt.) He; Anda, (Cyprian. Arda, auty. Kuzzgioi, Hesych.) She; Ans, Ansa, Enu, Ena, Enh, (Syr.) A Man, Such a Person, He, &c.; Anun, &c. (Syr. and Chald.) They; Enioi, Oon, On, Ens, (Gr. and Lat. Exos, Ov., Ov.) Some, This or That Existing Person adly, Certain Pronouns denoting the first Person singular and plural; Unc, Unge, (Sax.) To Us two; Uns, (Goth. and Germ.) Us; Ina, (Ir.) We; In, &c. (Ir.) We, Us, (as in Sa Inn, We, Dhu-In, To Us, &c. Ua-In, from Us); Hon, Ni, (Arm.) Us, We: Yis, Scc., Nei, Ni, (Corn,) Us, (as in Dh=Yn, To us,) We; Ani or Anki, Anu, Anchnu, Nachnu, Ni, Nu, (Heb.) I, We, Me, Ue; Noi, No. (Ital.) We, Us: Nor As, No-Us, (Lat. Span. Fr.) In Gothic, Ugkis means. To us two: where we may see how the forms, 'N and 'G might pass into each other. Whatever may, have been the fact, as to the original state of these Pronques; we may observe, that when these forms once existed, they would constitute classes of words, which may be considered as separate from each other. The English and Saxon Us seems to be directly taken from the form Uns. In Italian, Ci and Ce is

4thly, The Numeral expressing One, which belongs to the Element 'N in so many Languages, as One, En, (Ev,) Un-us, An, Ains, Aina, An, Ein, Een, Un, Uno, Aon, Un, Uyn-yn, Un-an, &cq. (Eng, Gr. Lat, Goth. Sax. Germ. Belg. Fr. Ital, and Span. Ir. and Gal. Welsh. Corn. Arm. &c.)—I have before produced various terms under this form denoting Being, as An-er, And-r-os, Anth-r-op-as, An-ax, (Aνηρ, Ανδρος, Ανθρωπος, Αναζ,) Hine, Hind, (Eng.) Ans. (Heb. Arab. Chald. Syr.) Man, &c.; Antta, Ansa, Aindear, (Syr. Ar. Irish,) A Woman, &c.; Aunt, Uncle, Aν-Unculus, (Eng. Lat.) &c. &c., and the verbs of Being, Einai, Een, Enti.

Us. The second Person is sometimes expressed by the form AN, as in Inc. (Sax.) To You Two; and in Gothic we have the equivocal form Igcwis. — Ant. Ant-ak. Enth-ak. Ent-ok. (Arab.

Syr. Chald. Cop. and Sahid.) signify Thou.

(Gr. Edai, Hv, Evri, Esse, Eram, Sunt,) Unt, in the compound S=Unt, An, (Gal. and Irish,) Wn, Ynt, (Welsh,) Oni, Onz, (Corn.) Oun, Int, (Arm.) Hyn, (Hind.) And, (Pers.) Ani, (Syr.) &c. &c. &c. The Element 'R sometimes appears among the Pronouns, as in Her, with its parallel terms Hire, Ihr, (Sax. Germ.) Your and Our, (Eng.) Eower, Euer, Ihr, (Sax. Germ.) Of You, You; Ure, Ar, Hor, (Sax. Gal. and Ir. Arm.) Of Us; Hira, Heora, (Sax.) Of Them; Ihr, (Germ.) Their, &c.; Er, (Germ.) He; $D^{\wedge} = Er$, W = Ir, W=Er, (Germ.) The, We, Who; Yr, Ar, (Welsh, Arm.) the Article The; ER, OR; (Eng. Lat. &c. &c.) a termination denoting Being, as in Sing-ER, Cantat=OR, &c. &c. The Pronoun sometimes appears without a Consonant, under the form of a vowel breathing, as He, (Eng. and Sax.) Heo, Hi, (Sax.) She, They; I, (Gal.) He or She, &c. These are generally, I imagine, derived from the Consomant form; and sometimes, perhaps, they appear under their original representation. The Element L is sometimes found among the Pronouns, or Demonstrative adjectives; and to this we must refer the Articles and Pronouns, in the Arabic, Italian, Spanish, and French Languages, as Al, (Ar. 1) 11, Egli, Ella, Lo, La, &c. (Ital.) El, Lo, Ella, &c. (Span.) Il, Le, La, Lui, (French,) Ille, (Lat.) &c. The g, in the Italian Egli, is an organical addition off the Country of Printer Employed areas of the to the L. with the sould neither

These observations will sufficiently unfold to us the original materials, of which the Pronouns, &c. in various Languages consist. I shall now consider the mode, in which they have been compounded, and the purposes, to which they have been applied in the formation of Languages, distinguished by inflexions of the Nouns. Though our Element ^C^, ^D^, &c. constitutes the main subject of my Enquiry, I shall perpetually recur to the other Elements, as they are connected with that, which is the object of my

East of the transfer of the

my discussion in the formation of Pronouns. We shall marvel to observe, how these Elements in their simple state have been compounded with each other, and how the form of inflexions has been assumed from this composition. Though I had always suspected, that this species of combination existed in various instances, where it was little supposed to be found; I had still no conception of the extent, to which it has operated, till I had fully entered into the subject, and was engaged in writing these discussions. and In I. shall first briefly consider the composition of some Latin and Greek Pronouns, as compared with others. In the Russian Dialect of the Sclavonic, we find that in all the five Declensions, the plural Instrumental case, as it is called, has ^Min the last syllable, as Rouka, The Hand, Rouk=Ami, With the Hands, &c. &c. It is often so likewise in the Dative plural, as Iacor-IAME, To the Anchors, &c. &c., and sometimes in the Instrumental Singular, as Lits=EME, With the Countenance, &c. &c. We find likewise 'B, or 'V, as a termination, as Zmai{EBE, IAME, EBE, mean Of, To, The Serpents, (Gen. Dat. Accus.) In the Pronouns we have T=EBAI and S=EBAI, corresponding with the Latin T=IBI, and S=IBI, Nace, of Us; or Us in the Accusative, corresponding with Nos, (Lat.) and N=AME, To Us, Vai, Ye, Vace, Of You, You, and V=AME, To You. The Russian Pronoun, denoting He, is, according to the arrangement of the Grammarians, thus declined in the Masculine Singular: N., One, G. Ego, D. Emou, A. Ego, Ime, Avec lui.—On-Eme, De lui. My Grammarian thus explains the use of these two last cases, to which he has given the names of Instrumental and Præpositive. In the plural we have for all genders, N. Oni, Eux, Onai, Elles, G. Ixe, D. Ime, A. Ixe.—Ime, Avec Eux.—On-Ixe, D'Eux. The Russian Scholar understands, I imagine, that the Inflexions of his Adjectives and Pronouns are formed from this Demonstrative Thus, G. Dobr-Ago, D. Dobr-Omou, A. Dobr-Ago, are Pronoun. G. Dobr-

G. Dobr-Ego, D. Dobr-Emou, A. Dobr-Ego, &c. Thus, N'= Ace. of Us, is quasi N^* -lxe; and V-Ace, of You, You, is quasi V-Ixe. We shall now understand, that the Latin N=Os, V^=Os, and their parallels Nous, Vous, (Fr.) &c. &c., are compounds of the NA and ABA, denoting Being, and our Element AS, performing the part of Inflexion, though originally significant. The plural of the Pronoun of the first person has been often, as we have seen, expressed by the Element AN, as Anu, Unc, Uns, Inn, (Heb. Sax. Goth. and Germ. Ir.) &c. &c.; and when the breathing is lost before the N^, and is preserved after it, we have Noi, No, (Noi, No, Noi, NE, (Ital.) Nt, NEI, (Heb. and Arm Corn.) &c. &c. &c.; and to these the N $^{\wedge}$ in $N^{\wedge}=Os$ belongs. In V=Os we have a similar union of V^{\wedge} signifying You, and corresponding with BAI, (Russ.) Voi, (Ital.) and Os the termination. The English and Saxon WE belong to the Element V.A., B.A., denoting the first person plural. In Gothic we have 'W'=Eis, and in German W'=Ir, which are compounds of the part W^{Λ} , expressing the Pronoun, and the termination. It is curious to observe, how widely extended the termination of 4S, AC, AT, &c. has been in expressing the plural of Pronouns, as in N=Os, V=Os, with their acknowledged parallels, No=Us, VoeUs, &c., the Russian N', V' Ace, We, You; the Saxon-Gothic, and the Gothic W'^ IT, Eis, We two, We; the Saxon G-YT, You two; the Gothic Gilt, and Ig=Wis, J=Us, Iz=Wis, You two, You; and the Greek Eem, Um, Sph Eis, (Hueis, Yusis, Egeis,) We, Ye, They. We shall in vain endeavour to discover that peculiar example, in which this addition was originally significant, or the precise meaning of the addition, when it was first annexed. In Spanish, Os signifies You; and we have seen the plural of the second person expressed in other instances by a breathing before the Element ^C, ^S, &c., as Euch, (Germ.) &c. This might lead us to conclude, that V^=Os was a compound of V^ and Os, both signifying the same thing. We must observe, however, that the 4300 Os

Os in N=Os and V=Os seems to be formed from the same analogy, as it appears from the parallel terms in Russian. The Spanish OS may either belong to the words with a similar meaning, Euch, &c., unconnected with Vos, or it may be derived by corruption from v-OS.

Formation of the Saxon, Greek, and Latin Articles, &c.-Inflexions of Nouns in certain Languages from Pronominal or Articular Suffixes.—The Inflexions of Saxon, Gothic, and Latin Nouns, &c. Observations on the Inflexions of Nouns in the Russian Dialect of the Sclavonic.—Some English terminations considered, &c. &c.

THE English Article THE first presents itself to our attention. Skinner refers it to the German Die, the Belgic De, and the Greek O, Ee, To, (O, η , τ o); and he adds, that Junius derives the Belgic De from the Greek Deva. He should have observed, too, that all these belong to the Saxon Se, Seo, sometimes Thy, The, and the Gothic Sa, So. It is marvellous, that the form of the article, beginning with S^, should have concealed this relation from the eyes of our Etymologist, especially as in other parts of the article the letter T is found. In Greek the form of S, as Se, So, sometimes appears likewise, as in Semeron, Setes, (Σημερον, Hodie, Σητες, Hoc Anno,) which are written Temeron, Tetes, (Τημερον, Τητες.) The Saxon and Gothic articles are compounds in most of their parts, and I shall write them at full length according to the mode, in which, as I conceive, they have been formed. N. Sing. SE, SEO, Th '=At. (G.) SA, So, Th \= Ata, (Masc. Fem. Neut.) Gen. Th \= Æs, Th \= Ære, Th \= Is. (G.) $Th \stackrel{\wedge}{=} Is$, $Th \stackrel{\wedge}{=} Izos$, $Th \stackrel{\wedge}{=} Is$. D. and Abl. $Th \stackrel{\wedge}{=} Am$. Th ^= Ære, X X

Th '= Ære, Th '= Am. (G.) Th '= Amma, Th '= Izai, Th '= Amma. A. Th '=One, Tha, Th '=At. (G.) Th '=Ana, Tho, Th '=Ata. N. Pl. Tha. (G.) That, Tho, $Th ^-Os$, Tho. Gen. $Th ^-$ #Era. (G.) Th $^{\wedge}$ =Ize, Th $^{\wedge}$ =Ize, Th $^{\wedge}$ =Ize. D. and Abl. Th $^{\wedge}$ =Am. (G.) Th $^{\wedge}$ =Aim. A. Tha. (G.) Th ^= Ans, Tho, Th ^=Os, Tho. I consider, that SE, SEO, SA, and So represent the original form of the article in its simple state,—that the Th, at the beginning of the other parts, is quasi The, Se, as in Th=At, Th=Ata, Th=Æs, Th=Is, which are quasi THE=At, THE=Ata, THE=Æs, THE=Is; and that the AT, ATA, Æs, Is are the terminations of Inflexion, which belong likewise to our Element 'S, 'T, &c., when the breathing precedes the Radical, and which were originally significant, and denoted the Is, ITA, (Gothic,) His, Hit, (Sax.) Is, ID, (Lat.) It, (Eng.) This or That Being or Thing, &c. Thus we see, that TH=AT, (Sax. and English,) TH=ATA, (Goth.) are compositions of our Element, under different forms, discharging the same office of Demonstrative Pronouns, and combined for the purpose of adding to the force of the signification, as THE-It or THE - Such a person or Thing, THE—THE. We see in Th^=ÆRE, Th^=AM, Th^=Amma, Th^=One, &c., that the Elements ^R, ^M, ^N, have been adopted with the same meaning.

In the Greek Article we see the To, Tou, Too, Tee, TA, (To, Tou, Tw, Ta, Ta,) coinciding with the simple form, Se, Seo, SA, So, Die, De, The; and in the other parts we unequivocally see a compound arising from the T^ or To, the original article, and a termination common to all the Greek Nouns, as T^{-} Ees, Een, Ain, As, On, Oin, Oon, Ois, Ous, $\{T_{\eta\varsigma}, \tau_{\eta\nu}, \tau_{\alpha\imath\nu}, \tau_{\alpha\varsigma}, \tau_{\sigma\nu}, \tau_{\sigma\imath\nu}, \tau_{\alpha\imath\nu}, \tau_{\alpha\imath\varsigma}, \tau_{\sigma\nu}, \tau_{\sigma\imath\nu}, \tau_{\alpha\imath\nu}, \tau_{\alpha\imath\varsigma}, \tau_{\sigma\nu}, \tau_{\sigma\imath\nu}, \tau_{\alpha\imath\nu}, \tau_{\alpha\imath\varsigma}, \tau_{\sigma\nu}, \tau_{\sigma\imath\nu}, \tau_{\sigma\imath\nu},$

In Dutch, HET and DE are Articles, where we have our Element, under both its forms, of the vowel breathing before and after the Radical consonant. We observe the same species of composition in the formation of all these Articles, Gothic, Saxon and German; and they differ in nothing but in having sometimes different compounds to express different cases, as they are called, which is the effect of accident. The compounds have the same original meaning in all the examples; which is that of an intensive sense, denoting 'The-} 'S, 'R, 'M, 'N, The—Such a Being, Thing, &c.—This—This, That—That, Being or Thing.

That my idea respecting the nature of this composition is just, will be manifest from considering the simplest state, which these Radicals 'S, 'M, 'N assume, as Demonstrative parts of Speech. We may consider this simple state to be exhibited in the Latin Hic and Is—in the Saxon and Gothic Hit, Is, and the Greek Os, (O₅); and we shall find, that terms, like these, have supplied the materials for the Inflexions of Nouns, which exist in those Languages. Thus we shall see, that the Inflexions or the terminations, added to the Radical parts of words, of Latin and Greek Nouns, were nothing originally but postpositive articles, performing precisely the same office as the prepositive, and denoting This—That—Such, &c. We shall not fully understand the force of these observations, unless the words are produced at length, and compared with each other.

The Latin Hic and Is, we know, are thus represented; N. Sing. Hic, Hæc, Hoc. G. Huj=Us. D. Huic. A. Hunc, Hanc, Hoc. Ab. Hoc, Hâc, Hoc. Nom. Pl. Hi, Hæ, Hæc. G. Hor=Um, Har=Um, Hor=Um. D. and Abl. His. A. Hos, Has, Hæc. N. Sing. Is, Ea, Id. G. Ej-Us. D. Ei. A. Eum, Eam, Id. Ab. Eo, Ed, Eo. N. Pl. Ii, Eæ, Ea. G. Eor=Um, Ear Um, Eor=Um. D. and Abl. Iis, Eis, A. Eos, Eas, Ea. In Saxon we have, Nom. Sing. He, Heo, Hit. G. His, Hire, His. D. and Abl. Him, Hire, Him. Acc. Hine, Hi, Hit.

Hit. Nom. and Acc. Pl. Hi. G. Hira, Heora. D. and Abl. Him. In Gothic we have Nom. Sing. Is, Si, Ita. G. Is, Iz=Os, Is. D. and Abl. Imma, Izai, Imma. A. Ina, Ija, Ita. N. Pl. Eis, Ij=Os, Ija, G. Ize, Izo. Dat. and Abl. Im. Acc. Ins, Ij=Os, Ija. In the Latin Hic and Is we find all the parts in their simple state, except the Genitives singular and plural, Huj=Us, Ej=Us, Hor=Um, Har-Um, Eor=Um, Ear=Um, where we see the process of Inflexion commenced. In the Saxon all the parts are in their simplest state, and so they are in the Gothic, except in the Iz=Os and Ij=Os. In the Greek we shall find, that every part is in its simplest form. Thus we have Sing. N. Os, Ee, O. G. Ou, Es, Ou. D. Oo, Ee, Oo. A. On, Eeen, O. Dual, N. and A. Oo, A, Oo. G. and D. Oin, Ain, Plur. N. Oi, Ai, A. G. Oon. D. and Abl. Ois, Ais, Ois. A. Ous, As, A. (N. Sing. Oς, η, ο. G. ου, ης, ου. D. ω, η, ω. A. ον, ην, ο. N. A. Dual, w, a, w. G. D. oiv, aiv, oiv. N. Pl. oi, ai, a. G. wv. D. ois, αις, οις. A. ους, ας, α.) The Relative Pronoun, as it is called, is only another turn of meaning to the Demonstrative, which was the original. Thus they are perpetually combined with each other, as in That, &c.—He is a Man, That I regard; which means, He is a Man,—That Man I regard. This union is fully underand every one knows, that Os, (Os,) is familiarly used for Aut-os, (Autos,) H & Os, Dixit ille. Thus then the Relative Pronoun Os, (Os,) may be considered, as representing originally the Demonstrative Pronoun, and agreeing with Is, &c. &c., Eos, Os, (Eos, Os, Suus,) the Out, and Aut, and Ek, and the EK=AST in OUT=Os, AUT=Os, EK=Ein=Os, EK=AST-os, (Outos, AUTOS, Exervos, Exactos,) &c. &c. The Ein, in Ek=Ein-os, belongs to the Element 'N. When I say, that the Inflexions of Nouns have arisen from such simple forms, representing Being, in these various Languages, I cannot be supposed to affirm, that in every instance the cases coincide with each other; but I mean to observe, that we shall clearly and unequivocally perceive, that such

such were the materials, of which the Inflexions are composed, and that the record of these materials is preserved with a precision, which we should little have expected to discover.

We shall now see, that the Inflexions of the Saxon and Gothic Articles, as Nom. Th=At. G. Th=Æs, Th^=Ære, Th^-Is. D. Th^=Am, Th^=Ære, Th^Am, are compounds of Th^, representing Se, or THE, and the Demonstrative Pronoun, HIT, ITA, as N. Th^=Hit. G. Th '=Is, Th'=Hire, Th'=Is. D. Th'=Him, Th '=Hire, Th'=Him, &c. &c. &c. Again, in the Gothic article, Nom. Th ^=Ata. G. Th '=Is, Th '=Izos, Th=Is, we have N. Th '=Ita. G. Th '=Is, Th^=Izos, Th^=Is, &c. &c. The Inflexions of the Saxon and Gothic Nouns belong to the same Elements, which we find in the Demonstrative Pronouns; though they do not always correspond with each other in the particular cases. We find however universally, that the Dative Plural terminates in ^M, as Smith=UM, To or With Smiths, which I consider to be Smith=HIM, To or With Those Smiths, &c. &c.; and in Gothic, Himin=AM, To or With Heavens, which I consider to be quasi Himin=IM, To or With Those or Th=EM Heavens, if I may so express it. In the first Declension of the Saxon, and the first, second and fifth of the Gothic, the Genitive ends in 'S, as Smith=Es, Of a Smith, which is quasi Smith-His, Of That Smith-Himin-Is, Of That Heaven; from whence, we know, has been derived our 'S in the Genitive case, as The Smith'S Work, &c. &c. The English His, we see, belongs to these words, and means That Person. would be idle to attempt to adjust, whether His should be considered as the Nominative Is, (Goth.) or as directly taken from the Genitive Is, (Goth.) His, (Sax.); and we now see, that those who have supposed, that our Genitive case in 'S, The Smith'S Work, meant the Smith His Work, are at once wrong and right. They are wrong, because this Genitive case was certainly directly taken from the familiar use of the Saxon and Gothic Genitive, Smith=Es, &c.; and they

they are right, because this Saxon termination Es or His, and the Pronoun His, have the same origin, and cannot be distinguished from each other in the meaning, which they convey, as in The Smith'S Work, and the Smith His Work.

This Analogy of the Genitive ending in 'S is very general. Thus we have it in two Declensions of the Latins, Lapis, Lapid=Is. Grad=Us; and originally in another Declension, Familia= A, Of a Family; in the Article and Demonstrative Pronouns, Huj=Us, Ej=Us, and in some other Adjectives, as Un=Ius, &c; in the second Declensions of the Greek Parisyllabics, and in the fifth Imparisyllabic, together with all the five Declensions of the Contracted Nouns, as Tim=Es, Somat=Os, Ast=Eos, &c. (Timps, Σωματος, Αστεος.) We see, that this termination originally belonged to the Saxon and Gothic His—Is, &c.; and it is extremely curious, that the affinity of the Languages should have been preserved in points so minute. In German the most familiar termination of the Genitive singular is AS. In one Declension of the Russian nouns, the Genitive Singular adds T to the Nominative, as Ditia, An Infant, Ditia= TI, Of an Infant. In the Adjectives the Genitive singular terminates in Ago in the Masculine and Neuter, and the plural in Ouixe, as Dobr=Ago, Of a Good Man or thing, and Dobr = Ouixe, Of Good men, women, or things .- In the Hindostanee Dialects, Kau, Kay, Ko, Say are added to Nouns, in order to mark cases, as Sauheb-KAU Ghoorau, The Horse of the Master, as it is in English Master-'S horse; where the Kau and the 'S seem to correspond precisely with each other, except only that the vowel breathing before the 'Kau is lost. In these Dialects, AK or EEK is the Article, corresponding, as we see, with the Latin Hic, as EEK ghoorau, A Horse.

In Latin the Inflexions of the Nouns, where vowels do not appear, belong to the Elements 'S and 'M, as Mus Is, As, Am, Ar=Um; Domin Us, Is, Os, Um, Or=Um; Regn Is, Um, Or=Um; Nub Es,

Nub} Es, Is, Ib=Us, Em, Ium; Grad} Us, Ib=Us, Um, Uum; Faci-} Es, We may consider these words, as com-Eb=Us, Em, Er=Um. pounds of the Radical part, expressing the sense of each word, and the Demonstrative Pronouns. Thus Mus-Is is Mus-{ IIs, or Eis, Mus-Am, Faci-Em, Mus-Eam, Faci-Eam, Mus-Ar-Um, Faci-ER=UM, Mus- HAR-UM, EAR-UM, and Domin-Us is quasi Domin-{Is, Hic, That Master, Domin-Is, Domin-{Iis, Eis, His, Domin-Os, Domin-{Eos, Hos, Domin-Um, Domin-Eum, Domin-Or=Um, Domin Eor = Um, Hor = Um. Even the Vowels A and O have been preserved in Mus-A and Domin-O, to accord with Mus-Ea and Domin-Eo.—We shall not wonder, that this coincidence of the termination with the Demonstrative Pronoun is not preserved in all cases; but our wonder will be much excited, that it has been so unequivocally exhibited in so many. Under some forms, however, the resemblance is still more complete. Even the Id is preserved in some; Ali-\Us, A, UD, is quasi Ali-\Is, EA, ID. In these, too, the 'S or Us of the Genitive is preserved, as Ali-Us, such as we find it in Huj-Us, Ej-Us; and we have moreover Ali-I^{$^{\circ}$}, quasi Ali=E_I. The ^{$^{\circ}$}S of the Genitive is preserved likewise, as we have seen, sometimes in the first, Famili=As, in the third Declension, Nub=Is, Lapid=Is, and in the fourth, Grad \Us. The Em in the Accusative singular of the third and fifth, and the Um of the fourth, belong, we see, to the Eum, Eam. In the second Declension the Eum or Um is applied in the Neuter to The Um in the Genitive plural of the third and three cases. fourth Declensions, Nubi-UM, Lapid-UM, Gradu-UM, is in a state, preceding that, to which we find the 'R prefixed, as Hor=Um, Har=Um, Domin- $\{Or=Um, Mus\} Ar=Um$. The Pronoun Qu=Is, Qu=Id, Qu=Od is unequivocally a compound of Qui and Is, ID; and in the other parts, $Cu = ^Tus$, Cu = I, $Qu \mid Em$, Am, Orum, Arum, Eis, we have likewise compounds of Qui and Ejus, Ei, Eum, Eam, Eorum,

Eorum, Earum, Eis. In the Ibus, of Qu=Ibus, we have the Dative according to another analogy.

The Dative and Ablative plural of the third, fourth, and fifth Declension, deserves our attention. We there see a combination of the Element 'M, 'B, with 'S, the termination, as Nub-} IB Us, Grad { IB=Us, Faci } EB=Us; and the same thing we know sometimes takes place in the first, as Fili \AB=Us. It is curious to observe, how widely this formation of the Dative and Ablative Plural, with the Element 'M, 'B, &c., has been extended. In the Saxon and Gothic Articles, the Dative and Ablative Plural ends in 'M, as Th-Am, Th-Aim; and even in the same cases of the Singular we see a similar termination, as Th-Am, Th-Amma. too we have sometimes the 'B in the singular, as well as in the plural, as T=IBi, S=IBi;—N=OB=is, V=OB=Is. In the four declensions of the Saxon, and in the five of the Gothic, the Dative and Ablative plural terminates in ^M, as Smith=UM, To or With Smiths, Himin=AM, To or With Heavens, &c. &c. &c. In some Dialects of the Celtic the same fact takes place. According to General Vallancey's arrangement, the same cases in the five Declensions of the Irish Nouns end in 'Bh, as Boghadh=UIBh. To or With Bows, &c. &c. This is the form, as we see, preceding the Latin form, where the Us is added to the Ub, as in Arc=UB=Us, To or With Bows. The same termination is adopted by some in the Galic Dialect, though others do not approve of it. "The Reverend Mr. Macfarlane," (says Mr. Shaw,) " in his translations and psalms, uniformly uses IBH in the Dative " and Ablative Plural; which I think too much resembles the " Irish Dialect."

In the Galic and Irish Dialects of the Celtic, Ibh and Sibh are Ye and You; where the $S=^{1}Ibh$, we perceive, is a compound, and the S^{\wedge} belongs to SE, SO, &c., He, That, Such a person, &c. To $S^{\wedge}=Ibh$ we must refer the Latin $S^{\wedge}=Ibi$, and probably the Greek

Greek Sphe, (Σφε, Sui et Illorum, quasi S^=Phe.) If Sphe, (Σφε,) be not a compound, the S may be an organical addition to the P', which we must assuredly consider as a Radical and significant Consonant. It sometimes appears in its simplest form Phi, and again Phi=N, (\$\Phi\$, vel \$\Phi\$, Syllaba Paragogica, quam Poetæ dativis sing. et pl. addunt); where we have the Element ^P, applied to the Dative, as in the other examples. The term Phi, when it is applied to the Dative, will accord with the more general analogy; as in Auto= PHI, (Αυτοφι, seu Αυτοφιν, Ibi;-Ipsis, pro dativo, Autous); but it is applied likewise to other cases. Let us note, moreover, its sense of Ibi, which belongs to ^Phi, denoting That; and let us remember the Italian Vi, That Place, precisely coinciding in sense and form with the Greek Phi. In the sense, which VI bears of You, coinciding with Vo=s, it only means That, Those, or Such a person or persons, applied to the second person. We cannot doubt, that SPHE, (Soi,) and its parallels Sph-eis, &c., are compounds, and that they belong to the Celtic terms, when we remember, that $S=^{\Lambda}$ Pho, $(\Sigma \phi \omega_{1})$ Ye two, has precisely the same meaning as the Celtic $S^*=IBH$, Ye. In the Greek Phse, (Ψε, Dor. pro Σφας,) perhaps the Greek s may be an organical addition to the Ph, or it may represent a compound of Phi and Se. The Latin Ip=Se seems to be a compound of Ip and Se. In Welsh, Efe, Ef, Efo, and Fe, Fo, denote He, Him, It, &c. In the Hindostan Dialects, Aup denotes Self, as Hum Aup Hoova, I myself Am; where we have the Element 'M, 'P, &c., applied to various purposes. The Latin Particle Pte, or $^{\wedge}P=Te$, may be a compound, as in Ip=Se. In Suo=Pte, we find it applied to its kindred term—the Pronoun Suo. The P however may be an organical addition to the Te.

THE RESERVE OF THE PROPERTY OF

to a strategy and the contract of the second

English and Saxon terminations in Y, IG, Esse, STER, &c.—
Degrees of Comparison in English—Saxon—Greek, and Latin.

The transfer of the second of the second of the second of the

THE termination of the Greek and Latin Nouns in 'S, &c. &c. Log-Os, (Λογος,) Kal-Os, (Καλος,) Hilar=Is, Bon=Us, Div=Es, &c. &c., is precisely that, which takes place in other Languages. Thus, in our Language, Ish denotes This or That Being or Thing. as Englass, That, Being or Thing, of England, or relating to England. This termination in Saxon is Isc, as Engl=Isc. The Y in our Language, when it is annexed to a certain race of words, represents the Element AC, AG, &c., bearing a similar meaning; as in Drear-Y, Merr-Y, &c. Manning in his Saxon Grammar observes, concerning the termination of Adjectives, "Multa exeunt in IG; ut Drear=IG, Mæstus; Myr=IG, Hilaris; "An=IG, Quispiam; Twent=IG, Niginti. Hanc nos vertimus "in Y; ut drear=Y; merr=Y, an=Y, twent=Y." The IG in these words has precisely the same meaning as the Us and Is in Mæst=Us, and Hilar=Is, &c. &c. The Element N has a similar meaning, both in English and Latin. Manning again justly observes, "Materialia exeunt in En, ut Ast=En, Fraxineus; Buc=En. " Fagineus; Stan=En, Lapideus. Sic nos etiam dicimus, Ash=En. " Beach=En, &c. Et alia quædam nonnulla, ut Midl=En, Medi-"oxumus." The latter word Midl=En is our English Middl=Ing. where in the Ing we see another representation; and we shall now understand, that the En in Ash=En, and the Ing of the Participle, are only different forms of each other, bearing the same meaning. Let us mark the In in the explanatory Latin words Fag=In-eus, Frax=In-Eus, which we see performs the same

same office as the English En. The Fag=In and the Beach=En precisely coincide with each other in both their component parts.

Manning observes in another place, that many Saxon Feminines end in Esse, &c. "Fœminina quam plurima in Esse, Isse, Nesse, Nysse; ut Cneor=Esse, vel Isse, Generatio; Thrinn=Esse, "Trinitas; Sothfæst=Nysse, Veritas." The Saxon Nesse belongs to the English Ness in Righteous-Ness. The n in n-Esse, may perhaps have arisen from an organical process. We here see, that the Esse in the Saxon Cneor Esse precisely coincides with the AT in the Latin Gener=ATio; and the Gener, we see, coincides with the Cneor. There is another thing likewise remarkable in this Saxon addition. We perceive, that the Saxon Esse is added to Adjectives in order to form Substantives, as Drin=Esse, Trinitas; and we may observe, that in Latin Substantives, formed from Adjectives, there are two additions, IT and As, as Trin= IT-As, Bon=IT-As; where the IT directly coincides with the Saxon Esse, and the As was afterwards added for the purpose of conforming to the analogy of the Latin Language. Thus we see, that the Latin formation of words is sometimes directly connected with the Saxon, and that the state, in which certain words appear before they become Latin, may be considered as purely Saxon.

Manning observes in another place, "Masculina personalia "multa in ER, vel ERE, ad artem, habitum, vel officium spectantia; " quorum fœminina exeunt in Estre, Istre, vel Ystre; ut Sæd=ERE. "Sæd=YSTRE; Bæc=ERE, Pistor; Bæc=ESTRE, Pistrix." ER, or ERE, belongs, we see, to the Element 'R, and coincides with the Latin On in Pist=On, the English En in Bak=En, &c. &c. In the formation of these words, Bac=Est-^Re, &c., from Bac=Ere, the Est is employed as a feminine addition, and is inserted before the Ere, as Beo=Ere, Bec=Est=Ere, or

Bac=EsT= ^Re. The EsT, denoting the female, coincides with the Ix of the Latins in Meretr=Ix, Cantatr=Ix. The Saxon mode of insertion in forming these words is not common; as the process generally takes place by termination. In the usual colloquial mode, now adopted, the Ess is added to the 'R, as a Bak=Er=Ess; and so strong is the necessity of this analogy impressed upon our minds, that we even add the Ess to the Ster, which denoted of itself originally the Female, but which we consider only as a termination for Person in general; as Song=Str=Ess. In Latin, too, the Ix is added to the 'R, as Cantat= 'R=Ix, quasi Cantat= OR=Ix, Pist=R=Ix, quasi Pist=Or=Ix. The Ster is used in its original Saxon meaning for a Female in Spin=STER; but in Poet=Aster, the Aster is adopted as a termination of contempt, q.d. Not a Poet, but A Poet=Aster, a She kind of a Poet. In Pun=Ster, &c. &c., the Ster is likewise used as a term of contempt, q. d. the foolish personage, who deals in Puns. the STER, the termination for the Female, should be adopted to express Inferiority, we shall not wonder; when we consider that the Female, in the ordinary works of labour, would be naturally regarded, as inferior to the Man, the Bac=EsT= ^Re, to the Bac=Ere, &c. &c. It is curious to observe, by what artifices of composition, Languages have been formed; and how dextrously the various artists employed in the work have accomplished their purpose, without communicating with each other on the mode of performing it; and without any knowledge of the art, by which it is effected. Thus we see in Cant=AT=^R=Ix, a triple composition, with the same Radical meaning applied to different purposes. By the addition of AT to the Cant, we have the action of singing expressed,—by a second addition of the 'R, or OR, we have the Male agent, employed in that action; and by another addition, lx, we have the Female.

In Saxon, as in English, the Comparative and Superlative degrees

degrees end in 'R, and 'ST, &c., where our Elements still retain their meaning of This-or That Personage or Thing, by way of Eminence or Distinction, as Strong, Strong=ER, Strong=Est, quasi Strong-Strong=Er, not He Strong, but This Strong; Strong=Est, Not He or This Strong, but That Strong. In Latin the Comparative is the same as in English ending in AR, and the Superlative differs by adding the Element 'M to 'S, as Doct=us, Doct-{IOR, Iss=IM=us. Some adjectives add only the 'M for the Superlative, as Humill=IM=us. The Greeks combine the Elements 'S, 'T, &c., and 'R, for the Comparative, and double the Element 'S, 'T, &c. for the Superlative, as Phronim os, Oot= Er-os, Oot=AT-os, (Φρονιμος, φρονιμωτερος, φρονιμωτατος.) Sometimes the Element 'N, 'NT is combined with 'R for the Comparative, and with 'S, 'T, &c. for the Superlative; and sometimes the Elements 'N, and 'S, 'T, &c. appear uncompounded for these Degrees of Comparison, as Mel as, Ant=Er-os, Ant=At-os, Eur-lus, ΙΟΟΝ, IST-05, (Μελας, μελαντερος, μελαντατος, Ευρυς, ευριων, ευριστος.)-I shall not produce any other examples from those Languages, whose degrees of comparison are formed by the addition of our Elements, as the same meaning prevails of the Demonstrative Adjective—This or That Being or Thing, by way of Eminence or Distinction. The artifice, by which degrees of comparison are formed, is precisely of the same sort with that, by which words are rendered Diminutives, or Augmentatives, as Paid=IskE, (Παιδισκη, Puellula,) A little girl; where the Iske means This-That, by way of Distinction; and the Ula, in Puell=Ula, has the same meaning.—The instance, in which the Demonstrative part of Speech itself has undergone the last degree of comparison, will strongly illustrate my ideas on this subject. We all remember, in the Plutus of Aristophanes, the superlative Autotatos. says to Plutus, Εκεινος οντως ει συ; 'Are you indeed That-Per-'sonage?' Pl. Nau, 'Yes,' says Plutus; when Carion again asks,

asks, Exervo; auto;; - 'That-That-Personage?' to which Plutus again replies, Autoratos, 'Autotatos;' where we have in fact the Aut in Aut-os thrice repeated, quasi Aut=Aut=Aut-os; That-That - That Personage. We know, that the Latin IPS=ISS=IM=us is likewise a Superlative from Ipse. In Ek=Ein-os we have unequivocally a compound of the Elements 'K and 'N, bearing the same meaning. I shall shew in a future page, that Nai, (Nai,) Yes, belongs to the Element N'; where the breathing before the N' is lost, and means nothing but The - This or That Person.—The English YES must be referred to our Element 'S. and to the race of words now under discussion, either considered as the Adjective or the verb,—IT, This or That, or IS—It IS so and so. This I observe on another occasion, and I shall now here illustrate the matter more fully. In old English, the term of affirmation connects itself with the form of the Pronoun of the first person, which it will be necessary first to examine.

Terms of Affirmation.

YES. (Eng.) It is. Aye. (Eng.) quasi Aje. YEA, JA-JAI, GEA, IA, IE,

, p. 4/24

Aio, quasi Ajo. (Lat.) I Yes,
Is. (Eng.) It is.

Is, It, a thing, if we may
so say, I say, It Is—so
and so.
YA, JA. (Eng. Goth. Sax.

Re=Jahen. (Germ.) To Be=Ja
a thing, To affirm a thing,

HE Elements, denoting Existence, or This _ That Being or Thing, are equally applicable, as we perceive, to all persons; and it is accident alone which operates in the adoption of the Person,

to which they are applied. The Element 'C, 'G is used, as we have before seen, for the first Person, in many Languages; and the Etymologists have accordingly produced, as the parallel terms to I, the Gothic Ik, the Saxon Ic, the German Ich, the Runic Eg, the Danish j-Eg, the Belgic Ick, the Greek Egoo, and the Latin Ego, the French Je, the Italian Io, and the Spanish Yo. In the English I, the Radical 'G, or 'C, &c. is lost; but in the French Te, the breathing before the Radical Consonant is lost. In Spanish and Italian, the same fact takes place as in the French; and the I and the Y represent the consonant J. Skinner has two articles for I, of which one is the Pronoun I, and the other he explains by "Etiam, Ita, mirifice corruptum," as he says, "à Yes." We shall agree, that Aye, quasi Aje, and Yes, belong to this race of words, and mean Est—Is—the thing Is so or so, or It— In—That—This Thing—the Thing Is in This—That manner. I again use the verb Is in my sentence; as we cannot separate Is from It, in a Declaratory or Demonstrative proposition, It Is, except by the mode, in which they are used, as different parts of Speech. The term I, Etiam, has lost the Radical Consonant, as I the Pronoun has done, and is only another form of Yes, as I the Pronoun is of Ich. In Yea, which I consider to be quasi Yea, the breathing before the Consonant is lost, and is converted into T, as in the Spanish Yo. In Shakspeare we have I, as the ancient mode of speaking and writing the affirmative particle. The following pun, however contemptible, will serve to illustrate this fact. In The Two Gentlemen of Verona, we have, " (Pro.) But what said she? did she nod? (Speed.) I. (Pro.) Nod, I? why "that's Noddy. (Speed.) You mistook? Sir : I say she did nod: "and you ask me, if she did nod; and I say, I. (Pro.) And that set together is Noddy." Mr. Malone observes, that "in "Speed's answer, the old spelling of the affirmative particle has been retained, otherwise the conceir of Protheus (such as it is) " would

"would be unintelligible." Let us mark the Υ in Nodd- Υ , which is for IG, as in Merr- Υ , &c., which means the IG, the Being or Person Nodding.

Lye has added an article to the I, the Pronoun, produced by Junius; where he observes, that I and Y were frequently used, as the Saxon Ge, as I=bathed, I=bore. The I or Y has the same meaning of Being, as in other instances, and seems to be quasi Te, Ge, diretly connected with the Saxon and German Ge, the Gothic Ga, &c. We use Be, belonging to the Element B. to Be-ing, &c., precisely in the same manner, Be-Moan, Be-Loved. Every one acknowledges how the G in Saxon words passes into Y, or I. Lye begins that part of his Saxon and Gothic Dictionary, where the words commencing with G are recorded, with the following remark: "Anglo-Saxonum, in fine vocum, G apud "posteriores Anglos sæpe in Y vel I liquescit. e. gr. Dæg. Dag. "Day: Cæg. Key, &c. Similiter quandoque in medio vocum: "ut, fæger. fair: Stæger. Stair: Sægl. Sail: Tægl. Tail, &c. "In initio vocum etiam sæpe mutatur in Y: ut, Ganian, to " Yawn," &c. &c.

The parallel terms to YEA, the affirmative particle, which are produced by the Etymologists, are JA, JAI, (Goth.) Gea, (Sax.) Ia, (Sax. Belg. Germ.) Ie, (Welsh,) Ya, (Arm.) Ja, (Swedish.) Under YES, the Etymologists remind us of the Saxon Gyse, or Gese, Gise; and these words may either simply denote It, &c., or they may be compounds of GE, The, &c. It, &c. Adjacent to Gyse, Yes, we have the Saxon Gyt, Yet, Adhuc; where we see, that these words belong to the same idea, and are only different forms of each other applied to other purposes. The Etymologists under Yet produce the Saxon Get, Geta, the German Ietzt, the Welsh Etwa, and Etto, and the Greek Eti, (Eti.) In the Welsh and Greek words we see the simple form, whatever the other terms may be. Junius imagines, that Yes may be a compound

of YEA Is. Junius produces likewise the Welsh Ys or Es, Truly. The Welsh Es is used in composition. While I am examining the Gothic JA, Yea, Sic, JAH, Et, JAI, Yea, Immo, I find in the same column of Lye's Dictionary Jainar, Ibi, Illic, Jaind, Illuc, Jains, Ille; which may be likewise compounds of Ja, &c., and the Element 'N, denoting Being. The Etymologists have justly produced these as parallels to the English Yon, Yonder; and they have moreover added the Saxon Eond, Yeond, the Belgic Gins, Gender, &c., the German Jene, Jener, &c.-The German JA, and Je, are only different forms of each other. The true sense of JE appears in such phrases as Ich habe sie JE langer, JE lieber, "THE longer I have her, THE more I love her." If we do not consider J'=Ene as a compound of JE and Ene, belonging to Ein, One, the j must be regarded as only the representation of a strong vowel breathing before the 'N.-I have observed, on a former occasion, (p. 245,) that the Latin verb of Affirmation, A10, quasi A10, means the same as 'I Aye or YES a thing.' Now it is acknowledged, that the Germans actually form a verb of Affirmation from their term JA, as Be=JAhen, "To affirm, "avouch, assert, avow;" which literally means, "To Be=JA, or "Be=AYE, Be=YEs a thing," as we might say. Some Etymologists derive Aio from the Hebrew היה Haiah, Est, where we have a similar origin; as my hypothesis supposes, that these terms belong to ID Est, It Is; and it would be idle to attempt to decide on all occasions on the Part of Speech, as it is called, to which a certain term directly belongs, when the leading idea, existing in different Parts of Speech related to each other, has been duly ascertained. We have seen, among the explanations of these Affirmative terms, the Latin words Etiam and Ita, which likewise belong to ID EsT.

INFLEXIONS OF GREEK NOUNS.

THE Inflexions of Greek Nouns belong to the Elements 45 and 'N. The simpler form of the Element 'S in Greek appears in Eis and Os, (Ei, Oc.) They perform different offices in Greek. but they had originally the same meaning of This or That Being. The Relative and the Demonstrative parts of Speech are acknowledged to be connected with each other through the whole compass of Language; as in the English That, which performs both offices—'That is a matter, That deserves attention.' It is easy to understand, that the Demonstrative part of Speech would be first used, and that the Relative sense would be a secondary application. Every one knows, that in Greek, Os, (Os,) is perpetually applied as a Demonstrative part of Speech, as H &O₅, Inquit Ille, &c. This I conceive to have been the original use of the word. The Element N appears in Greek in its simplest form in the term En, (Ev, Unum.) The Greek En, (Ev, Unum,) is only another form of the English An; that is, the numerals En, (E,) Un-us, a, um, One, &c. &c., represent only a different mode of applying the Demonstrative part of Speech-An, which is called by the name of the Article, when it is familiarly used before Nouns, with a certain turn of meaning. From this simple state of the Elements 'S, 'N, as visible in the Eis, Os, (Eic, Oc,) En, (Ev.) with their Inflexions, Enos, (Evos,) Ee, O, Ou, EES, &c., (H, O, Ou, H₆,) we may conceive the Inflexions of Greek Nouns to be more immediately derived. First we may regard the Inflexions of the Parisyllabic Declensions, as additions of the Pronoun Os, Ee, O, (O5, 7, 0,) denoting This or That, to the Radical part expressing the sense of the word, except the singular of Neuter Nouns, which

which belong to the form En, (Ev); that is, in Parisyllabic Nouns, with the exception of the Neuter singular, in the Nominative, the Accusative, and Vocative, the Elements 'S and 'N exist as terminations in certain cases, and vowel breathings in other cases, because these Elements and vowel breathings exist in the same cases of the Pronoun Os, Ee, O, (Os, 7, 0.) Thus then, though the Elements 'S, 'N denote simply This or That, as they do in other Languages, yet in Greek they bear such a meaning under certain relations, which Grammarians call cases, because they chance to have been employed under that relation in the Greek Pronoun. In the first, third, and fourth Declensions, as Taulas, Aoyos, Asus, the Element 'S exists in the Nom. Sing., and the Dat. and Accus. Pl.—and 'N in the Accus. Sing., in the Gen. and Dat. Dual, and in the Gen. Pl.; and the vowel breathing in other cases, because the same thing takes place in the Masculine Os, (Q₅,) Ou, &c. In the second Declension, as Tun, the 'S exists in the Genitive Sing., in the Dat. and Accus. Pl.—the 'N in the Accusat. Sing., in the Gen. and Dat. Dual, and the Gen. Pl.; and the vowel breathing in other cases, because they exist in the same cases in the Feminine, Ee, Ees, &c., (H, H₅.) We may observe, that both forms agree, with respect to the cases in which these Elements 'S, 'N, and the vowel breathings are found, except in the Nominative and Genitive Singular.

But this is not all; since in the third Declension, as $\Lambda o \gamma o \varsigma$, and in one form of the second, as $T \iota \mu \eta$, the same vowel breathings are adopted in the Inflexions, both as terminations, and as preceding the Elementary consonants, which exist in the Pronoun. Thus, Os, Ou, Oo, On, added to Log, denoting Speech, as Log Os, Ou, Oo, On, ($\Lambda o \gamma o \varsigma$, ε , ω , o r,) are precisely the same as the Os, Ou, Oo, On, (O ς , o v, ω , o r,) of the Pronoun, which bore originally, as I imagine, a Demonstrative signification, as Log-Os, That Speech. So in Tim-} Ee, Ees, Ee, Een, we have the feminine of the Pro-

noun Ee, Ees, Ee, Een, (H, ns, n, nv.) The Article, where there exists a composition, with T', or To, (To,) its original form, exhibits precisely the same combination, as T^{Ou, Oo, On, EES, EE, EEN, (Του, τω, του, της, τη, την,) &c. &c. In the Nominative feminine Singular, and masculine and feminine plural, where the T' is not found, the Demonstrative and Relative Pronouns agree, as Ee, Oi, Ai, (7, oi, aii) In the Neuter On, as Xul ON, we have the form of En, (Ev.) We perceive in the participle Oon, On, $(\Omega \nu, O\nu,)$ another simple form of En, $(E\nu.)$ In the feminine Ousa we have the simple form of Eis, (Eis,) with the feminine vowel termination, Eis-a, as in Mous-a, (Μουσα.) The Participles of the ordinary verbs are compounds of the part expressing the action of the verb, and these simpler forms, Oon, Ousa, On, (Qv, ouva, ov,) or ^N^, ^S^, ^N, or ^S, ^S^, ^N, as Tupt} Oon, Ousa, On, (Tuntan, τυπτουσα, τυπτον,) Tup=s As, Asa, An. In one form we have the 'S and the 'N with the same vowel breathings before them, as in EIS, EN, (E15, Ev,) and likewise a feminine, EIS=a, formed from E1s, (E1s,) as Tufth E1s, E1s-a, En. The term Mia, (M1a,) signifying One, as relating to a Female, belongs to the Element M', and has nothing to do with Eis or En, (E15, Ev,) but in the arrangements of the Grammarian. Though the Eis or En may be considered perhaps as originally belonging to each other, which will be more fully illustrated in the course of our enquiries; still, however, when the forms 'S, 'N have been once constituted, they may be regarded as distinct Elements, denoting Being in their simplest state. The Inflexions, which the Grammarians have attributed to Os, (O₅,) still preserve the simple state of the Elements 'S, 'N; but in the genitive En-Os, (Evoc,) from En, (Ex,) we see the process of Inflexion already begun.

The Reader will be fully aware, that when I speak of these Inflexions or Terminations of Nouns, as signifying This or That, I must refer only to their original use and meaning. When this original

original meaning was lost, these terminations were considered by the Greeks, as they are by us, merely as Inflexions; and were adopted only for the purpose of conforming to the analogy of the Language, without any knowledge or idea respecting their primitive use. The Reader will likewise understand, that when I produce certain examples, I do not mean to assert, withat the terminations in the peculiar instances, which are exhibited, were originally significant; but to observe in general, that similar terminations were thus significant in the learliest stages of the Language; and that the common analogy has been formed if from this source. It is necessary to remark, likewise, that nithese terminations in the Nominative of Nouns are not always additions arising from the analogy of the Language, but, that they free quently constitute a part of the Radical of the word. I Sometimes however peculiar vowels are assumed in order too comply with that analogy. Thus Laos, and Leoos, (Acos, Acos, Att. Populus,) belong to the Element LS, though the O and Qo are adopted to conform with that analogy of the Greek Language, which the Grammarians describe by the third and fourth Declensions of Parisyllabic Nouns. Again, in Laus, (Agais, Lapis,) we have the Radical form; but in Lith-os; (Ados, Lapis,) werese, that the Os is an addition arising from the construction of the Language and the Lith is the Radical part belonging to Litain The words Laos, and Laas, (Agos, Agas,) belong to Lego, Lakso, (Asyan Askai, Cubo,) To Lie, or Light; Licgean, (Sax.) Liegen, (Germ.) &c. &c. Low; Leeg, (Belg.) as on the Last; Loisthos, (Millios) Spot, i.e. on the Lay, Lea, Leag, (Sax.) or Ground. In Pur, (Hup,) we have another Radical form, belonging to Fire, &c. Plato has already discovered, that the Greek Language was inot wholly and absolutely the sole creation of Greek minds and Greek torgans, but that some words at cleast were adopted from other beings wfrom Barbarians, who had no pretensions to the honours of the Grecian name.

name. The term Pur, (IIu_p,) is acknowledged to be amongst those words, which were borrowed from a Barbarian mouth.

The Imparisyllabic Declension of Greek Nouns, forms the Genitive in 'S, Eris, Erid-oS, Botrus, Botru-oS, (Equs, Equos, Botque, Borpest,) &c. &c., as the second Declension of Parisyllabic Nouns does, Time, Time-^S, (Time, Time,) This coincides with the more general analogy, as I have before observed. We perceive, that in both these forms there is alike an increase in the Genitive; and yet the Grammarians have chosen to distinguish them by names, which are meant to express, that in one form there is an increase, and in the other there is none. ""Quatuor priores declinationes simplicium suno Parisyllabica, i. e. non crescentes genitivo. "Quinta vero est Imparisyllabica, i.e. genitivo crescens."—The increase of the Imparisyllabic Declension in Os coincides with the increase of Eist En, (Eig, Ev,) Con, On, (Qu, Ov,) in Os, (Erog, Outog); and they agree in the other terminations, which they have, as in i, a, in the Dat. and Accus. Sing., e and oin in the Dual, Es or A, Oon, Si, As, or A, for the Nom. Gen. Dat. and Accus. of the plural. The termination of the Accusative and Vocative Neuter is, we know, the same as the Nominative, both in Greek and in Latin. has probably arisen from an accident attached to these simple and primitive terms, as En, On, (Er, Or,) Id, (Lat.) Hit, (Sax.) ITA, (Goth.) &cc., which we find to have no variety of Inflexion in such relations, which the Grammarians express by those cases. When this was established in some terminations, the analogy extended itself to others.

The Reader is not to imagine, that my hypothesis is intended to account for every variety in the Greek Language, or in other forms of Speech, which are the objects of my discussion. The Writer must be ignorant of the principles of his art, who should pretend to such precision on such a subject, even if all the materials, from which Languages were formed, should be disclosed to his

view.

view. I am desirous only of giving a general idea of certain facts, which are to be found in the records of Human Speech; and of explaining moreover, in some degree, the cause of certain modifications attendant on such facts, which distinguish different Languages from each other. I have supposed, that the Inflexions in Greek, &c. have arisen from a few simple—significant terms, denoting This-That, &c., which are familiarly adopted; and yet it is not to be expected, that I can produce, in a polished state of any Language, every simple and significant form, from which these Inflexions have arisen. The Eis into En-Os, (Eig, Erog,) does not exhibit the ordinary analogy of the Language, as the S generally passes into one of its cognate Consonants T or D, and not into N, when it receives the increase of Os after it, as Gelloos, 00 T-0s, (Γελως, γελωτος.) It is not improbable, that a familiar simple term once existed, in which this fact took place, as it might be Eis, eiT-os. This is not absolutely necessary to suppose, for the support of my hypothesis; since we have only to imagine, that the addition Os was received from some familiar term, whatever it might be, on which the mind would seize, as characteristic of an analogy; while the S would undergo the changes attached to its nature, constituting likewise another analogy. The same cause, which makes the mind to fall into one analogy, renders it equally active and ready, in forming another, at the same time. This is perpetually visible, and is particularly apparent on the present occasion.—Though the form Oos, and the addition Os, might naturally arise from the existence of Eis, and the familiar addition Os in En-Os, (Evos,) &c., yet it is probable, I think, that the form Oos, Oot-os, Eis, Eit-os, or 'S, 'T='S, was once familiar, as a term denoting Being. In Tetuf-Oos, &c. (Terrope, τετυφυια, τετυφος, Gen. τετυφοτος,) &c., we have the Oos, or Os, oT-os; and if we should reason from the addition Oon, Qusa, On, Ont-os. in Tupt-Oon, &c., we might conclude that the form Oos, Uia, On, Ot-os.

Otios, was equally familiar in a separate state. The Uia I conceive to be quasi Uja. Among the Æolians, Eis, Eisa, En, (Eig, eiga, eig.) represented what Grammarians consider as the participle of the verb of Being. Here we see, that this accords even in its vowel breathings with the Eis and En, (Eig, Eig.) in the ordinary Language; and we have moreover the Eisa formed by a regular analogy from the Eis. In the form of the Æolian participle Eis, &c., all would recognise, under any opinions on Etymology, the adjunct in the Greek participle Tufth-Eis, (Tupbeig.) The Æolians, however, seemed to have formed their genitive in Ent-os, (Eige). The Æolic Eis, Eisa, This Man, This Woman, corresponds with the artifice in the formation of the Hebrew Eight AIS, ASH, which Bochart represents by Is, Issa, Man, Woman.

The increase of the Genitive in Imparisyllabic Nouns, both in Greek and in Latin, will unequivocally illustrate the truth of my hypothesis, respecting the changes of those Cognate Consonants, which familiarly pass into each other, to the exclusion of the rest, in representing the same or similar ideas. which Grammarians call a letter of its own power, (" Diyua est litera "suæ potestatis,") passes into T, Th, and D; Gel-\{ooS, ooT-os, (Γελως, γελωτος,) $Kor\{uS, uTh-os, (Κορυς, κορυθος,) Lamp-\{aS, aD-os, uTh-os, uTh-os$ (Λαμπας, λαμπαδος,) and the X, Ξ , which is supposed to be a compound of KS, GS, ChS, passes into K, KT, G, Ch, as Kul\iX, iK-os, (Κυλίξ, κυλικος,) An- $\{aX, aKT$ -os, (Αναξ, ανακτος,) Tett- $\{iX, aKT$ -os, (Αναξ, ανακτος) iG-os, $(T_{\varepsilon\tau\tau\iota}\xi, \tau_{\varepsilon\tau\tau\iota\gamma\circ\varsigma})$ BeeX, BeeCh-os, $(B_{\eta}\xi, \beta_{\eta\chi\circ\varsigma})$ The word LuGX, (Λυγξ, Singultus,) makes LuGGos, (Λυγγος); and LuGX, (Λυγξ, Lynx,) makes LuGKos, (Λυγκος.) We here see how the sound of N is attached to our Element 'S, 'G, &c., though it is not the most familiar analogy; and thus, what was LuGX in the Nominative, might have been expressed by LuNgos in the Genitive. We find accordingly the termination 'S of the Nominative passing

passing into 'N or 'NT, &c. in the Genitive, as in the ordinary example, Eis, eNos, and in KteiS, KTeN-os, Gig-}aS, aNT-os, Tufth-}eiS, eNT-os, (Εις, ενος, Κτεις, κτενος, Γιγας, γιγαντος, Τυφθεις, τυφθειτος.) In Latin, the changes of the Cognate Consonants are fully illustrated. Thus we have Sal-}uS, uT-is, Lap-}iS, iD-is, Rap-}aX, aC-is, ReX, ReG-is, NoX, NoCT-is, &c. &c. We see in Latin, likewise, that the N is frequently connected with the 'S, &c., as Sang-}uiS, uiN-is, OriGo, OriGiN-is, &c. &c., where the N is an organical addition to the G.

It will now be understood, that S, &c. in the Nominative, passes into N in the Genitive, precisely by a similar process of the mind and the organs, as that by which S passes into T, D, &c. Those ingenious enquirers, therefore, who have written on the Imparisyllabic Declension of the Greeks, have exhibited an unnecessary solicitude to discover a Nominative case with 'NS, in order to correspond with their genitive in N, when that Nominative has already supplied them with an S. Kteis, Ktenos, (KTEIG, KTEVOG,) they suppose a KteiNs; for Pas, Pantos, (Πας, Παντος,) a Pa Ns, &c. &c. &c. This form 'NS would assuredly sometimes exist in the Nominative, that is, the sound of N would sometimes be as fully attached to the sound of S in the nominative, as it is to the sound of T in the genitive, and for the same reason. Still, however, our Philologists have no more reason for seeking out this form, on all occasions, as the original and proper representation of the Nominative, than for supposing that the D or T, &c. in the Genitive was always derived from a D or T in the Nominative; and thus, that in Lampas, Lampad-os, Geloos, Geloot-os, (Λαμπας, Λαμπαδος, Γελως, Γελωτος,) the original form for the Nominative was always Lampad, Geloot, or Lampads, Geloots. affinity, which causes the S, &c. to pass into the D or T in the Genitive, operates likewise in causing it to pass into N; though the change of S, &c. into T or D, is more familiar:—That is, the

Consonants C, D, G, &c. constantly and familiarly pass into each other; and they are frequently connected likewise with the letter N.

The form 'N, as I have before observed, may either be considered as a separate Element, or as directly derived from the Element ^C, ^D, ^G, &c.—This point should be regarded rather as a mode of conceiving the subject, than as a matter of importance in the discussion of the question. The form 'N, when once existing, may well be considered as a separate Element: though it should be proved to have been originally derived from the Element ^C, ^D, ^G, &c., and though, as all would agree, it is frequently connected with it. This relation must be allowed by every Grammarian, and is visible in every Language. We all know, that the Greeks sometimes expressed the force of N by the G, or that the G, (γ_1) before G, K, Ch, X, $(\gamma_1, \kappa_2, \kappa_3, \kappa_4, \kappa_5)$ had the power of N, which commonly appears in other Languages; as Egchelus, (Εγχελυς,) Anguilla, though the more ancient Latins wrote Agguilla. The Philologists, who have written on the Greek Imparisyllabic Declension, have not failed to exhibit this union of S and N. Thus, as they have observed, what was Hortesius; (Ορτησιος,) in Greek, became HorteNsius in Latin; and in some Manuscripts, Thesauri and Quoties are written TheNsauri and QuotieNs. Sometimes the sound of the N, annexed to the S. was so faintly enunciated, that Hortensia and Forensia passed into Hortesia and Foresia, and were sometimes thus written. Again, in Latin we have Scidi and SciNdo, Fregi, FraNgo, &c. &c. In Welsh, C, G, T, D, become Ng, Ng, Nh, N, as Car-Ngar, Gwas-Ngwas, Tad-Nhad, Duw-Nuw.

In Hebrew there is a letter called Gnain, y, and sometimes Oin, which different Grammarians have considered to possess the sounds of NG, GN, NGN, G, N, or simply that of a vowel breathing, O. In all this there is no difficulty; as we have only to conceive.

conceive, that these various sounds are annexed to the letter, precisely as the sounds of N and G, more or less, prevail in the enunciation of it.: In French we know that the sound of G is perpetually annexed to the N, as On is sounded Ong. It is not necessary to illustrate at greater length a fact, which is so well known; and the Reader will be inclined, I imagine, to conceive, that the Element 'N, denoting Being, was originally derived from the Element C, D, &c. Still, however, I must again repeat, that the Element N, when once formed, may be considered as a distinct Element, propagating itself by its own powers, if I may so express it, and connecting itself only on certain occasions with the Element ^C, ^D, &c. From this affinity between N and C, D, &c., it has arisen, that C, &c. is oftentimes annexed to the N. Thus, the term Gune becomes, in the genitive, GunaiKos, (Turn, pwaixos,) where a vowel breathing has been inserted between the Nand the K. Mere again the Grammarians seek for a Gunaix, (Fuzzi,) from which their genitive is to be derived. In English we have three names for woman, corresponding with Gune, and Gunaik, or Gunk, with the added K, as Queen, Quean, and Wench, quasi Qwench.

In Greek, Gala becomes in the genitive, we know, GalaCTos, (Parage, yarantos.) Here again the Grammarians seek for a GalaX, (Parage) in the Nominative, in order to obtain their genitive. The sound of C, D, &c. is a perpetual adjunct to the L; and whenever a word ends in L, we may always expect to find the same idea under another or the same word with the C, D, &c. annexed to the L. We shall likewise generally find, that the same idea is expressed by the form LC, &c., which may be considered as composed of the second letter L of the Radical G L, &c., and the organical addition C to the L. Thus, what is Gala becomes Galact, and afterwards g Lact, and Lact; and hence we have the Latin Lac. The Gu, Qu, furnishes another change from

from the G to the Labials V, W, &c., as Guerre becomes War, and as Wench or Qwench belongs to Gunaik or Gunk. This change is universally acknowledged. Hence, then, we may expect to see the same ideas under the Elements GL, GLC, &c., and BL, BLC, &c. &c. We shall not wonder therefore to find the following terms for Lac in the dialects of the Celtic: Blith, Bloxd, Lait, Lath, &c. &c. (Lhuyd sub voce Lac.) Hence we have Milk in English, in Irish Meilg, as written by Lhuyd. In Greek we have other forms of these words, as GLAG-os, Glaz, (Thayor, Thak, Lac.) In Latin and Greek we have for the verb Milk, as we know, Mulgeo, and a Melgo, (Αμελγω) We should not imagine, that Sol belonged to Lux and Light; but we shall now readily understand from this process, SL, GL, SLC, GLC, or sLC, gLC, LC, how these words pass into each other. Thus I find, under Lux, in Lhuyd's Dictionary, Golou, Golug, Glus, Solus, Lhyg-ad, Les, Leos. We see how Golug or Glug, and Glus, gLug, gLus, become Lug, Lus, Lux, &c. &c. The name of this illustrious Celt, Lhuyd, belongs to Floyd or f LHOYD, &c. &c. &c. we may observe, that all the words, which begin with L, appear with the same idea under the Element GL, BL, gLC, bLC, &c. &c., together with other organical additions to the L. The point, however, which forms the object of the present enquiry, is, that the sound of C, D, &c. is a perpetual adjunct to the L; and that when we have already a Nominative in L, it is not necessary to seek for another Nominative with the addition of C, &c. to L, in order to obtain that C, &c. in the Genitive.

The Participles in Greek and Latin follow, as we know, the analogy of the Nouns; and in these Languages, and in various others, they belong to the Elements 'N, 'NS, and 'S, 'T, &c., denoting This or That Being. We have seen, that in Greek, Oon, Ousa, On, Onteos, &c. (Ων, Ουσα, Ον, Οντος, &c.) is the participle of the verb of Being, and that it is joined with the part expressing

expressing the action of the verb, in order to form the ordinary Participles, as Tupt {OON, OUSA, ON, &c., (Τυπτων, τυπτουσα, τυπτον.) We have likewise seen other forms, As, Asa, An, Eis, Eisa, En, &c., (Τυθας, τυθασα, τυθαν, τυφθεις, τυφθεισα, τυφθεν,) &c. &c., which I have before explained. In Esom=En-os, (Esoussos,) and in participles following the same analogy, we have again the En. In Latin we have Ans, Ant, At, as in Am=Ans, Am=Ant-is, Am=At-us; and in the Gerund Am = Andi, &c. we have the And. In English we have the same Elements 'N, &c. 'D, &c. denoting Being, as Lov=Ing, Lov= ED; and in old English we have Lov=ENDE, Lov=ANDE. In the Saxon and Gothic participles we have Luft-Ende, Am-Ans, and Luf-On, Am-At-us, Sokj-Ands, Quær-Ens, and Sok-Ids, Iths, Quæs-It-us. In other Languages, connected with these, we have the same fact, as in the German Lob-End-er, A Person Lav-Ing, and ge-Lob-Et, Lov-Ed. In the Irish Dialect of the Celtic, 'TA, 'TE form the Passive Participle, Gon-aim, I wound, Gon-ATA, Wound-ED; and in Galic, TE is used, as Cruinich-TE, Assemb-ED. In the Hindostan Dialects, TA and KA are added to the part denoting the action of the verb, in order to express the Present and Preterite Participles, as Dour-TA, Dour-KA, Running, Having Run. the Armoric, the Passive Participle ends in Et, as Meuli, To Praise, Meul-Et. In French the Participle active ends in ANT, as Parl-Ant; and the Passive Participle appears under the form of the general Analogy, in such instances, as Instruire, To Instruct, Instru-IT, Instruct-ED; Traire, To Milk, Trai- T, Milk-ED; Craindre, To Fear, Crain- AT, Fear-ED, &c. &c. In ETÉ, belonging to our Element ^D, ^T, &c., we see at once the idea of the Being, as it appears in the corresponding forms, denoting the Passive Participle, Lov-Ed, Am-At-Us, &c. &c. In Italian the office of the Active Participle is performed by the Gerund, as it is called, Aim-Ant, (Fr.) Am-Ando, (It.); and this will shew us, that the 'ND in the Latin Gerunds is only a different form of the termination

termination of their Participle Ans, Ant. In the Passive Participle the Italian follows the form of the Latin Am-At-o. In Spanish we have Cant-Ante, Cant-Ando, Sing-Ing; and Cant-Ado, Sung.

In the Persian Language, "the Participle Preterite is formed " from the Infinitive by changing (-," n, "into y" h, "as "رسيد" Rs-IDh, " Arriv-ED, " الشيع " Pash-IDh, " Sprinkl-ED." (Jones's Gram. p. 45.) Or we might say, as the regular Persian Infinitive ends in (., يدر Idn, which is added to the part expressing the action of the verb, that the Persian Preterite Participle is formed by adding IDh to the part expressing the action of the verb. "Participles of the Present tense are formed by adding ...! I or "نده " AN, A, or NDh, " to the Imperative," or to what may be considered as the Radical part of the verb, "as رسا رسان and "رسند " Rsa, Rs-AN, Rs-ND, " Arriv-Ing," (Id. p. 49.) Russian, one form of the present Active Participle is Chtchie, as Moliou, Je prie, Molia-Chtchie, Priant. My Grammarian represents the sound of a Russian letter here used by Chtch. The Gerunds likewise end in Ioutche, &c. The Participles Passive sometimes terminate in 'NE, and 'TE. We shall admire this coincidence in the form of the Participles, which so generally prevails; and we shall not doubt, I trust, that the 'T, 'D, 'N, ^ND, &c. are significant portions, denoting Being. The Participle in the Russian Language is sometimes formed by adding Bchie, as Bedaile, Je voyais, Bedai-BCHIE, Ayant vu; where the BCHIE denotes Being, and belongs to the Russian verb of Being, Bouidi, Etre. If it be so, it performs precisely the same office, which I imagine the 'N and 'T, &c. to do under other Elements, in the same situation. We have seen, that the Boudi, denoting Being, belongs to a race of words under the Element BD, which are to be found through the whole compass of Language.

belonging to other Dialects of the Celtic, appear to be added, and generally in combination. The addition to Jaun in some of the other cases are as follows: Jaum={AR=EN, (Gen. S.) ARI or Ar=En=Tzat, (Dat. Sing.) Ar=Eg=UIN, or Ag=AITE, or Ag= ABE, or AG=AN, (Abl. Sing.) EN, or ENA, or EN=Ac, (Gen. Pl.) En=Tzat, (D. Pl.) Acq=Uin, or AG=Atie, or AcG=Abe, or Et=An, (Abl. Pl.) I have divided these additions, according to the mode, in which, as I conceive, they are compounded. General Vallancey, who has produced the forms of this word, (Essay on Celtic Language, p. 48.) has justly observed, that "In this example, " Jaunagabe, and Tiarnaibh, (Ir.) and Jaunagan, and Gan Tierna, "(Ir.) seem to have little affinity, yet, are they absolutely of the "same radix." Nothing can be more certain than their affinity; and yet, as we see, they appear on the first view totally remote from each other. Let us mark the general analogy of 'B in the Ablative case, as in Latin, Nub=IB=us, &c. &c. In the Ag=An of the Basque Dialect, we seem to have the composition of Ac and An; and thus the familiar Gan of the other Celtic Dialects might be supposed to be directly taken from Ag=An, or a=GAN, by the loss of the a. Yet $G^{-1}An$ may be, as I conjecture in another place, a composition taken at once from the form G^{Λ} and An; and thus perhaps we should consider the Basque Agan to be quasi Ac=G^=An, a triple compound. The $tZ_{\Xi}At$ is the same compound as in the Irish Si=Ad, S^=Ud, &c., "That, There, Yonder." I cannot help observing, that in the Hindostanee Dialects, Saat, denoting With, is familiarly applied to Nouns in the Ablative, as the other prepositions are to different cases. This is curious, as the terms tZat and Saat are connected with kindred cases, the Dative and Ablative. We should conjecture, I think, that Sa=At was derived from Say, "From, by, which," as my Grammarian explains it, who in another place thus interprets SA, "By, from, with, out of, "than." (Hadley's Gramm. p. 23, and Vocab. 35.) The SAY, or

SA, in its preposition state, precisely corresponds with the Celtic SA, which Mr. Shaw explains by "In, In The;" where we see, in the interpretation The, its original idea. We shall not wonder at this resemblance between the Hindostanee Dialects, and the Celtic forms of Speech, when we learn, what has been asserted, that a Russian, passing through a street in London, was enabled to understand two Irish women, talking their own Language, from his knowledge of the Hindostanee Dialects. Though few, I imagine, are more deeply impressed with the radical and particular resemblance, existing between the Celtic forms of Speech, and the Hindostanee Dialects, &c., still, however, I cannot but marvel at this narrative; as the Irish and Hindostanee Languages do not appear to resemble each other in those points, in which that degree of affinity consists, supposed in the narrative.

The Composition of PRONOUNS, &c. and their Derivatives.

Pronouns, &c. and their Derivatives in a compound state, some of which correspond with certain cases of Articular or Pronominal Parts of Speech, in a state of Inflexion.

Th^=Is, Th^=At, quasi The=It.
Th^=Ose, Th^=Ese, Th^=Us,

Th '=Ough, Th '=Em, Th '=
Eir, Th '=Ere, Th '=Ither,
Th '=Ence, Th '=An. (Eng.)
The, They--Em, Hither, Hence.
(En.) terms in a simpler state.
Th '=At, Th '=Ata, Th '=Æs,
Th '=Is, Th '=Os, Th '=Am,
Th '=Aim, Th '=Ære, Th '=
One, Th '=Ana, &c. (Cases of the Sax. and Goth. Articles.)

W_E cannot proceed a step in these discussions, without turning our attention to the mode by which the familiar Articles,

3 B Pronouns,

Pronouns, &c. are found in a state of combination, as arising from more simple forms; and I have accordingly commenced my enquiries by shewing the nature of the composition which exists in the Saxon, the Gothic, Latin, and Greek Articles. conducted me to a survey of the compound state, in which Nouns appear in these Languages, and in kindred forms of Speech, by the process of termination and inflexion.—I shall now continue my observations on the composition of Pronouns, &c. in various Languages, and shew through what a wide sphere this operation has been extended,—in a manner, about which our Philologists have formed but little conception in their enquiries on Human Speech. It is indeed marvellous to observe that strong propensity, which exists in the mind to combine Pronouns with each other, in order to render the expression more forcible, as it might be This=This, That=That, Being or Thing. The very terms which I have been obliged to adopt, This and That, are themselves compounds of two Pronouns, bearing a similar idea, as THE-IT. The compounds in English, directly presenting themselves to our attention, either as Adjectives, or as other parts of Speech, which were originally Demonstrative, are This, That, Those, These, Thus, Though, Them, Their, There, Thither, Thence, Then, Than, &c. &c. The above words I consider to be compounds. derived immediately from the process of Inflexion, by the composition of THE, and the Elements 'S, 'T, &c. 'R and 'M, signifying Being. They are, in fact, different cases of the Saxon and Gothic article in a state of Inflexion, or they are terms directly derived from them. The forms of the Saxon and Gothic article, to which the above terms belong, are Th=At, Th=Ata, Th=Ata, Th=Is, Th=Os, Th=Am, Th=Aim, Th=Ære, Tho=Ne, Th=Ana, &c. &c.

The English *That* and *This* are acknowledged to belong to these articles, and to a Saxon Demonstrative Adjective This, Theos, This, corresponding with *Hic*, *Hæc*, *Hoc*. The Saxon

and

and Gothic Articles are acknowledged to be Demonstrative Adjectives. The Etymologists refer This, to the Saxon Adjective This, and the German Dieser; and Skinner observes, "Nescio an "liceat deflectere nostrum This, à Lat. Is." It is marvellous. that our Etymologists should not have unequivocally and distinctly seen the nature of the composition. That is referred to the Saxon That, the ancient Teutonic French Thaz, the Belgic Dat. the German Das, the Islandic Thad, and the Gothic Thata. Skinner has placed THAT, Ut, the conjunction, by itself, as a different word from THAT, the Adjective, which he refers to That, (Sax.) Dat, (Belg.) Dasz, (Germ.) We see, in the term That, the different uses of the Demonstrative part of Speech, as the Relative and the Conjunction: 'That is a thing That is of so ' much consequence, That it ought to be done.' The explanatory word Ut is, in fact, the second part of the compound $Th^{\wedge}=A\tau$, and belongs to ID, (Lat.) IT, (Eng.) as I shall shew in a future page. In Scotch, AT not only signifies, "Th '=AT, Which," as an Adjective, but likewise as a Conjunction. In Scotch they say, "That AT;" and we sometimes find, in old English, "AT That." (See Dr. Jamieson's Dictionary, sub voce.) This Lexicographer has produced the parallel terms in other Languages or Dialects, as AT, (Dan.) AT, AD, (Island.) AT, (Swed.) Id. ATT, (Su. G.) a conjunction corresponding to Lat. Ut, AT, (old Eng.) Till AT, i. e. Till Th ^=AT.

The terms Th^=Ose, Th=Ese, directly correspond in case with Thos, and Thas, the Nominative Plural of the Gothic Article, and of the Saxon Thas, the Demonstrative Adjective. In They we have the simpler state, before it is compounded with the ^S. In Saxon and Gothic we find the article The in its uncompounded state, in the Nominative Plural, as Tha, Thai, Tho; and Thy and The in Saxon are used for all cases, both as an Article and Pronoun. The Etymologists refer These to the Belgic Dese, the German

German Diese, the Swedish Dess, the Islandic Thesser, and the Saxon Thas, and Those, to This, (Sax.) Diese, (Germ.) which is right; that is, they all belong to each other, and perform the same office of Demonstrative adjectives, under minute differences Skinner observes on the word Those, and its parallels, "fortean à Lat. Hos vel Eos." The Latin Hos and Eos represent the second part of the compound in Th ^=Ese, and Th ^=Ose, and may be considered as more directly belonging to the Gothic Eis, Ize, signifying They and Them. Skinner refers They to the Saxon Hi, Illi, and the German Sie. In the German Sie we have the simpler form, as in THEY; but perhaps the Latin and Saxon Hi, and the Latin Ii, should be considered as vowel breathings. The Latin Ii may however be quasi Ij. The term Thus is only another form of This, and means 'in This manner.' Skinner derives it from the Saxon Thus, and the Teutonic French Sus, Sic, which are only different forms of each other. Let us mark the Latin Sic, which is a compound of a similar kind, quasi SE=Ic. It is the same composition as Hic-CE, in a contrary order CE-Hic. It is exceedingly curious, that the Etymologists should have understood something about the mode, in which this word has been formed.—Vossius derives Sic "à Si cui additum Ce," or from Hic, "spiritu in s converso." I shall shew, that Si means likewise This, and that it precisely corresponds with the English So, in "This manner,' as SI vis, 'So you like it;' or, as it is said in common colloquial Language, 'If So be you like it.'

THOUGH is nothing but This—or That, or Thus; and the term just produced, So, or 'If So,' may often be substituted for it; "Though I give my body to be burned, and have not charity, it " profiteth me nothing." 'So, So be it, or If So be, I give my body 'to be burned,' &c. In the phrase 'So be it,' we precisely see the sense of Though—'Should the thing be done So' or Thus—or in This manner—namely, 'Should I give my body to be burned.'

In Greek, the term corresponding to Though, in the passage above quoted, is a word signifying If, as Ear, Si. The parallel terms to Though, produced by the Etymologists, are the Saxon Theah, Tha, the Runic Tha, the Gothic Thauh, Thauh-gaba, the Belgic and German Doch, which they explain by "Tamen, Etsi, "Quamvis." These all belong to the same idea, and in some we see the simple form T', as THA. The Saxon THA is employed at once, as the English The, the article, as the Demonstrative and Relative THA= T, and as the Adverb and Conjunction, 'Tum, Tunc, Quum, Quando, Dum, Donec;' though the Adjective and the Adverb are placed under separate heads by Lye. We see in Etsi, the explanatory term of Though, the S_I, If or S_O; and I shall shew, that Et is nothing but Id, in This or That manner. We know, that the English Though is sometimes expressed in writing by Tho, and so it is spoken. The form Tho is commonly regarded as a contraction, which may perhaps be the case; yet it may possibly be the representation of the more simple form. In Scotch, Though is written Thocht, Thoucht, as it is represented by Dr. Jamieson. In the same column of this Writer's Lexicon, where Thocht is, we have Thof, bearing the same meaning; and in vulgar English we have the same sound, "Thof a thing be so and so." The Thof belongs to Though, for the same reason as the sound Ruf belongs to Rough. Dr. Jamieson derives Thocht from Thought; and he imagines, that the compound Allthocht, Although, is quasi 'All being Thought of,' or taken into account. He observes, however, that Thocht seems allied to the Islandic "Thoett, Quamvis; "which, according to G. Andr. is per syncop. for Tho-At, from "Tho, Licet, etsi; Lex. p. 266." Here, we see, is some glimpse of the true origin. In old English, the simpler form T^, as THA, THEI, &c., occurs, which Dr. Jamieson observes. In Percy's Reliques, to which this Writer refers, we have THA for Though; and

and we have likewise Tha for Them. The Editor of these Reliques is however wrong in supposing, that The God, in the ancient ballad on the Victory at the battle of Agincourt, is a contraction for the The he, or The high God. The term The is nothing but the article according to the usage of the Saxons, somewhat different from our own, "The God for hym wrouzt marvelously."

The term Th ^=Em belongs to Tham and Thaim, the Dative and Ablative of the Saxon and Gothic articles. Th=Em is acknowledged to be found in the simpler state Hem, and it is referred by Skinner to Heom, (Sax.) Hem, Hen, (Belg.) Dem, (Ger.); and Heom he refers to Eum, (Lat.) The Heom and Eum represent the simpler form, belonging to the Element 'M, and TH ^=Em is the compound. We now see, that the Em, "I love Em." is not contracted from Th-Em, but it is the primitive form. The Element 'M supplies the Singular and Plural HIM and EM, and so it does in Saxon and Gothic, Him, (Sax. Dat. Sing. and Pl.) IMMA, IM, (Goth. Dat. Sing. and Pl.) This the Etymologists understand. In Hebrew and Arabic, as we have seen, HEM signifies They, Em. The English Their and There convey the idea of These Men, &c., and These Places, or That Place, agreeing with the form of the Saxon article Thære and Thæra, which mean That or These. Their may be considered as more directly belonging to Thæra, (Gen. Pl.) of Those people, as 'Their gift, the gift 'of Those.' Lye, under Their, refers it to the Swedish Deras; and under Hem he observes, "Quod ad Them et Their, nullus dubito, " quin ab Isl. Theim, Theirræ, Theyr, proficiscantur." derives Theirs from the simple form Hiora, Illorum; though he seems unconscious, that Th' in this word is derived from The. He has justly seen, however, that Hiora belongs to Eoru-'M, (Lat.) The Etymologists under There refer us only to the adverbs bearing that form, as Ther, Thar, (Sax.) Thar, (Goth.) Daer, (Belg.) Der, (Dan. and Su.) Ibi, Illic, Thar, now written Dar, (Germ.)

(Germ.) &c., to which we must add the Greek Deuro, (Δευρο.) Let us note the explanatory term *Illic*, which, we know, belongs to *Ille*, just as I suppose *There* to belong to *Their*, denoting *These*.

It is marvellous to observe, how darkly the Etymologists have viewed such facts, so manifest, as it should seem, and unequivocal. Lye has placed in two separate heads the Saxon Thær, in the first of which he considers the term as belonging to the article Seo; and in the second he regards it as an adverb signifying "Ibi, Illic." Under the first head, likewise, he places Thær-to, There-to, which he supposes to be a compound of the Dative Singular, Thær and To. Under the same division he produces There-of, There-on, &c. &c.; and yet we have another separate head for Thær, There, "Ibi, Illic," the adverb, just as if the adverb There, and the same term There, in the phrases There-to, did not belong to each other. Dr. Jamieson, however, is on the brink of discovering this great mystery; and he has accordingly observed in his Dictionary, under the Scotch Thair, "used in composition like E. There," that he is "much inclined "to think, that A. S. Thaer, ibi, in that place, was originally "the genit. or abl. of the article; as Lat. Illic, and Istic, have " been formed from Ille, Iste." In the first part however of this article he observes, on Johnson's derivation of Thereabout, from There and About, that the "E. adverb There does not seem " properly to enter into the composition." In the same column of Dr. Jamieson's Dictionary we have "Thai, Thay, pron. pl. " of He or She;" on which word this Etymologist observes, "Johns. gives A. S. Thi, as the origin of E. They. But Hi is the "A.S. word. This seems from Thaege, like the pron. Tha, " Thay." I have derived THEY from Tha, the Nominative Plural of the Saxon article, because Tha is used in a plural sense, as They is. This however is an unnecessary minuteness. Dr. Johnson

is equally right in supposing it to belong to Thi. The Saxon Thi, or, as it is commonly written, Thy, and The, are used for every case of both numbers. All these belong to each other, and to a great race of words, as we have seen, which appear in their simple state with a vowel breathing after the T^{Λ} , &c. It was not necessary for Dr. Johnson, though They may be considered, as the Plural Pronoun of He and She, to seek for that identical word in Saxon, as a parallel term, which in the arrangements of a Saxon Grammar is represented as the plural of a Pronoun, corresponding with He and She. If the Saxon Hi, however, has been derived from the consonant form, quasi T-hi, they belong to each other; but if Hi is only a vowel breathing, they do not.

In the same page of Dr. Jamieson's Dictionary we have another article, "Tha, Thay, They, pron. These; all pron. in "the same manner," &c. &c., which the Lexicographer refers to the Saxon Thaege, Illi. One article was sufficient, as the Doctor will now understand, for the same word, Thai, Thay, Tha, Thay, They, with the same meaning—that is, for the Demonstrative part of Speech, signifying These—Persons or things, in different cases, &c. &c. The Saxon Thaege, like the English These, is in a compound state. In Scotch, Thir signifies These, corresponding in form and sense with Their, (Eng.) There, Thera, (Sax.) &c. &c.-By corresponding in sense, I mean, that they bear the same fundamental meaning of This - That - These - Those, &c., as Demonstrative adjectives. Such is the affinity which I am endeavouring to illustrate, and this is all the affinity which we can expect to exist. Our Etymologists, however, appear to have lost every idea of affinity, when words, by passing through various Languages, have been used with these differences of relation, which Grammarians distinguish by the names of Case—Gender and Number. When words are used as different parts of Speech,

and when a term, which is a Demonstrative Pronoun, as Grammarians would call it, has been applied as a Demonstrative Adverb, the gloom thickens, and all is darkness and confusion. that in the English Their and There, which appear under a minute difference of form, all ideas of affinity have been obliterated; and even in the Saxon Thær, These, This, Person and Thing, and Thær, These Places, That Place, no clear and decided conceptions of Again, in their identity or affinity appear to have been formed. Scotch, Tho signifies "Then, At That time," and Tho, "These," which Dr. Jamieson has placed in separate articles. Tho, we perceive, means That (At That time,) and These, both in the Singular Tно, as Dr. J. has justly observed, occurs in our old English writers, under the sense of Then; and he properly compares it with the Isl. Tha, and the Su. G. Dan. Da, Tum, Tunc. In German, DA signifies, At That time, or There; and it is used, likewise, for When, While, &c. &c., in which sense it means, At That time, It is used, moreover, with Wer, Who, "Wer Da glaubt," &c., which my Lexicographer properly translates by "He That "believeth," &c. Dr. Jamieson justly compares Tho, These, with the Gothic and Sax. Tho, Tha; and he adds, "Tho, how-"ever, seems synonimous with Thai," before produced.—I shall: not stop to exhibit the various terms of this sort, which are to be found in old English, and the Teutonic Dialects, under minute differences of form and meaning; as the Reader will at once be enabled, from the clue now before him, to arrange them in their due places, and to adjust their true and original meanings.

Compounds of the Elements $^{T}=^{R}$.

HITH=ER, &c. OTH=ER, EITH= ER. (Eng.) Or, OD=ER, ATH=OR, OTH=ER, &c. (Eng. Germ. Sax. &c.)

UT=ER. (Lat.)

ET=ER-os, ET=AIR-os, Ek=AT= ER-os. (Gr.)

TH '=ITH = ER, T'=OTH = ER.

(Eng.)

D'=EUT=ER=0s, TH'=AT=ER-0s.

(Gr.) Secundus, Alter-Uter.

N'=EUT=ER, N'=EITH=ER.

(Lat. and Eng.)

C'=ÆT=ER-us. (Lat.)

AT = AR, AUT = AR, AT = ER,

EITH=AR. (Gr.) Sed, Cæterum,

This—That—Oth=Er thing.

EITA, (Gr.) That—Then.

THE English TH ^=ITHER is a compound of The and Hither, Hider, (Sax.) Hidre, (Goth.) HITH=ER is a word of the same kind as OTH=ER, EITH=ER, and their parallels, which are compounds of the Elements 'T and 'R, bearing the same meaning. The English T^=OTH=ER is a similar composition to Thither; and the Greek words D=Eu T=ER-os, (Δευτέρος, Secundus,) TH ^= AT=ER-os, (Θατέρος, Alteruter,) are formed in the same manner. To this form of OTH=ER and EITH=ER, we must refer the Greek ETER-os, (ETEPOS,) the ATER-os, in Ek=ATER-os, ETAIR=os, (ETaipos, Sodalis,) which in a simpler form is ET=es, (ETMS, Socius;) the Latin UTER, with its derivatives, Ne=UTER, N^=EITHER, and the compound C'=ÆTER-us. In UTER=Que, UTER=Cun=Que, we see the propensity of these terms to be united with each other. Etymologists have seen the connexion between Uter and Eteros, (ETEROS.) In the UT, That, we have the first part of UT=Er. The Latin

Latin terms Uter, the Bladder, a Bottle, &c., and Uterus, the Matrix, the Belly, &c., are of doubtful origin. We shall agree, that these words belong to each other, under the idea of the Swelling out form; but the difficulty is to decide, from what notion they are derived. If UDDER and OUTHAR, (Ουθαρ, Uber, Mamma, præcipue belluarum,) and UTER-us, belonged precisely to the same notion; we might suppose, that they were derived from Uter, one of Two, This or That, and were originally applied to the Two Mammæ of Women. Yet, Vossius has observed, that UTERus comes from Eetteron, (HTTEPOV, Matricis integumentum,) or he might have referred it to the familiar word EETRon, (HTear, Imus venter, pars ab umbilico usque ad pubem.) It certainly seems, as if the UTER=us, and the EETR=on, (HTeov,) belonged to each other; and these words would duly connect themselves in form and meaning with Uster=0s, (Υστερος, Posterior,) which I have before produced, (page 291.) and Ustera, (Yotepa, Vulva, Uterus, Matrix,) a term From Ustera, (Υστερα,) we know, is taken our derived from it. word Hysteric.

I have shewn, that Eessa, or Eetta, (Hova, Htva, Adversum prælium, Inferiores partes,) in the sense of the Lower part, belongs to our Element 'S, as denoting the Estia, (Eotia,) or Ground. I have expressed my doubts, respecting the words under the form 'TR, whether they belong to the Element 'T, or TR, or to both Elements, by the process of composition. Surely the Eet in Eetta and Eeteron, (Htra, Htron,) must belong to each other, as denoting the Lower part. The Eetrion, (Htron, Stamen;—Textum,) and Eetron, (Htron, Imus venter,) are certainly only different forms of each other, whatever may be the precise idea by which they are connected. An adjacent word Eetor, (Htron, Cor,) might perhaps belong to the Eetron, (Htron,) as being an important part in the Venter; though the latter term is said to be particularly applied to the 'Imus Venter.' The notions, however,

on such subjects, are confused and indefinite. I have suggested, likewise, in another place, a different derivation, (page 188.) While I am examining the Greek Outhar, (Ουθαρ, Uber, Mamma, proprie belluarum; -- Ubertas, feracitas, Pars agri maxime fœcunda,) I cast my eyes on Oudos, Oudas, (Oudos, Solum, Pavimentum; Humus, Terra,) where we are directly brought to the Spot, supposed in my hypothesis. The Oup in these words must surely be considered as attached to our Element; though I cannot determine, whether the Dos and Das be significant, as belonging to the Element DS, which conveys the same idea. We must refer, I imagine, Outh-ar to Oud-os, (Oυθαρ, Ουδος); and we must remember, that the former word has a similar meaning to the latter, when it denotes "Pars Agri maxime fœcunda;" as in the Outhar Arourees, (Outag Apougns.) Perhaps the AR in this word, and possibly in the others, EET= 'R-on, (HTEON, Imus venter,) may belong to the 'R in AR=OURA, ERA, (Acouea, Eca,) denoting the Ground.

The terms Atar, Autar, Ater, Eithar, (Atae, Sed, Cæterum, Αυταρ, Sed, Autem, Cæterum, Deinde, Ατερ, Sine, Citra, Extra, Είθαρ, Statim,) mean nothing but Other—This—That— OTHER thing to be added, in order to form a conclusion. fundamental idea annexed to ATER, (ATER,) the adverb, Without, is the same, as that which is annexed to the other words, though with an application somewhat different. The sense of this adverb ATER, (ATER,) Without, is derived from the notion of any thing, being placed in This—or That Spot, as distinguished or separated from another. The Reader will perhaps imagine, that the desire of supporting my hypothesis has led me to conceive combinations of ideas, which were never united. That this union of ideas exists, will however be evident from the explanatory term, adopted by the Lexicographers,—Citra, which actually means, we know, in the first sense, "On This Side;" and in the second sense, "Without," 410

"Without," as R. Ainsworth explains it. EITHAR, (E18aq, Statim, confestim,) means, 'Upon That,' as we express it; and we have the simpler form in EITA, (E1TA, Postea, deinde, tum,) Then—at That time. The Etymologists produce, as the parallel terms to Other, the Saxon Other, Auther, Nathor, Neuter, corresponding with Neither, Autre, French; and they add, moreover, the Italian Altro, and suppose, that these words all belong to the Latin Alter. Skinner however says, "Alludit Gr. Eteqos, quod Mer." Cas. pro Etymo habet." The French Etymologists likewise refer Autre to Alter, which perhaps may not be so; though in such examples it is extremely difficult to decide. They refer likewise Outre, anciently written Oultre, to Alter, which appears more probable. In Spanish, we have Otro.

The Etymologists have justly produced, under Other, the German Oder, Sive, from which our word Or is derived, as the Etymologists acknowledge. Skinner cannot avoid seeing, that Oder has some relation to the Greek ATRO, and AUTRO. The Etymologists refer Either to the Saxon Egther, compounded of the Preposition Æc, Etiam, says Skinner, and Thær, Postea; and he adds, "Alludit Gr. Etegos." If this process be exact, Either does not so immediately coincide with the nature of the formation in ETER-05, (ETERO5); but still the 'R in all these words appears to have the same meaning. I have shewn, that Thær, There, is a compound of T', The and Here. The Saxon Other; Alius, Alter, means likewise "Vel,"—" Twa men OTHER thre, Duo "homines, aut Tres." The Etymologists produce the parallel terms to Or, as the German Oder, the Islandic Edur, the Saxon Athor, Outher, Other, Oththe, the Gothic Aiththau, Uththau. The Saxon Oththe is explained in Lye by "Vel, Aut, Sive; -Usque "ad;" where we see both senses of Or and To; and from whence we learn, how these ideas may be connected with each other. Let us mark the explanatory Latin word Aur, which has a similar

similar meaning of This or That; and we now perceive, how Aur In Gothic, Uththan means and AD may belong to each other. Autem, where we have other forms conveying similar ideas. While I am examining the term Other, I cast my eyes on the word Otter, the animal; which appears in various Languages, as Oter, (Sax.) Odder, (Dan.) Otter, (Germ.) &c. &c. These terms the Etymologists have referred, and probably with truth, to the Greek Udor, (Υδωρ); and they might have added the English Water, &c. They justly remind us, that in Greek the animal is called Evolus. and we shall therefore probably acquiesce in this idea as the true derivation. Yet I cannot help suggesting, that the Otter might possibly belong to Other, under the idea of the amphibious animal—the animal belonging to an-Other, or second Element; and I must observe, that this creature appears to have been particularly selected among the amphibious animals, as a creature of an uncertain kind, which excited doubt in the mind, whether it should be arranged to This Element or to That—to One race or to We all remember, that Falstaff compares the Hostess an=Other. to "an OTTER;" on which the Prince says, "An OTTER, Sir "John, why an OTTER? Fal. Why? She's neither fish nor flesh; "a man knows not where to have her."

Before I quit the term Other, I must note some of the words produced as parallel to it by the Etymologists, as Anthr, (Goth.) Anner, (Run.) Ander, (Germ. and Belg.) Anden, (Dan.) which they appear to consider as belonging to Another. These words seem to be precisely the same composition as that, which exists in the Greek Aneer, Anereos, Andros, and the Anthr in Anthr-opos, (Armo, Anereos, Andros); and the difficulty is to determine, whether such terms are compounds of An and Ar, or of AN, and DR. It should seem, by the German Ander, as if the composition was An and Der, the article; and the Gothic Thar, commonly used for That, as applied to Place, or as signifying There, would bear

the same meaning. Thus the English Yon=Der would be a composition of the same kind, which literally means Yon=There, or That=There, as we express it, Man, Place, &c. Yet in the Runic Anner, and the Greek Aneer, the D or T does not appear; and this might lead us to suppose, that the D or T was only an organical addition to the 'N. Perhaps in some the composition may be An, and the Element R ; and in others An, and the Elements T^{-} combined, as in Der, There, Thar, &c. &c. &c. The German Language supplies a term familiarly in use, belonging to the Element AR, as ER, He, from which the second part of the compound D^{\bullet} =ER is formed; so that D^{\bullet} =ER is nothing but Die=ER, if we consider DIE as representing the simple state of the article, without regard to the accidents of gender, &c., to which DIE is applied. In English, likewise, as we have frequently observed, the En is used familiarly for Being, as a termination for words denoting the agent, as Sing=ER, Play=ER. This use of the Element 'R is universal.

Th^=En, Th^=Ence, Th^=An. (Eng.)

Compounds of the Elements | Hence, Hen, Hin, &c. Hinc. (Eng. Sax. Germ. Lat. &c.) Th '=An, Th '=Onne, D '=Ann, &c.(Goth.Sax.Germ.)Th=En. $T^*=Unc$, $D^*=On=Ec$, $T^*=En=$ Us, HAC=T^ =En=Us, (Lat.)

Th^=Ence, Th^=En, Th^=An, may be considered as belonging to each other, and as bearing the same fundamental idea of This They coincide with the forms in the Saxon and Gothic Articles, Thone, Thana. A simpler form of Th ^= Ence has been acknowledged

acknowledged to be found in Hence; as it is supposed to be derived from There—Hence. In HENCE we have the simple form, corresponding with the Saxon Hine, the Gothic Ina, the Accusative Masculine, That Man, which belong to the Latin Hunc, Hanc. Our word Hence means nothing but That, as 'From Hence arose,' From That arose.' The Latin Hinc is acknowledged to belong to Hunc. The Etymologists produce the parallel terms to Hence, as Hen, Henen, (Belg.) Heonan, (Sax.) Hin, (Germ.) which Skinner derives from the Latin Hinc. It is true, that these words all belong to the Latin Hinc, as they do to Hunc and Hanc; yet they are more directly to be referred to the kindred terms in their own Dialects. Since, with its parallel terms Sint, (Germ.) Sind, (Belg.) Sinth, (Goth.) Sedan, (Swed.) &c., is supposed to be derived from Sith=Thence. These words may be compounds of Sith, and the Element 'N, or they might at once belong to the Element S^=N. In Sin, (Sax.) Suus, and its parallel terms Sein, (Germ.) &c., we have the compound $S^{-}N$; and in the Saxon Sin, Semper, there is the same union. The preceding word to this latter term in my Saxon Dictionary, is Sin pro Synd, Sumus; where we have a composition of a similar kind, applied to a different purpose. Whether Sith be a compound, I cannot decide.

Th^=En is justly interpreted by the Latin T^=Unc; and we shall now understand, that they are only different forms of each other. The T^=En, in Ten-Us, to That point, is a similar compound; and the Us is the same addition as in Us-que. In Hac=T^=En=Us, we have still a further compound; and here we see the Hac, the congenial term. D^=On=Ec is a conjunction, with a similar meaning to T^=Unc, and it means 'To, or Till 'Th=En, or That time.' The Lexicographers explain it by "Until.—As long as, while That;" and they derive it from Dum and Nec. In Donic=um, or Donec=Cum, we have a further compound with Cum. In Gothic, we have compound conjunctions, belonging

the

elonging to the article Than, That Person, under the same form, I directly attached to it. The succeeding term to the Gothic An pro Thana, Tov," says Lye, is Than, "Ote, otav, Cum and;" and in the same opening of his Gothic and Saxon Dic-I see the Gothic Thande, "Ews, Dum," and Thander, Quando, Quum." The Etymologists refer Then to the sel terms, Than, (Goth.) Thanne, Thonne, (Sax.) Dan, (Belg.) ann, (Germ.) which Junius derives from Otav, per apharesin.

We should imagine, on the first view, that the term used in comparisons, Than, is very remote from any idea, which belongs to a Pronoun. I do not find the term THAN in the Lexicons of Skinner and Junius; as they conceived, perhaps, that it coincided with Then, which however does not manifestly present itself to the view. It is true, indeed, that they do coincide; and in Saxon the term Thonne means at once Tunc, and "H, Quam," as Lye explains it. This union of ideas between the particle, if I may so call it, of Comparison, and the Pronoun, does not, as I have observed, at once appear evident; yet we cannot but note, that in the Latin and Greek H and Quam, the same union exists. It will be owned, I imagine, that the Saxon Thonne, Tunc, Quam, belongs to Thone, the Article, 'That person;' and thus we . shall understand, that 'Betere THONNE, Better THAN,' meant originally 'Better Thone-Better That-He-William, Thomas,' &c., i.e. 'Better That person, as compared with William, Thomas,' &c.; and afterwards it passed into the idea, which we annex to Than, the term of comparison, 'Better THAN William, Thomas.' Spanish, French, and Italian, the terms for comparison, THAN, are derived from the same source of the Pronominal part of Speech, as Que—Che, which signifiy, we know, That Person, That, Esto es major Que estotro, 'This is better Than the other,' Plus Pauvre Que riche, Piu povero CHE ricco, 'More poor Than rich.' In Italian, when the Pronominal part of Speech, which we call

the Relative, is not applied, another species of the Pronoun, the Demonstrative adjective, or Article, is adopted, as in the Saxon and English Than, as Piu chiaro DEL sole. The English Than and Del precisely agree with each other, except that Than is taken from what is called the Accusative case, and Del is called The Latin Quam belongs to the Accusative. the Genitive. In German, Dann corresponds in sense and form with Then. In this Language, Als has a similar meaning: 'Es ist better Als, 'It is better Than.' My Lexicographer explains Als by "As, like. "—Da, When, as, when as, at the time That—Mehr Als, More "Than;" where in the As, signifying in That Manner—"at the "time That," we see the genuine idea. The German Als belongs to the Element 'L, denoting This or That Being—thing, &c., as Ille, (Lat.) Il, (Ital. and Fr.) &c. &c. The English As is supposed to be derived from the German-Als, by the loss of the l, which may possibly be so; yet it may belong to our Element 'S, bearing the same meaning, with the Gothic and Latin Is, He, &c. &c. &c., which I rather conceive to be the fact. The German Als has been referred to Alle, All, &c., which is right. All belongs likewise to the Element ^L, denoting Each, or Every person. Let us mark the explanatory term Each, which the Etymologists have referred to the Saxon Elc, the Belgic Elck, &c. &c. Each might belong to our Element ^C, bearing the same meaning; yet it is probably derived from the source, which the Etymologists suppose. Elc must be referred to the Element ^L, and to the words before us, Als, &c. Meric Casaubon derives Each from Ek-Astos, (Exactos, Unusquisque,) where in the Ek and Ast we have the 'S doubled. In Ex-Ein-os, (Exsuros,) we have a compound of the Elements 'S and 'N. In Scotch, Als signifies As and Also. The Al in Also, we see, has the same meaning—All or Entirely in This manner—So or in This very manner.

Qui, and its corresponding terms in composition, or the Elements Q⁴, &c. ⁵, ⁵N, &c., combined with each other.

Qu=Is, Qu=ID, Qu=OD, Qu=Ic=Qu=ID, Qu=Ic=Qu=AM, Qu=Is=QuE, QuI=C^=UN=QuE.
(Lat.) &c. &c. &c.
Who — Why, quasi Qwho, Qwhy. (Eng.)
Quha—Quhay. (Scotch,) Who.

Wh^=At, Wh^=Ose, Wh^=Om,
Wh^=En, Wh^=Ence, Wh^=
Ere, Wh^=Ether, Wh^=Ither,
quasi Qwh^=At, Qwh^=Ose,
Qwh^=Om, &c. &c.

Hwa, Hw=Æt, Hw=Æs, &c.
Cw = As, Cwo, &c. Cw^=Is,
&c. &c. (Sax. Goth.) Who.

Qu=Ant-us, T^=Ant-us, Qu=Ot,
Qu=Ot-us, T^=Otus. (Lat.)

Qu = Am, T^= Am, Qu=Um,

 $T^*=U_M$, &c. (Lat.)

I SHALL consider in this article the compounds of Qui and its parallel terms. The Relative, as it is called, performed originally the office of a Demonstrative part of Speech, This—or That—Such a Person, thing, &c.; and accordingly we find, that Qui signifies "Any;—Every one, all." In English, as we know, That is both the Demonstrative and the Relative Pronoun; 'That is a person, 'That all respect;' and through a great variety of Languages, the Articular or Demonstrative parts of Speech are expressed by the same term, as every one understands. We have seen, through what a wide sphere of Human Speech our Element C[^], &c., with the breathing after the Radical Consonant, furnishes the Relative Pronoun; as Qui, (Lat.) Chi, Che, Cui, (Ital.) Que, Cujo, (Span.) Que, Qui, &c. (Fr.) Cia, Ce, Se, (Ir.) Co, Cia, Ci=Od, (Gal.) &c. Jo, Kai, Ki=^S, &c. (Hind.) Koi, Kto, (Russ.) Keh, Ki, Cheh, &c. (Pers.) Se, Seo, (Sax.) So, Sa}Ei, (Goth.) &c. &c. &c. understand,

understand, likewise, that Qu=Is, Qu=Id, Qu=Od, are compositions of Qui and Is, ID, and that the other cases supply combinations of a similar kind, as C'=U|us, Qu=Em, Qu=Am, quasi Qui-{Hujus, or Ejus, Eum, Eam, &c. The derivatives of Qui are used in various manners, as Conjunctions, &c. Que, Qui, (How, Why,) Quia, Quam, &c. The Reader will with difficulty believe, that the Etymologists do not refer Que to Qui, but derive it from Te, (Te,) Ke, or Kai, (Te, Ke, Kai.) All these words indeed belong to our Elements T[^], K[^], under the same idea; yet no one can doubt, that Que directly belongs to Qui, and means 'In This 'Manner.' R. Ainsworth justly explains it by "Also;" and in the phrase "Que-Que, Both-And," we have the sense of "In "This—That Manner." When Que is used as "a syllabical "addition"—Quis=Que, we see its true sense, and we mark the propensity of the mind to form compounds with the Pronominal parts of Speech. In some instances, the whole composition consists of Pronouns, or of words derived from Pronouns, bearing a similar meaning; and in other instances, we find different parts of Speech added. The following examples will be sufficient to illustrate the words derived from Qui; as Quis=Quam, Quic=Quid, Quis=Que, Quic=Que, Quic=Quam, Qui=Cun=Que, Qui=Dem, Qui= Dam, Qui=Dum, Quid=Nam, Quia=Nam, Quia=Ne, Quid=Ni, Qui=Ppe, Qui=Ppiam, Quid=Quid, Quantus=Quis=Que, Ec=Quis, Si=Quis, Ali= Quis, Qu=Alis, Qu=Alis=Cunque, Qua=Si, Quam=Diu, Quam=Libet, Quam=Dudum, &c. &c. &c. It is not necessary to enlarge this enumeration; but I shall proceed to remark on the composition of words in English, &c., which are formed from the parallel terms to Qui.

Who, as we have seen, is quasi 2who; and in Scotch it is accordingly represented by 2uha, or 2uhay. The term Why and How are quasi 2hy, and 2how, signifying Who, (if it were used in the neuter sense,) or $Wha=^T$. We shall now understand, that What,

What, Whose, Whom, When, Whence, Where, Whether, Whither, are all compounds, the first part of which is Who or 2who: and that they are quasi 2wh=At, $2wh^{\wedge}=Ose$, $2wh^{\wedge}=Om$, $2wh^{\wedge}=En$. 2wh^=Ence, 2wh^=Ere, 2wh^=Ether, 2wh^=Ither. Some of these terms, as What, Whose, Whom, When, Whence, may be considered as directly taken from the Saxon and Gothic Relatives in their state of Inflexion, in which state they are compounds of the Relative 2who, and the Demonstrative part of Speech, It, &c., as the article is of The and the same Demonstrative pronouns, as I These Relatives are thus represented: have before shewn. Sax. Sing. N. Hwa, Hwat. G. Hwas. D. and Abl. Hwam. A. Hwane, Hwone, Hwat. Goth. Sing. N. Cwas, Cwo, Cwa, Cwe. G. Cwis. Dat. and Abl. Cwamma. A. Cwana, Cwo, Cwa or Cwe. Pl. Acc. Cwans. The English Wh^=At, or 2wh^=At, coincides with $Hw^{-}=Et$, Hw=Es, Cw=As, $Cw^{-}=Is$, and the Latin Qu=Od, Qu=Id, 2u=Is; so that Wh=At, or 2wh=At, is precisely the same combination of the Relative or Interrogative Who or 2who, and It, quasi Qwho=It, as Th^=Is, Th^=At, are of The=It. Whose or Qw=Ose is a similar composition, though it may be considered perhaps as more directly taken from the Genitive Hwas, Cwis; as Whose pen is this?' Of whom is this pen? That Whose is directly derived from the Genitive, will be evident from a similar fact in Latin, where Cujas and Cujus are adjectives taken from the Genitive Cujus. The English Wh' = Om coincides with Hw=Am, Cw=Amma, and with the Latin 2u=Em, 2u=Am. They are compounded of Who, 2who, 2wi, and Him, with its parallels Him, (Sax.) Imma, (Goth.) Eum, Eam, (Lat.)

We see, moreover, that When and Whence, signifying What time—What place, may be considered, as coinciding with the Accusative Gothic and Saxon Cwana, Hwana, a compound of Who and Ina, Hine, (Goth. Sax.) If we do not refer Whence to the Accusative of the Relative, but say that it is derived from Who

and Hence, this comes precisely to the same thing; as HENCE signifies That, and belongs to INA, HINE, as I have before shewn. We perceive, that the Latin Qu^=Anno directly belongs to When, or Qwh^=En. Qu=Ant=us must be referred likewise to this Saxon form, as Qu=OT and Qu=OT=us belong to Qu=Od and Qu=Id, Qwh=At, &c. $T^{-1}=Antus$ and $T^{-1}=Ot$, $T^{-1}=Ot$, were adopted with a minute difference of form or composition, in order to mark another turn of the same idea, as Th^=En belongs to Wh=En or Qwh=En, Th^=At to Wh=At or Qwh=At.—The mind at once forms these regular analogies—without effort and without error. Qu=Am, T^=Am, Qu=Um, T^=Um, are compounds, formed on the same principle; and we shall now understand, that D^=Um, J^=Am, are likewise similar compositions denoting In, or During That—This time. We shall now moreover perceive, that D^=Em, D' = Am, the Pronominal affix, IDEM, Qui=DAM, must be referred to the same source. This union of Dem or Dam with Pronouns will most forcibly support my conjecture respecting its origin.

Nothing can be more unequivocal, than that Cum or Quum, as the Conjunction or Adverb, "When, at What time," &c., belongs to the Relative Qui; and we should be inclined to believe, that Cum the preposition expressed only another turn of meaning, annexed to the same word. The Etymologists derive Dum from Dee, (An); but it is extremely curious, that they have some glimpse of the true origin of J^=Am. Martinius derives it from Is, of which the ancient Accusative was Im. In my hypothesis, it is supposed to be a compound, of which the second part is Im, Him, Imma, &c. Tam and Quam are supposed by some to be taken from Tantum and Quantum; though it is understood, that Tamen belongs to Tam. Ita is an adverb belonging to Id; and thus we have alike the forms Item and Idem, corresponding with each other. Hence we see, that Dem or Tem may equally belong

to Adverbs as to Adjectives, denoting This or That Manner. the same source we must refer the Tim as the termination of Adverbs, as Minu=TIM, &c. &c., In This or Such a minute Dudum is supposed to be derived from Diu and Dum; and Diu is referred to Die. This perhaps may be true. We have perpetual occasion to observe, how these terms are combined with each other; as Jam = Jam, Jam = Dudum. The Etymologists remind us, under Diu, of the Greek DE=En, (App, Diu, Dudum, Pridem,) which is perhaps only another form of Then, (Eng.) Dan, (Belg.) &c. &c. The Greek THE=EN, (Oyr, Particula, Poet. Sane, diu,) is another of these words. To the forms Wh=En, or Qwh=En, Qu=Ando, we must refer Qu=In, the Latin Conjunction; and to the same form we must ascribe the Spanish Quien, He who, &c. &c. The Etymologists derive Quin from Qui and Ne; and the Ne may possibly constitute the second part of the Compound. It is true, that in some examples the sense of Not appears connected with the Qui, What; but in others no such meaning presents itself.

The English terms S^=OME, S^=AME, are similar compounds to the Latin D=AM, in Qui=D=AM, &c. The Etymologists refer Some, Aliquis, as an adjective, and as a termination, Toil-Some, &c., to the Gothic Sums, the Saxon Sum, the Danish Som, &c. &c.; and Junius derives them from the Greek Amos, (Aµos, Unus, aliquis;—Meus, noster,) Any person. The second part of S^-OME, according to my hypothesis, belongs to such terms as the Greek Amos, (Aµos,) and its parallels Him, &c. This Greek word supplies us with another proof of my theory, which supposes, that the Elements, as M, &c., denote simply This—or That Being; and that accident alone operates in annexing the signification of different persons. We here see, that Amos is applied alike to the third person, and to the first, both singular and plural. Lye explains the Saxon Sum, by "QuiDam, aliquis, unus."—The English Same is only another

another turn of meaning, annexed to Some; quasi S^=AME, SE, or THE=HIM, if I may so say—That very person. In Latin, we know, the idea conveyed by SAME is expressed by a Pronoun Is, and an Affix to Pronouns, Dem, which corresponds, as I imagine, with this very word Same or Some, as Idem; and in Greek it is likewise expressed by two Demonstrative parts of Speech, O auros, Idem. The Etymologists refer Same to the Saxon Same, the Gothic Samo, the Swedish Samma, the Islandic Same, &c.; and Skinner observes, "Nostro Same feliciter alludit Gr. Aux." The Greek Ama should perhaps be considered, as belonging to that race of words, to which the second part of the compound S = Ame is to be referred. We must add to the parallel terms of Same, the Russian Same, 'Lui Même;' and let us mark the French Même, anciently written Mesme, which is a compound of Me or Mes, for Moy, Moi, and Sme, denoting Same. In Spanish it is Mismo, and in Italian Medesimo, where the Simo or Same is distinct. I imagine, that the French Moi or Moy was quasi Moj; but however that may be, we have the Sme, distinctly denoting Same, Menage supposes, that the Italian Medesimo has been formed from the Latin Metipsissimus. When Mesme is used as an adverb, he derives it from the Latin Maxime. In Saxon, in the phrase Swa SAME, "Item, "Similiter, pariter," we see in Swa, So, That Manner, one of the terms, to which the first part of the compound Sa=^Me belongs. The Spanish C^=Omo, and its parallels Come, Comme, (Ital. Fr.) are similar compounds. Menage derives the French Comme from Quomodo, by this process, Comod, Comed, and then Comment The Ent is an addition of their Pronominal part of Speech En. If we say, that these words Comme, &c. directly belong to Quam, we have a kindred composition, and it is only another mode of conceiving a similar fact.

Again, in Saxon we have SAM, "Sive, Utrum," which means This SAME, or That SAME, "SAM hi fæsten, SAM hi ne fæsten, Sive "illi

"illi jejunent, sive illi non jejunent,"—'Should they do This thing, for This Same thing, namely, fast; Should they do That thing, for That Same thing, namely, not fast.' This word Sam means, likewise, in composition, what the Latin Semi does, as Sam=Cuc, SEMI=Vivus; and in composition it is used for "SAMOd, Simul "idem scil. valens," says Lye, "quod Latinum Con, ut SAM-"hiwan, Conjuges," &c.—We now see, that the Latin Semi belongs to the Saxon Sam, and that they both denote the Half, from the idea of a thing divided into the SAME or Equal parts. The Greek Eemi, and Eemisus, (Hui, Huisos, Dimidius,) may belong to Semi, as Ex, (Ex,) to Sex, &c.; or it may be the simple state, from which the second part of S^=Emi is derived. Thus Eemi, (Hμι,) would belong to such words as Amos, (Aμος, Unus, Aliquis,) 'Such a One,' or 'One and the Same,' as we express it. is not improbable, as SE in its separate state has a similar force to the SE in SE= 'Mi, as SE=Libra. The SE is referred in that sense to the particle of Separation, SE, as SE=Grego, &c. All this is very just; yet Sr, as a particle of Separation, means nothing but THE—'In This place or That—Here or There,' as distinguished from another place. Under the same form SE, it actually, we know, denotes Self-or Being-This or That Peculiar Being, as distinguished from another. In SE=Orsum and DE=Orsum, the SE and DE mean This and That. In S^=Us we have a compound of SE and of Us, as in Us=Que; and the Us has the same meaning in Vers=Us. The Um in Vers-Um belongs to the Element ^M, under a similar idea.

While I am examining the word *Eemi*, (Hµ1, Semi,) in my Greek Vocabulary, I cast my eyes on other terms, belonging to the Element ^M, which will illustrate the force of my hypothesis, and will shew us, how different Elements exhibit a race of words, which contain similar ideas, as being derived from a similar source. Thus we have Eemos, (Hµ26, Quando, Quum,) which belongs to

3 E

such words, as Amos, (Amos, Aliquis,) just as the Quis, in the explanatory word 'Ali=Quis,' belongs to Quando and Quum, as being all formed from Qui. Again, I find EEMen, (Huer, Et. Atque,) where in the Que of the explanatory word 'At=Que,' we again see the point of union, by which it is connected with the In short, we perceive, that Amos, Eemos, and other words. EEMon, mean simply That, under the three relations of 'That 'person-At, or during That time-In That Manner.' I likewise find Eemai, (Huas, Sedeo,) To be Seated-Situated-Placed, &c., supplying, as I imagine, the original idea, from which these terms for 'This' or 'That Existing Being' are derived; just as the very term Existence belongs to Sisto, and the explanatory word Sedeo; and as Is, Est, Esti, (Esti,) &c. belong to Istemi, (Ιστημι, Colloco,) and Ez=omai, (Εζομαι, Sedeo,) according to my hypothesis.

We observe in our Latin Vocabularies, adjacent to the Qui and its derivatives, the term Queo, "To be able; to may, or "can;" and we must own, that the verb Queo seems by its form at once to connect itself with Qui, &c., if the sense, which it bears, could be at all reconciled with the idea conveyed by the Relative. On the first view, nothing appears more remote than the meaning of these words; and yet nothing is more evident and natural than their relation to each other, when duly considered. We shall readily admit, that Queo may belong to Qui, when we reflect, that Qui is used sometimes as Qualis, Such a person, under the idea of being 'Such a person, who is adequate to 'his purpose—Such as—Can, or is Able to perform any thing.' To this derivation we should find no difficulty to assent, and we shall acquiesce fully in this notion, when we remember, that in a Greek term we have actually the two senses of Qui or Qualis, and Valens, Qui potest, 'One Who, Such a one—Such as is Able, or who · Can,—do any thing, as Oios, (O105, Qualis; Promptus, paratus, expeditus,

expeditus, idoneus, aptus, accommodatus, Valens, Qui Potest.) The Qu in Qu-Alis is likewise derived from Qui. The Greek O105, (O105,) belongs, we see, to our Element 'S, to Os, (O5, Qui,) &c.; and in its union with TE, as O10s Te, (O10; TE, Potens,) we find the TE, (Te,) adopted in its more original sense, as derived from To, TEE, &c. &c. (To, Ty, &c.) THE, when applied as a Demonstrative part of Speech. When TE, (Te, Et,) is used as a Conjunction, it still performs the same office of a Demonstrative part of Speech, and means, 'In This Manner,' as Que does. Thus Te belongs to To, as Que to Qui. In the Greek KAI, (Kai,) we have another form of these words bearing the same meaning. The Etymologists refer Queo to an Eastern origin; and yet Martinius cannot help observing, "Sed Queo lubet derivare a Koios, " Qualis; ut sit quasi Qualitatem ad aliquid habeo, quod barbare "dicimus Qualificatus sum. Sic et Pos, Potis possit esse a Потос, "Quantus, id est, magnus, multus." This is extremely curious. We perceive, that our Etymologist has conceived the true idea, though he has sought for it in the remote word Koios, when the very same idea exists in the word Qui, which directly connects itself in form and Language with Queo.

The Greek Ko1=Os may be considered however as quasi Qu1-os, Who. If we suppose with the Lexicographers, that oKo1=os, oKo=^S-os, are put for oPo1-os, oPo=^S-os, (Οκοιος, Οκοσος, Ιοπ. pro Οποιος, Οποσος,) we are brought to the same idea; as in that case we must regard the Poi and the Po, under the labial forms, as directly connected with the form K^, ^Q, just as Who is quasi Qwho belonging to Qui.—The Po=^S of the Latins is probably, as Martinius suggests, a compound of the same sort as Po=^S-os, (Ποσος,) from Pe or Pou, (Πη, Που,) and Os-os, (Οσος,) which belongs to Os, (Oς, Qui.) The union of the Pos with Sum, in Possum, adds weight to this derivation; as it is marvellous to observe,

observe, how terms derived from the same source connect themselves with each other. The Greek PA=^S, PA=^N, (Ilox, Ilox,) I conceive to be compounds of the Element P[^] and [^]S, [^]N, bearing a similar meaning of 'This or That Person, Each Person.' These combinations, I imagine, are directly taken from the Celtic Dialects. In Welsh we have Pwy, Pa; in Armoric, Pe, Piou, Pe=^T, Pe=Hez, Pe=Hini; in Cornish, Puia, Pa, signifying Who, What, &c., corresponding with the Pou, Poi, Pe, &c., (Ilow, Ubi, Ποι, Quo, aliquo, Πη, Qua?) of the Greeks. We perceive, that the $Po=^{S}$, the $Pa=^{S}$, and $Pa=^{N}$, (Πas , Πas) are compounds of the same kind, as the Armoric Pe= AT, Pe=Hez, and Pe=Hini. In Welsh, Pa is compounded with Un, Am, &c., as Paham, or Pa=Am, 'Why, Wherefore,' Pa=Un, "Which, or "Whether of the two," and Pan, or P^=An, "When, at What "time." The latter word likewise signifies That. Scholars will now understand, if they are not already aware of this fact, that the Byn in Bynnag is a compound of Pa and Un, or Yn, and that the Ag is an addition belonging to the construction of the Language. This word is perpetually accompanied by its original parts, Pa and Un, as Pwy Bynnag, Pa Bynnag, Pa Un Bynnag, Bynnag Pa Un. — The Latin Piam is the same composition as the Celtic Paham; and we accordingly see it annexed to words of its own kind-to Pronouns, as in the Latin Qui=PPIAM. In Qui=PPE, we have the simple form PA or PE.

Combinations of the Element Q^, &c. with ^L.

Alius, Ille, &c. (Lat.)

Allos. (Gr.) Another.

Al, El, Il, &c. (Ar. Span. Ital. Fr. &c.) Articular or Pronominal parts of Speech.

Eelik-os. (Gr.) Quantus.

T'=Elik-os, T'=Elik=Out-os. (Gr.) Tantus.

Ylk, &c. (Scotch and old Eng.) Every, Each.

TH ^=YLK. (Old English,) That same.

 $T^{\Lambda} = AL = Ka$. (Ar.) This, That, &c.

Qu=AL-is, T^=AL-is. (Lat.)

Qu=Is=Qu=ILIÆ. (Lat.) Quis—Qualis.

Qu=EL, Qu=ALE, &c. (Fr. Ital-&c.)

Wh=Ich, quasi Qw=ILCH. (Eng.)

Cw=ILEIKS, QuH=ILK. (Gothic and Scotch,) Which.

Wh' = Ilk, Hw = Ilc, Ho = Ilck, W'=Elche. (Old Eng. Sax. Dan. Germ.) Which.

Such, quasi S'=Ulch. (Eng.)
Sw=Ylce,Sw=Aleiks, S'=Ulck,
S'=Olche. (Sax. Goth. Belg.
Germ.)

Wh^=Ile, quasi Wh^=Ilk. (Eng.)
Which, at Which—or That
time, Which.

Quwh=ILE, Quh=ILIS. (Scotch,)
While.

I SHALL now exhibit the combination of the Element Q[^], S[^], &c. with that of ^L, as in Qu=AL-is, &c. &c., which is derived from QuI and AL=ius. The Element ^L denotes Being, in the most familiar words, through the whole compass of Language, as in the Latin Alius, Ille, &c., the Greek Allos, (ALLOS,) &c., the Eastern Articular or Demonstrative parts of Speech, Al, (Ar. and Heb.) the Spanish, Italian, French El, Il, Le, &c. &c. &c. In old English, and in Scotch, Ylk, Ilk, Ilka, signify "Every, "Each,"

"Each," which the Etymologists understand to belong to the Saxon Elc, Omnis, Unusquisque. An adjacent word to this Saxon term, in Lye's Dictionary, is Elcor, Alias, Aliter; from which likewise we perceive, that the Latin Alius and Alter belong to these terms. In old English we have Thylke, which is a compound of THE=YLK, That same. Ilk is likewise joined with One. as Ilk=Ane, in Scotch. In Greek, we have Elikos, (Hazzos, Quantus, quam magnus; quam potens,) which belongs to ILK, That—Such a person, as Qui means at once "Any one," and "what an one," so that it might be interpreted by Qui, as it is by 'Quam magnus.' The Elikia, (Hamia, Statura, ætas; —adolescentia, juventus, ætatis vigor; ætas bello apta, juventus apta bello gerendo,) means the certain Quantum (if I may so express it) of size, age, &c., adequate for any purpose, the Quantum or Id, (staturæ, ætatis, &c.) Quod alicui rei sufficit. We have in Greek a compound, T^=ELIK-os, (Tylmos, Tantus,) from To, TE, &c. (To, Ty, &c.) &c., denoting THE; and ELIK-os, precisely of the same kind as Thilk is. In T'=Elik=Out-os, (Tylmouros,) we have an addition to this compound, from whence we may again learn, how inclined the mind is to compositions of this nature.

It is curious, that in Arabic we have a pronominal composition, of the same Elements and meaning, similar in form to Telik, (Gr.) and Thilk, though generated perhaps by a different process. This word is Tsalka or Talka, تالك ذاك, "(Hic, Hæc, Hoc,)" which must be thus unravelled. The term Haza coincides with the familiar form for the Demonstrative Adjective Hic, Is, &c. &c.; and from the unequivocal connexion between Haza, أَكُ and أَكُ Za or Tsa, we see how the words, with the breathing before the Radical, pass into those with the breathing after it. Under the word أَنَ Haza, in Mr. Richardson's Dictionary, I find the phrase الش هذا Ash Haza, "What is That?" where in Ash, "How? "What? What thing?" we have another of these words, used

es an interrogative. The preceding term to شا Азн, in Mr. Richardson's Dictionary, is اشا Езн, (Pers.) "His, Him," where we see the Element again faithful to its meaning.

In Arabic, Tsa là is the familiar pronoun, signifying 'He, 'This;' and in the same Language,
K or KA is said to be " an adverb of similitude; signifying As, like." We perceive, that KA belongs to TsA, &c. signifying The, Such a person. Now the Arabs combine these words, and make another of their familiar Pronouns, as Tsaka, Ji That; where Tsa=Ka is a composition of the Element Z¹, K¹, &c. with the breathing after the Radical, as $THA = ^TT$ is of the Element T^A and TT , with the breathing after and before it. This composition of the Arabic term is acknowledged by the Grammarians, who suppose, and justly too, that an additional composition exists in Tsa= L= Ka, "by the insertion of $L \supset$," as they express it, that is, by the insertion of their articular or Pronominal part of Speech 1.) AL, denoting still, He, This, or That person, which corresponds with the race of words above exhibited, Alius, Ylk, &c. &c. Thus, then, in the English Th'=ILK, and the Greek T'=ELIK-os, (Τηλικος,) we have a composition consisting of two parts; and in the Arabic Tsa=L=Ka, a composition consisting of three parts, namely, of the same Elements T^ and ^L, and the Element T^ again added. When I compare therefore such compounds with each other, I do not mean to say that these words in their compound form have passed into each other, but that they are generated from the same Radicals, bearing the same meaning. The Relative in Arabic, Altsi, (Sill or Allazé, as Mr. Richardson represents it, Allate, (fem.) is acknowledged ultimately to be a compound of Al ال and ن عن Tsi; though Mr. Richardson seems to consider it as a triple compound of Al-Al and Tsi. The other familiar. Pronoun in Arabic, اهذا Haza, Mr. Richardson explains by "This, (Man, Woman, or Thing.)"

We shall now understand, that Qu=AL-is may be considered, as belonging to Qui and Alius, Ille, &c., as T=Al-is might to Th^=Ilk, The=Ilk. The word Qu=Al-is is in fact a compound of the Qui and the AL, with the same meaning, though in a different order, similar to that, which we have in ALI=Qu=Is. The English terms Which and Such may be regarded as belonging. to Qualis, however remote they may seem from each other in their present form.—We have seen, that the English Who, What, Which, are quasi Qwho, Qwhat, Qwhich.—In the word Qwich, the L has been lost; so that the genuine form of the word is QWILCH. In the parallel terms produced by the Etymologists, the existence of the L is acknowledged. Skinner has the following article: "Which, " antiquis Whilk, ab A. S. Hwilc, Dan. Hvilck, Teut. Welch, Welche, "Belg. Welck, Welcke, Fr. Th. Vuelic, Quis, Qua, Qualis, q. d. " Qualicus." In Lye's Junius we have likewise the parallel Gothic term Cwileiks, and the Swedish Hwilken. The power of the letter at the beginning of the Gothic word is represented by Q, Cw, and The Etymologists may be said to understand the origin of these words. Skinner, we see, refers them to Qualis, Qualicus; and Junius says, "Olim deduxeram ex Hamos," and he observes, moreover, that he considered the Saxon Thyllice, "Ejusmodi, " talis, tantus," to be derived from Telikos, (Tylus,) He adds, however, that he afterwards found it unnecessary to seek a Greek origin for these words, when they might be much more commodiously derived from a Teutonic stock; and he accordingly refers us to Such, and its parallels Sulck. We now see, that whether we illustrate this race of words by a Teutonic or a Grecian origin, we are equally right. The parallel term to Which in Scotch is Quhilk, where we have the true form. We have seen, that the simpler state Who is expressed in this Language by QWHA.

Among the compounds of Quis, we have Quisquiliae, which means "All things that are of no value, or estimation; riff-raff,"

as R. Ainsworth explains it. Obvious, as it should seem to be, that the Quis, in Quis-Quiliæ, is the Pronoun; Julius Scaliger appears to have been the only person, who has seen this relation. " A Quisquis, Quisquiliæ. fuit enim quicquid, το τυχον, vile et obvium " forte, non consilio." Others derive it from Σκυβαλον, Stercus, or from the Hebrew 72 gp KS BL, " Minutum vile." Surely we shall all agree, that Quis-Quiliæ is a compound of Quis and Qualis-Quis-Qualis fuerit, and is a combination of the same force as Quis-Quis, used, likewise, as a term of depreciation, "QuisQuis " est ille, si est Aliquis," the first instance produced by R. Ainsworth under the word. To the Latin Qualis more particularly belong the French Quel, Quel-Que, the Italian Quel, Quale, Qual= Che, the Spanish Qual, Aquello, as Tel, Tale, Tal, (Fr. Ital. Span.) belong to Talis, which the Etymologists understand. The Etymologists produce, as the parallel terms to Such, Swylce, (Sax.) Swaleiks, (Goth.) Sulck, (Belg.) Solche, (Germ.) &c.; and it is curious, that Skinner has seen the true origin of the word, by deriving it from Swa, (Sax.) So, and Hwylc, Quispiam. He adds, moreover, the derivation of Swa and Like; and Junius produces the Saxon Thyllic, or Thylc, which he supposes to be quasi ThusLic, but which we perceive to be the same compound as Thylk.

The English WHILE, and WHILOM, belong to WHILK, &c. &c., and signify 'The Time at WHILK, or Which any action is doing or 'was done—at That Time That, or at That Time.' Another form of While is Whilst. The English WHILE is referred by the Etymologists to the Saxon Hwile, Dum, the Gothic Cweila, the Belgic Wiile, the German Weil, Otium, temporis spatium, the Danish Hwiler, Quiesco, &c.; and Whilom, Olim, Aliquando, to the Saxon Hwilon, Hwilum, and to While. Lye likewise produces While Ere, or Whilear; Modo, paulo ante, which he compares with

the Saxon Hwileer. This combination occurs in Shakspeare. Caliban says,

"Will you troul the catch, "You taught me but While=Ere?"

The same combination perpetually occurs. Let us mark, among the explanatory words above adopted, the Latin Olim, which is only another form of Whilom. The Etymologists cannot help observing, that the Ol in this word belongs to Olle, for Ille. They refer it likewise to the Hebrew עלם OLM, past or future Time. Mr. Parkhurst produces, as derivatives from this Hebrew term, Whilom, and Olim. The word Whilom cannot perhaps be said directly to belong to the Hebrew term, yet the Element 'L has in both the same meaning. Quwhile, Quhilis, is explained in Dr. Jamieson's Dictionary by "At times, now, "then, S. While; often used distributively. -Quhile he, Qwhil he, " or S. Whiles the tane, Whiles the tothir." Let us mark in Tane and Tother another combination of the Demonstrative parts of Speech, The = One, The = Other. Whilom is written in Scotch Quhylum, Quhilom, which Dr. Jamieson explains by "Formerly, "some time ago.—Used distributively, now, then," where we manifestly see the sense of This—That time, &c.

Um=Quhile is likewise used in Scotch in a similar manner; "Sometimes, at times," the first part of which, Um, is derived from the familiar preposition En, Un, &c., and not from Umb, Circa, as Dr. Jamieson imagines. The Saxon word Ymbhwile, mentioned, as this Writer observes, by Skinner, but unknown to to Lye, &c., appears to have no existence. The succeeding word to Umquhile, in Dr. Jamieson's Dictionary, is Umwylles, Reluctance, which our Lexicographer justly derives from Un-Willes, where Un is used in its negative sense. In the same opening of Dr. Jamieson's Dictionary, we have Umbeweround, "Environed," which he derives

derives from Ymbe-Hwearf-an, Circumcingere. The Um is certainly the same as the En in Environ; and En has perpetually the sense of 'surrounding or taking In.' Be-Weround seems to be the same as Be-Vironed. The N is changed into the M, because of the labial B; and so it is in Umwilles and Umquhile, because of the labial W, and of the labial sound U or W, annexed to Q. Dr. Jamieson will now, I trust, understand, that the compound words in Scotch, beginning with Um, which he has derived from Ymbe, &c., Round, belong to Un, as Umbeset, &c. &c. We have in Sootch the phrases "Umquhile Brother-Umquhile Husband," &c., which mean the former or late Brother, Husband; or, as we express it precisely by the same kind of phrase, 'Her Quondam Brother, Husband,' &c.; where in Quondam, belonging to Quendam—That—Such a Person, we see a confirmation of my hypothesis, that While, Whilom, belong to Whilk, Which, That. It is a singular blunder indeed, which Dr. Jamieson has noted in Whitaker, who, in his vindication of Mary Queen of Scots, explains "this term as "signifying Uncle." Quhile likewise means "Late, deceased," which Dr. Jamieson, though he refers us to Unquhil, derives from the Islandic and Swedish Hwil-a, To be at rest. He seems totally unconscious, that this word, with its parallels Quhile, &c., belongs to the succeeding term in his Dictionary, Quhilk, Which.

Dr. Jamieson has another Scotch word, "Quhill, conj. Until, S." which he refers to the "A. S. Hwile, Donec, Until, Somner, "or more fully Tha Hwile the, which seems to signify The time "that." He does not however approve of deriving Till from To While; which, as he tells us, has been conjectured. Whether Till is a compound, belonging to this race of words, I cannot decide. Its doincidence in sense with the words now before us would lead us to this conclusion; yet there are some difficulties on the point, which cannot be explained, without a particular discussion on the force of the Element TL. The English While is

used at present in vulgar Language, as it was anciently among our best writers, like the Scotch Queill, for Until. So in Shakspeare:

"He shall conceal it,
"Whiles you are willing it shall come to note."

(Twelfth Night, Act IV. S. S.)

"Whiles," says Dr. Johnson, "is Until. This word is still so used in the Northern counties. It is, I think, used in this sense in the accidence." It is curious to observe, how the idea which we annex to such terms as To and Till connects itself with the idea, which we express by This—or That place, time, &c. Here we unequivocally see, that While—Such—That—time, &c. includes within itself, what we express by 'To or Till—Such—'That time,' &c. I shall shew, in the course of my enquiries, various examples of this union of ideas."

Combinations of the Element T^, &c. denoting The, and the Elements 'S, 'N, &c.

T^=Is. (Gr.) TH=Is, or Such a person.
T=^InA, DE=InA. (Gr.) Such a person.

Ti=^N, Te=^In. (Greek,) To
Thee, Th=^Ine.

T^=, Olos, T^=Os-os, T^=Othi,
T^=Ote, T^=Oth=En, &c. &c.
(Gr.)
S=Ic, S^=Ed, C=Is, S^=Us. (Lat.)
That.
Se, Ce, De. (Lat.) That, The.

The Greek Tis, Ti=^S, (Tu,) is, I imagine, the same compound as the English Th ^=Is, and Th^=^At, quasi The=It. In Ti, (Ti,) we see the simple state, as in To, (To,) The. In Ti=^Na, (Twa,) we have the compound of the Inflexion; but in Deina, De=InA, (Δωνα, Quidam,) we have a compound, separate from the operation of inflexion.

inflexion. The unused Nominative Deis, or DE-Is, (Aug.) would present us with the form THI=^S. The Grammarians observe on this word, "Pronomen Dena non declinatur; genitivi igitur, "et dativi casus ab inusitato nominativo Aug oriuntur." In TI='N or TE=In, (Tw, Tew, Dor. Ion. et Poet, pro Soi, Tibi,) we have an unequivocal compound of Tv, (Tv, Tu,) and the Element N, as in The Inc. The familiar terms for Being in Greek in their simple state under the Elements 'S and 'N, we know, are Eis, Os, (Eig, Unus, Og, Qui,) &c. &c., En, En=os, (Ev, Evog.) There is however some difficulty respecting Deina, (Deva,) which ought to be explained. The Element DN itself denotes Man or Being, from an idea explained in a former part of my Work, (p. 184-5.) We shall therefore find the name of Man under the form DN, as in the Celtic Dialects, Dyn, (Welsh,) Duine, (Ir.) &c. &c.; and it will therefore be sometimes difficult to decide, whether the terms under this form DN, &c. are original or compounds. If Deina, (Aema,) be not a compound, it must be referred to the Element DN, as denoting Man. The Greek Dein=os, (Δεινος, Universe, Qui est in aliquo genere vehemens, excellens, unde speciatim, Dirus, Gravis, Solers, Peritus, &c.) must be referred to the Element DN, as the name of Man; and it expresses the various and opposite qualities belonging to this extraordinary animal. It is marvellous to observe, how words are attached to their original idea. We all remember in Sophocles, Πολλα τα ΔΕΙΝΑ, κουδω ΑΝΘΡΩΠΟΥ ΔΕΙΝΟ-TEPON #ελει. (Antig.)—If DE=INA, (Δεινα;) be a compound, it is precisely of the same kind as that, which we have in The=One, which the Scotch combine into TANE. The Greek TEE= N-os is a combination of the same kind, and is not perhaps directly taken from Ek=Ein-os, (Exercise) We see unequivocally, in Ek= EIN-os, a compound of the Elements 'K and 'N, denoting Being.

The Thin Greek is perpetually added to mark the distinction of

of 'Th^=Is or Such a Being,' in opposition to another. In the very opening of my Greek Vocabulary, where Tee= N-os occurs, we have T'= Eelikos, (Tyloros, Tantus, ab Hloros, Quantus,) T'= Eelik= Out-os, $(T_{\eta}\lambda x \cos \tau \circ \varsigma)$; and we have moreover $T^*=Oios$, $T^*=Os-os$. from Oios, Os-os, (Teios, Talis, ab Oios, Qualis, Toros, Tantus, ab Oros, Quantus,) &c., T'=Othi, T'=Ote, from Othi, Ote, (Toll, Ibi, ab Oh, Ubi, Tors, Tunc, ab Ors, Quando.) Let us mark the simple state of these words O10s, Os=0s, OTHI, OTE, which all belong to our Element 'S, 'T, &c., and denote This and That. again note the explanatory terms Ubi and Ibi, which belong to the Element 'B, under a similar idea. In the same opening of my Greek Vocabulary, where these words occur, I find To=DE, To =TH=EN, T =Olos=DE, ToI =OUT-OS, To=D =EUTER-ON, (Tob. Huc, Toler, Inde, ab Oler, Touoçõe, Talis, Touoros, Talis, Possurepos, Iterum, secundum,) where we have other compounds. The Dr. (As,) meant originally THE; and here it is joined with a term conveying a similar idea. In the same opening, where these words are found, we have To1, (To, " Particula enclitica, quæ aliis "jungitur, Oo 701, Nequaquam,") where let us mark the explanatory term to Toi, (Toi,) the Latin Quaquam, which belongs to Qui, This or That Being. Wherever we turn our eyes, we still perceive the same proofs of uniformity and consistency in the formation of Before I quit the term Os=os, (Ooos, Quantus,) which we see is directly taken from Os, (Os, Qui,) I must note the adjacent term Os-ios, (Osios, Sanctus,) which may mean 'The Dis-'tinguished Being,'—the Os=os, (Ooos, Quantus.) There is however some difficulty on the origin of Oous, which will be explained on another occasion.

Let us mark the term $D^*=\text{Euter-os}$, ($\Delta \epsilon \nu \tau \epsilon \rho \sigma \epsilon$, Secundus, Alter,) which I have supposed to be a compound of D^* , To, (To_i) and of a term, like Eteros, $(E\tau \epsilon \rho \sigma \epsilon,)$ Other, &c.; so that the whole word signifies The=Other, as Alter means, we know, the Second, from the

the same idea. In Saxon, SE=OTHER means the Second; and from this the Greek DE=UTER-os seems to be directly taken. In English we have a similar compound, T'-OTHER. I suspect, that Two with its parallel terms is nothing but THE, That person as spoken with reference to a former; just as Alter and Alius belong to Ille, and only signify Other, as denoting This or That Person, distinguished from a former. In Saxon, Twa, and Twe= G-En denote Two; and the latter Saxon word is a compound of Twa and the Elements 'G and 'N, denoting Being. Perhaps the Secund or Secun, in the Latin Secund-us, may be directly taken from Twegen; though on this point it is difficult to decide. Some of the Latin Etymologists derive Secundus from Sequor, which is no improbable conjecture; and others from Secus.—The term Secus is arranged in two articles by R. Ainsworth, who considers it in one case as an adverb quasi Sequius, "Otherwise.— "Amiss." The word in this sense seems to have no relation to Sequor, and yet it appears to connect itself with Secundus in the sense of the Other. The preposition Secus he explains thus: "By. " or Nigh to,—Secus viam," where we indeed come to the sense of Sequor. On this word it is difficult to decide. It appears to be a compound of Sic and Us, as in 'Us=Que,'

The S=^Ic I have before supposed to be itself a compound of the forms of the Element S^ and ^C, This—That. Cato uses the term Utrimque Secus; where the Sec=Us seems to mean, 'As well on This side as on That.' Secundus or Sec=Cund-us might be derived from Sec in its compound state, and Cund, denoting Being, as in Cunque, Quis=Cunque. The succeeding word to Secus in Vossius is Sed or Set, which is acknowledged by Scaliger to be a compound of Se=Et, as Atque is of Ad and Que. This idea is probably just, though not for the reason which Scaliger gives us. I shew in another place, that the Se, the particle of Separation, means The. The Latin C^=Is and S=Us are only different

forms of S'-Ic; and these words, denoting 'That-Place or 'manner,' may be considered as compounds of SE=Is, SE=H1C, or CE=Is, CE=Hic, in a contrary order to that of Hic=CE. I have shewn, that SE, the particle of Separation, means the same as CE, 'That Being, Thing,' as in SE, the Pronoun, 'That Being.' the phrase S=^Us-Que, DE-Que, This way, or That way, we see the original idea; and let us mark the term DE, where we have again another form of THE, CE, &c. Let us note likewise a kindred term Que in combination with these words. We see now, that SE, CE, and DE, are only different forms of each other, meaning That. The Etymologists derive C^=Is from Keise, (Keise,) by Apocope from EKEI=SE, (Exerce,) where we have another combination similar to Hic=CE. The term CITRA may be a compound of Cis and Tra, as it is commonly supposed, or the C1 may represent the word in its simple state. In Ultra we have a similar compound from Ille, as some have imagined. Vossius observes, that Ultra means "In Illa parte," just as Ep=Ekeina is derived from Ekeinos, (Emercua, Exeros.) He derives however Ultro, for Sponte, from Volo, as the Greek Aubauperas comes from Aipeur. This comparison between Ultro and Αυθαιρετως, from Aut-os, (Αυτος, Ille,) will shew us, that ULtro belongs to ILLE—This or That person, as signifying what any one does Himself,—as of Himself, ' independent of others.' The original sense of the word again appears in 'Ultro Citroque, on This and That side.' Hence we see, that Ek=Oon, (Exar, Voluntarius, qui sponte aliquid facit,) is the same as Ek=Ein in Ek=Ein-os, (Exeros, Ille.)

The English words M'=INE, TH'=INE, are compounds of TH' and M', Thou and ME, and the Inflexion Ine or 'N. In My and Thy, the possessives are in their simple forms. We have seen, that the Element 'M', with a breathing either before or after the M, or with both, has been adopted, in a great variety of Languages, to express the Pronoun of the first person in some of

its relations, as Me, My, (Eng.) Eme, Me, &c. (Gr.) Me, (Lat.) Me, Moi, (Fr.) Me, Mi, (Ital. and Span.) Me, (Sax.) Mai, (Russ.) We; Ma, Am, (Pers.) We, My; Me, Om, (Gal. and Ir.) Mi, Ma, Am, (Arm.) Mi, Fi, (Welsh,) Mi, Vi, Evi, Am, &c. (Corn.) My, May, Hum, (Hind.) &c. In these words we have the simple form; but in others we have the compound form, as Me=Ina, $Mi=^{\Lambda}S$, Of, To Me, (Goth.) $Mi=^{\Lambda}N$, (Sax.) Me=Iner, $Mi=^{\Lambda}Ch$, (Germ.) $Me=^Nia$, (Russ.) Of me; $Ma=^N$, Ma=Ra, (Pers.) I, to Me, &c. &c. In the Nominative case, as it is called, the Element ^C, ^G, &c. is sometimes, we know, used, as Egoo, (Eyw,) Ego, I, quasi Ig, &c. &c. &c., which I have before produced. The English and Saxon We, and their parallel terms $W^{\wedge}=Eis$, $W^{\wedge}=Ir$, (Goth. and Germ.) $W^{\wedge}=It$, (Goth. and Sax.) I consider to belong to the labial Element M^, V^, &c. In We we see the simple form; but in the others we have a composition. In Saxon, the genitive case of Ic, I, according to the arrangement of the Grammarians, is M=In; and in the other cases it is Me. Gothic the cases are (N.) Ik. (G.) M=EINA. (Dat. and Abl.) M=Is. (Acc.) M^=Ik; and in German we have Ich, M^=EINER, M^=IR, ^M^=Ich. We here see the compositions of M^ and the Elements 'N, 'S, 'R, bearing the same meaning, as in the compounds, $Th^*=En$, Th=Is, $Th^*=Here$; though the Pronouns do not follow the analogy of the Article, in those peculiar relations, which the Grammarians express by the term Cases. The Latin Mei and Mihi are probably quasi Mej and Mihj; and Tui is perhaps quasi Tuj. We find in Gothic, for the inflexions of Thou, (Nom.) Thu. (G.) Th '=Eina. (D. and Ab.) Th '=Us. (Acc.) $Th^{-1}Uk$. In German we have Du, $D^{-1}Einer$, $D^{-1}Ir$, $D^{\Lambda} = Ich$; and in Saxon, (N.) Thu. (G.) Thin. (D. Ab. and Acc.) The. The parallels to MINE, THINE, as they are exhibited by the Etymologists, are M^={Ein, In, Ein, Ien, Iin, (Goth. Sax. Germ. Fr. Belg.) &c. &c., $Th^{-}=Ein$, In, In, $D^{-}=Ein$, Iin, In, $T^{-}=Ien$, (Goth. 3 G

(Goth. Sax. Isl. Germ. Belg. Swed.) The Greek T^= Ein, In, (Tew, Tw, Ion. Dor. pro Soi, Tibi,) must be considered as similar compounds to Th=Ine, &c., and probably as directly belonging to them.

The Possessives Mine and Thine are derived, as we perceive, from what Grammarians would call the Genitive. We see, in Latin, how the Possessives Noster, Vester, Nostr-as, Vestr-as, Cujas, are connected with Nostr=Um, Vestr=Um, Cujus. English, His, Her, Her's, Their, Their's, Your, Your's, Our, Our's, may all be considered as Genitive cases, derived from the Saxon Genitives His, Hire, of Him, of Her; Thæra, of Them, Those; Eower, of You; URE, of Us. We see, in the terms HER, THEIR, &c., as Possessives, 'HER Gown, THEIR Gowns,' the Saxon use of the words "The Gown, or Gowns of HER, In HER's, THEIR's, we see the original sense of the Personal Pronouns HER, Them; though the idea of the Genitive is expressed by another analogy, namely, by the addition of the s. — We must not be surprised to find in our Old Poets a mode of construction, belonging to these Possessives Your, &c., as they are considered by us, which refers to their original sense of Personal Pronouns. Thus, in the Poems attributed to Rowley, we have,

- "YOUR lovying wife, Who erst dyd rid the londe
- " Of Lurdanes, and the treasure that you han,
- "Wyll falle into the Normanne robber's honde,
- "Unlesse with honde and harte you plaie the manne."

(Battle of Hastings, N. I. v. 35. &c.)

Here Your conveyed to the mind the same idea as 'Of You;' and the meaning is, that "The Loving Wife of You, Who "formerly drove away your enemies, will now fall into the hands "of the Normans." Lurdane is not Lord-Dane, as Dean Milles supposes; but it is used as a term of contempt, denoting Heavy, Stupid, Vile, people. The "Lordying Toad," in

the Tournament, means the Lurdane, the Heavy, Lumpy, Toad. Dean Milles, under Lordyne, justly refers us to the French Lourd, and Lurdin in Gawin Douglas, which the Glossarist rightly explains by "Blockhead, sot." The Lord, in Lordying, belongs to Load. Hence the Hump-backed man is called Lourd, Lurd, or Lord, as we now pronounce it.

The Persian Scholars will now understand, that the Persian M^=AN, ... I, is a compound formed of the same materials as the English $M^*=Ine$. The Element appears in its simple form in MA, We, and in MA=Ra, ME, where the Ra is the addition to denote the Case. The Persian Scholars will again mark, that the Ra, which is used to form the Dative and Accusative Cases, both in the Singular and Plural, is nothing but the Teutonic addition of Case, originally denoting Person, as we find it in Th=ÆRE, D^=ER, &c. &c., and in the German $M^*=IR$, directly corresponding with it in form and sense. Persian the plural is formed by adding An, where we again see the Element 'N, performing the same office, as it does on other occasions. Sometimes Ha is used for the Plural. In Persian, as we have seen, An and Ain این ان are That, This; from whence, as we understand, the plural termination is taken. In Hebrew the termination of the plurals is in 'M and 'N, which are derived from the Pronouns EME and ENE, signifying Them. In the Arabic, likewise, Hem and Hen signify They; and hence in that Language the plurals end in 'N, (... In English the termination of the plural is sometimes in $^{\Lambda}N$, as Ox, Ox=En. In one declension of the Saxon the plural terminates in 'N, and in three declensions of the Gothic it terminates in 'NS. In two declensions of the German the termination is likewise in 'N. The resemblance of the Persian to the Teutonic Dialects, and particularly to the German, has been perpetually observed. In Persian, May=An signifies

signifies 'We,' and May=An-Ra, 'To Us.' The Persian Ma=Ra precisely corresponds, as I have observed, with the Teutonic Mi= 'R, To Me; and the May=An-'Ra is a similar composition to Me=In-Er, though formed by a process somewhat different. In Persian, Tu " is Thou, and Sh'=Uma is You or Ye, which is a compound of Tu or Su, and Uma; where the Uma denotes You, as the Greek Um in Um=eis, (Tueus) does.

The form of the English MINE will remind us of other terms, under the form MN, which are likewise compounds. In Arabic, (... MAN signifies "Those Who, He Who;" and the Arabic Scholars understand, I imagine, that this word is a compound of MA, Le the familiar Pronoun in that Language, signifying "That which, Those which," and 'N, denoting Being, HN 'They.'—The Arabic من MAN signifies "Some one, any one, a "certain person." We shall now understand, that the Greek particle M^=En, (Mev,) the Pronoun M^=In, (Mev, Seipsum, Seipsam, Seipsos,) and the English M ^= An, afford precisely the same composition, and signify Being-Person. In the ordinary phrase, O Men, O De, (O Mer, O de,) This and That Person, we are brought to its original Let us mark the term De, (Δe ,) which denotes likewise Person, and belongs to The, Die, &c. The first sense of Men, (Mev,) in the ordinary Vocabularies, is Quidem, which belongs, we know, to Quidam, containing precisely the same notion which I have supposed to be annexed to Men, (Mer.) Thus we see, that Min and MEN, (Mir, Mer,) have the same relation to each other, as Quidam has to Quidem. It is marvellous to observe, how certain terms still continue to be connected with other terms, which originally conveyed the same idea. MEN is connected with De, Dee, Toi, Gee, Oun, Pou, &c. (O Mev, O de, Mev dy, Mev Toi, Mevour, Mev mou, Msv Tol Tol, Msv Tol ye,) which belong to the Element D^, N, P^, originally denoting 'Being.' We shall now understand, that the particles in Greek have arisen from this source; and we shall not wonder,

wonder, that these particles are sometimes found in clusters; when we perceive, through the whole compass of Language, that there is a strong propensity in the mind to combine terms expressing Pronouns—' This or That Being—Person, Thing, &c... 'with each other.' We shall find, that these Particles in Greek are particularly combined with Pronouns, as in such phrases as these: 'Touto Men Toi,' 'Tis Men Toi Toon,' 'Peri Menoun ' Toutoon Tauta,' 'Kai Tauta Men Dee Tauta,' (Touro men roi, Tis men roi των, Περι μενουν τουτων ταυτα, Και ταυτα μεν δη ταυτα, Atque hæc quidem hactenus.) Let us mark the term KAI, (Kai, Et,-Etiam,) which likewise belongs to the same race of words, and means This-"In This manner." The term Tauta, (Taura,) is itself a compound of T' denoting The, and Aut, It, quasi TA=AutA, (Ta. αυτα); and thus we see, what a variety of terms, originally denoting The or That, are crowded into one sentence, KAI TA AUT M'=EN. DEE, TA, AUTA. We see in Touto, or T'=Outo, (Touto,) the same composition of T^, To, (To,) and Our or Aur, in Our-os, Aur-os, (Outos, Autos); and it is precisely the same species of composition, as we find in Th'=Is and Th'=At, from The and It, quasi THE=IT.

The English Man appears more particularly in its Pronoun state, if I may so express it, in the other Dialects of the Teutonic, as in Saxon and German. My German Lexicographer explains Man by "Man, Men, People, They,—One, Man hat "mich berichtet, One has told me;—Ihr, You, Man muss wissen, "You ought to know." This word will serve to illustrate likewise the main scope of my argument, and will shew us how readily the term denoting Being applies itself to all persons. In Saxon, too, Man or M^=An is used, as the French On is, and the English One, terms which form, as I conjecture, a part of its composition, as 'M^=An brohte, On a apporté, M=An mihte 'geseon,' One might see, or, as we could express it, A Man might see. Man is used at present both for Male and Female,— or the Being

Being in general, as 'The Creature Man'-'Mankind;' and in Saxon, Wundorlic MAN signifies Præclara Fæmina. The words Fæmina, Woman, Homin-is, might be quasi Fæm=Mina, Wom=Man, Hom=Min-is; and the Min or Man might belong to Man, the Being; though the N is perhaps only an organical addition to the M. In old English, MAN signifies simply Being, and is applied to another order of Beings, beside that, which we now denominate by the name of Men. In Shakspeare's age, the ancient sense remained, though the present sense was then prevalent; and hence our Poet has been furnished with a jest, bordering on profaneness. Dogberry says, "God's a good MAN." In the Merry Wives of Windsor, we have "No Man means evil " but the Devil." Mr. Steevens observes on these passages, that "in the ancient Interludes and Moralities, the Beings of " supreme power, excellence, or depravity, are occasionally styled "MEN." He produces, moreover, a passage from Jeronimo, "You're the last MAN I thought on, save the Devil." occurs in various Languages, as in the Saxon Man, Mon, the Gothic Manna, the German and Belgic Mann, Man, the Runic Man, the Danish Mand, &c., which the Etymologists produce; and they refer us to the Saxon Manan, the German Meynen, &c., the Greek Menos, (Mevos,) the Latin Mens, and the Greek Manes, (Marry, Servus.) The English MAN, we know, is used as the Greek Man-es is for a Servant.

The Manes, Departed Spirits, we shall now understand to be the potent Men—or Beings. Hence we have, in the Saliarian verses, the "Cerus Manus," the Great Creating Man or Being, which is explained by "Creator bonus," and the Sum=Manus, the "Summus Manium," a title given to Pluto. The Etymologists understand, that these Latin words belong to each other, though they derive them from Manus, the Hand, Mane, the Morning, &c. &c. &c. The Etymologists observe, that Immanis is derived

from

from Manus, an ancient word for Good.—Manus, we see, is the Illustrious Being; and the MAN in Immanis has the same meaning of the Distinguished Being, whether for Good or for Evil. Immanis is precisely the same compound as Ingens, from In and Gens, denoting likewise Being. While I am examining the term Manes, in the Etymologicon of Vossius, I cast my eyes on Mandragoras; which we shall now understand to belong to MAN, from its supposed likeness to the Human form, quasi Ανθρωπομορφος. Some have before derived it from the Belgic Man,—an origin, which was of all others the most absurd, according to our former notions on the subject of Etymology. Vossius has therefore justly observed, "At neutiquam audiendi, qui deducunt ex Belg. Man, " id est, Vir," &c. On the second part of this compound, it is not easy to decide. We have seen in a former page, (179,) that the Element DRG denotes a Draught, a Delineation, form, or likeness; and such perhaps may be the force of Drag in Mandragoras, or Mandrake. Hence we have the Persian Aher= MAN, اهرمن "A Demon, spirit, giant, satyr.—The Principle of "Evil, in opposition to Ormuzd, the Principle of Good." The Aher belongs to the Element 'R, denoting the Illustrious Personage, as in Hero, &c. &c. Or=Muzd is a compound of Or, bearing the same meaning, and on Murd, "A Man, a Hero. "Dead," to which belongs the Latin Mortalis, Mortal, &c. MN in BerheMEN, יָרָפּאָט or BrahMAN, has probably the same force, and is perhaps derived from BR, Great, and Man, and not from Brimha, the Deity. Yet Brimha itself contains the same idea, and is probably a compound of BR, Great, and 'M. Yet, however that may be, Brimha belongs to Primus,-From, Bremo, (Beeuw, Fremo, Murmuro,) Fremo, all denoting the First-the Illustrious, &c.—Great—Violent, &c. To Aher=Man belongs the Teutonic Har=Man, Herr=Mann, which directly connects itself, as we know, with Herr, the Lord, Master, &c.-Mann, the Being Man.

.

Man. I shall not pursue to a greater length my observations on the Element MN, under this idea, which is diffused through a wide sphere of Human Speech.

OBSERVATIONS ON THE PRONOUNS IN THE PERSIAN LANGUAGE.

I compared in a former page the composition of the Persian $M^{-1}An$, one from M^{-1} , expressing the first person I, and of An, Ain, This, That. I might take this occasion of making a few remarks on the Persian Pronouns. We have seen, that Asн (is His or Her, Esн=An, They, Кен, Снен, Кі, Сні, Who, Which, and Who, What? In هرانكه هركه Har=Che, Har=An=Che, Whosoever, we have a compound of Pronominal parts of Speech, as in Who=So=Ever; where we see another compound, formed on the same principles. The AHER in AHER-Man, we now see, is the same as the Pronominal HAR. In this Language, خون Chud is used as a Pronoun possessive; it answers to the Greek operepos, and signifies "My, thy, our, your, his or her, and their, according to the person and number of "the principal Verb in the sentence;" and KES means in Persian, "A man, a person, one, any one, some one." The K=Es and the $Ch^{-1}Ud$ are the same compounds as the Latin Qu=Is, the Spanish $C^{\Lambda} = Ada$, the French Ch=Aque, and the Celtic $G^{\Lambda} = Ach$, which I have before produced. On the term KADAM, Which, some difficulties occur, which cannot be unravelled, without the knowledge of other Elements. In Persian, Chun signifies, "1. How? 2. Like, in the manner of, as if. "3. Manner, Quality." This is a compound of Che and An; and we perceive, that it signifies Quality precisely for the same reason

reason that the term Quality itself, which is derived from Qualis, a compound of Qui and the Element ^L, is invested with this peculiar meaning. An adjacent word is چونان Chunan, Just as if, where there is another addition of An; and in جنانکه CH^=UN=AN=KEH, the Keh is again added. The Chun is precisely the same combination as that of the Latin Cun, or C'=Un, from Qui or Cui, and Unus; and we see in $C^{\wedge}=Un=Que$, and Qui=C^=Un=Que, how these kindred terms are wont to be compounded with each other. I have shewn, that Quid or Quod is a composition of Qui and Id; and thus, in Qu=OD=C^=UN=QUE, we have a combination of five terms, and the Qui is thrice repeated. The Greek K^=En is a similar compound of Ke and An, (Ke et Av); and the KEN, (Kev,) shews its original idea, when it is connected with Pronouns, as in O, TI KEN Κεφαλη Κατανευσω, where the Oti KEN is justly translated by Quod=Cun=Que.

The Greek conjunctions, An and EAN, (Av, Eav,) denote simply 'That or So,—Should things so happen, or If So Be,' as we express It is accordingly found, that An associates itself with Pronouns, and bears distinctly its original sense of a demonstrative part of Speech, corresponding with Cunque. Hoogeveen remarks on this Greek Particle, "Maxime vulgaris usus est cum "articulo subjunctivo, cui juncta idem notat, quod Latinorum "syllabica adjectio Cunque. Exempla innumera." Hoogeveen then produces a few of these examples, which every where occur, as A Av, Oi Av, Oo' Av, Hv Av, Airives Av, &c. &c., Quæ=Cunque, Qui=Cunque, &c. &c. We cannot help seeing the relation in sense of Cun, denoting 'Quality or Kind,' with the word Kind itself, and its corresponding term Genus. The words Kind and Genus connect themselves with a great race of words, as Genero, Ginomai, (Γινομαι,) &c. &c.; and we cannot but note the Latin Cunctus, the German Gantz, &c., as bearing a strong resemblance

to Cun, &c. If these words should all belong to each other, the process of composition will have proceeded to a length, of which we had formed but little idea. On these points however we cannot determine, till the Element CN shall be carefully examined. The Persian Scholars might be inclined to think, from the present view of the question, that the familiar term Gune, " Colour, species, form, figure, external appearance," as Mr. Richardson explains it, who in the interpretation of some examples annexed adopts the terms Kind and Genus, is only another form of Chun; and yet they would refer it, In the same column of I imagine, to Kind and Genus. Mr. Richardson's Dictionary, I see the Arabic (,, Kawn, "Being, becoming, happening. - Essence, existence," which surely belongs to Ginomai, (Γωομαι.) Through the whole range of Language, the Element GN denotes Being; and it will afford us a future theme of curious and extensive discussion.

In Persian, Ain=JA, | and An=JA, | mean Here and There, which are combinations of An and Che or JA, in a demonstrative sense; and we have likewise انسو اینسو Ain=Su, An=Su, Hither, Thither, which are similar compositions. Persian سو or Su or Su, means "a Side, a Part.—Towards." The Greek En=ThA, (Erda, Hic, Illic) and the French Ain=Si, are combinations formed from the same materials. The French word was sometimes anciently written En=Sic, where in Si= ^C we have the same combination as in the Latin Sic. The French AIN=SI may in fact be considered as a combination of EN=CI. The Greeks again combine their En=Tha with De, as En= Tha=De, (Ενθαδε.) In $Th^{\Lambda}=En$, (Gev.) we have another composition of Tha, The, (Θ_{ϵ}) &c. and En. Again, in Persian, $Ku = \Im a$, Where, Whither, is a compound of Ku and Ja; and they say, likewise, Har Ku=Ja Keh, هو کجا که for Whosoever. The Persians, we see, have adopted two forms, I and I which my Grammarian Grammarian represents to an English ear by Ku and Ja, in order to express What and That. The representation, which my Grammarian has adopted, Ja, This, That, may remind us of a word in French, which happens to be written in the same manner, Ja, De=Ja, From That time, and which has precisely the same meaning. The French Etymologists suppose Ja to be derived from Jam. I shew in another place, that Ja=^M is itself a compound. They acknowledge however its relation to the Italian Gia.

Again, in Persian, TA U means Until; and we have seen, that or (ζωω Su or Sui means To-wards. We shall now understand, that TA and Su are only different forms of each other, coinciding with the English To, the German Zu, &c. Mr. Richardson explains the Persian U TA, by "TO, Until;" and in the same column of this Writer's Dictionary, we have the Arabic Ta, U (" The Feminine Demonstrative Pronoun.) "That (Woman,)" as my Author explains it; and likewise TA in the same Language, signifying By in swearing, where the word has still the sense of the demonstrative part of Speech -That, or The, as will Tallahi, By God—The—That very God. In the same column, we have likewise the Persian TA U "A fold, plait, or ply (of a garment, &c.) — Multiplicity. — نك تا " Iek Ta, Simple or single. كو تا Du Ta, Double. سه تا Se Ta, "Triple;" where TA still means That One — That Two — That Three — or That same quantity taken once, twice, thrice. We have seen, that Tu, in Persian, is Thou - That Being; and in Arabic, again, we have "גו Тін and Тіні, (Fem. of טֹ)" ZA, which signifies "She, This, He," &c.; and ZA, là as we have seen, is "He, This. — A Lord, Master, endowed with, &c.," which is supposed to be the accusative of 3 Zu, "A Lord, ✓ Master.—Having, Possessed of, endowed with.—Who." I have conjectured, that Queo, To be able, belongs to Qui; and we see, in the

the same word Zu, the senses of the two Latin terms Qui and Queo. In the same column of Mr. Richardson's Dictionary where Za is, we have Zat, "(fem. of ¿)" Zu, "A Lady.—"Possessed of, or Endowed with.—The soul, essence, substance, "nature, the body, person." These forms K^, &c. denoting Man, bring us to the Persian Kai, "When.—A great King. "—A strong giant, a genie. — An intrepid Hero;" and this will remind us of the Irish Cia, "How, whence, A Man, "Husband."

OBSERVATIONS ON THE PRONOUNS IN THE FRENCH, ITALIAN, AND SPANISH LANGUAGES.

I SHALL now more particularly examine the nature of the Pronouns and their Derivatives belonging to other parts of Speech, in the French, Italian, and Spanish Languages, which have not been so minutely considered on former occasions. The examination of the English Pronouns, and a comparison with their parallels, have fully unfolded the nature of the words, belonging to this part of Speech, in the Dialects of the Teutonic. We have seen, that the parallel terms to the Latin Qualis are Quel, Quel=Que, (Fr.) Quel, Quale, Qual=Che, (Ital.) Qual, Aquello, (Span.) as Tel, (Fr.) Tale, (Ital.) Tal, (Span.) belong to Talis. In CE=Lui, C^=Elle, CE=LA, which are acknowledged to be derived from CE, Lui, Elle, and La, we have compounds from the same materials. In the French Ici we have the full form of Ce, Ci, &c., as in the Spanish Assi; and in the ancient Language we have the compound Icelle, as in the present Celle. The French Etymologists, under Ici, justly remind us of the Greek Ekei, (Exel,) and Hic=Ce. If Ici is most related to the Latin word, it must be considered as a compound quasi Ic=C1. Aus=S1 seems only to be another form

of Ici; and here the composition is manifest. The Etymologists derive Aussi from Outus and Ad-Sic. The CE, CI, &c. have precisely the same origin and idea, as the Latin CE. The word Ain=Si was formerly written Ain=Sic; where the Sic is a compound of Ci=Ic. If we consider Ici or Ic=C1 as a compound, we perceive, that the C1=Ic is the same combination in an opposite order. The Ain denotes That, These, as in En, &c. Oui is quasi Oul, and means That—In That manner, as YES with its parallel The interjection Ouais has probably a similar terms does. meaning, That! applied to another purpose.—In Italian we have similar compounds from C10, That, and Lui, and Loro, &c., as Co=Lui, Co=Loro, &c. &c.; and of C and the Element T, ST, &c., as Co=^Stui, Co=^Stei, and Co=^T=Esto, where the Element ^T is twice repeated. In $Que=^{\Lambda}Sto$, $Qu=^{\Lambda}Sti$, we have a similar composition from the form Que and the Element ST. In Essa, Esso, Essi, She, Him, or It, They, we see the simpler state of the Element 'S, &c., as in Is, ISTE, &c. In STA, This, as STA Matina, This Morning, the breathing before the ST is lost, and preserved after it. In Italian too, STA signifies He Stands, or Is; and we now perceive, how STA, He Stands, or Is, bears the same relation to STA, That, which Existit does to Existens. In IsT= Esso, and 'ST=Esso, the Same, the Element 'S, 'T, &c. is doubled. Let us here mark, that the idea, which we convey by the word Same, is expressed by the union of two Pronouns. In Spanish we have the same simple terms, and the same compounds. Este and Esse mean This—That, and Este coincides with the form of the verb Estar, "To be in a place.—To Be, an "auxiliary verb." From these we have the compounds Aqu=Este, Aqu=Esse, and, with the Element ^L, Qual, and Aquello: Where the A precedes the Q, the compound seems to be triple, and the Agto be significant, quasi Ag=Que=^LLo.

Among the Spanish adverbs we have Aqui and Aca, Here, or There,

There, and Ac=Ulla, Yonder, which belong to our Element ^C and ^L, and mean This—and That. Ac=ULLA is only another form of Aquello, and the Aca will remind us of the Celtic Accw, (Welsh,) There, and the Greek EKEI, (Exel.) The EK in EKEI has the same force, as the Ek in Ek-Einos, (Exervos.) In Spanish, Alli means There, as in the French La. The Ahi, "In This Place," of the Spanish, is quasi Achi. The Algo of the Spanish, the Alc in the Italian Alc=Uno, and the Auc, quasi Aulc, in the French Auc=Un, belong, we see, to our Element ^L, in its uncompounded We see, likewise, the organical addition of C to the L, as in the English Ylk, Else, &c., and of its cognates K and S. Etymologists understand, that Alcuno, &c. is derived from Aliquis and Unus. The French Autre is supposed to be derived from Alter; yet it might belong to Other, Either, and various terms of the same kind. The Spanish C^=ADA, and the French Ch^=Aque, seem to be compounds of the same kind, and directly to coincide with the Celtic Gach, Each, Every, from which the French name Gaches is derived. General Vallancey has justly observed, that Gach " is of the same origin as well as signification with the "Cantabrian or Basque Gucia, whereof the Spanish Cada and the "Latin Quot were anciently only a variation of Dialect." Gram. p. 38.) I have before compared the Spanish Cada and the Celtic Gach with the Persian 3 - Chud, the pronoun possessive, KES, Any One, and the Latin Quis. The Zur in the Spanish ZuT=Ano, "Such and Such a one," might be considered as a compound of the same kind; though it should perhaps be directly referred to the Arabic ZAAT, نات which is the Feminine of غن Zu, as Mr. Richardson observes, "A Lord, Master.—Having, possessed "of, endowed with.—Who." We see, that Zu belongs to Qui, CHE, &c. &c. The ^T, used as the Feminine in Hebrew and Arabic, still means This—or That Being, so that Zaat may still be considered as a compound. Mr. Richardson explains ZAAT

by "A Lady.—Possessed of, or endowed with. The soul, essence, "substance, nature, the body, person." The Ano in Zur=Ano is the addition from the nature of the Language derived from But the term Fulano, "Such a man," is directly and wholly taken from the Arabic, as the Etymologists acknowledge. In Arabic, نلارى Fulan, says Mr. Richardson, "(In Spanish " Fulano,) the name of any unknown or undefined person. He, "that man—Mr. Such-a-one." The Spanish Qui=En, Who, is a compound of Qui and the Element 'N.

In Italian, CI, CE, NE, NoI, denote Us; and VI, VE, VOI, My hypothesis is, that these terms were denote Ye, or You. originally only Demonstrative words, denoting This, That, &c., but were afterwards applied to express different and distinct persons. Now in Italian, C1 and V1 are used in their original sense to denote This-or That, Person, Place, &c., as 'CI, VI Sono, Thase Persons, or Such Persons Are, or, as we express it, There are. In the phrases "Giacche sono Qui, Ci pranzero," Qui and Ci are only different forms bearing a similar meaning; "Since I am in This or That Place, I will dine in This or That "Place. - Puisque Je suis Ici, J'y dinerai." Again, in the phrase "Sono stato in Inghilterra, no VI tornerò piu,"-- "I have "been in England, I will not return to That Spot," the word is used in its genuine sense. The French, in the corresponding phrase to C1, V1 Sono, use terms denoting It and There, 'Il Y a. The Etymologists imagine, that the French Y, as well as the Italian VI, belong to Ibi. That the Italian VI belongs to IBI, is according to my hypothesis; though it is not easy to adjust the precise degree of Affinity, which they bear to each other. I suppose, that all these words denoting Being or Existence, which belong to the Element ^B, &c., are derived from the idea of Place. Now, though IBI denotes This or That Place, it probably relates to Place at once in its original meaning, and not

6.3

not to Place, as signifying in a derivative sense This or That. which I imagine to be the case with VI. The French Y. whatever be the source from which it is derived, signifies simply This — That — These; and it is indifferent to what it is applied, whether to Persons - Things, or Places. My Lexicographer explains Υ by 'To, At, For, In Him, Her, It, Them, — There, 'Thither.' The French En and the Italian Ne, which belong to the Element 'N, mean only This or That-These, and refer In the Italian the breathing is after the N¹, to all the Persons. as in the Celtic Article of the Galic and Irish Dialects, we have both An and NA. The French and Italians delight in the combination of these Demonstrative words, IL y En a; where we have IT—There or That, (Place,) They or Them joined together; and in Italian we have VE NE Sono. The French On is only another form of En, applied with the same meaning in another My Lexicographer explains On by "One, They, manner. " People."

We shall now understand, that the Italian and Spanish Si, denoting Self, and "Yes, So," &c., have precisely the same meaning applied to different purposes. When it denotes Self, it means That Being; and when it denotes Yes and So, it means Thus or in That Manner. We see, that So in English is only another form of Si, Yes; and I have shewn, that Yes has the same idea, when the breathing is before the 'S. The Italian Co=Si is a compound of Co and Si, bearing the same meaning as in the French Ce=Ci. In Spanish, French, and Italian, Si, Si, and Se, denote If, and correspond with the Latin Si. The ordinary Lexicographers bring the Latin Si to the sense conveyed by this race of words, when they tell us, that Si is used for Quod; and R. Ainsworth gives us, as the second sense of Si, "Seeing That." Hence it is, that Si is connected with such words as Quis, Qui, Si=Quis, Si=Quidem, &c. &c. It is marvellous

to observe how the mind is inclined to combine these words with each other. The Etymologists derive S1 from E1, (E4,) which I conceive to be quasi EJ, where the breathing is before the Radical consonant. Hence it is, that E1, (E1,) is so perpetually combined with particles, as they are called, which originally, as I imagine, denoted Being, or with words, which are acknowledged to denote Being, as Ei De, (E. de,) Ei Dee, (E. dn,) Ei Ge, (E. ye,) Ei Tis, Ei Tou, Ei Too, (Ει τις, Ει του, Ει τω,) &c. &c. The Latin S₁, &c. denoting If, precisely corresponds in form with the English So—That or This Thing, as I have before observed;—'SI me 'audies, gaudebo, So you will hear me, I shall rejoice;' and the sense of the Demonstrative part of Speech is connected in such a manner with the sense expressed by the conjunction If, that we unite these words together in our own Language, 'If So be that you 'will hear me, I shall rejoice.' The corresponding word in German, So, which means "So, Thus, after This Manner," is used as a Relative, and likewise as the Latin Conjunction Si, "Der mann, SO mir solches gesagt," The man, That or Who Said it to me, "SO es euch beliebet, If you please, If such be your "pleasure," as my Lexicographer translates it, who explains this sense of the word by "SO, If SO, If SO be That," &c.

Sin is a compound of Si and the Element 'N, This or That. The Etymologists derive it from Si and Ne. This is the same thing. I shall shew, that Ne originally performed the office of a demonstrative Part of Speech. Sin in one of its senses is explained by Otherwise, where in Other we see the same idea of This or That. Sine, as it should seem, is the preposition annexed to Sin. The Conjunction Si='N is unquestionably a compound of Si and 'N, and denotes This or That—So and So, as distinguished from something else—in This or That—Other manner; and Sine the preposition, when it is annexed to a word, means, that the thing or Person, to which it is annexed, is in

An-Other, or in a different state or position to that, with which it is compared. "Non possum vivere tecum, nec Sine te"—" Nec te " existente Hic, neque Te existente-Illic, Alio loco." Martinius has compared SI and SIN with Alioqui and Alioquin, which coincide with each other in the fundamental ideas annexed to them of This—That, Mode, Manner, &c. Let us mark again, how these terms denoting Being are combined with each other, Alius and Qui. The word Qui^ =N may be considered, as a similar combination to S1= N, with a minute variation in the turn of meaning. Though the explanation which I have given, as to the sense conveyed by Sine, is, I imagine, the true one; yet there may be some doubt still remaining, respecting the origin of the term. Sine may not directly belong to Sin, but may belong to the Element 'N, by an organical addition of the s, conveying the same idea. We must remember, that ANEU, (Aveu, Absque, Sine, Præter, Citra,) means s-INE; and in German we have OHNE. The Greek ANEU, (Aveu,) is joined with its corresponding words in ANEU=THE, ANEU=THE='N, (Ayeude, Ayeudev.) In Welsh we have ONI, ONID, and OND, "If Not, Unless, except;" but these words the Lexicographers conceive to be compounds of Os and Ni. They imagine likewise, that Os, If, is compounded of O and Ys, which latter word signifies 'Truly,' and which, we see, means YES, 'In That or This Manner.' Hence the Welsh join it with Er, He, as Ys Er, which might be rendered in Latin by Is Ip-se; and these terms they contract into SEF, says Mr. Richards, who produces, moreover, the phrase "Ys Er yw Hynny, To wit, That "is;" where we have three words, belonging to our Elements 'S, 'F, and 'N, bearing the same meaning of This or That.

In the Latin S=INGUL-us, the S may be either an organical addition, or it may be significant. Whatever it be, the composition is Celtic. In Welsh, *Unig*, *Unigawl*, or UN=IG, and UN=IG=AWL, mean *Singular*; where UN=IG is the same compound

as the Latin and Greek Un = Ic-us, and En = Ik-os, (Evikos.) The Welsh likewise use Sengl and Tengl, or $S=E_N=^G-L$, $T=E_{N}=^{G}-^{L}$, in the same sense. The S and T in these words seem to be significant portions. The Latin Singultus might belong to Singulus, under the idea of the 'Single, Distinct, Separate 'Noises,' which succeed each other 'One by One;' or it may belong to the Element SL, GL, denoting Noise. If the latter be the true derivation, the Singultus will be quasi Siggultus, or Sgultus, and the i will have arisen from the accidental insertion of a Vowel breathing between the letters representing the first Consonant of the Radical.—The Latin Sino, To Suffer, Permit, &c., may belong to Sin, under the idea of This or That. It may be imagined, perhaps, on the first view, that the origin, which I have proposed, is remote; but a little reflexion will reconcile us to the idea. One of the passages, produced under Sino by R. Ainsworth, is the following: "SINE fores, Sic, abi, noli aperiri;" where the word Sic will shew us the original idea. 'Let the Doors be So-in This or That manner, as they are.' The phrase might have been Sint Fores Sic, where Sic conveys the idea expressed by the sentence. Now if Sic had been converted into a verb, and the phrase had been 'Sicce fores, Thus the Doors,' if I may so say, or 'Let the Doors be Thus,' it would bear precisely the same idea, as that which I annex to SINE in my hypothesis. Let us mark the explanatory term Sic, which is a compound of our Element S^ and ^C, or of such terms as SI, CE, &c. and HIC, as I have before observed.

On the word SINISTER, I am unable to decide. The Etymologists derive it from *Sine Astris*, and it might seem indeed as if *Astrum* was a part of the composition. Whatever the *Ister* means in this word, it should seem, as if the *Ister* in the Greek *Ar-Ister-os*, (Aquateqos,) had the same meaning. Perhaps these words may be compounds of our Elements S^=^N=^S=^R, and of

436 ^R.R. ^.—C, D, G, J, K, Q, S, T, X, Z.

^R= ^S= ^R, denoting This—That. We cannot but mark, under the same form with the SIN of the Italian SIN=Istro, the particle Sino, Until,-Sino a Tanto Che-inSintanto; where the Sin certainly means That, and belongs to the Celtic Sin, That. Celtic combination An Tan Sin, "At that time," is of a similar kind to that of In=Sin=Tanto. The term $S^{-1}In$ is unquestionably a compound of S^=^N, as the Celtic Scholars would acknowledge, who will now see, that T^{-} AN is one of a similar kind from Ti=An, as S^=In is from So=An. The Latin T^= Ant-us I shew to be likewise a similar species of composition. same column of Mr. Shaw's Celtic Dictionary, where Sin, That, is found, I see likewise Singil, "Single, Alone, unmixed." On the whole, we shall imagine, I think, that the Latin S^=In=IsT=ER is a composition of certain terms, denoting This or That. I shall not pursue to a greater length my remarks on the composition of S^{-} N, as we cannot fully understand this subject, till the Element SN shall be particularly examined.

PARTICLES;

UNDER THE ELEMENTARY FORMS

^C, ^D, &c. and C^, D^, &c.

Particles belonging to the Element ^C, ^D, &c., which originally denoted This or That.

Ac, Et, At=Que, Etiam. (Lat.) In This manner, So, &c.

Element ^C^, ^D^, &c., which have been classed by some Grammarians under the name of Particles, as certain Adverbs, Prepositions, and Conjunctions; and I shall endeavour to shew, that they

were originally derived from Pronominal terms, denoting This-That, &c. I shall first consider those words, which belong to the form of the Element ^C, ^D, &c. when the vowel breathing precedes the Radical Consonant, either with or without a vowel breathing after it. I shall not anticipate the train of reasoning, which I adopt in my illustration of this subject, as it will best unfold itself, when the examples themselves shall be brought under discussion; yet it may perhaps be necessary to observe, that in one part of Speech, the Conjunction, as it is called, the probability of my hypothesis at once presents itself to the mind of the Reader.—The English Conjunction That, as every one understands and acknowledges, is a Pronominal part of Speech, at once Demonstrative and Relative, 'That is a subject, That requires ' much consideration, That it may be understood.' We all know, moreover, that a similar union of the Conjunction and the Pronoun exists in various other Languages, as in the Latin Quod, the French, Spanish, and Italian Que, Che, the Greek Oti, (Ori, Quod, Quia, O, 71, Quod,) &c. &c. &c. In English, and in other Languages, when terms, performing the part of Conjunctions, which are derived from different sources, are adopted; still the Conjunction That, and its cognate terms, may be frequently adopted, without disturbing the turn of meaning, which these various Conjunctions are employed to express, as 'Unless That'-'Provided That'-'If That,' &c. &c.-'Pourvu Que,' A moins, 'Que,' &c. &c. We shall hence understand, how terms originally denoting That might be applied to those various turns of meaning, which the various species of Conjunctions, according to the division of Grammarians, are employed to convey, and which are in fact oftentimes expressed by words drawn from a variety of sources, distinct and remote from each other. My French Lexicographer thus explains the various turns of meaning, in which Que is applied: "Que. Conj. 1. If. 2. Unless, without, " before.

"before. 3. When, as, at a time when. 4. Till, until. 5. That. 6. If, when. 7. Lest, for fear That. 8. Than. 9. Where. 10. When. 11. Whether. 12. Because. 13. As. 14. How, how much, how many. 15. How. 16. Why. 17. What. 18. Nothing but, only."

I shall commence my enquiries by considering a Preposition, belonging to the form of our Element ^C, ^D, &c. with the breathing preceding the Radical Consonant; and we shall here see, what all have understood, how words performing the office of Prepositions and Conjunctions, may express a similar meaning, or contain the same fundamental idea, though they are applied to purposes somewhat different. Though Grammarians have with good reason distinguished words, applied to these different purposes, by the different names of Conjunctions and Prepositions, yet they have not been ignorant, that such words often conveyed a similar sense, and belonged to the same fundamental notion. Every Grammarian who records the fact, which often takes place, that the same word is used both as a Preposition and Conjunction, necessarily supposes this circumstance to exist, as every one allows, that the same word, however various may be its senses, contains one common and fundamental idea. The first term, which I shall examine, is the Latin AD, "To, Before, At-"Until," &c. &c., which meant originally, as I imagine, 'That-· Place—Time; and it may be considered, only as another form of ID. The Demonstrative part of Speech, when it is applied to a distant Place or Time, naturally passes into the idea, which we annex to such Prepositions, as AD, signifying To. Thus in the phrase 'Eo ID Londinum,' if I may so say, when it becomes familiarly repeated, we readily and almost necessarily pass from the sense of ID to the use of AD—'Eo AD Londinum.' The Conjunction UT, I conceive, likewise, to be another form of ID; and thus we see, how Ap and UT contain the same fundamental idea.

idea. We find, among the interpretations of R. Ainsworth for Add, the term *Until*, and the terms "Till, Until," are adopted, as we have seen, among the senses of a Conjunction. We know, that *Till* and *Until* are used both as Prepositions and Conjunctions—*Till—Until* such a time—*Till—Until* he returns—*Till—Until—That* he returns. In our ancient Writers, and in Scotch, *Till* is familiarly used, as *To* now is in our ordinary Language; and I have suggested on a former occasion, that *Till* may perhaps be derived from a Pronominal word signifying *This—That*, &c.

The Etymologists justly compare Ap with AT, AST, (Lat.) and the Greek Atar, (ATRP); and they inform us, likewise, that it is compounded with adverbs, as Adeo, which is the same, says Vossius, as "Eo usque, Ap eum usque modum." The explanatory English word AT is acknowledged to belong to AD. Let us mark how AD is joined with a term of the same sort, Eo, belonging to Is, ID; and we shall agree, that AD=Eo might have been AD=ID. The first sense of Adeo in Robert Ainsworth is So, where we have the original idea, This-That-or Such a manner. In the combination Ad=Huc, quasi AD=Hoc, we have precisely the same union, which I suppose in AD=ID. It is marvellous to observe, how these terms are inclined to be united with each other. Let us again note the explanatory word Usque, where the Us has the same meaning of Is—'That;' and we observe, moreover, that it is combined with Que, and forms a similar union to that of Huc=CE. In the phrase Us=Que Ut, we have, in fact, the union of terms, denoting in their original meaning, without regarding the primitive sense of Us,—'To That — That;' and in the combination Us=Que=Que=Que, we have the union 'To That-'That-That,' applied to a different purpose. In the phrases Us=Que AD=Eo, Us=Que Ad=Huc, we have the combinations 'To 'That To That;' and thus we see, how terms, conveying a DemonDemonstrative idea, are crowded together; which will shew us how frequent and prominent this idea presents itself in the construction of Languages.

One of the senses of AD=eo, according to R. Ainsworth, is "And "Therefore;" and he explains ID=éo, which is acknowledged to be derived from ID and Eo, "Therefore,-Propera ADeo tollere puerum," where we might put "Propera IDeo tollere puerum." Now AD and ID, in AD, $ID E_0$, coincide in meaning. While I am examining the term Ideo, I cast my eyes on Identidem, where we have another combination—Idem—Idem; and likewise on Igitur, "Therefore.— "Then, Thereupon," where we see the Is-ID. The sense of Thereupon is the same as Upon This-Upon That. The Etymologists understand, that Igitur is related to Is; and they derive it therefore from "ID Agitur." It may be a compound of ID-ID, or ID-ITA, or the Itur may be referred to such terms, as Autar, (Αυταρ,) Eter-os, (Ετερος,) Other, &c. Let us mark the explanatory word ITA, which the Etymologists acknowledge to belong to Is, Out-os, (Outog.) In Itaque, we have the union of ITA and Que. The Etymologists justly compare the Latin ITA with the Greek EITA, (Ειτα, Postea, Deinde,) Upon IT or That; to which we must add EITHA= A, Ep=EITA, (Ειθαρ, statim, confestim, Επειτα, Deinde, Postea.) We cannot but note the Demonstrative Ea in the explanatory word 'Post-Ea;' and De=Inde, we know, signifies 'From That—place—person—time,' &c. In the phrase "To Ep= " ΕιτΑ," (Το Επειτα, Posteritas,) we see a combination with a kindred term. The Er belongs directly to the Greek Epi, Epei, (Επι, Ad, $E\pi\epsilon_i$, Postquam,) which we must refer to the Element ^P, &c. bearing the same sense. In the Latin Ap=UD, At, we see a combination of a similar kind from AB and UD or ID. Among the senses of Ab, R. Ainsworth justly gives us, 'After, next,—At— 'In,' &c. The Latin AT will remind us of the AUT in Autem, or Aut=Tem; and the Tem is the same as the Dam or Dem in 'Qui = Dam, Idem or Id = Dem;' and the Tem in Item or 'It=Tem,' 3 K

'It=Tem.' Thus, then, Autem and Item are only different forms of Idem.

The Greek Eis, (Eig, In, Ad,) has a similar meaning to AD; and we shall now understand, that it has the same radical meaning as a word under the same form, Eis, (Eig, Unus,) One, This or That Person, though applied to a different purpose. Let us mark the Latin In, and remember its parallels, the English In, and the Greek En, (Ex,) which have the same relation to En, (Ex, Unum,) Unus, and One.—If the Reader should doubt about the original sense, which I have supposed to be annexed to Ap and AT, of This, That; I shall produce a Greek word, which is acknowledged to signify, as an Adverb and Conjunction, "In This or "That Manner," and to be often used precisely as the English That is; while the same word is likewise employed as a Preposition, corresponding with AD. The Greek Oos, (Ω_{ζ} , Ut, Sicut, Perinde ac si, &c.—Pro $\pi \rho o \varsigma$, Ad, In, $\Omega \varsigma$, Ita, Sic, pro $O u \tau \omega \varsigma$,) signifies Thus—in This or That Manner—As,—That, (Eyw our εγινωσκον, ως ουκ εδει, &c. ubi Ως ponitur pro Oτι); and it likewise means To. It would be idle to produce instances of senses, which every schoolboy acknowledges. Another form of Oos is Eoos, (as, **E** ω_{ς} .) It is curious to mark the particles, with which Oos, (Ω_{ς}) is joined, and which have all, as I imagine, the same original meaning; as Oos Ei=The Ge, Per, An, Ara, An Dee=^ La=Dee, An Dee=Pou, Dee=Pou=The='N, Ge, Oun, Oun Dee, Te, &c. &c. (Ω_{ς} , ω_{ς} είθε γε, ω_{ς} σπερ, ω_{ς} αν, ω_{ς} αρα, ω_{ς} αν δηλαδη, ω_{ς} αν δηπουθεν, ως γε, ως ουν, ως ουν δη, ωστε.) The Etymologists acknowledge, that Oos, (Ω_{ς}) belongs to Os, (O_{ς}) and Autos, Ov $\tau_{\varrho o \pi o v}$, Quemadmodum,—Αυτον τροπον, ωσαυτως, where we again see the Oos, (Ως,) joined with the word Autoos, (Autus, Sic.) I suspect, that Pros, ($\Pi_{\rho \rho s_{\bullet}}$) or $Pro={}^{\Lambda}S$, is a compound of Pro, ($\Pi_{\rho o}$, ante,) and $E_{1}s$, Oos, (Eig., Ω_{f} ,) or some word belonging to our Element 'S, bearing a similar meaning; so that Pro= S will signify 'Thus 'Forward—Forward to This or That Point.'

Let us note the term Ei, (E, Si, An, Utrum, Utinam, Quod,) which I conceive to be quasi EJ, and of the same radical meaning with Oos, (Ω_{ζ}) &c. The sense annexed to Ei, or E_J, as denoting If, may be conceived to be, 'Were things in This or 'That manner'—'Were things So,'—('So he would but hear;') and hence we join If with That, and So-'If That-If So be,' as I have before shewn. In the sense of Utinam and Quod, which Er or Es bears, it directly signifies That—'O That such things were!' THE, (Θ_{ℓ}) added to E_{ℓ} , (E_{ℓ}) conveys the same meaning as THE in English does. Our Etymologists acknowledge, that UT belongs to ID, Oos, Os, $(\Omega_{\zeta}, O_{\zeta})$; and they remind us, moreover, of Oti, (Ori,) That, and Ote, (Ore, Quando,) which signifies 'At 'That time, That.'—I might here suggest, that Eoos, (Euc, Aurora; -Oriens,) denoting the East, under the same form as the Conjunction, may possibly bear the same meaning of 'That—the 'Distinguished quarter of the Heavens.' But on this point there are many difficulties. The WEST is a kindred word. terms corresponding with the Latin AD, and the English AT, in the Celtic Dialects, are AD, AT, (Welsh,) AIG, AG, (Gal. and Irish,) which are used in the formation of Participles, as I shew more fully in another place. General Vallancey, in his Irish Grammar, explains Ag by "AT, with, by, in possession of;" and the next term to it is Aga, "Whose, Whereof;" where we see it in its original state of a Pronominal part of Speech. In the same column we have Ag=So, Here'; where again Ag is applied in its just sense, and AD, "A, or An." The Latin Etymologists have referred AD to the Hebrew Ty OD, "Ad, Usque Ad," says Martinius. Mr. Parkhurst explains this Hebrew word by "YET. " still.—Besides, moreover.—Again, YET, again.—More, Until. To, "Unto.—Repeated, Both—And," which I shall consider more particularly in another place.

The Greek Eti, (Eti, Adhuc, Etiamnum,) and the English YET,

YET, contain the same idea of IT, ID, or 'This or That thing.' Let us mark the explanatory terms AD=Huc, 'To This or That,' Etiam, 'In This manner,' which are acknowledged to contain the same idea. While I examine the Greek Eti, (Eti,) in my Greek Vocabulary, I cast my eyes on ET-es, (ETTS, Socius,) ET-Air-os, (Εταιρος, Amicus,) Ετ-Er-os, (Ετερος, Alter,) where the Ετ has the same meaning of 'This or That—Person, a certain Person.' The Etymologists under YET refer us to the Saxon Get, Geta, the German Jetzt, the Welsh Etwa, Etto, and the Greek Eti and Authis, (Eti, Aulic.) The form of the Saxon Get, which may be quasi Ge=IT, might lead us to think, that $\Upsilon=ET$ was a compound. The Greek Authi, (Aυθι, Illic, Ibi;—Huc,) and Auto=Thi, (Αυτοθι,) 'In This or That place,' is acknowledged to be derived from Aur-os, (Autos, Ipse,) 'He, This or That Person;' yet Authis, (Autis, Denuo, Rursus, Iterum; Posthac, in Posterum,) which is nothing but That or This, succeeding or added to a former action, 'Post-Hac,' the Lexicographers derive from Au, (Av.) It is justly joined with a cognate word, the Article, to express the same thing, as 'O, Ee, ' To Authis, The Succeeding one,' (O, η, το Authis, Sequens, Posterus.) This is a similar combination, with a similar meaning, to 'O, Ee, To 'Aut-os,' (O, 7, 70 Autos, Idem,) The This-The That-or 'The Same 'again, as before,' or, as we might express it in English by congenial terms, 'The As, The Such.' We see now, that Autothi, and Authis, (Autob., Illic, Aubis, Rursus,) means 'In That or Such a Place,' and 'In That or Such a Manner;' which latter phrase of itself, without the addition of As before, or Again, would denote the repetition of the action before done, as a similar combination does the identity of the Person, who was before mentioned. Idem, we know, too, is from Is—' This or That person.' We find, however, that Au, (Au, Rursum,) in a similar sense to Authis, (Aubis, Rursus,) exists by itself; which must lead us to refer the one to the other; and yet we at the same time see the relation relation of Authis, (Aubis,) to Autos, (Autos, Ipse.) This difficulty can only be solved by supposing, what I have often thought, that Autos was itself a compound of Au, or Av, Af, Ap, denoting Being, He, &c, corresponding with Ef, (Welsh,) &c. &c., and ^T or T^, bearing the same meaning. Perhaps the Aut or Apt is the same combination as Ips, in Ips-e. In Autika, (Autika, Mox, Statim, Protinus, Illico,) we have the explanatory term Illico, which belongs, we know, to Ille,—This or That Person, and which will shew us, how such ideas may be connected with the notion of This or That.

While I am examining Eis, (Eig, In, Ad,) I cast my eyes on Ek, or Eks, (Ek, Eξ, A, Ab, De, Per, Propter, Juxta, &c. &c.) which, with its parallel term Ex, appears to have the same Radical meaning with Eis, (Eig, In, Ad,) This or That-Place, Person, &c. by way of distinction; and the different turns of meaning, belonging to these words, as To-From, are merely the effects of The Lexicographers explain both of them, in some. of their senses by the same words, as Per, Propter, In, Post. There is, however, considerable difficulty on this point; and I have given a different idea, respecting these particles, Ex, &c. on another occasion. The English Our seems to belong to the Latin Ex; and, if this should be the case, we must derive from the same origin the parallel terms to Out, as Ut, Utan, (Sax.) Uyt, (Belg.') Aus, Aussen, (Germ.) Ut, Uta, Us, (Goth.) Ud, (Dan.) &c. &c. The English UT in Ut-most, and Utter, with its parallel terms : Itter, (Swed.) Ytre, (Isl.) Utter, (Sax.) belong to This seems to bring us to Other. To UTTER is Out—Outer. To Bring Out. The terms Issue, Issir, (Fr.) Uscire, (Ital.) belong to Ex. I have suggested, on a former occasion, that Ex and Our might possibly belong to our Element, under the idea of the Base, as the Spot From or Our of which things may arise; and I shall exhibit a race of words, in a future page, which signify,

signify, To Stir up or Out the Earth, Estia, (Eστια); and from this idea may Ex, Out, &c. be derived. When various notions concur, which might on the first view of the question with equal probability supply the origin of the word; and when we have no evidence, from which we could decide on the original sense annexed to it, our judgment must be suspended, till such evidence can be obtained. I shall here, however, produce whatever arguments present themselves, which may seem to shew, how such terms might naturally be referred to the race of words now before us.

Outrage is in ancient French Oultrage, which is referred to Outre, Oultre, and which they derive from Ultra. Now Ultra has precisely the same meaning as Ex=tra, and the Ul certainly belongs to Ullus, Alius, &c. This will serve to illustrate my Hypothesis, that Ex belongs to Hic, Is, &c. While I am examining my Saxon and Gothic Dictionary, I cast my eyes on the Gothic UTHthan, · Autem; where we see a Conjunction, derived from the idea of This—That, as Autem is. In the same column of Lye's Dictionary, I perceive "UTH=Wita, Wite, Wuta, Sapiens, Sophista, "Philosophus;" where the Uтн appears to be used in its intensive sense, and Wite is Wise. Adjacent to Out in Skinner is OUGHT, which must surely be considered, as a Demonstrative part of Speech,—'This or That thing—Any thing—It,' &c. The parallel terms to Ought are Owiht, Awiht, Aht, Uht, (Sax.) &c. &c. Skinner says, that Awiht is the same as Wiht, "Quodvis "Animal." Lye explains Wiht by "Wight. Creatura, animal, "res.—Res quævis; aliquid, quidvis, quidquam." Wight must probably be added to these words; and if so, the term Whit,-"Not a Whit," belongs to the same race. From Ought is derived N'=Ought, N=Aught, as Nequis is derived from Ne and Quis. There is no part of the office attached to the Etymologist so difficult, as that, in which he endeavours to discover the origin of certain

certain terms, when different senses belonging to his Radical may alike be applied to them. I have examined, on a former occasion, (page 121,) various terms, which denote Property and Possession; and I have supposed, that they may be derived from the EARTH, as the great source from which Property and Possession are acquired. Nothing can be more obvious and natural than this origin. Yet we may observe, that the idea of Property, or of that, "quod cuique Proprium est," might be derived from the notion of 'This or That Peculiar Person,' as distinguished from another; and thus Ought, Own, in Gothic, Aigin, &c. HEAD, or HOOD, &c. (as Maiden-Head, Knight=Hood,) might belong to the race of words now before us. Among those terms, I have produced Again and Against, which may possibly be likewise attached to the train of ideas, which I am here unfolding. The Ag=Ain might be a compound of the Elements 'G='N, denoting Being, of a similar kind to Idem, or Id=Dem, O Autos, (Ο αυτος,) &c., and might mean 'This—That, as before, or re-'peated—The Same;' and the idea of Ag=Ainst directly connects itself with This and That; as 'This, corresponding with-distin-'guished from, or as opposed to That.' I shall shew, that the Greek Anti, and Ant=ios, (Avri, Avrios,) belong to the Element 'N, denoting Being, to En, (Eu,) One, An, (Eng.) &c. &c. Yet these words Again, Against, &c. present to us considerable difficulties, which it is not easy to unravel.

In Saxon, Oth signifies "Donec, Usque, Dum," which coincides with the sense of Add. &c. Eis, (Eig.) &c. Lye explains "Oth Hider," Huc Usque, where in Huc, Us, we see This—That. The Us is only Hic—Huc, &c. as I have before observed. Let us mark the Saxon Hider, belonging to the English Hither, which I have shewn to be the same combination as Other; and I have likewise shewn, that T'Hither belongs to Hither, as Th'-Ateron does to Eteron, (Θαταρου, Ετερου.) I have suggested,

suggested, that AD, EIS, (E15, Ad,) and EK, EKS, (E2, E5, E1) EX, may have the same radical meaning of This or That, as the Distinguished—Marked Spot, to which things are referred, whether as That Spot, To which they tend, or as That, from which they proceed. Now the Saxon Oth, Usque, is sometimes used in composition for AD, as Oth-Clipian, Adhærere; and sometimes for Ex, as Oth-Brædan, which Lye explains by Eripere, Oth-hæbban, Ex-Tollere, and Oth-Byrstan, Erumpere; where we see, that Oth coincides with Out, To Burst-Out, To Stick—Break,—Burst, &c.—to That or Such a point, if I may so express it, so as to unite, proceed forward, &c. &c.

In the same column of my Greek Vocabulary, where the preposition Ek, (Ex,) is, I find Ek=Ast=os, (Exactos, Singuli, Quisque;) and in an adjoining one, Ex=Ein=os, (Exeuvos, Ille.) We cannot doubt, but that Ex in these Pronouns signifies That; and the same form of the Preposition might be some inducement for us to imagine, that the Preposition contained originally a similar The Ast in the former Pronoun is an addition of the Element ^C, ^K, ^S, &c. to itself; and the Ein belongs to the Element 'N, bearing a similar meaning. I find, likewise, in the same column with Ek=Ast=os, (Exastos,) EK=As, (Exas, Procul,) which is a similar compound, applied to a different purpose. 'That—That Distance,' by way of exaggeration. We have various compounds of the same words, belonging to different forms of our Element ^C, ^S, &c. C^, &c., which are all employed for the same purpose of increasing the signification, Ek = Ast = AstAtoo, Ek = Asta = Chee, Ek = Asta = Cho = Thi, Ek = Asta = Cho = Se, Ek = Asta=Cho=The=^N, &c. (Εκαστατω, Longissime, Εκασταχη, Ubique, Εκασταχοθι, Ubique gentium, Εκασταχοσε, Quocumque, Εκασταχοθει, Undique,) which mean This There—That There Spot—Way off, &c. &c. In Ek=AT=Er-os, (Εκατερος, Alteruter,) we have a combination of Ek and ET=Er-os, (ETEPOS,) which is compounded of our Element

Element 'T and 'R. In Eκ=Oon, (Εκων, Voluntarius, qui sponte aliquid facit,) we have a similar compound to that of Ek=EIN in Ek=Ein-os, (Exervos,) as it means Is Ipse, Is qui ex se Ipso aliquid facit. In Auth=Ek=Ast-os, (Αυθεκαστος, Severus, rigidus;-Justus,) we see a compound from Aut-os and Ek=Ast=os, (Autos, Exaστος); and the term denotes 'A Person, who acts from Himself, or ' from his Own feelings, without regard to the condition of others,— 'The Selfish Personage,' as we express it. The word literally means 'The Each-Himself man,' if I may so say;—the man, who acts as if Each individual was acting only for Himself. The various compounds of Aut-os, (Autos,) will shew us the different uses to which the Demonstrative Pronoun may be applied, as AUTH=Ades, (Αυθαδης, Sibi placens, se ipsum admirans,) AUTH= Airetos, (Αυθαιρετος, Voluntarius, Ultroneus); where we have the same sense, as in Ek=Oon, (Εκων,) AUTH=ENT-es, AUTH=ENTeo, (Αυθεντης, Qui suâ manu se perimit; -- Auctor cædis; Auctor quilibet; -- Dominus, Auctor, Αυθεντεω, Auctoritatem in aliquem usurpo, Dominor,) from which, as we know, the term Authentic is taken. The Ent in this word is not derived from Ιεσθαι, Mittere, Αυτος Εις, Έντος, qui se ipsum mittit ad negotia; or from Evw, occido; but it belongs to the Element 'N, bearing the same meaning as Aur. On a former occasion, (p. 257.) I have referred Auctor and its parallel terms to the idea of the Base, which is probably right. Yet we ought to observe, that Aut=os, (Autos,) has here precisely the same meaning as Auctor; and thus the original idea of this latter word might possibly be the same as that of the former. This word Auctor seems to be directly attached to Augeo, which must likewise be referred to the Base, if my conjecture is right respecting the source of Auctor. The Latin Augeo, however, appears to belong to some Saxon and Gothic terms, which may be thought not to be derived from the Base. All this will be examined on a future occasion.

We shall now understand, that Ac, ET, and AT, whether as simple or compounded, in AT-Que, all belong to each other, and denote Hoc-ID, &c., 'In This or That manner, Likewise, So. 'Also.' Robert Ainsworth explains Ac in one sense by As, where we have both the Demonstrative and the Relative idea; "Est "animus erga te Idem, Ac fuit;" where the Demonstrative Pronoun Is, in Idem, has the same relation to Ac, which That has to itself in its two uses of the Demonstrative and Relative turn of meaning, "My mind is towards you That, That it was." The Greek EEDE, (Hoe, apud Poetas pro Kai,) EEDEE, (Hon, Jam,) mean 'In This manner—time.' The Etymologists derive Ac from Ago; "Notat enim Agmen," says Martinius, "quia est Conjunctio "Copulativa." He sees, however, its relation to Arque; and he refers it, moreover, to terms connected with our old English word EKE. We should imagine, on the first view, that EKE, and its parallel terms Auk, Eac, (Goth. and Sax.) Æc, (Sax.) Etiam, Auch, (Germ.) &c., belong to Ac; yet on this point considerable difficulties occur. EKE, &c. has been justly referred to a race of verbs, signifying To Add, as Eacan, (Sax.) Aukan, (Goth.) &c.; and if EKE is attached to Ac, the verbs Eacan, Aukan, (Sax. Goth.) &c. must be derived from Eke, &c. Yet the same verbs seem to connect themselves with the Latin Augeo, and the Greek Auxo, $(Av\xi\omega$,) which are attached, I imagine, to a very different idea. Martinius reminds us, under Ac, of the Hebrew אך AK, Utique, another of these terms; where let us mark, in UTIque, the UT belonging to ID. He observes, moreover, "Alludit ad Græcum "Kai, per metathesin." The Greek KAI and TE, (Kai, Te,) under the form K[^], &c., have a similar meaning.

We perceive in AT=QUE and AT=QUI, how the QUE and QUI are joined with AT; and this will shew us the original idea annexed to AT, which I conceive to be the same as ID. AUT is another form of AT, applied to a different purpose, as in 'AUT

'Cæsar-Aut Nullus,' which means 'This character-Cæsar, That character - Nobody.' It is agreed, that Or and its parallels Oder, (Germ.) &c. belong to Other-Either. R. Ainsworth explains Aut by "Or, or Else, Either.—It is often Disjunctive.— "Sometimes Conjunctive." We all know, that Que has this double use; and we learn, from my Hypothesis, that the Conjunctive and Disjunctive senses are alike annexed to these words. In the Conjunctive sense, This or That marks or demonstrates similitude; and in the Disjunctive it marks difference. 'Cæsar ET Pompeius pugnarunt, Cæsar fought-In This manner-So-Likewise Pompey fought. - Cæsar Aut Pompeius vicit, Cæsar conquered, He, such a person—Cæsar conquered—Either '—the Other,—That person—Pompey conquered.' The Greeks, we know, use H, vel, which bears the same relation to H, the Demonstrative article and the Relative, (O, η , τo , $o \varsigma$, η , o,) that Que bears to Qui, denoting 'Any one, Who.' The Greek KAI, (Kai,) means likewise ET and AUT; and it expresses various other turns of meaning, which we annex to different Adverbs and Conjunctions, &c., as Sic, Nam, Sed, AT, IGITUR, &c. &c. as the ordinary Lexicographers detail to us. In the Vocabulary of Hederic we have thirty different senses annexed to KAI, (Kai,) and the particles combined with it. In one sense we have "Ponitur et " pro Relativo Pronomine,' where we have the relation of Que to The Latin Autem, as I have observed, belongs to Aut, as Idem or Item to Id. One of the senses of AUTEM produced by R. Ainsworth is "And Also," where we unequivocally see the sense of Item-In This Manner. In the sense of But it marks Difference and Distinction-This-That thing, as compared with another thing, by way of some dissimilitude.

The Lexicographers, though they have explained AT by the general expression But; yet they have added the various purposes, to which this particle is applied, of Distinguishing—whether

by Admiring-Dispraising, &c. &c.; and this brings us to the use of the Distinguishing-or Demonstrative Parts of Speech, This-That, &c., AT, says R. Ainsworth, "But. (1) In Distinguishing, "(2) Threatening. (3) Admiring. (4) Dispraising. (5) Ob-"jecting and Answering." The Etymologists understand, that the succeeding word AT-AT, "(1) An Interjection of surprise, "Hoida! how now! (2) Of Admiration; Ostrange! O wonder-"ful!" &c. &c., belongs to AT; where we fully see the use of the Demonstrative Part of Speech, That! That! and we moreover again observe a propensity in the mind to combine terms of this nature. Hence we have the Greek OT-OTOI, (OTOTOI, Heu! Hei!) ΑΤΤ-ΑΤΑΙ, ΑΤΤ-ΑΤΑΙ-ΑΧ, (Ατταται, Ατταταιαξ.) Let us mark the adjacent words to Ototoi, (OTOTOI,) Oti, and Ote, (OTI, Quod, Quia, O, re, Quando,) which belong to the same idea, This -That,-That time, When; and they are alike to be referred to our Element 'T' or T', whether we consider them as simple or compounded. Eute and Eeute, (Eute, Aliquando, Quando, Hute, Sicut, Tanquam,) still mean At That time That, in That Manner. While I am examining Eeute, (Huts,) I cast my eyes on EEUS, (Hus, Bonus; -Strenuus,) which might mean That - Illustrious Personage, by way of distinction; but on this there are some doubts. The preceding word to Ototoi, (OTOTOI,) in my Greek Vocabulary, is Otobos, (Οτοβος, Strepitus,) which may lead us to consider, whether OT in this word be attached to the interjection of Ad-The Tob in Ot=Tob belongs probably to the Element TB, denoting Noise. In the same column with Attatai, (Ατταται,) I find Atuzo, (Ατυζω, Terreo, Perturbo, Obstupefacio,) which relates to a state, according with the sense of the Interjection; but whether it be significant I cannot decide. There is another adjacent word Atto, (Atta, Prosilio, subsilio, subsulto,) which may mean, 'To move from This place to That—Here and There.' The example cited by my Lexicographer brings us to this very idea,

idea, ATTWI δευρω κακεισε. I produce, however, in another place, words, expressing Motion, which are derived from a different train of ideas. I must observe, however, that on the origin of the Interjections, belonging to our Element, considerable difficulties occur.

Let us now mark another adjacent term to ATT-ATAI, (ATTATAI,) the Greek ATTA, the term of respect to the old Man, which may mean the 'Is, The Being or Personage—This or That 'Illustrious Being or Personage,' (ATTA, vox, quâ juniores Senes compellant, sodes amabo, Pater, Lat. ATTE, Senes.) Whatever we may think about the origin of ATTA, (Aττα,) as denoting 'This— 'That, or The—Distinguished Personage;' we have a word, under the same form, which actually means, as a Pronoun, This—That, or in the plural These and Those, as ATTA, (ATTA, pro aTWA, Aliqua, Quædam; -- vocula in sermone plane abundans); where we see unequivocally the idea supposed in my Hypothesis. word ATTA, (ATTA, Quædam,) is not put for ATWA, but appears under its true form. When it seems to abound, or to be idle, as it is called, in a sentence; it assumes one of the characteristic offices of these Demonstrative Parts of Speech, which are added for the purpose of conveying more strongly what was already expressed, as Πολλα ATTA ματην δια σπουδης εσχεν, " Multa studiose " frustra curavit—Many such things;" and Ποια ATTA διεπραξατο; "Which of These sort of things did he do?" &c. &c. ATTA likewise means a person, "qui talipedat, hoc est, propter "vitium crurum, aut pedis, plantis vel talis, insistit." is probably derived from the Hobbling mode of walking, (as we express it,) which belongs to the ATTA, or Old Man. The Etymologists derive it from ATTW, Salio. While I am examining this term in Vossius, I cast my eyes on Attubus, which means a person "qui laborat linguæ vinculo;" and is derived from A and $T_{\nu\pi\sigma\varsigma}$, "quia sensa animi expedire nequit verborum Typis sive "formis." The Attubus might possibly belong to the Old Man.

the Atta; "Canus, comosus, hispidus, trux, Attubus," (Auson.) as it is corrected by Scaliger. The At, in At=Avus, must be referred to this race of words, Atta, (Aττα,) as the Av in Avus, to the Element 'B, 'V, bearing the same meaning,—to AB, (Arab.) &c. Assa in Latin means "A Dry Nurse:—"A Midwife or nurse, that tends lying-in women;" and it is justly referred by some Etymologists to Atta, (Αττα,) who produce the terms of address, as distinguished from each other, To δε Παππα πατρος, Τεττα φιλου, το δε Αττα τροφεως, Το δε Ηθεις αδελφου. The parallel terms to Atta, Father, are to be found through a wide compass of Human Speech; and they have been collected, with some minuteness by many, who have written on the theory of Languages.

I have supposed that these terms, denoting This or That, are derived from Place; and it is extremely difficult to decide, in many cases, whether the Primary or the Secondary idea has afforded the immediate origin of the term examined. On the first view we might suppose, that AD belonged to the notion of Place, as 'Eo AD Londinum,' 'I go Place London;' yet, on carefully examining the whole subject, I cannot but conclude, that the Secondary idea has generally operated, and that AD may be considered as only another form of ID. We find, through the whole of these discussions, that every thing tends to confirm this Hypothesis. The sense of AD, we see, connects itself with motion, as 'Eo AD Londinum,' 'Itum AD Londinum,' 'I go, To go-to London.' Here some difficulty will arise, as I before suggested, in deciding on the precise idea, from which certain words, belonging to our Element ^C, ^D, &c., denoting Motion, are derived. On the first view, we should imagine, that terms. expressing Motion, To Go, &c., as ITum, &c., were directly taken from the Earth, -Earth, the Spot on which that Motion was made. In many cases, under other Elements, we shall find this to be the

fact; and some of the terms belonging to our Element ^C, ^D, &c. were probably directly taken from the EARTH. Let us mark the form of Adeo, (the Adverb,) "To That pass," and Adeo, (the Verb,) 'To Go to;' and we shall be inclined to think, that it was the same word, applied to different parts of Speech. If such should be the fact, then Eo, the verb, may be considered as Eo, That, (the Demonstrative Pronoun); and thus Eo, 'I Go,' originally signified, Eo, 'I That,' if I may so express it, or 'I pass ' from This place to That.' According to such an Hypothesis, wherever the 'T occurs, as in IT, ITum, it should be considered as belonging to the form of ID. In IB=am, IBO, IVI, we have the Element 'B, 'V, &c. belonging to IBI. It is oftentimes very difficult to distinguish between the Radical part and that, which arises from the analogy of the Language: and such is the difficulty, which exists in the terms before us, IT, IB = am, Ivi.

The Greek Eimi, (E141, E0,) is perhaps quasi Ej=mi; and I have suggested, in a former page, that perhaps Eimi, (Euu,) Sum, is likewise quasi Ej=mi. But however this may be, we see the true form of the word signifying 'To Go,' in Eis, Eisi, (Eis, Eisi,) as we do that of the verb signifying To Be, in Eis, Esti, (Eig, Eoti.) We cannot but note the coincidence in form between these words, which express Being and Going; and they agree likewise with each other in their Radical idea. I suppose, that the verb of Being, Esti, (Esti,) means 'He Is-Placed;' and the verb denoting Going, Eisi, (Eisi,) means, as I suppose, in its primary sense, 'He Places,' if I may so say, or 'He Goes from Place to The Greek Iemi, (Inu., Mitto,) appears in its true Radical form in Ies, Iesi, Iethi, (Ing, Ing., Iel.,) &c.; and the sense of Sending is derived from that of Placing, Putting, &c. R. Ainsworth justly explains Mitto in one sense by "To Put in, To Put. "In Acta Mittere-Sub jugum," &c. In another sense he explains plains it by "To make to Pass, To Go;" and thus we see, how, under a different point of view, Eimi, $(E_{i}\mu_{i}, E_{0})$ To Go, and Iemi, $(I\eta\mu_{i}, Mitto_{i})$ To Send, agree with each other. This verb Iemi, $(I\eta\mu_{i},)$ is supposed to belong to the verb Eo, $(E\omega_{i})$ From a word under this form Eo, $(E\omega_{i})$ the term Eimi, $(E_{i}\mu_{i}, Sum_{i})$ To Be, is likewise supposed to be derived; and it is imagined, moreover, that it signifies $Induo_{i}$, which means, To Put or Place on, and $Colloco_{i}$; where we have the very idea proposed in my Hypothesis, $(E\omega_{i}, E\sigma\omega_{i}, -E\sigma\sigma\epsilon_{i})$, Induet, $E\omega_{i}$, Inusitat; hinc f. $E\sigma\omega_{i}$, $-E\sigma\alpha\epsilon_{i}$, Collocasti.) We perceive the Radical form of these words in the future Eso. In Esthes, $(E\sigma\theta\eta\epsilon_{i})$, vestis, ab $E\omega_{i}$) which is supposed to be derived from Eo, we have likewise the true form, as in v-Estis, &c. We cannot but perceive, how these forms connect themselves with Estia, $(E\sigma\tau\alpha_{i})$, v=Esta, the Ground.

Among the terms denoting Motion, Coming or Going, which belong to our Element, we must class the following: Op=0s, (Οδος, Via, Iter, Οδευω, Iter facio,) Οι CHomai, (Οιχομαι, Abeo,) ΕΕΚΟ, Iko, Ikneomai, Ikano, (Ηκω, Venio, Accedo, Ικω, Venio, Ικνεομαι, Venio, Advenio; - Supplico, obsecro, Ixava, Convenio, adeo, adsequor, supplico); where in the two latter words the n appears to be an organical addition to the K. To the idea of Supplication, as connected with that of Approaching or Going to, which is expressed by these latter words, we should perhaps refer Iketes and Iketeuo, (Iketys, Supplex, Iketeuw, Supplico.) I have produced an Arabic term on a former occasion, (page 173.) where I have shewn, that the idea of Petitioning is sometimes connected with that of Remaining in a certain Spot—or Place. EODE is Ivit; and it is supposed by the Grammarians to be the Preterite of Gan, To Go. In old English, YEDE has a similar meaning. (See Hawkins' Old Plays, I. p. 100. and Dodsley's Collection of Old Plays, II. p. 53.) I cannot determine the precise idea, from which these terms denoting Motion are derived; as

we have no evidence to decide, whether the primary or secondary notion originally prevailed in them, or whether they are not derived from the idea of Excitement, which I fully illustrate on another occasion. I have thought it right, however, to produce them in this place with the preposition Ap, that the Reader might be enabled to form his own judgment on the question. In another place, I produce some Hebrew terms for Motion, which appear to be directly connected with the secondary idea.—The Greek Euthus, and Ithus, (Ευθυς, Rectus, Ιθυς, Rectus,) seem immediately to belong to the Path, or the Ground—the Op-os, (Odos,) &c. The AITHA, in Up=AITHA, (Υπαιθα, Coram, Recte,) must be referred to these words. The English word Go, with its parallel terms Gan, (Sax.) Gaen, (Belg.) Gehen, and the Greek Kio, (Kiw.) produced by the Etymologists, belong to the form of the Element G', with the breathing after the Radical. The n in some of these words is the form of the Infinitive, from whence the English Gang is derived. In the Hindostan Dialects, Jaouna means To Go, where the n is likewise the Infinitive form, as I have before observed.

PARTICLES BELONGING TO THE ELEMENT C[^], D[^], originally denoting This, That.

DE, DEE, Toi, Thi, The,

Th^=En, Si, Se, Ze, Chou,

Che. (Gr.)

Que. (Lat.)

De. (Lat.)

S^=Us=Que, De=Que, De, Di, Da,

&c. (Lat. Fr. Span. Ital. &c.)

Da. (Germ.)

CE, SE, DI, TE, p=TE. (Lat.)

CEU—KE. (Lat. Hebr.) As.

SI, So. (Lat. and Germ.) So, If So be, &c. &c.

I have shewn, through the whole of this discussion, that the Greek Particles, belonging to our Element ^C^, ^D^, &c., with the breathing either before or after the Radical Consonant, originally denoted This or That; and were added, either singly or in composition, to mark more strongly the object represented: and I have shewn, in numerous examples, that peculiar position, in which they were employed with their original idea. When this primitive sense became obscure, as I have before suggested, the Particles still continued to be adopted, and to impart a certain force to the sentence, which those, who were conversant with the Language, were enabled to feel, but not to describe and detail. Hence, by Grammarians, they have been sometimes considered as Expletives and Redundant; and when the meaning of these Grammatical terms is duly limited and defined, it is not necessary

to raise any violent objection against their adoption. A minute and laborious enquiry into the precise sense, with which Particles are invested in the different modes of their application, may be considered as an idle discussion; and it should be regarded, in my opinion, as a vain and fruitless attempt to unfold that, which admits not of explanation or detail. An investigation of this nature may perhaps accord with the researches of the Metaphysician, but it is remote from those objects of enquiry, which belong to the Philologist and the Scholar.

I have noted, in the course of my enquiry, various Particles, under the form C[^], D[^], &c. with the breathing after the Radical Consonant, which were originally, as I imagine, derived from the Demonstrative part of Speech, and denoted The, To, (To,) &c. &c. I shall now collect a brief list of Particles under this form, and place them under one view, before the eyes of the Reader. In this class we may enumerate Que, Quia, Ceu, Ce, De, Di, TE, p-TE, SE, SI, &c. &c. (Lat.); and in a compound state, Qu=In, $Cu=^N$, $Si=^N$, $Di=^S$, $Su=^S$, $Ci=^S$, Ci=Tra, &c. (Lat.) KE, GE, CHOU, CHE, DA, DE, DEE, DIA, TE, TOI, THE, THI, SE, ZA, ZE, &c. &c. (Ke, Γ_{ε} , Xou, X_{η} , $\Delta \alpha$, $\Delta \varepsilon$, $\Delta \eta$, $\Delta \iota \alpha$, T_{ε} , T_{0i} , Θ_{ε} , Θ_{i} , Σ_{ε} , Z_{α} , Z_{ε} , &c.); and in a compound state, Ke='N, DEE='N, THE=N, THEE='N, DEE=THA, DEE=THE= N, DEE=THA=KI, &c. &c. (Kev, Syv, Oev, Onv, δηθα, δηθεν, δηθακι,) Το, Τοο, DA, Zu, (Eng. Germ.) Το, ΤΕ, Το= T, (Sax. Belg.) Tha, Thu, (Sax.) Tunc, cum; Theei, Thi, (Goth.) Quia, Ut; Swa, (Sax.) Sic, Ut, So, (Eng.) GE, (Sax.) Et, Item, Cum, Tum, &c.; YEA, with its parallel terms JA, JAH, GEA, &c. &c. (Goth. Swed. Sax. &c.) Cà, Cì, JA, DA, DE, SI, &c. (French,) So^=Us, Su^=S, (Fr.) &c., QuA, GIU, GIA, SE, SI, SU, So=^Tto, &c. &c. &c. (Ital.) The Reader will turn his eyes to the various terms denoting This—That, &c., which I have produced in a former page, (338, &c.) belonging to the same form of the Element C[^], D[^], &c. Though I have supposed, that the forms

forms ^C^, ^D^, and C^, D^, with and without the breathing before the Radical Consonant, have passed into each other; yet we may consider each form, under one point of view, as constituting a race of words, more particularly belonging to each other. I have supposed, that the notion of Existence, as denoting This— That Existing Person, or Thing, This—That, is derived from the idea of Place, as the term Existence itself is; and I have supposed, moreover, that this idea of Place is attached to words, under the same Element, denoting The Ground, &c. Under the form C', D', &c. we have terms, signifying the Ground, as GEA, GE, (Fea, Γη, Terra.) Ce, (Irish,) De, Deo. (Δη pro γη in Δημητης, Δημητρα, To this form belong the terms Go, with its parallels, as we have before seen, K10, (K16, vado,) &c. GUA, (Tua, Arvum, Jugerum, Via, Fossa,) &c. &c. The adjacent word to Gua, (\Gamma_{u\alpha}) the term Gui=on, (\Gamma_{u\ota}), Membrum, in primis majus, ut pes, manusve,) may belong to the idea of the Dirt of the Ground, as denoting the Matter-Substance. I conceive Limb to belong to Limus, for the same reason.

DE, (Δε, Vero, Autem, &c.) is used in its original idea, when it is applied to Pronominal parts of Speech, as O=DE, (Oδε,) Toios=DE, Tosos=DE, (Τοιοσδε, Τοσοσδε.) We see, likewise, the original sense of DE, and some of the other Particles, when they are applied to Place, as denoting This—or That Place—Here, There. We learn, moreover, that the ideas which we annex to In, To, or From, may be only accidental appendages, and may exist in the terms, which express simply This or That, There, &c.; and we learn from hence, likewise, how terms, denoting In, To, &c. may be derived from words, which simply expressed This—or That. The Particles applied to Place are Thi, Si,—In loco Ourano-Thi, Athene-Si, (Ουρανοθι, Αθηνησι,) Chou, Che, Panta-{Chou, Chee, (Πανταχου, Πανταχη, Ubique, Ubivis); where let us mark, how Que is used for the same purpose, in Ubi-Que, De, Se, and Zee, Ad locum, Oika-De,

Oika-DE, On-DE Domon-DE, Ourano-SE, Athena-ZE, (Oixade, Domum, Ονδε δομονδε, Ουρανοσε, Αθηναζε,) THE and THE=N, DE Loco, as Euboie-The, Oiko-The= N, (Ευβοιηθε, Οικοθεν, Domo.) The term THE is again used in its original sense, when it is applied to Particles of wishing, as Ai-The, or Ei-The, (Aide, Eide,) which mean, 'That a thing were so and so!'—In Latin, as we have seen, the Particles CE, TE, p=TE, SE, &c. have the same meaning; as Hic=CE, Tu=TE, Suo=p=TE, SE=paro, To Place Here and There, in This and That Place—Se=Se, &c.; where in Se we have at once the same form for the Pronoun and the Particle. I have shewn, that the Latin S1, If, means precisely the same, as the English So does, Si Vis, So-If So be-you are willing. Seu may be quasi Sev and Si=Ve, as it is imagined, or it may be in its simple state, as in CEU. In $S_1=Ve$ we have a compound of Si and Ve; where Ve, under the Element V', has the same meaning of This or That, as in the Italian Vi. If we imagine the Latin Ceu to be a compound of a similar kind from CE and 'V; still the CE in this particle has the same sense as the CE in Hic=CE. The Etymologists have justly compared CEU with the Hebrew > KE, bearing the same meaning.

The English preposition IF, with its parallel Provincial and Saxon term Gif, has been derived by Skinner from the Saxon verb Gifan, To Give. Though this origin appears on the first view probable, yet I do not conceive, that the conjecture is well founded; as it supposes a species of formation, foreign from the genius of Languages in the production of such words. Junius has exhibited, among the parallel terms to IF, the Gothic Gabai, and the Teutonic forms Jof, Ob, Oba, Ibu. We here see, that in some of these terms the word appears, as in English, without the G, and this I imagine to have been an original form. Dr. Jamieson, under the Scotch "Gif, Gyve, Geue, Gewe," denoting IF, has justly expressed his doubts on the origin which Skinner

has proposed to us. He properly observes, that "Iba, Iof, Ob, "Oba, occur in Alem. and If, in Isl. in the sense of Si. A. S. Gu "also signifies If, which can have no connexion with the v. Gif-an, "but seems immediately formed from Moes. G. Gau." We here see, that the term for IF appears likewise under the forms Gu, Gau, which belong to the Saxon and Gothic Ge and Ga, used in composition, &c. Lye explains Ge thus: "In compositione idem "quandoque valet quod Cum, Latinis; alias, sæpius scilicet, "otiosum est. Præfixum hoc postea mutatum est in Y; ut Ge-"Writen in Y=Written: Ge-Clypod in Y-Cleped:" &c.

The GE simply means The, This, &c., as "THE thing "written," &c. The sense of GE, as denoting THE—This—That, &c., will be manifest from Lye's interpretation of GE in another Article; "Et, Item-GE-GE, Cum-Tum, ut GE lare, GE bysne, "Cum doctrina, tum exemplo," 'As by Learning, So by exam-'ple, In That manner by Learning, or As by Learning, In That 'manner, or So by example; — Doctrina=Que, Exemplo=Que;' where Que, belonging to Qui, That, has a similar meaning. Under GE we have the following combinations: GE Eac, Sed Et, GE Swa, Ut Et; where it is joined with So, a term of the same kind, and GE Deah, Etiam, Quamvis, Immo licet. I have shewn in another place, that Ut, Et, belong to Id; and thus GE and Swa or So are combined with each other, under the same meaning, just as Ut and Et are. The next article in Lye is "GEA, YEA, Ita, "Etiam, sane," the particle of Affirmation, which means So in This manner; and here the explanatory word Ita is acknowledged to belong to Id. I see, likewise, an adjacent term GE, Ye, Vos; where we actually find a Pronominal part of Speech, under the idea, as I imagine, of This-That-Such a Being. I find, likewise, Geac, Item, Quinetiam, which is a compound of GE=Ac. We shall now understand, that the Greek GE, (IE, aliis vocibus fere adnecti solita, certe; cum pronominibus Quidem.—Kau ye idem

the

idem quod ye,) directly connects itself with the Saxon and Gothic GE, GA, &c. &c. In KAI GE, we have a combination of similar terms. My German Lexicographer explains OB by "Whether. "OB es wahr ist, oder nicht, Whether it be true or not.—Eben. " als Ob, Even as If;" where we see, that Ob and If precisely correspond with each other. Let us mark the terms Eben and Even, where Eb and Ev belong likewise to the Element ^B, and convey the same Radical idea as Ob, IF, or mean 'So, In This Manner.' In the phrases Eben So wohl, (Germ.) "Even So well," Efen Swa, (Sax.) "Even So, Even As," we see the Eb, Ev, Ef, in Eben, Even, Efen, used in their genuine sense of So-in This or Such a manner. In old English, Even is used for a Fellow, or Such a person as— Talis Qualis, Is Qui, Idem, &c. The Grave-digger says in Hamlet, "And the more pity that great folks should have coun-" tenance in this world to drown or hang themselves, more than "their Even Christians;" on which the Commentators have justly observed, that the expression means Fellow Christians.

We shall now understand, that Gu, GAu, and IF, OB, IBA, &c., belong to separate Elements, conveying a similar idea; and that G'=IF, G'=ABAI, are the compounds of Gu=IF, Gu=IBA, &c. This conjecture is of itself probable; yet we shall have, I think, little cause to doubt on the subject, when we learn, that IBA and IBAI mean in Gothic, Num. Lye interprets. likewise, the Gothic Jau by 'Num,' and Ja by 'Yea, Sic.' The Jau and JA are only different forms of GE, GA, &c. I have used the letter J in this case, for no other reason but to shew, that in these Gothic words an initial letter has been adopted, different in form, though similar in power, to that which is used in representing GA. Dr. Jamieson has with equal justice adopted the letter G, in expressing the same word JAU. The Gothic letter, for which I have used G, is similar in form to the Greek r, and that, for which I have used J, has supplied

the form of our English G. In the same column of Lye's Dictionary, where JA is, we have the Gothic Jabai, or, as it is commonly represented, Gabai; which I consider to be JA=IBAI, or JAU=IBAI. In the same column we have, likewise, JAH, Et, JAI, YEA, Immo, and other Gothic words, which I conceive to be compounds of JA, JAH, &c.; as JAH=Tha, Forsan, JA=Inar, Ibi, JA=Ind, Illuc, JA=Ins, Ille. In the next column we have JA=Inthro, Inde, Jathau, Utique, which Lye conceives to be a compound, and which, as he thinks, should be written GA Thah, Sive, or JAH Thau, as it is in the Codex Argenteus. In this same column, where Iba and Ibai are, we have likewise the Gothic Ibn, Even. The Iba is compounded with another term in Niba, or N=Iba, Ni=Si, as the same Ni is with Si. Let us mark the explanatory Latin term Ibi, in That place, which has the same Radical meaning, as Iba, in This or That manner, So. Among the Gothic conjunctions in Manning's Grammar, we have Thau, Gathau, or GA=Thau, which he explains by 'Forsitan.' The Saxon GE is often compounded in the formation of particles, as Gese, quasi GE=Ese, YES, Get, Geta, Yet, which I conceive to be Ge= T, The Etymologists understand, that Ye= ^S, Ge= ^Se, belong to Yea, the Gothic Ga, Gai, &c., the Saxon Gea, &c. &c. Again, we have Hwar, Ubi, or Where, and GE=Hwar, Ubique, Hwanon, Unde, GE=Hwanon, Undique, &c. &c. Among the Gothic Conjunctions, collected in Manning's Grammar, we have "Iba, Ibai, "Num, Numquid," and "Gabai, Gau; Si." The composition, with the prefix GE, is of great extent; and many words, which appear to have a Radical form, are compounds, derived from this source. Hence we have $\Upsilon=On$, $\Upsilon=Onder$, Ge-Ond, (Sax.) $\Upsilon=Ore$, $\Upsilon=Ear$, G=Ear, which mean Ge=Ere, (Ære, Sax. &c.) former, or Past time, with various other terms, which will more properly fall under consideration, when the words, with which GE has been thus compounded, shall be examined.

We have seen certain Greek Particles, annexed to words, which convey the idea of In-From-To, &c.; and which I suppose originally to have signified This or That. I have shewn, on a former occasion, the truth of my hypothesis, by producing terms, in which this union of ideas actually exists. We shall not wonder, that the sense expressed by these Prepositions is involved in that of the Demonstrative part of Speech, when we recollect, that such a sense is often included in the Noun to which it relates, as Domum, Domo, 'To and From Home.' The Latin DE, and the English To, signified originally, as I imagine, the same as THE; and when, by the nature of the proposition, as 'I come THE Church, I go THE Church,' we include in the Demonstrative part of Speech those relations of Place, expressed by To and From, or, as in Latin, DE, we shall not wonder, that such Demonstrative terms passed into words, denoting such relations.

It is curious to observe, how words still continue to retain their original notion; and we shall marvel to note that acuteness of the mind in perceiving the union of certain ideas, by which it again reverts to the primitive meaning by a secondary and reflex process. somewhat different from the former. Thus the Preposition DE, which I suppose to have been originally a Pronominal or Articular part of Speech, actually possesses in that state a Pronominal or Articular sense, as in Latin, or it may be said to pass into a Pronoun or Article, as in French, &c. Thus our Pronoun Some, as used in such expressions as "Would you like Some of the "Wing, or Some of the Leg, of the fowl," might be expressed in Latin by "Utrum mavis De ala, an De poplitibus;" and we all know, that Some in French and Italian is expressed by DE, with or without another articular part of Speech. "Some," says my French Lexicographer, "either expressed or understood, answers to the "French words Du, DE l', DE la, DE l', DES, and DE, as Bread, or

" Some Bread, Du Pain, Some Gold, DE l'or, Some Meat, DE la " viande, Some Water, DE l'eau, Some Pears, DES Poirs,-Good "Wine, DE bonne vin." In many cases, so much is the DE conceived to have passed from the office of a Preposition to the office of a Pronoun, that a Preposition is even placed before it, as "J' ai affaires a Des gens fort honnêtes." The Grammarians tell us, moreover, "that in many cases either of these two parti-"cles, Du or Un," as Chambaud calls them, "may be used," as "Ceux qui vont sur mer, courent Un grand danger," or "DE grands dangers;" and by some, DE is directly called an The Italians, we know, use Del, Della, Indefinite Article. in the same manner, as Du, De la, &c. &c. Though all this is familiar to every one, yet no one has seen the process, by which the Preposition, thus applied, has reverted to its original idea.

The true sense of DE appears in the phrase Sus=Que, DE=Que, This Place and That, DE=Orsum, &c. &c. I have shewn, that the explanatory word $Su = ^S$, together with $S_I = ^C$, $S_E = ^C = U_S$, are compounds, as likewise $SE=D_a$ or SE=T, $CI=^sS$, CI=Tra, &c. &c. The Etymologists suppose, that Sed or Set is derived from SE=ET, which comes to the same point. The French So=Us and Su=^S, and the Italian So=^Tto, are similar compounds to Su= 'S, &c.; and we see the simpler form of these words in the Italian Su. If the French Su = R should be likewise a compound. the process of composition will have extended through a wide sphere indeed, as Sur belongs to a great race of words, to be found in every form of Speech. On this point I shall not venture to propose an opinion in the present state of our discussion. In the Italian Giu, Below, and Gia, Already, we have other forms; and to this latter term directly belongs the JA, in De=JA, of the French. These terms denote merely This or That Spot. We might imagine, that Goe, in the phrase "Sometime Agoe," belonged

longed to JA, GIA, if it did not appear to connect itself directly with Go, the verb of motion, which belongs to the form GE, (In, Terra,) CE, (Celt.) the Earth, &c.

To the Latin DE are acknowledged to belong the terms in modern Languages, DI, DA, (Ital.) DE, (Span. and French,) &c.; to which we must add the Celtic terms, as Do, (Irish, Gal.) &c. &c. Let us mark, in DE=Que, the congenial term Que added; and observe, moreover, that DE, in this sense, coincides with the German DA, There, and with THE in the English compound THE= 'Re, quasi THE=Here. The Etymologists justly refer the Latin DE to DI and Dis, the particles of Separation. The DI, Dis, mean 'This or That place or thing,' in opposition to another place or thing, as 'I Dissent-I think in This Manner,-DI=Vido, 'I place in This place,' as distinguished from another. The DI='S is a compound. I have suggested, on a former occasion, that Two, and its parallel terms Duo, (Lat. Gr.) Zwei, (Germ.) &c., have a similar meaning of This or That person, in opposition or addition to another; and thus we see, how DI and Duo coincide. TwI=^CE is a similar compound to D1=1AS. In the Galic Dialect of the Celtic, DA, Dis, mean Two; which perhaps more directly bring us to the DI-Dis of the Latins. While I am examining the word DA in Mr. Shaw's Dictionary, I see DAE, "A Man, A "Person," where we have the original idea; and I find, likewise, DA, the preposition If.

I suspect, that the names for the numbers from One to Ten were most of them originally Demonstrative parts of Speech, denoting simply This or That. The name for One, under the Radicals 'N, 'S, as One, En-os, (Evos,) Eis, (Eis,) are acknowledged to belong to this idea. A similar idea is annexed to Three, and its parallels Tres, Treis, (Teus,) Thrie, (Sax.) Drei, (German,) Tri, (Welsh, Galic,) &c., which must be referred to the compound Celtic terms produced in a former page, $D^{\wedge} = Ar$,

"By, Through, Whose, Whereof," Tar, "Beyond, Out of," as Mr. Shaw explains them, which in other Dialects of the Celtic appear under the forms Tre, Tro, Tres; to which we must refer the Latin Tra, Tro, in In=Tra, In=Tro, Tra= Ns, &c. terms mean simply This-or That-Place, as in the English Th^=Ere, which is precisely the same compound. Thus, One, Two, $Th^* = {^*Ree}$, mean the same as An, or One, (Such a person,) THE,(Th ^= Is other person,) THE=HERE, or 'That TH=ERE person.' Adjacent to Dar, Through, in Mr. Shaw's Dictionary, we have Dara, Second, which certainly belongs to Dar. The terms for Three have a similar idea, under another form. In Tres, Treis, (Teeis,) we have an additional compound, T^=^R=^S; and we find the same form in the Celtic Tres, Beyond, and more unequivocally in the Irish $T^*=Air=Is$, Beyond. Tr=Is, (Lat.) and Thr=Ice, (Eng.) are similar compounds. The number Six will be considered on another occasion.

We shall surely not doubt, that the English TO is nothing but the Article THE, under another form, "I go THE London," "THE "Rome," 'I go TO London,' 'TO Rome.' The term signifying THE or This, and That, Place, Thing, or Time, by way of distinction, as the Spot-Action-or Time, to which any thing tends, especially under certain circumstances of the Place or Thing so specified, naturally receives the sense which we express by TO. We shall see the genuine idea of TO more fully, when it is applied to Time; and especially when it is applied to the Present Time. When we say, "I will come TO you TO-Morrow," we perceive, in "TO you," an application of the word, which appears, on the first view, remote from the sense of THE, or This—That; but in the phrase "TO-Morrow," we approach nearer to the meaning, and we see, that the substitution of THE for TO would not affect the sense. I will come To You—TO or THE Morrow. But when we say, I will come To You-TO-Night, we see, that the latter TO directly coincides

coincides with the sense of This, 'I will come To You, TO or ' This Night.' When TO is applied to the Infinitive Mood, it signifies precisely the same as THE, as 'TO Write-TO Speak,' means 'THE action of Writing-Speaking,' &c. It has been frequently remarked, that the use of the Greek TO, (To,) before the Infinitive Mood, TO Grafein, TO Legein, (Το γραφείν, λεγείν,) resembles that of the English TO, at which we shall now not wonder, when we have learnt, that they both signify the same— In Provincial Dialects, Norfolk, &c., TO means THE or This, as applied to Time, as 'The apples ripen late TO Year,' for This Year, or THE present Year. In Saxon, TO is applied to Time in general, as we might use THE, and sometimes This, as TO Niht, "AD (hanc) vesperam," says Lye-TO Æfen, "AD "vesperam," THE Evening, &c.; and in this Language they use "TO Morgen," THE Morning, either for This Morning, or TO-Morrow, or, as we should say, THE Morrow. Let us mark the use of the Latin AD, which for the same reason coincides with the sense of Is—ID, HIC, &c. as 'Eâ, Hâc vesperâ.' The Etymologists produce the parallel terms for TO, as the Saxon To, the Belgic Te, Tot, Toe, and the German Zu. The German Zu is applied to Time in the same manner, as 'Zu Nacht, At Night, THE 'Night.' The Greek DE, $(\Delta \epsilon_1)$ as we have seen, is used in a sense corresponding with TO, when it is applied to Place, as Agoren= DE, Klisien = DE, Oika = DE, Domon = DE, (Αγορηνδε, Κλισιηνδε, Οικαδε, Δομονδε,) 'TO the Assembly, TO the Tent, TO one's home,' &c. But in the phrase On=DE Domon=DE, (Aqueto Orde Domonose,) we have DE at once used as TO, and connected with a kindred part of Speech, the Pronoun On, (Ov,) corresponding with THE, as on other occasions O DE, Toios=DE, (O DE, Toios de,) &c.

TO, in the sense which it bears when it is written Too, unequivocally presents to us the original idea of the Intensive Part of Speech, The—This—That, by way of eminence or distinction,

470

distinction, as 'Too Much—Too Little, as The or That (Excessive) Abundance—Deficiency.' The Saxons and Germans use TO and Zu in the same manner, as TO Micel, Nimis Multum, TO Lytel, Nimis parvus, Zu viel, &c. TO is used in Saxon as a prefix to verbs, either in its sense of Ad, or intensively, as TO-Asendan, Mittere, TO-Asettan, Apponere, TO-Bædan, Adprecari, &c., and TO-Bræcan, Disrumpere, TO-Brysan, Conterere. In Gothic we have, likewise, TO-Briggan, Adferre. This use of TO was common in old English, and is to be found in Shakspeare:

"Then let them all encircle him about,
"And, Fairy-like, TO-Pinch the unclean Knight."

(Merry Wives of Windsor, A.V. S. 4.)

On which Mr. Tyrwhitt has observed, "This use of TO, in com"position with verbs, is very common in Gower and Chaucer,
"but must have been rather antiquated in the time of Shakspeare.
"See Gower, De Confessione Amantis, B. 4. fol. 7.

" All TO-tore is myn araie."

And Chaucer, Reeve's Tale, 1169.

" ---- Mouth and nose TO-broke."

And Mr. Steevens adds, "This use of the preposition TO was "not entirely antiquated in our Author's time. See Spenser, "B. IV. c. 7. B. V. c. 8." And Mr. Malone produces likewise the following passage from Milton:

"Were all TO-ruffled, and sometimes impair'd." (Comus, *. 380.)

Tickell altered the word To to Too; and this alteration, though it arose from an ignorance of our ancient Language, is at once, we see, both right and wrong.

I have referred, on a former occasion, the numeral Two to the same idea of The, This, or That, in opposition to One, conveying a similar notion of This or That, An, &c. We know, that Two assumes various forms, as Tu, Twa, (Sax.) Zwei, (Germ.) Duo. (Lat.

(Lat. and Gr.) &c. &c. &c. Twice Twixt, Be-Twixt, Twain, Twin, are acknowledged to be compounds from Two. supposed on a former occasion, that the Secund in Secund-us belongs to the Saxon Twagen or Tuegen, which the Etymologists justly produce as the parallel term to Twain. The present form of the parallel German word to Twain is Zween; and if this had appeared under its due original form, we should have had Zwegen, or, as it might have been, tSwegen, which brings us, we see, still nearer to Secund-us, (Lat.) Segundo, (Span.) &c. &c. We have seen, (p. 415.) that SE=OTHER is the Saxon term for the 'Second,' where the SE is the Article. In the term DE=UTER-os, we hardly can decide, whether D_E belongs to Duo, (Δυο,) Two, or THE; but in Th^=ATER-os, (Θατερος,) we have the Articular part of Speech To, (To,) The; and here again we see, how the ideas of THE and Two pass into each other. In German, the word for Doubt is Zweifel, from Zwei, Two; and this might lead us to conjecture, that $Du = ^ABium$, Dou = Bt, is derived from Duo. B' or B₁ in this word may belong to the B, and its cognates M, F, in B₁=linguis, B₁= ^ΛS, B₀=Th, amfo, &c. (Aμφω.) The term Twi-Light is acknowledged to belong to Two, "Tweo, Twi, "Dubium," and Light. Hence we have the DI in DI=Luculum. The Etymologists suppose, that Twine belongs to Twain; and if so, surely Twist must belong to the form of Twice. English Ty is adjacent to Two, and, as we should imagine, must be derived from it for the same reason. If that should be so, Deo, (Δεω, Ligo,) must be referred to Duo, (Δυσ.) English Twenty, with its parallels Twentig, (Sax.) &c., is Twain and Ty or Tig, Ten, Dec-em, Deka, (Dexa); and it does not come from the Latin Viginti, as the Etymologists imagine. The Latin Viginti is quasi bis=Denus, Zehen, &c. The Greek term DA10, (Δαιω, Di=Vido,) might belong to Duo, (Lat. and Gr. Δυο,) Two, &c.; but on this point some difficulties occur.

For the same reason, that Zu, To, or Too, have an intensive signification, so have the corresponding particles in Greek, DA, Z_A , $(\Delta \alpha, Z_{\alpha})$ the same intensive force. In our ordinary Greek Vocabularies, we have "Aa. Particula inseparabilis, augens signi-" ficationem vocum, quibus componitur; v. gr. Δασκιος, ex Δα et " Σκια, Umbra; et Δαφοινος, Cædis admodum avidus, ex Δα et Φονος, "Cædes."—" Za. Particula inseparabilis, augens significationem, " ut Ζαπλουτος, Valde dives, Ζαφλεγης, Vehementer ardens. " tamen semper." The succeeding word to ZA, (Za,) is Zaballein, (Ζαβαλλειν, εξαπαταν, Decipere, putatur esse à Διαβαλλειν,) which the Lexicographers suppose to be put for Diaballein. Whether this be the case, I shall not stop to enquire. Let us note, however, the Greek Dia, (Dia,) which is only another form of the English To and the German Zu, &c. As applied to Time, we have $\Delta \omega$ δευτερου ετους - Δια τριτου ετους, "Altero Quoque Anno, Tertio Quoque "Anno, At the second, third year, At every second, third," Apxoustos τε και ΔΙΑ τελους τουτο επεμαρτυρατο, "Ab initio usque Ad finem " testatus est, From the beginning TO the End." We here see, that Dia, in Dia telous, (Δια τελους,) precisely corresponds with TO; and so the Saxons say, 'TO his Ende, Ad ejus finem.' Let us mark, how the Latins express this sense of DIA. (Aux.) by Demonstrative parts of Speech, Altero—Quoque. In Quo=Que we have the sense of THE—THE—This—That; and let us mark. moreover, the term AD, which is ID. Among the interpretations of Dia, $(\Delta i\alpha)$ in our Vocabularies, we have In, Ob; and these two Latin prepositions are given in Lye's Dictionary, as the senses of the Saxon TO. Our Lexicographers tell us, that DIA, (Δια,) denotes "Vehementiam aut Excellentiam;" and thus it agrees with the sense of To, or Too, and Zu. It likewise denotes in composition, Diversitatem, as Διασκεδαζω, Dispergo, which agrees with the sense of TO in the Saxon TO=Bræcan, Disrumpere, TO=Brysan, Conterere, and with that of the Latin DI

and Di=S, as in Di=Spergere, and with the sense of Two, Duo, Thus D_I, D_{I=} $^{\Lambda}S$, and D_{IA}, ($\Delta i\alpha$,) may under &c. &c. &c. one point of view be considered only as different forms of Two, Twi= $^{\text{Cr}}$. The Greek $DU= ^{\text{S}}$, (Δu_{S} ,) belongs perhaps to Di, Di='S, &c. The Lexicographers describe the senses of Di, $Di=^S$, and $DU=^S$, ($\Delta u \in \mathcal{S}$, nearly in the same manner. The Greek Dus, (Δu_{ξ} ,) is explained by "Particula inseparabilis notans "in compositione ægre, difficulter; Male, Infeliciter. In sive " Non, velut a Privativum; — Intensionem, vel α επιτατικου, valde," R. Ainsworth explains DI and DIS by "Modo Negationem "notant, ut Diffido, Non fido: - Modo diversitatem: - Modo di-"visionem: - Modo auget significationem, ut Discaveo, i. e. Valde "caveo:-Modo idem est quod Male, ut Dispereo, i. e. Male " pereo." Our Lexicographer has justly expressed the use of these terms; though he has negligently passed from the plural to the singular in his explanation.—On considering the Greek DIA, (Dia,) in its senses of Diversity—Vehemence or Excellence, and as a Preposition Ad, we see how it agrees with the different uses of Two, Too, and To.

We have seen in what various manners the *Pronominal* part of Speech, the French Que, has been used as a Conjunction; and a few observations on some of the Saxon and Gothic Particles, under the form S^, T^, &c. and other forms, which are acknowledged to belong to the *Articular* or *Pronominal* part of Speech, The, &c., will fully unfold the various purposes, to which *Demonstrative* terms may be applied. I have shewn Th=At to be a compound, quasi The=At; and Th^=At is used, we know, as a *Demonstrative* and Relative Pronoun, and as a Conjunction. In Gothic, SA, as we have seen, is the Article; and it means "Hic, Qui,"—SA SAEI, "Is Qui." In Saxon, SE is the Article, and means 'Ille, Qui.' The same term SE means likewise Est. SEO in Saxon is used as the Article for all genders; and it denotes

Hic, Qui, &c.; and Seo is moreover used as a verb for Sum, Es, Est, &c. The Saxon Tha is the article, used in various cases for THE; and it means likewise Hic, Ille, Iste, Qui. In a separate place, Lye produces Tha, to which he gives the following senses: "Tum, Tunc,—Quum, Quando, — Quandoquidem. — Dum, Do-" nec.—Tha, Tunc, Quum," &c. The, in Saxon, is the Article corresponding with THE, and it means likewise THEE, the Pronoun of the second person. It denotes, moreover, Is, Iste, Qui, and likewise "Quod, Quam.—Ut,—An, Sive, Vel, Aut," &c. adjacent word to this Saxon term is THEA, Though, where we have a simpler form of Tho=Ugh. We have seen, that in Saxon Thon is an article in the Dative and Ablative singular, and it is used, as Thonne is, for 'Quam,—Tunc;—Quum, Tum.' To these words belong Then and Than, which are compounds, quasi THE=^N, THA= N, as I have before shewn. Lye interprets Thonne, by "Tunc, Tum,—Quando, Quum,—Quomodo.—Quam;" and he produces a passage, in which Thonne is at once used in various senses. "Tha Welan beoth hliseadigran and leoftælran THONNE "THONNE hie mon selth. THONNE hie beon THONNE hie mon " gadrath and healt.-Divitiæ erunt splendidiores et magis æsti-" mabiles Tunc Cum, illas homo diffundit, Quam illæ sunt Cum ipsas "homo colligit et retinet." The different modes, in which this word is used under the same form, will shew us to what various purposes the same idea may be applied, when it passes into terms, appearing under a variety of forms, in order to mark different turns of meaning, annexed to that original notion. note the explanatory word Tunc, which I have shewn to belong to Thonne, &c.; and let us note, moreover, Cum or Quum, and Quam, which belong to each other from the same union of ideas, as that which exists in Thonne. In Gothic, Than is the Article in the Accusative case, and it means likewise "Cum, Quando, Tum, "Tunc. Autem, Vero," &c. We see, that Quum, Quam, have the Accusative Accusative forms Quem, Quam, for the same reason. Thy in Saxon is used for all cases of the Article and Pronoun, "Usurpatur "pro omnibus casibus Articuli et Pronominis, præcipue vero pro "Ablativo singulari," says Lye; and he explains it likewise by "Quum, Quando;—Tum;—Quandoquidem, Quando, Siquidem;—"Quamvis, Licet.—Ideo.—Quare, Quapropter," &c. &c. I shall not pursue my illustration of this subject to a greater extent; as I have already, I trust, both here and through the whole progress of my discussion, produced abundance of such evidence, which every where presents itself for the support of my Hypothesis.

Under the same form as the Saxon SEO, the Article, we have SEO, Oculi acies, and SEO, the Sea. We shall now understand, that SEE and SEA mean That or THE remarkable object, and are derived from the Demonstrative part of Speech. The word SEE is used in its original meaning in the Imperative sense. In German, Siehe is familiarly used with this turn of meaning annexed to the Interjection, "SEE, lo! behold! SIEHE Da! look There! "SIEHE Zu, take Heed;" where, in its union with Da, There, (which directly belongs to the article Die, The,) and Zu, corresponding with the English To, we see the idea from which it is derived, and the terms to which it relates, as I have shewn, that Zu and To belong to THE. The Etymologists produce the parallel terms to SEE in other Languages, as Seon, (Sax.) &c., Sien, (Belg.) Sehen, Videre, Sie, Siehe, Ecce, (Germ.) as Skinner explains them, Saihwan, (Goth.) See, (Dan.) and the Greek Segomai, and Theaomai, (Σεαομαι, Æol. Θεαομαι, Video.) The parallel terms to SEA produced by the Etymologists are Sæ, (Sax.) See, (Germ.) See, Zee, (Belg.) Soe, (Dan.) Sio, (Swed.) Saiws. (Goth.) &c. The Greek Se=aomai, and The=aomai, (Seaoual, Æol. Θεαομαι, Video,) must be referred to SEE, as we shall all agree; and we observe the true form of these words in THEA, (Ota, Spectaculum.) In the English Si= aght, and its parallel terms

ge-S₁=Cht, we have an addition, arising from the analogy of the Language, in the formation of substantives.

The particle Ec in Latin is nothing but another form of Hic; and it is applied in its due place, when it is added to Pronouns, as Ec=Quis. It has a similar meaning in Ec=Ce, which is nothing but Hic=CE—This—or That remarkable object. Let us note the term CE, bearing the same sense, and belonging to the form C^, with the breathing after the Radical Consonant, as in SEE. I do not mean to say, that CE and SEE directly belong to each other, but that they convey a similar idea, and are derived ultimately from the same source. It is marvellous to observe, as I have had occasion perpetually to remark, how these Pronouns are combined with each other; and we accordingly see Ecce, under its original relations, in the following compounds; Eccillam, Eccistam, Eccum, Eccos, for Ec=CE-{Illum, Istam, Eum, Eos. In the compound Ecastor, or Ec=Castor, the Ec is not derived from Ædes, but belongs to Ec the Demonstrative Particle or Adjective, 'Hic Castor!'— "Per Hunc vel Eum Castorem." We shall now understand, that the Particle En belongs to the Element 'N, bearing the same sense of This or That—'Mark That distinguished object.' The Etymologists refer Ec, when combined with Quis, to Et, or to the Greek Eeken, (Huev Poet. pro Hv,) rather, says Martinius, than from En, to which Ec in Ecce is referred. Under En, the Etymologists justly produce the Greek Eeni, (Hvi,) and the Hebrew in HN, terms bearing the same meaning, This or That. Martinius observes under En, after having produced this derivation, "Posset referri ad Em, id est, Eum, quod et Im." observes under these words, "Em, Im, id est, Eum, ex Emem, " q. eum eum Hesych. w autor, authr." We shall now understand, that the Latin HEM, the interjection, is significant, and means This! or That person! Eum! EAM! The Greek EENI is sometimes combined with Ide, as Eenide, (Hride, Ecce,) which the Lexicographers graphers suppose to be for Enide from Eneido, (Ende ab Eveldow.) This union of the Demonstrative Een, (Hr.) with Ide, (Ide,) might suggest to us, that IDE has possibly the same sense as Ec, This or That, See This or That, and that the Greek verb for Seeing, EIDO, (Edo, Video,) is derived from this source. I have given a different origin in another place. In the Latin v-IDeo, the labial breathing has assumed a Consonant form; and from this form the terms in modern Languages are derived, Visible, (Eng. and Fr.) &c. &c. In Persian, we have a combination of the two Elements 'N and 'C, as Lin-Ak, Behold, which is a compound of Lin, or Olde, This, That, and Lik or Yak, One.

If the Reader should imagine, that in my conjecture respecting the original meaning of En, as denoting This or That, I have been influenced by the desire of supporting a favourite Hypothesis; he will be instantly relieved from this suspicion, when he examines the parallel Hebrew word to which the Etymologists have referred us. The Hebrew הנה HNH, is a Pronoun, which means These or Those, and as a particle, "See, lo, behold—and " Hither, Thither." Here we have the precise union of ideas supposed in my Hypothesis. Taylor, under m HN, as the particle of Demonstration, observes, that it signifies likewise " If, "Whether, Or." Mr. Parkhurst produces the same interpretation as the Chaldee sense, ocurring in Daniel and Ezra; and remarks. moreover, that it is perhaps corrupted, like the "Greek Av, Eav. "H, from the Hebrew DN AM." We shall now understand, that the Greek An, Ean, (Av, Ear, Hr,) If, have precisely the same meaning, and denote In This—That manner—Such, So, &c., 'Should the thing be So and So, I should be glad,'---' So you would ' grant me this request, I should be glad;' where we see how the sense of If is connected with This or That. I have shewn, that the Latin S1 belongs to the English and German So, which my Lexicographer in the first sense explains by That, and in another,

by "So, If, If So be, If So be That, &c. &c. Thus, O TI AN ABYOIG, πλεον γενησεται μηδε εν, " Quicquid dicas, amplius fiet nihil," may be translated by 'What SO ever you should say, nothing more will be effected.' In our translation of the Bible, the Relative Os, O, accompanied by EAN and AN, (Ear, Ar,) is frequently translated by Who, or What So ever-"What So ever" (O EAN, O Ear,) "thou "shalt bind on earth shall be bound in heaven; and What So ever" (O EAN, O Ear,) "thou shall loose on earth shall be loosed in "heaven." (Matt.xvi. 19.) And again, in the same chapter, "For "Who So ever" (Os-An, Os An,) "will save his life shall lose it: "and Who So ever" (Os-An, Os Ar,) "will lose his life for my. "sake shall find it." (ver. 25.) "Who So shall receive-Who So " shall offend," (Os EAN, Oc Ear, Od'AN, O S'Ar, Matt. xviii. 5, 6.) The Greek INA, (Ira, Ut,) we now understand, when used as a Conjunction, has the same sense of That. Thus we see, how An, Ean, Een, (Au, Eau, Hu, Si,) Ina, (Iua, Ut,) En, (Eu, In, Pro, Eac, In, quum significat in locum,) and En, (Ev, Unum,) belong to each We have here the same relations under the Element 'N, which I shew to exist in the Element 'C', 'D', &c. C', D', &c. We shall instantly acknowledge the relation of Eis and En, (Eig, Ad, et Ev, In, Ad,) to Eis, En, (Eig, Ev, Unus, Unum,) One, This or That Person or thing, just as I suppose AD to belong to ID.

We have seen, that the Greek Sea=omai, and Thea=omai, (Σεαομαι, Æol. Θεαομαι, Video,) belong to See, which I suppose to be attached to the Articular part of Speech under this form, as the Saxon and Gothic Se, Sa, &c. and To, The, (Gr. Eng.) &c. It will now be understood, likewise, that Thea, (Θέα, Spectaculum, Θεα, Dea,) the Spectacle, and the Goddess, convey the same idea of The—object; and thus we should conjecture, that in Thea, (Θέα,) and Dea, we have the original form, and that in The=os, (Θέος,) De=us, the os and us are derived from the construction of

the

the Language. In Dia and Zeu, we should suppose the true form to exist; but in Zeus, (Zeus, Jupiter,) the simple form does not appear. In Si=0s, (Sios, Deus, Dor. pro Oeos,) we have the S, as in Sea-omai, (Seaopai.) The Greek Theia, (Oeia, Amita, Matertera,) means an Aunt, as denoting The—distinguished personage; and hence we have, under the same form, Thei=0s, (Oeios, Divinus, ad Deum pertinens, Oeios, Patris vel matris frater, avunculus, patruus,) The—Divine personage, and The—Honoured personage, the Uncle, &c. In the Dialects of the Celtic, among the terms for Deus in Lhuyd, are Dyu, Deu, Due, Dia; and we all remember the terms in modern Languages, Dieu, &c. There is however some difficulty respecting these words, which must be explained on another occasion.

We shall all agree, that among the various ideas, from which the term for God might be derived, the name of Father;—the word of reverence, would probably supply an important source. Those, who have written on the Theory of Languages, have imagined. that Infantine Sounds have afforded some of the original materials of Human Speech. Hence, as they say, the Labial sounds Ab, Ap, Pa, Pa, Ma, Ma, first uttered by Infants, have supplied the names for Father and Mother, through a great variety of Languages, as Abu, Ubba, &c. &c. &c. (Arabic, Heb. &c. &c.) Mama, Papa, &c., and Pa=Ter, Fa=Ther, Mo=Ther, &c. &c. But not only, say they, have the Labial sounds supplied these names, but the sounds of the neighbouring organ, the Teeth, or the Dental Letters T. &c., have likewise furnished their assistance; and hence we have Atta, (ATTA, vox, quâ juniores senes compellant, sodes, amabo, Pater,) with its parallel terms, and Taaut, Theut, &c., Tad, Taz, Dad, &c. &c. (See Mechanisme du Language, Tom. I. p. 244, &c.) If, therefore, we should be inclined to imagine, that the Infantine sounds AT, ATTA, TA, DA, DA, supplied the original materials for these names denoting Father,

and afterwards for Being or Person in general, This or That Being; such an opinion would not disturb my Hypothesis; but on the contrary, some of the facts, which I have noted, would rather be illustrated by that Hypothesis. We should then understand more particularly, why Theia, and Thei=os, (Osia, Amita, Matertera, Oe105, Avunculus, Patruus,) the names of Relations, are found among these terms; just as the Av in Avunculus, with its parallels, Avus, &c., belongs to the Labial Sounds for Father and Mother, Aba, &c. &c., and as Patruus belongs to Pater. We should hence perhaps be inclined to think, that Theios, (OELOS, Avunculus,) Theos, (Geos,) Zeus, Dis, (Zeus, Dis, in Latin Deus, Dis, Dit-is, &c., were terms corresponding with Tad, Dad, &c., the names for Father, under one form; and that DIA, ZEU, (AIR, ZEU,) DIA, (Ir.) THEIA, (Osia,) &c. &c., corresponded with the names of Father, under another, as TA, DA, &c. This probably is the true way of conceiving the matter. Perhaps in Eetheios, (Ηθεως, Venerandus, colendus, Hosse, vox junioris ad seniorem reverentiæ causâ,) the true form is EETHIE, corresponding with ATTA. That the Greek Tetta, (Terra, vox quâ benevolentiæ aut honoris caussâ, junior seniorem compellat,) belongs to TAD, DAD, &c., we shall not doubt; and that Tettix, (Territ, Cicada,) is derived from the same source, we shall likewise agree. The comparison of old men to Grasshoppers is well known, Τεττιγεσσιν εοικοτες, &c. (Il. r. 151, &c.); and hence we understand the origin of the name of TITH=onus, the TAD, DAD, or old man, and why he is changed into a Grasshopper.

If the Reader, as I have observed, should conceive, in his Theory of Languages, that the Infantine sounds, At, TA, DA, supplied the original materials for some, or even for all the words, under these forms; the series of facts, which I have exhibited, would not be disturbed by this Theory; nor would the relation, which I have supposed to exist between words, be affected, unless

unless in these peculiar instances, in which I have exhibited certain details, belonging rather to the modus concipiendi, than to the great essential points maintained in the Hypothesis. Under such a Theory, the Reader perhaps might imagine, that the Demonstrative parts of Speech would constitute the second step in the formation of Languages; and that Is, Hic, ISTE, This, That Personage, and afterwards, either under the same form, or with some variety, ID, Hoc, This, That thing—SE, SA, CE, STA, &c., (Sax. Goth. Fr. Ital. &c.) THE Personage or thing, would be such terms as would immediately succeed the name of Father, &c. The name for the Ground or Earth, we may imagine, would soon be in existence, from whatever source it was derived; and the Estia, (Estia,) Ge, De, Deo, ($\Gamma\eta$, $\Delta\eta$, Terra, $\Delta_{\eta \omega}$, Ceres,) CE, (Ir.) &c. &c., we might conceive, according to this Hypothesis, would denote IT, (Eng.) Is, ISTE, (Lat. Locus,) SE, SA, CE, STA, &c. &c., This or That-Place. object. We see, moreover, how the mode of declaring our ideas, which Grammarians denominate by the name of the verb, would be attached to this process; and how such words as ATA, Is, (Celt.) Is, (Eng.) Isτ=amai, (Ισταμαι,) Esτ, (Lat.) Esτλ, (Span.) 'STA, (Ital.) STA='t, (Lat.) TA, SI, SE, &c. (Celt. Sax. &c.) would perform the office of Verbs of Existence, as at once connected with terms denoting the Ground, or Place, and with Demonstrative parts of Speech. So far the Theory seems sufficiently compact and intelligible; and the Reader perhaps, on whose mind a direct similarity of form may make an impression, will be struck by observing, that the Celtic verbs ATA and TA coincide in form with the name of Father, ATA, and the infantine sounds TA, TA. In exhibiting this Theory, I might suggest, likewise, that if, in some instances, the idea of This or That, as derived originally from Being, furnished the terms for Place; still it might happen, that by the same relation,

the idea of *Place* would afterwards supply words conveying the sense of *This* and *That*. From whatever source these words may be derived, or by whatever bonds of affinity they may be more particularly related; still, I imagine, we shall agree, that they are all to be referred to each other, and that the ideas of *This*, *That*, and of *Place*, are so intimately blended together, that it would be an idle labour to attempt their separation, and abhorrent from the discovery of such facts, which are found within our reach.

After this statement, I shall leave the Reader to follow that modus concipiendi, to which he shall be most inclined. I shall leave him to decide on the Primitive notion, as on a point of Theory, totally unconnected with the object of these discussions. I shall likewise submit to his decision those instances, in which the ideas annexed to Place, and to Demonstrative parts of Speech, This—That, are involved with each other; and I shall leave him to determine, whether the idea of Place, or of This—That, be the prevailing notion. Such an investigation would in many cases be precisely of the same kind, as if the Reader should attempt to adjust, whether in the adverbs of Place, as they are called, Hic and Huc, the idea of Place most prevailed, or that of the Demonstrative part of Speech; and if Hic could be proved to be originally derived from the notion of Place, the consideration would in fact then be, whether Hic and Huc partook most of their original or their secondary idea. The Reader may imagine, if he pleases, that the particle GE, (IE, Particula, Aliis vocibus fere adnecti solita, Certe, (2.) cum pronominibus, Quidem,) directly connects itself with its adjacent term, similar in form, GEA, GEE, (Γεα, Γη, Terra); and he may suppose too, if he pleases, that when these Particles are referred to a certain Place-'Such a Place, 'This or That Place,' that the idea of Place is the prevailing notion, as in 'Panta Chou, Chee, (Πανταχου, Πανταχη,) Every Place,'

or 'EveryW here,' as we express it, 'Every Here and There,' if I may so say. The Reader, however, cannot but observe, that these explanatory terms, designating Place in our Language, Where, Here, There, are derived from Demonstrative parts of Speech, as I have before shewn. If we considered only DE=Uro, (Asupo, Huc, Adesdum,) and DE=Ute, (Asure, Huc adeste,) we should be inclined to imagine, that the idea of Place prevailed, and that these words more directly connected themselves with the form DE, $(\Delta \eta$, pro $\Gamma \eta$,) the Ground; but when we remember, that DE=Uro belongs to THE= ^Re, we see in THE, how the Demonstrative idea exists. The same Demonstrative idea appears, likewise, in its adjacent term De=Uter=os, (Δευτερος, Secundus,) which I have shewn to signify THE=Other. It is thus, that such ideas are entangled with each other. Even in Go and K10, (Kiw,) as I have suggested on a former occasion, the same difficulty may be raised. The term GE, (I.,) though it appears to be attached to GEA, GEE, (Tea, Ty,) the Ground, is still particularly connected with Pronouns, as with kindred parts of Speech, and is then best translated by Quidem, which, we know, belongs to the Pronoun Quidam. We have seen, moreover, in the course of these discussions, that the Greek GE, (Is,) appears to connect itself immediately with the Saxon GE, the Gothic JA, &c. &c., which removes us somewhat from the direct influence of the Greek GEA, (Tea.) In considering the Celtic verbs ATA and TA, we cannot but perceive how these forms 'T', T', with the breathing before the Radical Consonant, and with no breathing before it, connect themselves with each other. Still, however, we must remark, that these forms, when once existing, may be considered, under one point of view, as distinct and separate forms, generating a peculiar race of words, more directly related to each other.

Before I finish these notices on the Theory of Languages,
I might

I might observe, that there is still another source, the principle of Onomatopæia, (Ονοματοποια, nominis seu vocabuli fictio, nominis fictio a sono,) which is supposed, likewise, by our Theorists, to have afforded materials for the formation of Human Speech. This principle will be considered in another place, when I shall examine those terms with which it appears to be most connected. I must again repeat, that these discussions, such as they are, about the Theory of Languages, have nothing to do with the discovery of those facts, which we are enabled to learn by patient and accurate investigation.—The name of the EARTH, Estia, (Estia,) Ge, (Γ_{η} ,) &c., or, under other Elements, Terra, Solum, &c., when once existing, would equally exert its influence, and alike operate in the production of words, whatever might be the source from which that name was derived. It is not to be understood by this statement, that every Element, denoting the Earth, produces a race of words, conveying precisely the same turn of meaning: On the contrary, each Element may be considered to exhibit a characteristic turn of meaning, peculiar to itself, as derived either by accident from peculiar views in considering the same common object, or as impregnated, perhaps, with the peculiar idea, from which the name of that object was originally taken. Both these principles may probably have operated in producing the characteristic difference, which is attached to each Element. I must observe, moreover, that this peculiar turn of meaning can be exhibited in a series of indisputable and innumerable facts; though the Primary cause should be hidden from our view, and should be the object only of conjecture, unimportant even in the discovery of those truths, which are placed within the sphere of our researches. All, which has been supposed to relate to the Theory of Languages, refers only to a very few terms indeed, which on the present view of the question appear to have but little influence. Those terms, which

have been imagined to be derived from the principle of Onomatopæia, perform no important part, and present themselves to our view, rather as capricious and insulated appendages to Language, which are removed from the sphere of its action, than as necessary and fundamental parts of its structure, which operate with energy and effect in the business of its formation. All, which concerns the Theory of Human Speech, may be exhausted within the compass of a few sentences or pages; while the facts, exhibiting the affinity of words to each other, must be acquired by the most minute examination of the various terms of which Languages are composed, and can be detailed only in long and laborious discussions, which must be recorded in many a bulky volume. I must add, likewise, that even the little, which can be said on the Theory of Languages, cannot be said with effect, till all these facts shall be fully discovered and ascertained.

Whatever Theory of Language the Reader may adopt, and whatever he may be disposed to think respecting the union of the terms denoting Being, under the forms ^C, &c. C^, &c., with the name for the EArTH, ESTIA, (Eστια,) he will probably think that all these terms must be considered as ultimately belonging to each other. The Writers on the Theory of Languages have collected the various words denoting Father and Mother, which appear under our Elements ^C, ^D, &c. C^, D^, &c.; though their enquiries have terminated at this point, nor have they appeared to imagine, that any other terms denoting Being, under different relations, are connected with such words. I shall detail some of the words for Father and Mother, under our Element ^C, ^D, &c. C^, D^, &c., which have been already collected by others: and if the Reader should be of opinion, that these words supplied the origin for the terms denoting Being, under the same Element, he will place them as the original and fundamental words belonging to that race of Pronouns,-Articles,

Articles, &c., which have been the objects of our discussion, and which I have collected in a former page, (336, &c.)

The Author of the Mechanisme du Language, (Tom. I. p. 245, &c.) has the following article: "L' Egyptien, le Cophthe, "l'Africain d'Angola diront Taaut, Theut, Thot, Tot. Celui du " Congo Tat. Le Celtique, le Cimraëc, l' Armorique, le bas " Breton, le Gallois, le Cantabre diront Taat, Taad, Tath, " Taz, Aita. L'Irlandois Nathair. Le Gothique Atta. L'Epirote " Atti. Le Frison Haite. Le Valaque Tatul. L' Esclavon, le "Russe, le Polonois, le Bohemien, le Dalmate, le Croate, le "Vandale, le Bulgare, le Servite, le Carnique, le Lusacien, et " autres dérivés de l'ancien Illyrien, et de l'ancien Sarmate diront "Ottse, Otsche, Otshe, ou par corruption Oieze, Wotzo, Wschzi, "Otsky, Wosche, &c. Le Sauvage de la N. Zemble Otose. Le "Lapon Atti. Le Livonien, le Curlandois, le Prussien, le "Lithuanien, le Meklembourgeois, Tabes, Tews, Thawe, Tewe, "Thewes ou Tabes. Le Hongrois Atyank, Atya. Les Sauvages "du Canada, Aistan, Aytan, Outa, Adatti. Le Huron Aihtaha. "Le Groenlandois Attata. Le Sauvage de N. Angleterre Oshe. "Le Mexicain Tahtli. Le Brasilien Tuba. Le Kalmouk Atey. "Le Siberien Atai. Le Russe Otetze. Le Lapon Otzia, &c. "Tous en se servant de la lettre de dent douce, moyenne ou "rude." In this collection, which is very negligently made, our Author, we see, has omitted the Greek ATTA, (ATTA, Atta,) Tetta, (Terra,) the English Dad, &c. &c. &c. In the same column of Mr. Shaw's Dictionary, where Athair, a Father, occurs, we have "ATA, Is, Am," where we perceive, how the verb of Being is connected with these words. In Gothic, as ATTA signifies Father, AITHEI means likewise Mater; and in the same column of Lye's Saxon Dictionary, in which Aithei occurs, we have the Gothic AIRTHA, Terra.

Before I quit the Greek terms, beginning with Θ , Th, and having

having a vowel breathing after the Radical consonant, I ought not to omit the consideration of Theison, (Oesov, Sulphur,) which means perhaps The—Substance, Theo, Theo, (Θεω, Curro, Θεω, Pono,) 'To Run, and to Place,' which might seem to bring us to the Ground; and yet they might be derived from the idea of 'THE—brisk, lively, action,' and from that of 'THE=ing,' if I may so express it, or 'Putting in The—This or That situation.' Greek Thuo, (Oua, Sacrifico;—Cum impetu quasi furibundus feror, ruo, festino; Furo; Ferveo, Æstuo,) relates perhaps to the • THE—brisk violent action,' from whatever idea it may be derived. I will not pretend to decide, that such is the notion annexed to these terms; but I must observe, that the intensive Particle or Article, under the form C[^], D[^], &c., has certainly supplied verbs, which relate to Intensive actions, as will appear in the course. Whether the English term Do, with its of this discussion. parallels Thue, (Germ.) &c., belongs to the Article, I cannot In Gothic, the parallel term, as it should seem, to Do, appears under the form TG, as Taugan, Facere; and this would lead us to think that Do belongs to the Element TG. Do, and the English Do, must surely be referred to each other, whatever may have been their origin. The Greek Duo, (Δυω, Subeo, ingredior; occido; Induo,) and the Duo in In=Duo, must likewise, I think, be referred to Do, (Eng.) In the sense of Occido, we see 'The-action-of violence,' &c. as in the English Do; and in the sense of In=Duo, we have the use of Do in our colloquial phrase, 'To Don and Doff,' as applied to cloaths, 'To Do-on and off.' In Doo, (Δοω,) from which Didomi, (Διδωμι,) is supposed to be derived, we have the form of the Latin Do, and perhaps the Di=Do in Didomi, (Διδωμι,) as well as the Ti=The in Tithemi, (Τιθημι,) may represent the reduplication of the same terms expressing the action of the verb. analogy.

analogy of the verbs in M₁, as they are called, which the Grammarians detail to us, may have arisen from these very examples. We seem to perceive the same reduplication in the Latin D_E=D_I, and D_E=D₀, and a further addition by the same analogy, perhaps, in D_E=D_I=D_I. We see the original sense of the Latin D₀, as corresponding with the English D₀, in such phrases as 'Dare amplexus, cantus,' &c. 'To D₀ embracings, 'singings,' &c. In the Laws of the Twelve Tables, we have "Si quis hominem liberum—morti Duit," which precisely coincides with the use of D₀ in our ancient expression "D₀NE to "Death;"

" Done to Death by slanderous tongues,

"Was the Hero that here lies." (Much Ado about Nothing.)

where Mr. Malone has justly observed, that "this obsolete "phrase frequently occurs in our ancient dramas." We have seen, that in Saxon, as in English, THE is one form of the Article; and in the same opening of my Saxon Dictionary, we have The=an, or The=on, "Proficere, vigere, pollere, pu-"bescere, adolescere," which surely connects itself with the Intensive word THE. This idea of verbs being derived from Pronominal parts of Speech, under the form C[^], D[^], &c. with the breathing after the Radical Consonants, denoting THE, This, That, &c., will receive illustration from the Hebrew Pronominal parts of Speech, and Particles, which I shall take this occasion of examining. It must be observed however, that some of these terms may be referred to the Element TS, SS, &c.; and under that idea, the Radical form of these Greek verbs Thuo, (Oua, &c.) would be found, in the future, Thuso, (Θυσω.) In many terms, not produced on this occasion, which appear under the form C¹, D¹, &c., this difficulty presents itself. If the Doo, $(\Delta o \omega_r)$ should be conceived to be the true Elementary form, perhaps some might imagine,

that it belongs to the form DE, DEO, ($\Delta\eta$, Pro $\Gamma\eta$, Terra, $\Delta\eta\omega$, Ceres,) as in Zeidweeg Açouça, which is equally applicable, whether we regard $\Delta\omega$ çov as belonging to $\Delta\omega$, or not.

HEBREW PRONOMINAL PARTICLES AND PRONOUNS.

In examining the Hebrew Pronominal Particles, (if I may so express it,) and some of the Pronouns, which belong to our Element ^C^, ^D^, &c. or C^, D^, I shall first consider those, with the breathing after the Radical Consonant; as they directly connect themselves with the form of the words, and with the ideas, now under discussion. In Hebrew, v S^ is used as a Conjunction, denoting "That—For—Because—When," &c. &c. It is applied in the same sense as אשר ASR, says Mr. Parkhurst, of which word, or of w IS, denoting Is, (Eng.) he considers it as an abbreviation. The form of S^, ש corresponds with כה CH, "Thus, In this Manner,—Here,—As, Like As, About—Surely, "Yea, Because, For, Therefore, for That reason, When,—But, "Though," as Mr. Parkhurst explains it in its different senses. Here we see to what various purposes the idea conveyed by That Another form of these words, ש S^, and CH, is זה ZH, "This, This here.—A certain one," &c. &c. The latter word ZH, in says Mr. Parkhurst, "Like Outog in Greek, (see "Acts x. 36.) and Hic in Latin, sometimes imports Eminence— " Distinction, Pre-eminence." Another form of at ZH, is and ZUH, which occurs not as a verb in Hebrew, says Mr. Parkhurst; but in Arabic, nr ZUI, signifies "to verge, tend or incline towards a " certain point, 'vergebat, tendebat Eo, petebat Illud,'" where in Eo and Illud we see the original idea. The same word means an "Angle, Corner, (i. e. the Inclination of two lines, planes, &c. " to each other,) whence the verb is used in the derivative senses

" of thrusting into corners, hiding, laying up," &c., as Mr. Parkhurst explains it. Hence the word means, in one sense, no M=ZUI, "Store=Houses, where things are hidden or laid up." In another sense we have the primitive notion, it is ZU, ZH, ZAT, This, This Here." Mr. Parkhurst has noted the coincidence of the term under such a meaning with it ZH, before produced, and suggested, that the sense of the Demonstrative Pronouns may belong to the Root in ZUH, "as denoting the tendency of our "own, or the directing of another's mind to a certain object."

Adjacent to the word in ZH, This or That, we have in ZI, which, as Mr. Parkhurst says, "occurs not as V. in Heb. nor (so " far as I can find) in the Eastern Dialectical Languages; but "the idea is To be Bright, Splendid, &c., and hence the Greek " Zew, To be fervid, hot." The sense of Splendor, attached to the Hebrew term, certainly belongs to the idea of THE—Distinguished object; and the Greek ZEO, (Zew, Ferveo,) is perhaps attached In examining this word in my Greek Vocato the same idea. bulary, I cast my eyes on ZAO, (Zaw, Vigeo, Vivo,) which we shall certainly imagine to be derived from the same source; and every thing tends to confirm this opinion. The succeeding word to Zao, (Zaw,) in this Vocabulary, is ZEA or ZEIA, (Zea, Zea, Far, &c. Zua, idem,) which perhaps means The-Precious production, by way of Distinction, or it directly belongs to the GEE, (Γ_{η}) Dee, $(\Delta_{\eta}, \text{Terra})$ the Ground. In the combination Zei-Doros, (Zειδωρος, Fertilis, Almus,) a term expressing the Blessings of Fertility, we are indeed brought to the Ground; but here the ZEI may be intensive. We shall probably be confirmed in our opinion, that these terms are derived from some Intensive sense, when we remember an adjacent word, which is directly adopted as an Intensive Particle,—ZA, (Za, Particula inseparabilis, Augens significationem, ut Ζαπλουτος, Valde dives.) Here we have the very idea, supposed in my Hypothesis; and I shew in another place,

place, that ZA is THE. The Hebrew word n ZI, means likewise "The Olive tree and fruit, q.d. The Splendour tree and fruit, so "called from producing Oil," says Mr. Parkhurst, "which sup-"ports the action of fire in Light and Splendour." The ZI, as denoting the Olive, is THE—Distinguished Tree. Our Lexicographer imagines, that Olea, the Olive, and its parallel terms, belong to the Hebrew HL, signifying To Shine. Perhaps Olea, &c. is attached to the Element ^L, for the same reason, as denoting The—Tree, ILLA Arbor. Whether the Hebrew word 'To Shine' is derived from a similar idea, must be the subject of enquiry in another place.

In Hebrew, it ZZ, or it ZIZ, means "An animal moving or "endued with Motion, Whatever Moveth, may to kindulesoov." Perhaps this idea of Life and Motion may belong to " ZI, " ZH. Nothing is so common in Hebrew, as to double a letter, expressing a certain idea, in order to make that idea more forceable. Now the Hebrew ww SS has a similar meaning, "To be brisk, "active, sprightly, chearful;" where perhaps we may have a similar reduplication of w S, "The person or thing THAT,-"Who? Which?" as Mr. Parkhurst explains it. It is curious, that we should find attached to the word CH, This and That, terms with a similar meaning to those, which are annexed to זה ZA, That. We have הוה CUH, "To Burn, Scorch, as Fire," where the term is applied to the Burning of Fire, as 7 ZI is to its Brightness. The term 75 CCH, means 'To be strong. ' vigorous, firm,' which may be a reduplication of > C. Mr. Parkhurst refers to this Hebrew word on CUH, the Greek KAIO, (Καιω, Καυσω,) and the English Caustic, &c. The Greek and Hebrew words may perhaps belong to each other. The Hebrew רדה ChIH, "To be strong and vigorous," we shall now understand to be only another of these words, it ZI, &c. It signifies, likewise, "To Live," and, as a substantive, "A Living creature, An Animal."

We perceive, how this word coincides in idea with ZAO, (Zaw, Vigeo, Vivo,) and with the Saxon The=an, Proficere, Vigere, pollere, pubescere, adolescere, and with the Latin Queo, "To be" able, to may or can." I do not affirm, that these terms directly belong to each other; but I mean to assert, that they belong to the same idea—The—This or That—distinguished person or thing—the Qui—the That That, &c. &c. &c.

I shall now examine some Hebrew Particles, &c. which have not been so particularly discussed in the preceding enquiry, under the form ^C, ^D, &c. It will be necessary to note, likewise, the corresponding Pronominal parts of Speech in this Language, under the same form. We have seen, that the Latin AD has been referred by the Etymologists to the Hebrew OD, "AD, " Usque = AD," says Martinius. Mr. Parkhurst explains this word by "YET, still-Besides, moreover, Again, yet again, More-" Until, To, Unto,-Repeated Both, And;" and in one sense of the word, as our Author observes; "it is used almost like a N. " Any other, any else," where we see it in its original Pronoun state. Mr. Parkhurst has justly pointed out its correspondence with the Greek ET1, (E71,) and Eoos, (E ω_5 ,) in the versions of the Septuagint and Symmachus; and he refers to it the Saxon Gyt, the English Yet, the Latin Ad, and the English At. The Hebrew word denotes likewise, "Timeforeward, futurity, Eternity to come," which mean 'That or Yon period—Unto which we proceed.' It denotes, likewise, "To bear witness, testify;" and as a Noun, "A witness or testimony—a Sign, as the Rainbow, Moon," &c., which means 'That remarkable object, AT which men look. 'ID, AD quod homines respiciunt.' The same Hebrew term ADD, signifies, moreover, "To preserve or continue still, i. e. in "being or safety;" where we have the original idea of Place-Situation, or of any thing Placed—Situated; from which idea, as I conceive, these terms, denoting This or That Existing being

or thing—This—That, &c., have been derived. In one passage of the Psalms, it is translated by "Stand upright;" and by this word, Taylor explains it; where we see the same metaphor as in Existo Sisto, &c. The succeeding word in Mr. Parkhurst's Lexicon, is in ODH, "To Pass over or upon, as a path or way.—"To cause to pass upon, to put on," as ornaments; where we seem likewise to have the more original sense of Place, or of going from Place to Place—To Place it, if I may so say, as applied to motion, and To Place or Put—on a garment. The term, we see, belongs to by OD, and agrees with it even in the secondary sense, which by OD bears of AD or To; as we might explain in ODH, by 'To AD or TO, To On, or Unto,' if I may so express it, Ire AD locum—To pass TO—On, Unto, a certain spot.

There is however a parallel term to these words, which will unequivocally determine their original sense. This term is אחה ATH, (in Chaldee אחה ATA,) which, according to Mr. Parkhurst, means, in its first sense, "To come, to come TO, come "near, approach, come speedily,"—and in its second sense, we have אות AUT, "A Sign, Token," which senses agree with the significations of the preceding terms; but the same word אתי אתה את AT, ATH, ATI, is used as a Pronominal and Articular part of Speech, denoting Thou, Me, and The, The Very; and it is adopted likewise as a Preposition, signifying "With, "To, Towards." We here see that precise union of ideas between The and To in the same word, which my Hypothesis supposes. This example alone would be decisive of the question. The Hebrew את AT means, moreover, a Coulter, which Mr. Parkhurst supposes to be so called, because it "comes before the plough-"share in ploughing." Whatever be the precise idea, by which it is connected with the other senses of the word; we perceive, that we are directly brought to the very spot, from which, as I imagine,

I imagine, all these terms are ultimately taken. Mr. Parkhurst enumerates, among the derivatives of this Hebrew word, "At, "With, The, Thee, Thou;" and all these terms, if we except With, assuredly belong to it, and to each other. It would be idle, however, to select any one of these terms as the original, and to consider the others as Derivatives. Mr. Parkhurst produces, under this Hebrew word, the following passage, in order to illustrate its Intensive or Articular sense, and to shew the faulty translation of our version. In the fourth chapter of Genesis we have, "And Adam knew Eve his wife; and she conceived, "and bare Cain, and said, I have gotten a Man from the Lord," איש את יהוה AIS AT JHUH; where our Translators have considered AT as denoting From,—a sense, which, as Mr. Parkhurst imagines, it cannot bear on this occasion. Dr. Geddes translates it by "I have acquired a godlike man-child;" on which Mr. Parkhurst observes, "But surely the incommunicable name יהוה" JHUH, "must not be degraded to the sense of Godlike;" and he accordingly imagines, that it means "The very, or even Yehovah: " referring to the evangelical promise, Gen. iii. 15. of the seed of "the woman, who should bruise the serpent's head; which promise, "however, it is plain, from her mistake, she did not perfectly "comprehend." This interpretation, I imagine, will not be adopted, though the sense given to את AT, is just. Let us mark the Hebrew words AISH, and AT, the terms for Man, and THE-'THE VERY-Godlike,' which, we see, belong to each other, and to the Latin Is, the English IT, &c.; and I have already examined the Hebrew שה or שה ISH, IS, Existence, Is, (Eng.) &c., to which איש AIS, Man, is referred. We have a similar form, שא AS, which signifies Fire, and sometimes, perhaps, Is; and Mr. Parkhurst, under this word, produces a Chaldee term, denoting Foundations, where we are brought to the primitive notion, supposed in my Hypothesis. Perhaps the sense of Fire may belong belong to the idea of 'THE—That—Powerful, Extraordinary, 'Element;' and Mr. Parkhurst has accordingly referred this word to the term w Being, Substance. If such should be the fact, the words denoting Fire, belonging to our Element, as Ignis, &c., should perhaps be referred to the same idea. I produce, however, these terms for Fire, under a race of words denoting Agitation, &c., which is likewise a very probable idea.

In the same opening of Mr. Parkhurst's Lexicon, where ארה ATH is, we have ASR, אחרה which means, in its first sense, as Mr. Parkhurst supposes, "To proceed, go forward, to be suc-"cessful, prosperous;" and in another sense it means, "Who, "Which, Whom," "a Relative word," as this Lexicographer explains it, "referring to somewhat going before, either expressed "or understood; and so causing the sentence to Proceed or "Go forward without interruption or repetition."—The sense of Prosperous—Happy, means only THE or THAT Personage, by way of Distinction—The Prosperous—Happy Personage, just as Queo, Qui=Ens, denoting Powerful, Able, belongs to Qui. ASR likewise means, as a Conjunction, That, and is used in various manners for Because, As, When, Where, which Mr. Parkhurst has duly referred to the original sense of That, in his explanations, "For the cause That - Because That - In the " manner THAT, As—At the time THAT, When, The place "THAT, Where," &c.; and here again we see how Conjunctions, with apparently different senses, may belong to the idea of THAT. The Hebrew $AS=^{R}$ is probably a compound of the Element $^{S}=^{R}$. In the opening of the Psalms we have three words belonging to each other, applied in their different senses, "Blessed is The Man That," אשרי האיש אשר ASRI HAIS ASR, which is the same as if it had been 'Is,' (quasi δεικτικως,) 'Is-Homo, Is-Qui,' or, as it might have been, 'Qui=Ens, Qui—Homo, (vel AliQui=^S,) Qui.' And thus it is, that Languages have been formed. In Hebrew,

אל AZ means, as a Noun and Particle, "AT That time, then-"AT This time, Now.—AT That point of time," as Mr. Parkhurst explains it; where we have the ideas combined, of AT and This— That, which I suppose in my Hypothesis. Our Author seems doubtful whether he should consider it as a Pronoun or a Particle. In Hebrew, likewise, איך AIK is a particle denoting "In what "manner,—By what means, Where;" and here we have still the same meaning, "In the Manner, That." Mr. Parkhurst supposes it to be a compound of 'M AJ, Where, and CH, Thus or Here; which may possibly be the fact, though it may perhaps be the simple form, belonging to the Element 'K, with the breathing before it. We have, however, a compound in איככה AIK=KH. There is another particle AK, signifying "Indeed—Surely," or in This or That very manner. Mr. Parkhurst describes it by " A Particle denoting that the speaker is very earnest, much moved, " or as we say, greatly struck, and accordingly it may be regularly " deduced from נכה NKH, " to strike, as אט AT, "from נפה" On the origin of the Hebrew MAT, denoting Stooping, as Mr. Parkhurst supposes, or Slowly, Gently, as others, I cannot accurately decide.

The preceding term to this in Mr. Parkhurst's Lexicon is AChR, "Behind, After, either of place, or time," which perhaps may be another form of ASR, and may mean only This—That. The term Be=Hind certainly means 'Be=Yond,' or 'Be=Yon' Situation. In one of the senses, Mr. Parkhurst explains it by "Another, i.e. One, in some respect, after or posterior;" and he derives from it After and Other, where in Other we see the idea, which coincides with my Hypothesis. Mr, Richardson has placed in separate articles AKHAR, "Another, a Second," and AKHIR, "Last, posterior, ultimate, final." In the next column of his Dictionary, he has AKHIRet, "Posterior, last.—The "Extremity.—Life eternal; the other world;" and he adds, "Akhiret

" Akhiret is always opposed by the Arabians to wid" Daya, which signifies, The world or the present Life; synonimous to "which the Persians make use also of این جہان" Ain Jhan, "This world, and "I'm An Jhan, "That world." The Hebrew אחר AChR, is used somewhat in a similar manner; and Mr. Parkhurst has referred it to Acheron, "the name of one of "the infernal rivers, in the Greek and Roman Mythology;" or the River of the Other world. We cannot but note in all this, how the idea of a Future World is marked by the Demonstrative or Distinctive Pronouns That—Other; and such might be the origin of AChR. If such should be the fact, it will be the same compound as in OTH=ER, ET=ER-as, (ETEPOS); yet on this point there is some difficulty. If Ach=Er=On should be derived from. this idea, the On must be considered as belonging to the Element 'N, bearing the same meaning. It is curious, that the same mode of speaking occurs among the Greeks, who, in order to express a Future or the Other World, have adopted the Demonstrative term EKEI, (Exel.) That—place, There. remember the address to Death in the last Speech of Ajax:

 Ω Θανατε, Θανατε, νὖν μ' επισκεψαι μολων' Και τοι σε μεν ΚΑΚΕΙ προσαυδησω ξυνων.

- "O Mors, Mors, nunc accedens me specta;
- " Etsi te quidem, et Illic cohabitans tibi alloquar."

The Critics have been aware of this peculiarity of expression; and have produced, on different occasions, various instances of its use.

CELTIC PARTICLES AND PRONOUNS.

THOUGH I have perpetually appealed to the Celtic forms of Speech in the preceding Enquiries, concerning the nature of the Pronouns, and the terms directly belonging to them, as

the Conjunctions—Prepositions, &c.; yet I shall here more particularly consider these Dialects, and endeavour to explain the mode, in which the process of composition has operated in the formation of such parts of Speech. I shall not however attempt to examine every instance, in which this composition occurs; but shall make only such general observations, as will enable the Celtic Scholar at once to unravel other examples of a similar Some of these compounds are understood, but on others, I imagine, no just conceptions have been formed. In the Irish and Galic Dialects, ME, MI, TU, SE, ISE, &c. are simple states denoting I, Thou, and He, as we have before seen. INN, in Irish, signifies We; and it corresponds with terms in other Languages, bearing the same idea, as Uns, (Goth.) &c. &c. which I have before produced; but S'=Inn, We, is a compound of SE and Inn. IBB and S=IBB in these Dialects signify Ye, where in the latter word we have another compound, corresponding with S'=IBI, (Lat.) and various other terms, as I have before shewn. In Irish and Galic, IAD means They: In the former Language, S'=IAD signifies, likewise, They; and in the latter, ID=SE, which is quasi IAD=SE; where we have combinations of SE and IAD in a contrary order. An, in both these Dialects, is the familiar Article, as in the English An; and in the Plural we have Na, where the breathing before the N is lost. In Na= N, the Genitive plural, we have a combination of Na and An, In these Dialects, Cia. CE, Co, Ciu, Ci=OD, &c. signify 'Who, Which, What;' and So, SA, Su, S=In, &c. 'That, There;' S^=An, S^=On, &c. 'His;' Up, OD, S'=UD, 'This, That,' &c. &c.—TI, TE, 'He, the Man.'—In the same Dialects, CIA means likewise "A Man, Husband." I have already noticed the composition of G=^AcH, Every; and compared it with other terms. In Galic, we have EILE, Another, belonging to Alius, &c., and Chu-Ile, 'All, every,' which is probably in this instance a compound of C^=EILE.

is a similar composition to Qu=Id, Qu=Od, &c. M_I=Se means 'I,' or 'I myself,' from which the Latin Me=T, the addition to Pronouns, seems to be directly taken, as Ego=MeT; where it is applied in its original sense, though it was afterwards added on other occasions, as Nos=MeT.

In Galic, Cheudna means Same, where we have a composition In these Dialects, Ceud is the First, and a of Che=Ud=Na. Hundred, which is surely a composition of CE=UD. Having proceeded thus far, the Celtic Scholar might be tempted to conjecture, that the terms for the First,—the Head, &c., and a Hundred, under the forms CN, might be likewise compounds, similar to S^=In, That, as the Galic Cean, the Head, the Welsh Cyn, the First, &c. &c. He would likewise, perhaps, conjecture, by the same mode of reasoning, that the name for a Hundred, under the Element CN, was a similar composition, as the Galic Ceanan, Ceanair, the Welsh Cant, the Latin Centum, &c. &c. &c. If the Greek Ekaton, (Exaror,) is not quasi Ekton, with the Kton belonging to Centum, perhaps we should imagine, that Ex= AT=ON was a composition of the Element 'K, 'T, and of 'N, in order to express the greatness of the number, quasi That-That, &c. number, by way of distinction. I dare not venture to conjecture, that such is the origin of Cyn, &c., as the process of composition would then proceed to an extent, to which we should with difficulty raise our conceptions, in the present state of the discussion. Through the whole compass of Language the form CN denotes the Top-Head-First-Chief, &c.; and this idea seems to be deeply involved with the great race of words, appearing under that form.

Before however I quit this form, I must exhibit a few terms, which are, I think, unequivocally derived from the process of composition. In the same column of Mr. Shaw's Dictionary, where Ceann, the 'Head,' is found, we have "Ce=Ana, Alike, the "Same."

"Same," and "CE=ANA, Even, lo, already," which is a similar composition of Pronouns, denoting This or That, as in Ce=Ud, Idem or Id-Dem, O Autos, (O autos,) and S^=Ame, which I have shewn likewise to be a compound. In Welsh, C^=An or G^=An signifies "Because, forasmuch as, since That," which is another of these combinations; where, in the interpretation As—That, we see the original idea of the compounding Pronouns. These words are likewise used as Prepositions signifying "With, Of." The Welsh C^=An=Ys, "For, Because," exhibits an additional part Ys. Mr. Richards explains G^=An in another place by "Forasmuch as, "Whereas." Let us mark the compound Where=As, in which Where signifies That—That, (In That Place That,) and As bears a similar meaning of That.' Let us likewise mark the explanatory word S=Ince, which I have shewn to be a similar compound. The same term G-An, which in the Welsh Dialect of the Celtic signifies With, in other Dialects denotes With-out, as the Irish In all this there is no difficulty; as the senses of With or Without express merely This situation and That. But whatever may be the precise mode, by which the ideas of With and That are united; we unequivocally see, how the idea of That is connected with GAN as a Conjunction; and we cannot doubt, that the Preposition and Conjunction are the same. We now see, that the Latin S=IN and S=INE belong to each other, and that they are compositions of a similar kind to the Celtic S=In, That, G=An, 'Without.'

The Prepositions in the Celtic Dialects, which are familiarly joined with the Pronouns, originally performed, as I imagine, the office of Demonstrative parts of Speech. Thus we have belonging to our Element, with the breathing before and after the Radical Consonant, Ag, Aig, Uaidh, As, Do, Dh, Gu or Chu, or, when compounded, Gu=S, Chu=G, &c. When joined to Pronouns we have Agibh, Asibh, Dhibh, Chugibb, or Ag, As, Dh^, Chug\limeq Ibh,

'At, Out, From, To You.' Let us mark the terms AT and To, respectively corresponding with Aig and Do. The Preposition Air, Upon, belongs to the Element 'R, denoting the Ground, as UIR, (Gal.) "Mould, Earth, Dust," as Mr. Shaw explains it; the Greek ERA, (Eoa, Terra,) AR-OURA, (Acoupa,) &c. &c. With the idea of Upon—the Top—the Surface, is connected that of the Superior Personage-The Distinguished Personage; and hence we have the Armoric and Welsh Articles AR, YR. Hence the sense of the Preposition AIR. Upon, the Superior Part, is so entangled with the sense of The Superior Personage—The—This or That Distinguished Person or object, that oftentimes we cannot separate the one from the other. Without stopping to adjust on every occasion the precise idea annexed to the Element AR, I shall exhibit various terms which belongs to each other, under this Element; and which present themselves to our attention in the consideration of the Celtic Particles. The terms Th '=AR, Th '=AR=Is, Over, are compounds. Among the terms for Iterum, we have the Cornish Arta, the Armoric Adarre, the Irish Athair, which seem to be compounds of Ath, Aith, Again, and Thar. We perceive, that Iterum belongs to Athair, &c.; and yet ITERum seems to connect itself with ITER, which belongs surely to IT, (Lat.) In Celtic, we have words, under the same form as Iter, bearing the same meaning. Among the terms for ITER in Lhuyd, we have Astar, Eartar. The particle Rt, To, is AR, with the breathing after the R[^]; and AR=Is, R1=S, Again, are compounds. Ro, "Very, "Too," belongs to Ri, To. I have shewn, that To and Too belong to each other, and to the Article or Intensive term THE. I must leave the Celtic Scholars to decide, whether Re and Ro are related to each other by the same process.

The Latin Re belongs to these terms R1, Ro, AR=Is, &c.; and we perhaps see the true sense in the future of Rus, as it is called; where,

where, in Amat-Ur=Us, the Ur seems to signify 'THE Being, 'Loving.' The Latin RE coincides in sense with Ro, Very, when it denotes Abundance, as Redundo, To Overflow. In the Greek Eri, and ARI, (Eq., particula, augens significationem vocum, cum quibus componitur, Ap, Particula inseparabilis, quæ vocabulis præfixa. significationem eorum auget per Valde, Vehementer, &c.) ARA, (Apa, Utique, Nempe, &c., An, Utrum,) we have the full form with the breathing before and after the 'R'; but in AR, (Ap, apud Poëtas pro Apa,) and RA, (Conjunct. Expletiva, Certe, Utique,). we see the Celtic forms. Let us mark the explanatory term 'Utique,' where the Uti belongs to UT, ID, That; and we have likewise Que added, which belongs to the Pronoun Qui, That. In Irish, UIR added to nouns means Very, as UIRisioll, Very Humble. The Etymologists doubt, whether Re or Retro be the original. The Tro is the same as the Tro, Tra, and Ter, in In Tro, Tra, Ter, Tra= Ns; and it belongs probably to Terra, unless we should imagine, that it is the same compound as In the Dialects of the Celtic, Dra, Tra, Tar, &c. signify Beyond; and in these Dialects, likewise, Daiar, Tyr, &c. mean Terra. Can we imagine, that the name for the Ground, as DAIAR. Tyr, TERRA, is itself a composition from TH=AIR? If this should be the fact, my Hypothesis will still remain the same, that Languages, or the terms forming the great body of Human Speech, are derived from the Ground. If the name for the Ground, as DAIAR, &c., had not existed, the Element DR, TR. &c. would have supplied only a few terms. I have exhibited the prepositions produced above, Ag, Aig, &c., as they are written by Mr. Shaw in the Galic Dialect; but the Celtic Scholar will at once apply them to the parallel terms which appear in other Dialects, and which I do not think it necessary to produce. Ag and Air are used in the formation of verbs; and General Vallancey has expressly represented them under the idea

idea of "Participial Articles," which coincides with my Hypothesis. He observes, that "AG and AR are Participial Articles of the "Present tense, IAR, of the Preter, and AR T1 of the Future, as "AG Radh, Saying, IAR Radh, Having Said." The AG and AR mean 'The Person, or Being,' as ED does in Lov=ED, and as Ing in Lov=Ing. The Ing, we know, belongs to the An, &c. the Article, as Love=An, Love=One, 'The An or One who Loves.'

The Irish IAR belongs to the ER in Lov=ER, and OR in Amat=OR. In Galic, OIR or AIR may be almost considered as a participial termination. Mr. Shaw observes, that "Agents or "doers subjoin Oir, and sometimes Air, to the present participle " of verbs, as Scriobadh, Writing, Scriobhadoir, a Writ=Er, &c .-" or by changing the termination into OIR, as Cruthich=OIR, the " Creat=OR, from Cruthuchadh, a Creating." Mr. Shaw adds, that "Some write the termination Fhear in place of Oir, affecting " an idle knowledge in the Etymology of words, at the expence " of hurting the eye of every Reader with the bristly appearance " of an useless assemblage of consonants;" and Mr. Shaw imagines, that Fhear added thus to words would be the same, as if we should write in Latin Amat=VIR, for Amat=OR, Mr. Shaw, we see, supposes, that the Oir and Fhear belong to each other, and to Vir. This I suppose likewise; but here some difficulty presents itself. The Fhear and Vir may be derived from the Element $^{\text{R}}$, Oir, by the organical addition of the f, v; or the Fhe=Ar, and $V^{\wedge}=Ir$, may be a compound of the Elements F^{\wedge} and ^R, as we have seen $P^A=As$, P=An, &c. to be compounds of the same Element F', P', and of 'S, 'N. We may likewise consider the matter under this point of view. We cannot, I think, doubt, that the Celtic terms for Man, Gur and Fhear, are only different forms of each other; and if that should be the fact, we may suppose, that Gu and FHE, in the compounds Gu= AR, Fhe=Ar, belong to each other, as Qui belongs to Who. The

504

The Greek particle Per, (II.e., Particula, sive Conjunct. expletiva. aliis orationis partibus annecti solita, quæ-Notat Quamquam. Tametsi, respondet particulæ Cumque;—redundat,) certainly belongs to a race of words denoting This or That Being; and it is used in its original idea, when it is annexed to Pronouns, as Os=Per, (O $\sigma\pi\epsilon\rho$.) I must observe too, that $P^*=ER$, ($\Pi\epsilon\rho$.) seems to have arisen from the process of composition.

I have suggested, that the Greek $T^*=In-os$, and $D^*=Eina$. (Tivos, Deiva,) are compounds; and that possibly another familiar Celtic term for Man, as Duine, may be likewise a compound of the Elements D^=^N; but here too some difficulties occur. Those, who examine the Welsh Dyn, "A man, a person," in a Dictionary of that Language, and consider the adjacent Dyna. or D'=YNA, Lo there!' which the Lexicographers themselves allow to be a compound of Dy and YNA, will be disposed to imagine D'=YN, the Man, to be a compound of a similar kind. The Welsh Dy, "the preposition in composition, augmenting " and enhancing the signification—DI, the privative particle, and "DE, the particle for enchancing or altering the signification a "little," still mean THE, and belong to DE-DI, &c. &c. of the Latins, &c. &c. before unfolded, (p. 467.) Dr is used in Welsh for T1, Thou, where it is directly applied to person. The Welsh DA, Good, may perhaps mean DE, the Distinguished Personage; and the adjacent term to DE in Mr. Richards' Dictionary, DEHAU, "RIGHT, the Right hand," &c., might perhaps mean THE-This however will bring us to the Latin Dexter, and the Greek Dexios, (Δεξίος,) in which there is some difficulty. In the Greek Outi-Dan-os, (Outidanos, Homo nullius pretii,) and in O TAN, (Ωτων, amice,) we see the Deina and Tin in Tin=0s.

Let us mark, in the expression Ar Ti, the word Ti, which bears a similar sense of This—That. Mr. Shaw explains Tr in one article by "He, He who, Him that;" and in another article

by "Unto, To." If we are not willing to suppose, that THE and To, in English, belong to the Celtic Ti, we see from Ti how THE and To may be only different forms of each other. In another article of Mr. Shaw's Dictionary, we have T1 Mhor, "The Supreme Being, God;" from which the Tartar term for an Illustrious personage, Timour, or TI=Mour, is derived. The AIR and Ag in the formation of verbs have sometimes Pronouns put after them in such a manner, that we may consider them to be used in their sense as Prepositions. Do and Ro are sometimes likewise applied in the forming of verbs; and here again General Vallancey has well described them, when they perform this office, under the idea of "Verbal Articles." He tells us, moreover, that "As, which is called an Affirmative Article, is also no other than "the Spanish Es, and the Latin Est, and is a verb impersonal." Here it seems to be obscure, whether As should be considered, as a Particle of Affirmation, or an Articular-Demonstrative Pronoun, or a Verb, corresponding, as it might be in these three usages, with YES, IT, Is, respectively. I have myself expressed a doubt, whether YES, which means IT Is, should be considered as IT or Is. This, however, is an idle distinction, as it relates to the fundamental idea of the word.

The Galic Si=Os, Su=As, Up, Down, Shi=Os, Shu=As, Above and Below, An=Ios, An=Uas, Up, Down, with their parallel terms in other Dialects, are compounds. The Latin $S^*=Us$, and the French $J^*=Us$, in Jus=Que, belong to Su=As. In the same column of General Vallancey's Grammar, where Su=As, and An=Uas, 'Upward, Down,' are, I find Siu, 'Before, 'That, So, Here,' 'SO, This, This here," where we have the simple form. In the Italian Su, we have likewise the simple form; and in Su=Vi, $Su=^*L$, we have acknowledged compounds. We might hence conjecture, that the French $Su=^*R$, Upon, is a compound; and to Sur, &c., signifying the Top,

we must refer, I think, terms denoting eminent personages, as Sieur, Sir, Tzar, &c.; and words signifying the 'Head—Top, or 'Sureface,' as Kara, (Kaea, Caput,) &c. &c. This will open to us a wide sphere indeed for the process of composition. We shall now understand, that the French $Su=^S$ and $Sou=^S$ belong to Su=As. The French Etymologists refer Sus and Sur to the Latin Sursum, Susum; where we see, that in Su=rS we have the same composition as in $Su=^S$. The Etymologists derive Sous from Subtus. Perhaps the $Su=^B$ and S=Uper of the Latins are compounds. In Galic, Ann=S=Ud, and Ann=So, mean 'Here' and There;' to which Celtic combinations the French Ain=Si, and its ancient form $Ain=S^*=Ic$, directly belong. We have in Irish Uin=Si, which General Vallancey explains by "Is, It is."

The terms Se=Ach, C^=Ach, are enumerated among the Irish Particles by General Vallancey, as signifying "Rather than others, "else, otherwise;" to which, as we see, belongs the Latin S^=Ec=Us. The succeeding terms to Se=Ach in this collection of particles, are Se-Acha, Se=Ach=Adh, "By, aside, out of the " way," which signify 'That Part or Way,' as distinguished from another. In the Adh of this latter word, we perhaps see the Us in the Latin $S^*=Ec=Us$. I have supposed on a former occasion, that the Latin S=Ic, $S^{A}=Ec=Us$, $C^{A}=Is$, $S^{A}=Us$, $S^{A}=Ed$, &c. belong to each other; and we now see, how they are connected with these Celtic terms. The word Se=Ach=Ad occurs in the same column of General Vallancey's Grammar, in which "SO, This. "This here," is produced; and I find, likewise, in the same column, Se=Adh, "Yes, Yea, truly," to which we shall more directly refer the Latin S^=Ed. Robert Ainsworth explains SED Autem, SED Enim, by "Yea But,-But Truly," where we perceive how Yea and Truly are involved in the sense annexed to But. "Non solum interfuit, SED etiam præfuit,"- Not only ' was he present at these things; -Yes indeed, Yea, Truly-· Verily,

Verily, &c. he presided over them.' Mr. Shaw, in his Galic and Irish Dictionary, produces the phrase "Seadh, Seach," "By "turns, alternately;" which means, 'Now This, now That.' In the same column of Mr. Shaw's Dictionary, where Se=Ach occurs, we have Se, "He, It, Him." Se "For Is e, 'tis he, it;" where we have both the Verb and the Pronoun; and we see here another proof, how they are blended with each other. On considering the terms with which Se=Ach and Se=Adh appear to be connected, our ideas on the process of composition would be enlarged to an extent, which I shall not venture to unfold in the present state of these Discussions.

I have suggested on a former occasion, that most of the numerals from One to Ten are probably derived from Demonstrative parts of Speech. I have illustrated this idea in the terms One—Two—Three. The number $S^*=Ix$, $S^*=Ex$, &c. I conceive to be a compound, and to be derived from the same source. The simpler form I imagine to exist in the Irish SIA, which Mr. Shaw places in one article, as denoting Six; and in another, as signifying "Far off, the utmost, remotest from you." In the same column of his Dictionary, we have a word under the same form. which he explains by "Backwards, behind, the west, awry." The SIA is only another form of SUI, So, &c. produced above, denoting 'This-That place;' and the SIA in this sense, must surely be the same as SIA—This—That—Such a number, SI=^X. In the same column where these words occur, we have likewise S₁, She, Her, $S_1 = Ad$, They; where we have the genuine sense of a Pronominal part of Speech, Si=Air, Aside, Shi=Air, the West; where in the two latter words we have compounds, such as I have before unfolded. Thus then, the Latin SE=X does not come from Ex, $(E\xi)$ but it is a compound of SE=Ex,—Sia=Ex, where the Ex means likewise That. Under another form, we have Okto, (Outw,) Eight, &c. &c. Thus then, Eis, (E4,) Ex, (E2,) Окто,

OKTO, are different forms, applied to express different numbers, conveying the same fundamental idea. In the Italian SEI, we have either the simpler state, or the second Consonant is lost. In the Dialects of the Celtic, the name for Seven appears under the form S-T, S-C, &c., as Saith, Seith, Sheaxd, Moir-Seisear, as they are written by Lhuyd. In Mr. Shaw's Dictionary, the form of the Irish word is Seach, Seacht, Seven, which occurs in the same column, where we have Seachad, "By, aside, out of the way, "Past," which I have above produced as a compound denoting This -That. These words surely belong to each other. We cannot help observing, that the T exists in the Latin Septem, which may be quasi Setem, and in the Greek Epta, (Enta,) which may be quasi Eta. We must not, however, forget to remark, that in Hebrew, Arabic, as in the Teutonic Dialects; the name for Seven appears under the Element SV, without any record of the T. In Gipsey and in Persian we have Efta, and Haft, denoting Seven, where we have the Greek form. In the Italian and Spanish Sette and Siete, we have the Celtic form; and the French Sept is quasi Set, without the sound of the p. In Persian, Do and SEH are Two, Three; where Do and SEH are plainly only different forms of each other, denoting This—That. Again, in Persian, DAH is Ten, which is either quasi Dach, as in the Dec of Decem; or it is the first portion of the compound DE=C. In the Celtic Dialects, the name for this number appears under the form DC, &c., as Deg, Dek, Deix, the terms produced by Lhuyd under Decem. In the Teutonic, we have the form TN, as Tyn, (Sax.) Ten, (Eng.) Zehen, (Germ.) &c. &c. On this term, however, there are some difficulties.

As SA in Irish signifies That, so it likewise means, as Mr. Shaw justly explains it, "In, In The;" where, in the interpretation The, we have the original idea. Under the same form SA, Mr. Shaw has three different articles, in which it

méans

means Self-Whose-"And His;" where its genuine sense appears. Among the Celtic terms for In, Lhuyd produces the Irish $S^-=An$, which belongs to $S^-=In$; just as a part of these words SA means at once That and In. The English In, with its parallel terms through so great a variety of Languages, belongs to the In in S^-In , and to the An, The, That, in S^-An . I find in Mr. Shaw's Dictionary, that SAN is placed in four separate articles, in which it is explained by "In THE," (San's An,)—"Holy," -" Put after Pronouns, and particularises the word to which it "is joined."—"San Cann. Thither and hither;" where C=Ann is only another form of S=An, This, That. We cannot but refer the same form SAN, in the sense of "Holy," to the other meanings above produced; and thus we shall understand, that S=AN, 'Holy,' signifies The, or That personage, by way of distinction. To SAN belongs SANCTUS, with the parallel words in modern Languages, Saint, (Eng.) &c. &c. - Sanus should probably be considered as belonging to the Celtic SAN. General Vallancey, likewise, justly explains San by "In The;" where, in the Demonstrative The, we see its primary sense. In the next column of General Vallancey's Grammar to that in which San is, I see its kindred terms Sin, That, These, Soin, That, Thence. Here I see likewise other similar terms in a simple and in a compound state, as So, "This, This here;" So, "This is;" Siu, "So, "Here;" Sui, "Before, That," which I have produced above; S1=Ar, "Backwards. behind," just as Be=HIND means "By=Yon," or That part. I see likewise, in the same opening of this Vocabulary, Sceo, "And," or, as it might be interpreted, 'So—in That 'Manner.' To the Sceo or CEO, as it is sometimes written, belongs the Greek KAI, (Kai.)

I shall here produce various Celtic terms attached to different Elements, under the Irish form, which I conceive to be derived from Demonstrative parts of Speech, denoting This—

That;

That; and I shall duly mark those, which I conceive to be compounds:—Ach, Achd, But; Atha, Again; Os, Above; Ag=Us, Ac=Us, Is, Eas, And, belonging to the Latin Ac, Et, &c.; and Cha, Not; Ca=It, Ca=Ide, Where; $Ca=^TT$, $C^*=AD$, What; Ca=Ode, How; $Ca^*=Ch$, All, every, (to which belong, as I before observed, the French Chaque, or Cha*=Que, the Spanish $Ca^*=Da$, &c. &c.); $Ca=^NN$, Whilst; Ce=Ana, Low, Behold; $Ca=^NN$, Without, &c. &c.; Co, Co, With; Co, Co, Although; $Co=^NN$, So that; Co, If; Co, Whence; Co, Co,

To the Celtic preposition Le belongs the Hebrew and Arabic Servile Letter L, when it is used as a Preposition Particle, if I may so express it. The Hebrew 5 L, "To, Unto,—For, be-"cause of, on account of," &c. &c. &c.—"Redundant, or rather " abridged from אל " AL, "The," as Mr. Parkhurst explains it, is acknowledged to belong to אל AL, about which the Hebrew Scholars have been involved in so many difficulties, when they have attempted to discover its original idea. Mr. Parkhurst observes on the Hebrew אא AL, that "it is one of the most diffi-"cult Roots in the Hebrew Language; and various methods have "been taken by learned men to account for its several applica-"tions." He then adds, "After the most attentive consideration "I think the notion of Interposition—Intervention, or the like, bids "the fairest for the ideal meaning of it, and best reconciles its "different uses." Some of the senses produced by our Author, for this word, are God, the Heavens, Leaders,—Assistance, Defense, Horned Animals-The-That, as an "article or Pronoun," To, Into, &c., No, Not, &c. &c. We here unequivocally see, that the leading idea is The-That-The object-The Eminent or Distinguished Distinguished object, as 'God-Leaders,' &c. Powerful Creatures able to Assist, or to Attack, as Defenders, Horned Animals, &c. &c.

This Hebrew word אל AL belongs, as we shall agree, to the Latin ILLE, the Italian and French Il, the Spanish El, and the Arabic Article JI AL, &c. &c. As Il, and its parallels, have become Le, Lo, so has the Hebrew AL, 'To, into,' become L', 'To, Into,' with the breathing after the L'. We perceive, moreover, a most unequivocal fact, which decides on the truth of my Hypothesis, namely, that the same word is at once the Pronominal part of Speech The, That, and the preposition To. which is the precise union of ideas, which I have conceived to take place on various occasion. I have supposed, that the explanatory terms here adopted by Mr. Parkhurst, The and To, are examples of this union; and that they are only different forms of each other, with a similar meaning applied to different purposes. We perceive, moreover, what we shall find to be a very important fact on another occasion, that terms bearing a Negative sense may be derived from the Demonstrative part of Speech, under the idea of THE-object, as Distinguished for its Bad qualities-the Vile object—Vile—Bad—No, Not. The use of the Demonstrative part of Speech is acknowledged to be alike applicable to the Distinguished object—whether good or bad; and when we adopt such terms as THE-THAT, we all know, that by a different mode of applying them, as in scorn or abhorrence, THE! THAT! THE? THAT? we pass at once into expressions of aversion, which correspond with the application of Negative particles-No, Not! When the L is doubled in the Hebrew word, as אלל ALL, it is one of the strongest terms to express a Vile object; and Mr. Parkhurst accordingly explains it by "Nought, Nothing, Vain, Nothing "worth, Res nihili." It will not be necessary to examine the parallel terms in the Arabic, belonging to the Hebrew AL, and the particle L^* , as they have a similar meaning. In Arabic,

AL, is the Article, and God; and AL AL is "Deus optimus "maximus." In Arabic, J L^ is a preposition To, as in Hebrew, Irish, &c.; and it means in general, "That, To, for, "because," &c., as Mr. Richardson explains it; where, in the conjunction That, we see the original idea. The succeeding word, in Mr. Richardson's Dictionary, is Y LA, "No, Not, Not at all." There is a curious combination of the various terms belonging to the Element ^L^, in the familiar Arabic sentence, all y LA, ALH, ALA, AL=^LH, "There is no God but God;" where the Element ^L ^ is five times repeated, and in four it is applied to different purposes Not, God, But, The, though with the same radical meaning. In Arabic, the term Ala, I not only means 'Except, Besides,' but it signifies the same as الج Ali, 'To, 'Until, &c., which is the full form of Le, .). In the same Languages, J& HEL, means "Whether or Not.—Indeed, Aye. Yes.— "It is not," as Mr. Richardson explains it; where we see, that the word equally signifies Tes or No, only because it means This or That—So, &c. applied in a different manner.

It is curious to observe, how words, conveying the same Radical idea, though not directly connected with each other, express similar turns of meaning. I shall produce a word, belonging to this race, which appears to be a term, formed from nothing but the affectation or folly of the speaker. Language, however, exhibits no such terms; and among all the various mutations, which folly or affectation may controul, they have never been able to produce any change in the Elementary forms of Human Speech. Our term of affectation, LA, means simply This, That; and in some examples, we can hardly distinguish, whether it is applied in its Affirmative or Negative sense. Cressida says, "In Faith, I will, LA; never trust me else, (Act V. S. 2.) and Pandarus, in a former part of the play, says, "Nay, "that shall not serve your turn: that shall it not, in truth, LA. "Nay,

"Nay, I care not for such words; No, No." Though La in both these places has the same meaning; yet in the former it is applied with the Affirmative idea; and in the latter, it is involved with the Negative sense. The French too, use La La for 'Indifferently,' or 'Somewhat badly;' and in Arabic, La La, Y I is used to denote "Not at all,—By no means," &c.

These observations on terms implying Negation, will unfold to us the origin of a race of words, about which nothing is understood, and which are used in a Negative sense, through a wide compass of Human Speech. These words are No, (Eng.) NE, (Lat.) &c. &c.; and in a compound state, No= ^T, (Eng.) NE=^C, No=^N, (Lat.) &c. &c. &c. The parallel terms to No, produced by the Etymologists, are Na, No, (Sax.) Ne, (Goth.) Nei, Ne, (Dan. Isl. Swed.) &c. &c. Nor is referred to the Belgic ' Niet, the German Nicht, Nocht, (Scotch,) &c. &c. In the Dialects of the Celtic, we find in Lhuyd, under Non, the following terms: "Na, Nag, Ni, Nid, Nis, Heni, Dem. No, Not, Na, Ne, " Nag, Nag yu, quod non est. Ar. Ne, Ir. Ni, Ko, Naide. "K. Nim, Niar, Nar, Nax, Na, Gion, Naxa, Konax. Non est, "Ni v'uil, Nil." All these words belonging to the Element N', as No, NE, NI, &c., originally, I imagine, denoted This or That Being; and in their compound state, No=T, NE=^C, NA=^G, N1=^M,&c., they still conveyed the same idea. We have seen, that the Celtic article An becomes in the plural NA, with the breathing after the 'N'; and in No+An, the genitive Plural, we have a similar (combination, though applied in a different sense, to that of the Negative No= N. We have seen in Arabic, that the Negative particle Le, belonging to the Article Al, has the breathing after the L^.

The Etymologists, under the Latin NE, remind us of the Greek NE, NEE, (Ne, Nn,) and the Hebrew PR AIN; and they have referred us moreover to the Greek Een, An, (Hr, Ar,) and the

Latin An. In NE, the interrogation, we have precisely the sense of An, which simply denotes That in an interrogative sense; just as Quid, That thing, Ali=Quid, becomes the interrogative Quid, What? In the Greek NEE, (Ng, Particula affirmantis et jurantis, Ny Au, per Jovem, profecto, Gl. V. Ny Au, Etiam, in comp. priv. interdum etiam intendit et auget, ut Nazuros, &c.), we unequivocally see the genuine idea; since it is used in the Affirmative sense as well as the Negative. In the explanatory word Etiam, which belongs to Et, ID, and means 'In This or 'That same manner, So,' we see likewise the true notion. Greek NA1, (Na, Næ, Ita, Etiam, Sané, Utique,) and the Latin Næ, contain likewise the original idea. The explanatory word ITA is acknowledged to belong to ID. The Celtic Сно, Not, belongs to the Element C[^], That. Cho means at once, "Not, Whose," where it is both a Negative particle and a Pronoun; and the adjacent terms in Mr. Shaw's Dictionary are "Co, As," and "Co, Who? "Which," divided by this Lexicographer into separate articles. The Greek Ou, (Ou, Non,) the Negative, belongs to the Ou, (Oi,) the Pronoun, and in the Ouk, Ouch, (Ouz, Oux,) the K and Ch, z, x, might have been originally added before vowels, as it is commonly supposed; yet they might be distinct words belonging to the Element ^C. We have Ouki and Ouchi, (Our, Oux,) and we know, that Ouk, (Oux,) is often placed at the end of a period, by way of a strong mode of Negation, Ou was Some, a larger OTK. 'Non mihi videtur, O Hippia. Nequaquam.'

The particle MEE, (M₁, Ne, Non, Nunquid? An?) belongs to the Element M[^], under the idea of the Pronominal part of Speech. We perceive the interpretation An, and the Pronominal term Numquid; where let us mark N[^]=Um, which is a compound of the Elements N[^] and M[^], bearing the same meaning. We have seen under a similar form the Celtic Nim, Not. Let us mark the parallel term to Mee, (M₁)—The Greek MA, (Ma, Jurandi

Jurandi negativum, Μα Δια, Non certe per Jovem, ου μα Δια, idem. Sed Nai un Dia, affirm. profecto, certe, per Jovem. Occurrit Ma solum et affirmative, sed raro, et fere apud recentiores,) which is used in an affirmative as well as in a negative sense; and these senses belong to each other, just as Nee belongs to Nai, (Nn, Nai.) The Greek MA, (Ma,) must be referred to the Hebrew תה MH, 'Who, Which, What;' and this is directly attached to the Hebrew AM, which denotes a Mother; and which is moreover used as an Affirmative-Interrogative and Negative Particle.-We have seen, that the Enclitic NE has been compared with the Hebrew AIN THE Not; and the original idea annexed to this word will be seen in its parallel Arabic term (1) An, which Mr. Richardson explains by "1. That, in order to. 2. If. 3. Behold. 4. Not, " (particularly after an oath,)" &c. &c., which again unequivocally decides on the truth of my Hypothesis. These Hebrew and Arabic terms Ain, An, belong to the Pronouns my (... HN, They. This union of ideas of That and If, in the Arabic (1) An, will shew us, that the English An, in the sense of If, ("An it like " you,") belongs to An, the Article. The Greek Ean, Een, An, INA, (Ear, Hr, Ar, Iva,) belong to En, (Er, Unum,) for the same reason; and we see how these terms, with the Latin An, &c. &c., are all ultimately to be referred to each other. I do not attempt to adjust the precise degrees of affinity, which exist between them. I have shewn on former occasions, that the Latin SI has the same meaning as the English So-denoting This or That; as Si Placet-'SO it pleases you, If SO be, it pleases you;' and to this we shall all agree. In the Irish and Galic Dialects of the Celtic, Ain is a Negative Particle, compounded with an adjective; and we shall now recollect, that in English An or Un has a similar meaning, and for the same reason.

The Irish NA General Vallancey explains by "Nor, Neither, "Not, Or, Than." Let us first mark, that NA signifies Than.

We have seen, that the idea conveyed by Than has been often expressed by a Pronominal part of Speech, as in the term itself— Than, which I have referred to Then, signifying That time,—H, (H, Quam,) in Greek, belonging to the Pronoun, under the same and likewise in Che and Que, (Ital. and Fr.) We see, moreover, that this sense of NA, Than, is involved with that of NOR; and let us remember, that in vulgar English, NoR is used as a term of comparison, 'He is greater Non he.' We perceive, -that this phrase, through a vulgarism, is derived from a just impression on the force of words.—In Scotch, Non is used for Than; and so likewise is the simple state NA. I find in the same column of General Vallancey's Grammar, where NA occurs, Nach, 'Whether or No, is Not, almost,' 'Naide, Who, Which,' 'Noch, Which.' These terms exhibit, in fact, the same compositions as Not, with a different turn of meaning. The Noch coincides with the German Noch; and when in this Language we find the union Noch Nicht, we have terms belonging to each other, applied to different purposes. The term D'-Och is a compound The Etymologists are aware, in some cases, how the of $D^{\wedge} = {^{\wedge}C}$. Negative Particles NE, No, are combined with other words, as Nam, for Ne Am, Nat and Not, which they consider to be Ne What, Ne Wot, Nist, Ne wist, Nold, Ne Would: The Nold is precisely the same combination as Nolo, from Ne and Volo; or as Nill in the phrase Willy Nilly; and in Malo we have the intensive M^, Ma, and Volo. In Gothic, Nist is for Ni Ist, Is Not; and in Persian we have precisely the same combination. Greek N^=Ekus, (Nexus, Mortuus,) is a similar composition, and means the N'=IsT, the N'=OT, the person who Is N'=OT, or No We shall hence understand, that Now, N'=ONCE, (Eng.) N'=Unc, N'=Un, (Nuv,) all belong to each other; and that they signify 'At, &c. This—time,—on This Occasion,' &c. N^=Oon is not the Nona hora, but 'THE-Time,' by way of eminence. I shall

not proceed to any greater length at present with my illustration of the Element 'N', which will afford me an ample subject of future discussion. These observations are sufficient to shew us, how widely the same idea operates in forming words under different Elements, and how similar principles exert their influence through the whole compass of Human Speech.

Wherever we turn our eyes in contemplating the mechanism of Language; we view on all sides the same strong and striking proofs of order—uniformity and consistency. It is indeed a marvellous art, in which the artist is unconscious of his skill, and totally ignorant of that exquisite and unerring contrivance, by which his machinery has been conceived—conducted and compleated. Still, however, all his principles are just, and all his exertions are directed to the same purpose, and terminate in the same end. The great work of Language is at last accomplished; and Man communicates with Man, in a curious system of artifice and of order, which exhibits the abundance of its resources, under an infinite variety of forms, and with unbounded diversity of effect *.

^{*} This article on the Celtic Pronouns and Particles should be well studied by those, who are desirous of investigating the affinities of Human Speech, and especially in such Languages, which we have been accustomed to consider as Barbarous. We must found our researches on the Celtic Dialects, and we must apply to Pronouns and Particles, as the most certain objects for tracing that affinity, which we are endeavouring to discover. Other words may be so much transformed in appearance and in sense, as to be removed out of the reach of all but those, who are consummate adepts in the secrets of Language. But Pronouns and Particles proceed only to a certain point in composition, and still remain in their more simple and original form. The Numerals, which have been commonly produced as the most certain marks of affinity, are the most changeable—uncertain and fallacious. The long words, which Barbarous Languages are represented as possessing, have arisen probably alike from the ignorance of those, who have detailed their own Language, and of those who have recorded it. A sentence has been mistaken for a word, and a description of properties and qualities for a name. The length of words by composition, &c. has been effected

in Barbarous Languages by a similar process to that, which has taken place in other Languages; though perhaps it has not proceeded to a greater or even to so great an extent as in those Languages, with which we are most acquainted, where the artifice of composition, by Prepositions and inflexions in Nouns and Verbs, has been adopted. In the Mohawk Language, which is supposed to be the most Barbarous of Languages, the Celtic Scholar will immediately discover its connexion with the Celtic Dialects, and especially by observing the Particles and Pronouns. The familiar Preposition in this Language, Tsin, In, At, &c., will at once direct him to the Celtic San. In the same Language Ox is But, Nz is She, A, Who, &c. Nzoni, And; where we see the force of the Element Na. Mr. Shaw explains "NAE, NAI, NUI, A Man, Woman;" and General Vallancey inserts, among Irish particles, NEO, And. In the Mohawk Language NEGG is God, which brings us to the Irish NEGCH, Good, which means only The-That, Distinguished object. The next word in Mr. Shaw's Dictionary is NEOID, "Bad, Naught;" where we have a similar idea, applied to a different purpose. General Vallancey produces Nogen, as the Kalmuc word for "A Lord, Master," which he compares with the Irish Node, Noge, Noble. In Mohawk, Kayaner, Sayaner, signify Lord, King, which belong to the explanatory word King, and its parallels in the Teutonic Dialects, to the Celtic SAN, That, CYN, the First, and to a great race of words to be found through the whole compass of Language. Even the long words, which appear so formidable in this Language, will on many occasions afford the Celtic Scholar but little trouble; and he will be able to perform the part of an Etymologist without any violent effort of skill. Thus in the term for Heaven, KARONGHYAGOUH, he will unequivocally see in Karon the familiar name for the Sun in the Celtic Dialects GRIAN, which the Greeks and Latins have adopted in their CARNean and GRYNean Apollo.

Σπαςτα τοι, KAPNEIE, τοδε πρωτιστοι εδεθλοι. (Call. in Apoll. v. 72.)

"His tibi GRYNEI nemoris dicatur origo,

"Ne quis sit lucus, quo se plus jactet Apollo." (Virg. Ecl. VI. v. 72-3.)

On this origin of Karon we shall have no doubt; and perhaps the Celtic Scholar would conjecture, that Ghyagouh belongs to the Irish Gogor, Light, to which our term Gorgeous belongs. Thus Karon Ghyagough means the Place where 'The 'Light of the Sun' appears.

The Reader may perhaps smile at a Greek and Latin quotation for the purpose of confirming a Mohawk Etymology; but his surprise may be diminished, when he has learned, what the most learned and acute—I had almost said, of all my predecessors in the study of Languages, has observed on the savage Dialects of America. The Jesuit Lafitau, who lived among these American Savages, has conjectured, that some of these tribes were Grecian Colonies; and I have little doubt, that a Grecian Dialect is at this moment somewhere spoken in the wilds of America.—Others have conjectured, that among some of those Tribes a Celtic Dialect prevails. My Lord Monboddo was himself acquainted with a Jesuit, who understood the Basque, Celtic Dialect,

Dialect, spoken at the foot of the Pyrenees, by his knowledge of the Esquimaux Language. Even the evidence of Lord Monboddo may be produced in a Philological discussion for the confirmation of an Historical fact. General Vallancey has faintly conjectured, with a quære, though with perfect truth and admirable acuteness, that the name of KAMSCHATKA belongs to the Irish CAMCACTA, or CAMCEACHTA, as Mr. Shaw represents it, "The seven stars, which roll about the North Pole," or the " North Pole." (Essay on Celtic Language, p. 90.) The MOHAWKS, a tribe of the Iroquois nation, belong to some clan of the MACS. From the Iroquois, we could not perhaps form a conjecture; but it must be owned, after the observations just made, that the Cherokees look marvellously like the Greeks; and I must own, that I am inclined to attribute to this nation the honours of the GREEK Name. The MACE-DON-ians are, I imagine, the Macdons, as in Macdon-ald; and the Mur=Midons, (Mueurdons,) are the Mor-Macdons, the Great Macdons. The Mur is the Celtic Mor, "Great, noble, bulky, many," as Mr. Shaw explains the Irish term. The term MAC has been acknowledged to appear in the name of Nations, as in Kal-Muc, which General Vallancey conjectures in one place to be Ceil or Keilt MIC or MAC, "the Sons " or Descendants of the Chals or Kelts," i. e. the Celts, (Essay on C. Lang. p. 92.) Though General Vallancey has seen, that the Kalmucks and Monguls or Moguls belong to each other, he does not appear to have understood, that they exhibit the same compound in a contrary order, KAL=MAC and MAC=KAL, or Moc=Gul. In the same page, where General Vallancey has produced the derivation of Kalmuc, he has resolved M'Intosh into Mac=an=Taois, "the son of a General, Prince, or Chief." Through the whole compass of Language, DS-N, DC-N, ZN, C-N, D-N, mean ' The Illustrious Personage—the First—Chief—Man, &c. &c. In the succeeding page, this enquiring Linguist has produced the Kalmuck term Kontaysha, a Chief. which he has justly referred to the Irish CEAN-TAOISI. The CEAN belongs to King-Cyn, which I have just produced. The province KEN=TUCKY, with which the Mohawks or Macs are connected, is compounded of the same materials, and so is our familiar name Ken=Tish. General Vallancey will rejoice, I trust, to have his Celtic origin of KAMSCHATKA confirmed, by learning, that SIBERIA itself is the region inhabited by the great Celtic Tribe, the illustrious race of the CYMBI-CIMBRI, CAMBRI-ans, &c. &c.; and it is from the region of SIBERIA that the Ancients have obtained their CIMMERians, living in darkness. The Scythian or Tartar tribe of the Kalmucs is allowed, we see, to be a Celtic tribe, speaking Celtic Dialects; but it has not been seen, that the SCYTHE, and its acknowledged parallel terms. Scots, Goths, the Coti, &c. &c., are quasi the SCYLTHE, the CELTS, &c. The sound of the l has been lost, as it perpetually is in our own and other Languages, as in Talk, Walk, Soldier, &c., pronounced sometimes as Tauk, Wauk, Sodier, &c. It is actually lost in another name of the CELTIC tribes, the CHALDeans, whom the Hebrews represent by 'Chasd-im.' My conjecture, however, about the origin of Scuthæ will be placed beyond doubt, when the Reader learns, what Herodotus informs us, that the ancient name of the Scythæ was Scoloti, which, we see, are the Celts. Wherever we turn our eyes among the nations of the Earth, we find all around us to

520 ^R.R.^.—C, D, G, J, K, Q, S, T, X, Z.

be Celtic. Thus we see, that the dispute about a Gothic or a Celtic origin is idle, and almost unmeaning, as they are ultimately to be considered, as belonging to each other, though under one point of view the Dialects, which we denominate Celtic and Gothic, will afford us a just and proper ground of distinction. I shall not venture to pursue this ample theme, which would lead us into a new world of ideas, totally unknown and unexplored; yet I could not forbear to seize on certain occasions, which presented themselves before me, for the purpose of exciting the Celtic Scholar to the consideration of so ample a theme, and of rousing him from a slumber, which, as I have before observed, has been so long and so profound.

CHAP. III.

SECT. I.

^R.---C, D, G, &c.

Terms relating to the Soil of the Ground or Earth, when it is Agitated — Stirred up, Broken up, &c. &c. by the various accidents and operations, attached to it,—by Digging, Ploughing, Harrowing, &c. &c., as Harrow and its parallel words Hergian, Herse, (Sax. French,) &c. — Terms connected with these, which express the idea of Stirring up in general, of Excitement, Commotion, Agitation, Irritation, &c.—of Disturbing, Annoying, Aggrieving, &c., as Harrs, Harr, &c. &c. Hence Words, which express Strife—Contention, &c. &c., as Eris, Erid-os, (Equi, Equidoc); actions of violence, Breaking to pieces, &c. &c., as Eriko, (Equixa, Frango,) &c. Terms denoting the Rough—Grating Noise, as originally connected with the action of Scratching upon or Grating upon a Surface, as Hoarse, &c. &c.

Terms belonging to the Element ART, &c. which express or relate to operations performed on the EARTH, ARG, &c.

HARROW — HERSE, HERCKE, HARCKE—HARRE. (Eng. Fr. Belg. Germ. Dan.)

HERGIAN. (Sax.) To Harrow, Vastare, Spoliare, &c.

ARATrum. (Lat.) A Plough.

ARDHY--AREDIG--ARAZ, ARAT. (Celtic,) To Plough,

ARADR, ARDAR. (Celtic,) A Plough.

Erian, ERIGAN. (Sax.) Arare.

Ear—Aro. (Eng. Latin,) To Plough.

: 1

ERIGEND, ARJANDS. (Sax. Goth.)
Arans.

YRKIA. (Isl.) To Plough.

HERS. (Arab.) Cultivating.

HERRAS. (Arab.) Sowing, a Farmer.

Eris. (Arab.) A Plowman.

ORATSE. (Sclavonic,) A Plowman.

ORUSSO—ORUTTO. (Greek,) To Earth, or Dig.

v-Erro, v-Erro. (Latin,) To turn up the *Earth*, To Plough, &c.

v=Ersus—v=Erse. (Lat. Eng.)
The Verse.

In the last Section of the preceding Chapter, I considered a Race of Words, belonging to our Element, which exhibited, as I trust, in marked and distinct characters, their relation to each other, as conveying their secondary sense; though the primary idea, which I conceived to be attached to the Earth, Estia, (Estia,) &c., appeared only in certain terms and on certain occasions. The discussion has extended to a greater length than I at first conceived, and has perhaps occupied too large a portion in the arrangement of my Work. Yet the facts, which it exhibits, have unfolded, as I trust, to the enquiring Reader, a train of ideas altogether new and curious on the nature of Languages; whatever

Theory he may adopt respecting the primitive source, from which such facts were derived. This Theory, as I have frequently observed, whatever it may be, does not interfere with the relation of the terms, there produced, to each other, in their secondary application; nor with the process, by which that relation has been effected.—I shall now, however, proceed to a vein of enquiry, in which the principles of my Hypothesis will be perpetually apparent in the most marked and distinct characters. I shall produce, in the present Chapter, a Race of words, in which this connexion with the Earth will be, I trust, perpetually visible, and will appear most fully illustrated, in the general series of examples which are the objects of our discussion.

In the present Chapter I shall consider those terms, belonging to the Element 'R. '. C, D, G, &c. &c., which relate to the Soil of the Ground, or EARTH, when it is Stirred up or Agitated by the various accidents and operations, attached to or performed upon its surface; as by the feet of animals in motion, by the Wind, &c. &c.—by the labours of Agriculture, in Digging— Ploughing-Harrowing, &c., as Harrow, and its parallels HERGian, HERSE, (Sax. Fr.) Occo, &c. &c. We may well imagine, that these familiar accidents and operations would be strongly impressed upon the mind; and we know, that Language has borrowed some of its most ordinary expressions and most forcible metaphorical applications from this source, in order to express Agitation - Commotion - Excitement - Irritation, &c. &c. of various sorts and in various degrees. We shall instantly call to mind the Latin expression for Commotion, Pulverem Excitare; which in our colloquial phraseology we express by 'To Kick up 'a Dust;' and we know, that the term Tumultus, Tumult, is connected with Tumulus, the Heap of Dirt. The word HARROW, belonging to our Element, which I have been obliged to anticipate, is one of the strongest terms, in our Language, to express

the most violent state of mental Perturbation, as 'To Harrow up 'the Soul;' and a similar metaphor from some such operation on the Ground is probably to be found in every form of Speech.

I shall shew in a future Volume, that the Latin Fodio belongs to the Element FD, PD, denoting the Ground, as Pedon, (Medor, Solum); and Fodio, as we know, not only signifies "To Dig, to "Delve," but it means likewise, "To prick; -To Stick, or Stab; -"To jog, or push, by way of notice or admonition;" as Robert Ainsworth explains it, "Fodere stimulis,-Equi Foderet calcaribus "armos,—Pungit dolor, vel Fodiat." We use Dig in a similar sense, 'To Dig your spurs into a horse,' &c. &c. We all remember, that one of the strongest images among the Hebrews for Annoyance—Persecution or Affliction, is derived from the act of Ploughing, as in the Psalms, (cxxix. 2, &c.) "Many a time " have they afflicted me, from my youth, but they have not " prevailed against me. The Plowers Plowed upon my back: "they made long their furrows."—All Languages abound with metaphors of this nature. — Another strong term for mental Perturbation is Solicito, expressing Solicitude; the first sense of which is to Stir up the Ground-Solum Citare. The significations of this word, as they are detailed by our ordinary Lexicographers, will fully explain to us the train of ideas, which I have unfolded, as connected with operations on the Ground. "Solicito," says R. Ainsworth, means, "(1.) To Stir, or Dig up; properly the " Ground. (2.) Met. To disquiet, to busy, to trouble, to disturb, "to make Solicitous. (3.) To Solicit, to provoke, or be in earnest "with, one; to importune, to press, to be urgent, to entice one "to do a thing. (4.) To sue, or pray, for. (5.) To allure."— We shall be prepared from these observations to expect a Race of words, belonging to our Element R. A. C, D, &c. which are connected with the action of Stirring up the Ground, and which express the idea of Stirring up in general, of Excitement, Commotion, Agitation,

Agitation, Irritation, &c., or of Disturbing, Annoying, Aggrieving, &c., as Harass, Harsh, &c. Ago, Agito, &c. In producing these terms, I shall not always attempt to decide on the peculiar species of operation, from which the sense of such words is derived; as all those actions of Stirring up the Ground alike lead to the same train of ideas.

As I do not attempt always to adjust the peculiar action, from which this sense of Stirring up the Ground is derived; so I do not pretend to fix on that period of Social life, in which such a sense originally appeared. The term, which expresses Stirring up the Ground by the Harrow, might have existed long before such an implement was adopted; and it may be observed, that among the various and obvious sources, from which the idea of Soil or EARTH in a state of Agitation would be derived, we must not be too minute in our selection of a peculiar notion, as they would all operate in forming a general impression. The great point, to which my attention has been directed, is to prove, that the Race of words, conveying this train of ideas, is either remotely or directly connected with the EARTH. Nothing can be more obvious, than that the terms relating to the operations of Agriculture, Stirring up or Cultivating the EARTH, would be derived from the spot, on which those operations are performed; and I shall leave the enquirers into the Theory of Languages, as it is called, to decide on the more primitive idea, if any such existed, which might prevail in certain terms, before they were applied to the labours of Agriculture.—My Hypothesis is, that this Race of words originally signified, to Stir up, as being connected with accidents or operations attached to the Ground or EARTH, the great object, in which such ideas are most prominent.

In the first Section of the present Chapter, I shall consider the terms under the form 'R. C, D, &c. with the breathing before the 'R, as Herse, &c.; and in the second, those terms with the breathing

breathing before the $^{\circ}$ C, D, &c. when the sound of r has disappeared, as Occo, &c. &c.—The Reader will not fail to observe the simple process by which the various senses of our Element AR. AC, D, G, &c. resolve themselves into their original principles. He will perceive, that they are all connected with the EARTH, considered under two points of view, either as 'A Place of Rest,—or as in a state of Agitation.' When the EARTH has been considered, as 'A Place of Rest,' it has supplied us with terms,. which denote the Certain-Fixed-Appropriate Spot, Enclosed for the purposes of Safety and Security—The Spot, on which things are Placed-Situated, as on a Base or Foundation, or on which Persons Dwell—Remain, &c. &c. When the Surface or Soil of the Earth is considered, as in a state of Agitation, it supplies us with terms, relating to the operations of Agriculture, to the notion of Excitement-Irritation-Commotion, &c. &c.-We perceive, moreover, through what a wide range of Human ideas these two modes of conceiving so important an object as the EARTH will conduct the understanding. In the two former Chapters of this Work, I have already illustrated the extensive influence of this impression, when the EARTH is considered as a Place of Rest; and in the present Chapter I shall examine the influence of the same impression, when the Surface or Soil of the EARTH is considered, as in a state of Agitation. The great materials of Human Speech have been derived from these two sources; namely, from the idea of Place, and that of Stirring up-Routing up—Cutting up—or Vellicating a surface, as the Ground, EARTH; but the latter idea is the most prevalent, and is perpetually operating on occasions, which are apparently most remote from such notions. As I advance in the secrets of Language, I perceive still more and more the extensive influence of this latter idea; and I may perhaps have sometimes erred in attributing certain words to the EARTH, when considered as the Base

Base—the Settled Place, on which things Rest, or are Placed, which were originally connected with terms, belonging to the same Spot—the Earth, when considered as the Surface in a state of Agitation. The Reader will not wonder at an error of this kind, when the point is obscure, and the idea of Agitation is not prominent in the sense of the word; or rather, perhaps, he will be of opinion, that in such cases, where the original spot is duly ascertained, this minuteness of distinction is unnecessary.

I have endeavoured, in the progress of these Researches, to detail the train of ideas, which I was desirous of unfolding, in that order, which I conceived best adapted for conciliating the attention and engaging the conviction of the Reader, to a variety of facts, as yet unknown and unexplored. I have abstained therefore from introducing points which related rather to Theory, and the Modus concipiendi, than to the spirit and force of my argument; till I was obliged, by the course of my Enquiries, to enter on the explanation of such topics, and to exhibit certain terms, which, under a minute variety of form, connected themselves with the Race of words which are now to be examined. We have seen the term Harrow under the form 'R; and we shall find, how it attaches itself to the form, now under discussion, 'RS, ART, &c., when we consider the parallel terms in other Lan-The Etymologists, under Harrow, justly produce, as parallel, Harse, Herce, Herse, (Fr.) Hercke, (Belg.) Harcke, (Germ.) Rostrum, Harre, (Dan.) the old barbarous Latin word Herciare, &c.; and they have likewise properly referred us to our English word Harrie, and its parallel terms Hergian, (Sax.) Herge, (Dan.) H arrear, (Spanish,) Torquere, &c. &c. we see, how the forms 'RS and 'R connect themselves with each other. We shall find, moreover, that these forms familiarly pass into each other; and that the words, appearing under such forms, should be considered as ultimately related. We must observe,

observe, however, of these forms, as we observed of the other forms, 'RS, &c. 'T, &c. RT, &c., that though they pass into each other on certain occasions, and may be regarded, as belonging to the same Element; yet still they may be considered, under another point of view, as distinct forms, generating a race of words peculiar to themselves *.

The

^{*} As the following observations relate rather to the Theory of the question, than to the essential business of our Researches, I shall assign this discussion to the place of a Note, that the Reader may consult it, without diverting his attention from the main scope and spirit of the argument. It may be enquired perhaps by some, which of these forms, AR, &c. or ARS, should be regarded as the Primitive or Original form. On this point I can only observe, that such a question belongs rather to the mode of conceiving the subject, than to the fact, which is intended to be exhibited.—I have chosen to represent ARC, &c. AC, &c. RC, as the general Elementary form or forms, because, in considering the words, conveying the same train of ideas, and ultimately, as I conceive, belonging to each other, under the forms ARC, &c. AR, I have found, that the greater number of words appear under the form or forms 'RC, &c. 'C, &c. RC, &c., and but few under the form 'R; and moreover, that the name for the object, from which, as I conceive, under various forms and Elements, Languages have been supplied with words, appears under the form ARC-ARS, ART, &c. in our Teutonic Dialects, and in other ancient Languages, as EARTH, ERDE, &c. ARETZ, (Heb.) &c. The Reader perhaps may imagine, that the form 'R, as seeming to appear in a more simple state than that of AC, &c. RC, &c., should be regarded as the Primitive and Original form. Under this idea, he will perhaps consider the Greek ERA, (Egs., Terra,) and other words in the same form, EAR, (Eng.) To Plough, HARROW, AROO, (Aew.,) Aro, as terms existing in the more primitive state; and that Ear-th, Er-de. HER-se, &c. are the derivatives, in which t, th, and d, are organical additions to the AR. Under the Hypothesis, which in any mode of conceiving the matter is alike supposed, that these words are allied to each other; it will certainly be oftentimes a fact, that a word under the form 'RT has directly passed from a word under the form AR, and may therefore be justly said to be derived from it. Yet we must remember, that from the same principle, which alike supposes the separation and the union of sounds represented by R and T, &c., the form AR may equally pass into the form AR. Such facts, of one word passing into another, will, no doubt, perpetually occur; and sometimes the more original form, or the original word, may be discovered by the arts of Etymology. It must be observed, however, that this process is generally placed out of our reach; and that the principle, on which such a process is supposed

The succeeding word to Harrowes in Skinner's Lexicon is "To Harry," which he derives from Harier, Vexare; Lacessere.

Thèse

supposed to be effected, will suggest to us a more comprehensive mode of conceiving the operation by which words are generated.

In enquiries of this nature, it is very difficult to consider the question, under that abstract point of view, which is necessary for the due comprehension of the subject. The symbols of written Language are too apt to confuse our ideas, and to lead us into distinctions, which are often idle and unnecessary. When we adopt a single symbol AR, in order to represent a certain class of words; and then add a second letter or symbol to it, in order to represent another class of words, we are apt to confound the number of the symbols with their power, and to consider that form, which happens to be represented by symbols numerically less, as affording the more simple and original form. Let us, however, conceive the matter under another point of view. Let us, instead of using known characters, adopt an unknown symbol; as for I example, in order to represent the general expression for the Element. Let us suppose, that this symbol \prod is the representative of a certain peculiar sound, in which the kindred sounds, expressed by the characters AR and AT, &c., are involved; and let us imagine, that these sounds are sometimes found separate, as AR, AT, &c., and sometimes united, as ART, &c. RT, &c. From this mode of conceiving the matter, we should scarcely become intelligible to ourselves, if we attempted to enquire, which of the forms 'R, 'T, 'RT, &c. RT, &c. should be considered as the more original form.—We should only be able to say, that when one of these sounds was heard, the forms AR, T, &c. would appear, and that, when they were both heard, the forms ART, RT, &c. would be visible. With respect to the vowel breathing we should observe, that it might exist before, after, and between these sounds.—Under this point of view, it would be idle to say, that the term EAR-th is derived from ERA, (Eqa.) &c., from an idea, that ERA appears to be in a more simple state, because it happens to be represented by characters, less in number than the other.

When we allow, however, that all these forms belong to each other, and observe, moreover, that the words under the form 'R are inconsiderable in number, when compared with the words under the other forms; we conclude, that the Human organs are less inclined to enunciate the 'R by itself, and more disposed to combine T, &c. with it, as 'RT, RT, or to enunciate 'T, &c. alone. When we consider this, and remember, moreover, what I have before observed, that the name for the Ground assumes the form 'RT, &c. in our Teutonic Dialects, as EARTH, &c.; the Reader, I trust, will acknowledge the propriety of my representing 'RT, &c. 'T, RT, &c. as the general formula for the Element. I shew, in different parts of my Work, that the Element has assumed other forms likewise, which ought not to have found a place in a general representation of the Elementary characters. On the whole, as I conceive, I have selected that form, as the general expression, which is best adapted to represent the

great

These words, we see, belong to each other, as HARASS—and HARASSER, (Fr.) belong to the form HERSE. Nothing can so strongly

great body of facts, which I have undertaken to unfold. If the Reader will recur to my original explanation of the Elementary Characters, and the subsequent statement; he will find, that the mode of conceiving the process, which I have there adopted, does not interfere, in point of fact, with the more abstract mode of viewing the question, which is here exhibited.—Though I imagine, that the words, under all these forms, belong ultimately to each other; yet as I consider them, under one point of view, as distinguished likewise from each other, and as consisting of a race of words, peculiar to themselves, I have arranged the terms under each form in separate articles.—Thus have I exhibited, on the same spot, the race of words which more directly belong to each other; and in those cases, which appeared to admit of some doubt, to what form a term should be referred, I have endeavoured to make such distinctions, which the nature of the example would admit.

I have avoided, however, that minuteness of enquiry, which seemed to be involved with cases placed out of our reach; and have contented myself with recording those plain and intelligible facts, which we are better enabled to discover and to detail. Various cases certainly exist, arising from different modes of operation; and some of these may be stated as facts, which can be sufficiently ascertained; though others are of such a nature, that they cannot now be discovered. Thus a great race of words, under the form AT,&c., have been derived, directly or remotely, from certain terms, denoting the Ground, under the form ART, &c., as EARTH, &c.; that is, such words would not have existed, unless the name for the Ground had appeared under the form ART, such as h=EARTH, &c., and these directly belong to EARTH. Such words we may expect most to abound in those Languages, in which the familiar term for the Ground appears under that form, as in the Teutonic Dialects. Still, however, as the forms AR and ART, &c. perpetually pass into each other, a great race of words must exist under the form ART, &c. which would have existed, if the familiar name for the Ground had never appeared under the form ART. Thus, when we consider the parallel terms to Harrow, under the form ART, &c., as HERSE, HERCE, these terms might have existed, though the word EARTH had not appeared. Such distinctions, however, are generally placed out of our reach, or we involve ourselves in enquiries about cases, which from the very nature of the question will not admit of discrimination or distinction. When, therefore, I refer any term, under the form ART, &c., to EARTH, ERDE, I do not mean to entangle myself with any distinction of this sort; but I mean simply to observe, that such a term, under the form 'RT, is to be referred to a race of words ultimately connected with a name for the Ground, among which words EARTH is In this case, however, it is supposed that ART found under the same form. represents the Elementary form, or that the T is an organical addition to the A. When the ART represents the Elementary form, and is connected with the name of the

strongly exhibit the contracted conceptions, which have been formed on the subject of Etymology, than the fact which here presents

the Ground under that form, as EARTH, &c., I have discovered the fact, which belongs to the spirit of my Hypothesis.—Yet there is another case of words under the form ART, &c. ARS, &c., where the T and S are not organical additions to the AR, but are significant additions derived from the analogies of Language, &c. Here, if this fact could be discovered, it would not be right to say, that the word belonged to the form 'RT; but we ought to consider it, as attached to the form 'R. This case I always mean to point out to the Reader, when it can be duly ascertained; though perhaps I have omitted to do so, when it really exists.—Thus I have referred the Greek Orusso, Orutto, (Oguoow, Ogurtw,) to the Elementary form ARS, ART; yet perhaps the Usso and Utto were additions, arising from the analogy of the Language; and if that should be the fact, they should be said to belong to the form 'R, as in Oro, (Oew, Concito,) Aroo, (Aeo,) &c. Again I must repeat, I have been desirous of separating certain facts from each other, and of marking certain distinctions, whenever materials for such separation and distinction were placed before me; but it must be remembered, that such materials are oftentimes removed altogether out of our reach,—that in a great variety of cases, the question dwindles into a petty and almost unintelligible minuteness, referring merely to the Modus concipiendi; and that any laboured discussion on these secondary points removes our attention from the great and fundamental fuct, which constitutes the force and spirit of these researches. This broad and intelligible fuct is, that all these forms 'R, 'RT, &c. 'T, &c. RS, &c. supply a race or races of words, which are ultimately to be referred to each other, and which are inseparably blended with terms, expressing the Ground and its operations, as ERA, (Eca.) EARTH, &c. Estia, (Eotia,) &c.—Harrow, Herse, Occo, &c. &c.

The Reader will be enabled best to understand the force of the above observations, by considering the examples themselves, in which these forms pass into each other. He will there see, how intimately the form 'R is connected with the form 'RS, ART; and consequently, how the sounds R and T, S, &c. are related to each other. We may here, however, briefly state what the ordinary Grammarians detail respecting the relation between AR and S, &c. I have before produced the remarks of Robert Ainsworth on the sound of R; who observes, that it is formed "in the upper part of the "throat, but so vibrated by a quaver of the tongue, and allision on the teeth, that it "makes a sound like the grinning of a dog; whence it is called the canine letter: "but the Romans, on the contrary, give it so soft and lisping a sound, that in "writing they sometimes omitted it, calling the Etrusci, Thusci, or Tusci; and "especially before S; thus Ennius writ pr-OS-us, ra-US-us, for pr-ORS-us, " R'-URS-us." And the same Philologist adds, "Yea, the sound of this lisped R was "so near that of its neighbour S, that they writ aSa, caSmen, papySii, for aRa, " ca Rmen, papyRii; and we find the termination oS, as well as oR, in good writers " still."

presents itself; namely, that Skinner and Junius have not seen any affinity between Harrow and Harry; though in the Lexicons of both these Etymologists, the terms are directly adjacent to each Lye, however, ventures to observe, "Chaucero Harrowe "est idem quod præcedens Harrie, et hinc fortasse dicitur per " translationem instrumentum, quo glebæ diminuuntur." forms of ARA and AsA will shew us, how these words at once belong to ERA, (Eqa.,) Estia, (Estia,) and EAR=Th. The Etymologists acknowledge, that ARA has some relation to the Chaldee ארע AR-G, or AR-O, and the Hebrew ארץ ARZ, "quippe," says R. Ainsworth, "quæ humilis fuit, ut quæ Diis inferis præcipue " esset, ut altare ab altitudine, quod superis." Our Etymologists likewise remind us of the Greek Ara, (Apa, Præces.) AR-aomai, (Αραομαι, Precor, facio vota; —Imprecor, Maledico,) means, in its original sense, as I imagine, 'To Curse,' and belongs to Aroo, (Apow, Aro,) by the same metaphor, as HARRY belongs to In the Latin Aratrum, the Greek Arotron, Arotriao, Aroter, (Acoteou, Aratrum, Acoteiaw, Aro, Acotne, Arator,) we see the T; but whether it be an organical addition to the 'R, or a significant one, arising from the construction of Language, I cannot decide.

[&]quot;still."—Again he observes how pauCus belongs to pauRos, (\(\Pi_{aveos}\)), aGna to aRne, (\(\A_{em_0}\))—how meRidies is written for meDidies, aRlabi for aDlabi, &c. &c. From this affinity between R and S, &c. it has arisen, that R becomes the neighbour of S, as R. Ainsworth is pleased to call it, in the arrangement of our Alphabets, as in English, Greek, Hebrew, Arabic, &c.; and hence it is, that the characters, representing these sounds, differ only from each other in some Languages, by a minute mark of distinction. In Hebrew, the D and the R T are distinguished only by a little protuberance; and in Arabic, the R and Z, or Ru, Za, which are placed together, differ only by a dot put over the latter, as j.—I shall now proceed to the examples themselves, which will illustrate and confirm the force of these preliminary observations. The Reader will however remember, that I do not mean in this Work to extend my enquiries to any great length on the race of words under the form AR, but to consider those only, which present themselves to me in the course of my discussions on the words under the form ART, &c.

decide. In the Dialects of the Celtic, many of the parallel terms appear likewise under the form 'RT; but here the Celtic Scholar must assist in determining, whether the T, &c. be an organical or significant addition. In Lhuyd, among the terms for Aro, I find the Welsh Ardhy, Aredig, the Cornish 'Dho Araz,' the Armoric Arat, and the Irish Ar; for Arator I find the Welsh Ardhur, and the Cornish 'Dean Ardar,' Ardhur; and for Aratrum we have the Welsh Aradr, the Cornish Ardar, and the Armoric Arar.

In English, To Eare signifies 'To Plough;' and the Etymologists have referred us under this word to the Welsh Aredig, the Gothic Arian, the Saxon Erian, the German Erren, the Belgic Aeren, and the Latin and Greek Aro and Aroo, (Aeou.) They remind us, moreover, of the Welsh Ar, Arvum, and the Greek Aroura, (Apoupa.) They might likewise have added the Greek ERA, (Ερα,) which is the simpler state of AR=OURA, (Αρουρα,) and a variety of other words, which denote the EARTh, under the Element 'R. The Saxon Erian directly connects itself with the form 'RG, as Lye gives us at the same time "Erian, Erican, Arare, and Ergend, Eregend, Erigend, Arans. In Gothic too, Anjands is Anans; and from these words we have our name ARGAND, as in the name of the Inventor of the Patent Lamps. EAR for Plough occurs in Shakspeare. "He, that EARS my "land," says the Clown, in All's Well that ends Well, "spares "my team, and gives me leave to inn the crop: If I be his "cuckold, he's my drudge." (A. I. S. g.) &c. &c. In Welsh, HEAR or HYAR means "Easy to be ploughed, Arable, plain, even." In Arabic, جاث Hers, signifies "Cultivating," and حاث Herras, "Sowing," is "A Farmer;" and hence the Persians say, "Huns " or Hers Saukten," حرث ساختن "To Plough." Again, in Arabic, Eris, means "A Plowman, Husbandman, Farmer;" and it likewise means "A Prince, Chief." The preceding word is اريز

ERIZ, which denotes "Frost, hoar-frost, rime." This will remind us of the Greek Erse, (Eporg, Ros); and now we shall understand, that these terms mean, what is upon the surface of the Earth. An adjacent term in Mr. Richardson's Dictionary is Eriz, "Broad, Wide, large," which will bring to our remembrance the Greek Eurus, (Eupus, Latus.) In the same opening of Mr. Richardson's Dictionary, where these words occur, we have ענים 'Uruz, "Earths, Grounds."—In the Russian Dialect of the Sclavonic, Oratze is a Plowman; and to this source we should probably refer the name Horateius, h=Orace, Orazio, (Lat. Eng. Ital.) &c. &c.

The Greek Orusso, Orutto, (Ορυσσω, Ορυττω, Fodio,) 'To Dig,' would be naturally derived, as we shall all agree, from the Ground; and it signifies, as I imagine, to EARTH, or to break up the EARTH. If the Reader should suppose, that the Usso or the Utto were derived from the analogy of the Greek Language, or that the words, to which it immediately belonged, bore the Elementary form 'R, then he must conceive the term OR=usso to coincidé! with Oro, (Oea, Concito,) and to signify 'To Era,' (Eea, Terra,) if I may so express it, 'To Break up the Era,-To 'EAR—up the Ground,' &c. &c. In the Latin ν=Erτο, we have no such minute point to adjust; and this, we perceive, may be safely considered as 'To EARTH.' Robert Ainsworth has given its genuine sense, when he explains it by "To Dig, or cast up-"Quo sidere Terram v=ERTere." Virgil, we know, has likewise v=Ersare Terram, which means 'To Plough it.' In the "Duro " Terram qui v=ERTit ARATro," we see the action ERT, and the Instrument Arat or Art, both belonging to the Earth. From the action of Ploughing or Turning up the Land, v=Erto has the sense of Turn applied in a different manner, To Turn about in passing From Furrow to Furrow; and hence we have v=Ersus, the v=ERSE. The Latin v=ERSus is explained by Robert Ainsworth,

worth; "A turning about at a land's end.—A Rank, row or series "of trees.—A line, even in prose.—A Verse." We now see, that v-Ersus, Lines, Rows, v-Erses, mean no more than Earths, if I may so say, or Furrows, turning one into the other, as it were, or regularly recurring, one after the other. From this regular recurrence of Furrow after Furrow by the action of Turning about—Up and Down in Ploughing, v=Ersart signifies 'To be about any thing,' or, as we express it, by a word derived from v-Ersor, 'To be con-v-Ersant in any thing.' Thus we see, how our term con-v-Ersant belongs to the Earth, however remote it may appear from that spot. The Greek Poleo, to which our words Plough and Ply belong, has precisely the same meaning; and hence it is explained in our ordinary Vocabularies by "v-Erto, v-Erso, v-Ersor, Aro."

In the Tuscan Dielect, Arse Verse signifies "Averte Ignem," as Festus informs us. Verse is supposed to be the term for Fire, and therefore ARSE corresponds with Averte. In ARSE, we see the true form of v-Erto. I shall shew, that the term for Fire, v=ERSE, belongs to the same race of words, v-Erto, Arse, &c. To Stirup; and that it is derived from the idea of Commotion—Agitation, &c. &c. In Hebrew, Dr IRT, signifies "To turn aside, turn over," as Mr. Parkhurst explains it, who has justly referred it to the Latin v=ERTO, and the English w-Rith, w-Reath. The succeeding word in Mr. Parkhurst's Hebrew Lexicon, is 77' IRK; the woriginal ideas of which, as our Author conceives, is "To be long, extended in length." The sense of Extension we should naturally conceive to be derived from Space on the EARTH. The preceding term to ירט IRT, is ירח IRCh, "the Moon," which Mr. Parkhurst supposes to belong to MARCh, "To go in a Track," which brings us directly to the EARTh, Arg, &c. This will remind us of the Greek ERCH-omai, (Ερχομαι, Εο,) 'To Go.' The succeeding word in Mr.

536

Mr. Parkhurst's Lexicon to the latter Hebrew term, is ארך ARK, which denotes "To be or grow Long," and which is only another form, as we see, of יודן IRK, "To be Long."

Terms, which relate to Action—Labour—Work, &c., or to the idea of Working up any thing, connected with operation performed on or with the Earth, Erde, Aretz, Arg, &c. &c.

Erdo— 'Rezo. (Gr.) To Do; originally To Earth, To Cultivate the Earth, To labour.

'RES. (Lat.)

Ergon. (Gr.) The labour of Agriculture.

w-Ork. (Eng.) &c. &c. &c.

Ge=Oorgeo. (Gr.) To Work or cultivate the Earth.

w-Eork, v-Erck, w=Ark, &c. &c. (Sax. Dan. Swed.) Work.

w-^Right,w-Ryhta,w-Yrhta, w-Aurstu. (Eng. Sax. Goth. &c.) To Work.

IRK, IRKsome, w-ARK, &c. (Eng. &c.) Relating to Work, Toil, Pain, &c.

ARTUO. (Gr.) To Work any thing up, or together, To Season, Prepare.

ARTOS. (Gr.) Bread, What is Worked up—Kneaded.

ARTEO. (Gr.) To Prepare.

ARTios. (Gr.) Made or Worked up, so as to be whole.

ex = Erceo. (Latin,) To Work Land, Till, Labour.

ex=Ercise. (Eng.)

w-Orden. (Sax.) To be Worked
—Made or done, To Be.

w-YRD. (Sax.) The Work, fact or circumstance attached to any person or thing; What is Worked or Done to, or befalls any one; Fate, Destiny, &c.

w=EIRDES. (Old Eng.) Workers
—Fates—Destinies.

w=Ord. (Eng.) Originally the Work or thing enjoined or uttered by another. Hence the Enjoining Speech, or Speech in general.

WE may well imagine, that the terms for Work-Labour-Toil, &c. would be derived from the Labours of Agriculture. Hence we have the Greek Erdo, (Eedw, facio,) which means, as I trust we shall all agree, To EARTH, ERDE, (Germ.) &c. mologists derive it from Retso, (Pεζω, facio,) which should be considered, as belonging to the race of words before us, signifying 'To aRetz-to Earth,' when the breathing before the R does not appear. To the form of Retzo, (Pe $\zeta\omega$,) must be referred the Latin Res, which means Action—Business—Employment. Some Etymologists have acknowledged this origin, though others derive Res from the Greek Pyv, Ovis, the Hebrew ראש RAS, Caput, &c. &c. Res connects itself with Rus, and is used in its original sense, when combined with the derivative of that word, in the phrase RES RUSTICA. The form of the Element RS will be fully considered in the progress of our dicussions. In the same column of my Greek Vocabulary, where Erdo, (Epdw.) is found, we have Ergon, (Egyov, Opus,) Work, Labour; which, as we now see, belongs to our Element under the form 'RG. to ARK, ARG, &c. (Chald. Samar. Syr. &c.) We shall likewise understand, that the English explanatory term w-ORK is only another form of the Greek Ergon, (Epyov.) Every one knows. that the appropriate sense of Ergon, (Egyov,) as given in our School-boy Vocabularies, is 'Labor in Agro;' and that the title of Hesiod's book on Agriculture, is "ERGA kai Emerai," (EPTA και Hμεραι,) 'w=ORKS and Days.' The Greek Ge-ORGeo, (Γεωργεω, Terram colo,) is derived, we know, from Ge and Ergon, (Epyon,) and means 'To w=ORK or Cultivate the Land.' The English word $w = {^{\land}}R_{IGHT}$ is still another form of w = ORK, as $Ship = w - R_{IGHT}$ —' the 'Man, Who w-Orks in making Ships.' The Etymologists, under Work, produce the parallel terms to be found in other Languages, as the Saxon Weorc, the Danish Verck, the Swedish Wark, the Belgic and German Werck, and Wercken, Wirken, the Runic Uerg,

the Gothic Waurstw, &c. Under WRIGHT, they refer us to the Saxon Wryhta, Wyrhta, which they derive from the Saxon verb Weorcan, Wyrcan, Operari. From WRIGHT, the WORKman, is derived, we know, our familiar name WRIGHT. The word appears under various forms in Saxon and Gothic, as Weorc, Werc, Wircan, Wyrcan, Waurkjan, 'to Work,' &c. &c. Under the word Wircan, To Work, in Lye, we are brought to the very spot, and the union of the very terms, which I have supposed in my Hypothesis, "Land vel Eorthan, w=Yrcan, Terram elaborare, "colere."—" Man næs the tha Eorthan w-Orhte, Homo non erat "qui terram coleret." In Greek, the parallel term Ergazo is adopted, "Anthropos ouk een Ergazesthai auteen," Ανθρωπος ουκ ην EPΓAZEΣΘΑΙ αυτην. Dr. Jamieson, under the Scotch w-IRK, "To "Work, to cause, to accomplish," observes, that this term and its parallels "appear in a more radical form in Isl. YRKE, YRK-ia, "Arare, Colere terram, from YR-ia, id. glebam radere," where we see the primitive idea. We have likewise in Scotch the preterite Wroght and Wrocht, which connect themselves more directly with the form Wrought in our own Dialect; and we may note, that the use of the word in English, which relates particularly to the mingling of materials, preserves the primitive idea.

The action of Working Earth, either under the idea of Cultivating it and Improving it, or that of Working it up, as we express it, or Tempering it by the mingling of materials, leads us to the idea of Preparing any thing in general, and particularly in the operations of Cookery. Hence we have the Greek Artuo, (Αρτυω, Apparo, adorno, instruo; — Condio,) which is nothing but to Earth—or Erd, (Ερδω, facio,) if I may so express it, "To Work up or Make up any thing." In Artuma, (Αρτυμα, Condimentum, conditura, Pulmentum,) when it signifies Pulmentum, Pottage, we see the original idea of Earth or Mud like materials—of a thick consistency, mingled or Worked up together. Artos, (Αρτος, Panis,) Bread, is nothing but the Worked

up, or Kneaded Substance. I shall shew, that Masso, (Massa, Subigo, Pinso,) MIX-MUD, and MAKE, belong to each other; and that Masso signifies to MIX or MAKE up any thing of a MUD like consistency. The strongest term in Greek for exquisite Condiment, is a word, which in its original sense signifies 'To ' Mud or Dung a field over,' as " Ονθηλευω, Proprie Fimo agrum " adspergo, deinde cibos exquisite condio, quia ut fimo agri " fœcundiores, sic cibi condimentis delicatiores fiunt." Whatever be the precise idea annexed to the metaphor, whether that of the Lexicographers, or that which I have annexed to ARTUO, (APTUW,) the fact, at which on a superficial view we might be surprised, remains the same; namely, that the term for the preparation of Food, and that too of the most exquisite kind, is derived from Dirt-Muck, &c. The Onth in Ontheleuo, or Onth-Theleuo, belongs, we know, to Onthos, (Ovlos, Fimus seu stercus Jumentorum,) and the Thel in Theleuo is derived from Tellus. The Saxon Wircan signifies To Knead any Earth like or Mud like substance, as in English 'To Work' up does. Under Wircan, Lye produces the following Saxon phrase: "He Worhte fenn of his spatle," "Elaboravit lutum ex sputo."-" He-Made clay of the Spittle," εποίησε πηλον εκ του πτυσματος. (John ix. 6.) If, instead of Εποιησε πηλον, it had been Ηρτυσε πηλον, the EERT in EERTuse, (Hetuse,) would have precisely corresponded with w^- ORHTE. We shall now understand the origin of the Greek terms under our Element ART, for a Feast, as Eortazo, and Eorte, (Εορταζω, Festum celebro, Eggry, Festus dies.) The phrase produced by my Lexicographer, Eortasete Eorteen too Kurioo, (Εορτασετε Εορτην τω Κυριω,) will shew us the original idea; as the verb Eortasete bears, we see, the same meaning, as ARTusete, (Αρτυσετε,) 'Ye shall Prepare.' In the following passage, ARTuno relates to the Preparation of Food, as Δειπνον ΕΠΗΡΤΥΝΟΝΤΟ, &c. (Hom. Hymn. ad Cerer. v. 128.) The preceding term to Eortazo, (Εορταζω,) in my Greek VocaVocabulary, is EORGE, (Εοργη, Cochleare, Tudicula,) the Spoon, or Ladle, which belongs to the Oorgeo in Ge=Oorgeo, (Γεωργεω,) and means the instrument, which Stirs up or w=Orks up any thing. My Lexicographer produces Eorgesai and Eorgizesthai, which means to Stir up with a Ladle. Εοργησωι, Cochleari Agitare, and Εοργηζεσθωι, Cochleari Agitari. The Εοργηζεσθωι is only another form of Εργαζεσθωι.

The Greek Arteo, (Αρτεω, Paro, Apparo,) To Prepare, is only another form of Artuo, (Αρτεω, Apparo, adorno, instruo,) which means the same. Arteo, (Αρτεω,) is supposed to be derived from Artios, (Αρτεω, par, ut numerus,—Integer, perfectus, omnibus partibus suis constans;—Integer, sanus, incolumis;—Consentaneus;—Consummatus, pleneque instructus ad omnia pietatis officia;—Paratus ad aliquid faciendum.) We see, that the genuine sense of Artios, (Αρτιος,) is expressed by "Paratus ad aliquid facien-"dum," or that the word means 'Prepared for any use or 'purpose—Made up—Worked up, so as to be fit for a certain use 'or purpose.'

We perceive, that the idea of Working the Earth, or of Cultivating and Preparing the Ground for produce, would at once bring us to the idea of Preparation in general,—or of Making up any thing into a due state of Preparation—improvement—perfection—or completion, so as to be fit for any use, purpose, &c. Hence it is, that Colo, 'To till or cultivate Land,' means Improvement—or Cultivation in general:—Colo is explained by R. Ainsworth, "To Till or husband Ground,"—"To deck, trim, or adorn;—"To dress, or prune." Let us note the word Dress,—which I shall shew to belong to Dirt, &c. But whether this be a fact or not, we find in Dress the same union of ideas, which I have supposed to be annexed to Artuo, (Artuo,) as relating to the Earth. To Dress, we know, is applied to Land; ("And the "Lord God took the Man, and put him into the Garden of Eden,

" to Dress it, and to keep it,") and likewise to the preparation of Food by Cooking, as 'To Dress a dinner.' Though the general sense of Working Land, or the EARTH, directly brings us to that of a Prepared state of things, yet the same idea is acquired by another turn of meaning annexed to this action. EARTH conveys likewise the notion of Tempering the Soilconsidered as the substance of Dirt-of Mixing or Working up the materials of the Soil, or of Plastic materials of a similar nature, so as to make them in a due state of consistency.—Now I imagine, that this turn of meaning is attached to the words connected with ARTuo, (AeTuw); and hence it is, as I suppose, that ARTOS, (Aetos,) means Bread,—that, in which the materials are Worked up in a due state of Consistency and form; and hence it is, I imagine, that ARTios, (Aptios,) means, "Par, ut numerus.— "Integer, perfectus, omnibus partibus suis constans,"—'What is 'WORKED up into a due Consistency of parts, so as to be duly ' composed, or Made up, Entire, Whole, Compleat, Perfect.'-It may be thought, perhaps, unnecessary to make this minute distinction, when the general idea is sufficient for our purpose. The adverb ARTI, (Aeti, Modo, paullo ante, nuper;—nunc, jampridem; -in compositione notat perfectionem, brevitatem vel novitatem,) as applied to Time, means the Time just Compleated, or finished.—The Lexicographers have properly observed, that ARTI, (Apri,) in composition points out the Perfection of a thing, or of something duly Made up - Compleated - Finished. If ever an English and Greek Dictionary should be published,—a work, which of all others, is most wanted; I might hope, that the secrets, which are here unfolded, would afford a valuable fund of materials to the Lexicographer, by which the spirit of his interpretation would be perpetually supplied and regulated. In the various interpretations of Artios, (Aetios,) the English phrase Made up should be adopted for the purpose of expressing the fundamental idea, to which

which the Writer should perpetually appeal; and on which the vein of metaphor, applied in his explanation, should be established.

I shall now consider the words adjacent to Artios, (Aprios,) in the order of the Greek Dictionaries. The ART in ARTamos, (Aprapos, Lanius;—Coquus,) the Cook, is attached, as we shall now see, to Artuo, (Αρτυω.) In Artemes, or Art-Temes, (Αρτεμης, Incolumis, Integer, sanus, salvus,) the ART has the same force, as in Artios, (Αρτιος, Integer, sanus, incolumis.) The goddess Diana, Artemis, (Aptemis, Diana,) is the Artemes, (Aptemas,) the 'Integra Virgo.' Artemisia, (Αρτεμισια, Artemisia, herba,) belongs to Artemis, (Aptemis,) the Goddess. The Tam and Tem in Artamos, Artemes, (Aetamos, Aetemps,) mean nearly the same as the Art, Prepared, perfect, compleat; and belongs to the Toim in Etoimos, (Etoipos, Paratus,) and to a great race of words, which are to be found through the whole compass of Language. - The term ARTao, (Αρταω, Suspendo, appendo,) To Hang or be Suspended, seems, on the first view, very remote from the train of ideas now before us; yet nothing we shall find is more easy and natural. The idea of any thing Made up, so as to be of due Consistency—or in a Compact piece, is necessarily connected with that of Adherence; and the notion of Adherence directly brings us to that of one thing Hanging to or being Attached to another. well-known line, "They Stick Adherent, and Suspended Hang," while it ridicules the tautology, illustrates the intimate and inseparable union of these ideas.

The Greek Artemon, (Αρτεμων, Artemo, velum navis majus,) Artemo, "The Pulley of a Crane, or other like machine, wherein "ropes do run—the mizzen sail in the fore part of a Ship," as R. Ainsworth explains it, must be referred to the idea in Artao, (Αρταω, Suspendo,) as it seems in both these cases to mean that, which is Suspended—Appended—Attached. The idea of a Pulley is necessarily involved with that of Hanging, both as relating to itself.

itself, and to the weight raised. It is hardly worth remarking, that Vitruvius, in his description of the Artemo, points at this "In radice autem machinæ collocatur tertia trochlea. idea. "Eam autem Græci Επαγοντα, nostri Artemonem appellant. "cochlea religatur ad machinæ radicem." (Lib. x. c. 5.) Commentators on Vitruvius derive it from "Αρτασθαι, Aptari, alli-The Sail is that, which is Raised up—Hung up or Sus-Martinius, under Artemo, has quoted the passage in the Acts, (xxvii. 40.) Επαρουτες του Αρτεμουα, and he produces with it the Latin version, "Levato Artemone;" and likewise the Syriac and Arabic versions, which he has translated by 'Suspenderunt— 'velum.' The Commentators on Vitruvius observe on Artemo, in the sense of a Sail, "Aliis vero esse velum placet addititium, id " est, velum parvum, quod majoribus Appendi, et assui solet, ab " Apraw." The Tem in Artemon has the same force as in Artemes, (Αρτεμης,) and means Compleatly or wholly attached.

ARTeria, (Αρτηρια, Arteria,) may belong to ARTios, (Αρτιος,) ARTOS, (Apros,) and mean the Compact mass—the plump—swelling out subtance. The beating of the Artery gives us the idea of a Compact plump Mass—resisting the pressure. The word is sometimes applied to a Compact or Swelling substance of a larger kind, as the Aptypia Τραχεια—the Aspera ARTERIA, the Wind Pipe. The Etymologists derive Αρτηρία, Arteria, παρα το αερα τηρείν, " quod aërem servet, eum " attrahat, et emittat." Others consider it to be " quasi Αλτηρια, " ab Αλλομαι, salio." The Aorte, or Aorta, (Αορτη, Arteria magna, quæ à sinistro cordis sinu oritur,) is only another form of Arteria. The adjacent word Aorter, (Aoethe, lorum seu funis, quo ensis, vel clypeus, vel pera Appenditur,) belongs to Artao, (Αρταω, Suspendo, Appendo.) ARTer, (Aethe, Calceamenti genus, Instrumentum bajulorum,) as denoting the Instrumentum Bajulorum, plainly belongs to ARTao, (Aeraw,) and signifies the Instrument, on which something is carried or Hangs; and as a species of Shoe,

it relates probably to the mode, by which the Shoe is Fastened or Attached to the foot.

The Greek ARTHron, (Aρθρον, Articulus,) and the ART in the Latin Articulus, might belong to this race of words, and so might ARTUS, a Limb; yet I have before referred these terms to ARCTUS, ARTio, under the idea of that, which Holds together-Keeps close together; and I have supposed, that they belong to the Enclosure—the ERKOS, (Equos,) &c. My arrangement is, I believe, just; yet it is oftentimes impossible to decide, when two trains of ideas are so blended with each other. Some of the words, which I have above produced, might belong to ARCTUS, &c.; and yet they all seem to be connected with Artuo, (Aetuu,) of which I have given, as I conceive, the true idea. The Etymologists compare Ar-τuo, (Αρτυω, Paro,) with Aroo, (Αρω, Apto,) a word of a similar meaning. Here again we see the forms 'R and 'RT blended with each other. In the passage produced under the term AROO, (Apa,) we have the word in its more general form, ARS-as, Νη Αρσας ερετησιν εικοσιν. In the same column of my Vocabulary, where Artuo, (Αρτυω,) is, I see, Aruoo, (Αρυω, Haurio, ex profundo, traho,) which belongs to the form ERA, (Eqa,) and means 'To ERA, ' or Earth out or away,' if I may so express it,—'To Stir up Era, or to remove from the surface of the ERA. The preceding term in my Vocabulary is Aruto, (Αρυτω,) where we have the form ^RT, unless we conceive the Uto to arise from the analogy of the Language. Let us mark the kindred term HAURio, and let us remember Hausi, where we see the form of the Element ^S. Aruo, (Aevw.) belong Eruo, (Eevw, Traho, Custodio,) Airo, Aireo, (Αιρω, Tollo, Αιρεω, Capio.) Under the term Enuo we have Enusei, the future, as it is called; where we again see the more usual form, Τρωας ες ιπποδαμους Ερυσει.) The words connected with ARTuo, (Αρτυω, Apparo,) have led me into a train of ideas, which seem on the first view remotely connected with the subject of this article:

I shall

To Aroo, (Aρω,) To Prepare, belongs Ar=oma, (Αρωμα, Aroma, Odoramentum,) the Prepared or Made-up Perfume, as some understand. I shall now return to the consideration of those terms, which directly relate to operations on the Earth.

We have seen, that EORTHAN WYRCAN, TO WORK the EARTH, means 'Terram elaborare, colere.' Now the Latin ex-Erceo has,we know, precisely the same meaning, "To Till," as R. Ainsworth explains it, "Exercer frequens Tellurem;" and thus we see, how the Erc, in ex-Erceo, belongs to w=Ork-Ergon, (Eeyov,) and the EARTH. From this idea of Tilling or Cultivating the Land, ex-Erceo signifies 'To Labour in other matters'—'To 'ex-Ercise,' ex-Ercer, (Fr.) or 'To w=Ork in general.' belongs to Till for the same reason. Hence, we know, is the name for an Army, ex-Encitus, derived, from the Discipline or ex-Encise, which they undergo. We see how remote the object signified is from the original idea, and yet how naturally they coincide, when the intermediate notion is once ascertained. In the present instance, the connexion is known; but we shall readily understand, what difficulties would arise, when the medium, through which one idea passes into another, becomes obscure. The Etymologists derive Exerceo from Ex and Arceo, "quasi " Extra Arceo, premo, fatigo; item frequenter facio, occupo," says Martinius. He refers us to the form Enceo, which some think to have been in use, because co-Erceo and ex-Erceo are to be found. The Erceo in Co-Erceo belongs to Arceo, "To. "keep in," which I have before referred to Erkos, (Equos, Septum,) the appropriate or enclosed EARTH. An adjacent word ERCtum "Enctum citum fit inter consortes," says is a term of Law. Festus; that is, "Cohæredes, ad quos eadem sors pertinet."-"ERCTUM citum," they say, "est hæreditas divisa;" and they imagine, that it was so called, " quod, quum hæreditas divisa est, "alter ab alterius parte ERCETUR." Martinius thinks, that the

ERCTUM is quasi Erkton, (Ερκτον, Septum,) the Inclosed place, because "Suam quisque Hæreditatem Sepiebat, quam poterat com"modissime." We shall now understand, that the ERCT in ERCTUM is another form of Hæred in Hæreditas; and that they both denote the property in EARTH or Land.—In the English Heir, &c. we have the form 'R.—The Greek Askeo, (Ασκεω, Colo, Exerceo,) belongs to our Element 'S, &c. when the sound of the r is lost. An adjacent word to Askeo, (Ασκεω,) in the Greek Vocabularies, is Asis, (Ασκ, Limus, Sordes, Cœnum.)

The Saxon Were and Weore not only signify Work, Opus; but they mean likewise "Dolor, cruciatus, anxietas;" and to this Lye has justly referred IRK in IRK-some. M. Casaubon derives it from Ergodes, Εργωδης, Operosus, difficilis, laboriosus, molestus:— Junius produces the Runic IRK, Facere, elaborare; and Skinner, though he derives it from ge-Reccan, "pro Reccan, punire," adds, "vel potius à Belg. Argh, Teut. Arg, Malus, Pravus, quia "malorum sc. nos tædet. Vel ab A. S. Wærc, Chaucero Werk, "in agro Linc. Somnero teste Wark, Dolor." We see, that WARK, Dolor, is only another form of Werc. The German Arg, Base, Bad, Aergern, &c., must be referred to w=ORK, w=ARK, &c., just as the Greek Πονηρος, Vile, &c. (Πονηρος, Laboriosus, miser, infælix, Πονηρος, Improbus, scelestus, pravus, malus, i.e. malitiosus, malignus, vitiosus, vitiatus,) belongs to novos, Labour, Trouble, &c. (Movos, Labor, studium, et opera rei alicui impensa; - Molestia, labor et molestia, ærumna, calamitas, morbus; dolor.) The senses of these words will shew what train of ideas belongs to the notion of w=ORK, Labour, &c. In our ordinary Language, Work. we know, relates to Agitation-Annoyance-Vexation, &c. 'He 'Works his opponent well'-'He Works himself into a passion.'

"Your father's in some passion,
"That Works him strangely." (Tempest.)

From the idea of a person over 'Worked or Worn out—Weary 'and

"and Exhausted by hard labour," we have terms, which denote Weariness—Inactivity—Sloth—Timidity—Indolence—Reluctance, &c. In Scotch, Arch, Arch, Airch, Erch, mean, according to Dr. Jamieson, "1. Averse, Reluctant; often including the idea of Timi-"dity as the cause of Reluctance.—2. Apprehensive, filled with anxiety." Dr. Jamieson observes, that Chaucer uses Erke for "Weary, Indolent;"

"And of that dede be not ERKE, "But ofte sithes haunt that Werk."

where in Erke and w-Erk we see united the very terms which belong to each other. The ERKE is the person so w=ERKED or Weary, and Annoyed by w=ERK, as to be Averse to engage in it. Dr. Jamieson justly records the parallel terms, as Earg, (Sax.) Desidiosus, Argr, (Isl.) &c. "Su. G. Arg, Ignavus; Oarg, Intrepidus, "Lappon, Arge, Timid; Arget, Fearfully; Argo, Timeo, -Leem;" to which he adds, "Vossius refers this word to Gr. Apyos for " Aspy-06, from a priv. and spyon, opus." Dr. Jamieson, under IRK, "To tire, to become weary," observes as follows: "The E.v. is " used in an active sense. Johns. derives it from Isl. YRK, Work, " although the terms convey ideas diametrically opposite." Writer ought to have understood, that these ideas are necessarily connected with each other. Thus, Laboriosus in Latin means "Laborious, pains taking; Oppressed with pain, sickness or "ill usage; taking much pains,-Requiring much pains; Tiresome. " toilsome, Wearisome, fatiguing," as that authentic Lexicographer R. Ainsworth explains a term denoting Labour, or w=ORK. verb, Laboro means to "Lie under, to be Oppressed with;" and thus, in such a phrase as 'He Erks of his w=Erk,' we might represent it in Latin by 'Labore suo Laborat.'

The Greek Argos, (Agyos, Albus; —Otiosus, Piger; —Incultus,) is not a compound, but is derived from the Earth, Arg, &c., either as belonging to this race of words, or as denoting

noting the Lumpish Clod. We see in the sense of Albus, that the term refers to the Dirt or Clod. In the same column of my Vocabulary, where Argos is, I find Argillos, Applados, Argilla, ' Terra pura et Alba,' where we are at once brought to the spot, supposed in my Hypothesis. The Gil belongs to Clay, &c. &c. Argos, (Aeyos,) is supposed sometimes to denote Swift, as in the compound Argi=Pous, (Αργιπους, Celer, Velox; Albis pedibus); and in this sense it should seem to belong to the idea of Activity, expressed by w=ORK, YRKian, Facere, &c. In the same column, we have Argos, (Apyos, Urbs Peloponnesi, &c.—Argus, Pastor,) the City, and the Name of the Shepherd. I have shewn, that Argos, the Man, is the HERD or Keeper of Cattle; and Argos, the City, may perhaps mean the Enclosure, ERKOS, (Epros, Septum.) In the same opening of my Vocabulary, I see ARGUROS, (Apyupos,) ARGentum, which might denote the White—Bright metal; though this word has considerable difficulties. Whatever be the precise idea, from which Argos and Argeo, (Aeyos, Aeysw, Otior,) are derived, the term Argeo, (Aeyew,) is brought to its original spot in the following passage: 'Iva Ti Tyv yyv καταργεί. Luke xiii. 7. 'Why Cumbereth it ' the Ground?' I shall shew, that Cumber belongs to Campus. We know, that such expressions as the Sluggish—or Inactive Clod, &c. perpetually occur; and we know, likewise, that Segnis Campus—Segnes Terræ, &c. are equally familiar. This would lead us to conclude, that some of these terms denoting Inactivity, &c. are derived directly from the EARTH, as referring to the Sluggish Clod. The Saxon Eargian, Torpescere præ timore, seems to be immediately attached to the Greek Argeo, (Apyen,) whatever might be the original notion. In Saxon we have other forms, as YRGTH, Ignavia, YRHTH, Segnities, Tædium.

In the succeeding column of my Saxon Dictionary to that, in which Weorc and Weorcan, To Work, Operari, Facere, are explained; we have Weordan, Wordan, Wurdan, Wyrdan, which

which Lye explains by Fieri, and which we see to be only a passive sense of Weorcan, &c. To be Worked, Made or From this sense of To be Made or Done, the above terms WEORDan, &c. simply mean 'To Be;' and hence Lye explains them by Esse. In Gothic, WAIRTHAN means "Fieri, Esse;" and in Saxon the same term appears again under the forms Weorthan, WURTHAN, WYRTHAN, Fieri Evenire. In German, WERDen is the verb, corresponding with the Saxon Weordan, &c., and signifies, "To become, grow, wax, &c.—Wie ist das so ge-Worden, "How did that become, grow, wax, prove, fall or turn so? "How came that to be so? What made it become so?" Here WERDen has the same meaning, 'Fieri, Evenire, &c. To be WORKED, Made, Done, or to Be as a Work-Fact,' &c. It is used in the German Language, as an auxiliary to express the Future and the Passive;—'Ich WERDE lieben—I shall love—Ich 'WERDE geliebet—I am loved; or I am To love, and I am loved;' that is, 'I am-so Made, Constituted,' &c. Am and Werde, whatever may be the original idea conveyed by Am, alike express the Mode—Form—State or Condition, in which any thing is Made— Constituted—Situated, &c.; and Am is used in a Future sense. when we say, 'I Am to do a thing,' for 'I Am about to do a thing, or shall do a thing.' Lye, in his edition of Junius, produces WORTH, as a term in old English for "Esse, Fieri;" and refers it to the terms produced above, and to the Belgic Werden, the Swedish Warda, and the Islandic Verda. Hence we have the phrase so frequent in old English, "Woe Worth," Woe Happen to You.

In Saxon, the substantive to these verbs, Weordan, &c. Fieri, is Wyrd, which means the 'Work, Fact, Event, Occurrence, 'what happens, or takes place in the course of things, whether 'referred to the past, the present or the future, Fate;—Fortune, 'Destiny,' &c. From this Saxon term is derived the English Word, which meant nothing but the Work—Fact, or Circum-

stance

stance attached to any person or thing. The Etymologists refer us under Word to the Gothic Waurds, the Saxon Word, the German Uuort or Wort, the Belgic Wo d, the Runic, Swedish, and Danish Ord. Skinner and Junius produce only the parallel terms to Word, except that the former adds, "More criticorum "nimis lascivit Martinius dum à Lat. Oratio deducit." however observes, "Maximo doctorum consensu origo vocis "refertur ad Uuortan, Fieri;" and he adds, that though the term, according to this Etymology, seems to denote rather the Res Gesta than the Dictum, yet these ideas are naturally attached to each other. Lye, in his Saxon Dictionary, explains the Saxon Wyrd thus: "Wyrd—i. q. Word. Verbum; et κατ' εξοχην, το "Verbum, sc. quod Fatus est sive decrevit Deus. Fatum, fortuna, " rerum ordo, cursus naturæ, series eventuum." Here he seems to consider, that Word, Speech, is the original idea; and that the sense of Fatum, &c. is derived from this; nor does he seem here to understand, that WYRD belongs to the terms produced above, Weordan, &c. Fieri. In the very first example produced by Lye, we find Wyrd, the Substantive, connected with the verb from which it is derived. Wyrd was geworden, "Fatum "ejus, decretum de eo, evenit;" that is, the Work,—Fact—or Event attached to him, was Worked or Effected, 'Eventus de eo 'Evenit:' Again, "Tha WYRD he thonne WYRCTH, Hunc " rerum ordinem producit—He Works or Produces the Work, "Fact, &c.;" where we see, that WYRD, WORD, is actually combined with WYRCTH, WORK.

As Speech is a declaration of Things or Works, we shall not wonder, that these ideas pass into each other; and that Wyrd, the Work, becomes Word, the Speech. Lye, we see, has produced one mode, by which this union takes place.—The Work imposed by the command of another, the Enjoined Work or Command, directly connects itself with the Speech, or Word, by which

which it is uttered; and thus they are mutually adopted for each other; as Fatum, the Fate or Destiny of a person, is connected with the Fatum, the Speech. In such phrases as 'He is obedient to his master's Word,' we see how the Work or Conduct Enjoined or Commanded by another is involved with the idea of Speech.—Our Biblical Critics abound with illustrations of the union of ideas between Words and Deeds; and our School-boys well know the senses of Λογος and Ρημα, (Λογος, Dictum, verbum;—Caussa,—Ρημα, Verbum, dictum, Res.)—In the Poems attributed to Rowley, Word is used with its more original idea, as relating to an Order, Command, or a Work Enjoined.

"Celmonde dyd comme to mee at tyme of reste,

"WORDEYNGE for mee to flie, att your requeste." (Ælla, 1228, &c.)

Dean Milles explains Wordeyinge by "Bringing me Word, Com"manding me;" where we perceive, that in this application of
the English term Word, Bringing me Word to do so and so,'
the idea of a message is connected with some Enjoined Work, or
business to be performed. In Shakspeare, Word is used as a
verb, and relates likewise to a Command, or Enjoined Work.

"He Words me, girls, he Words me, that I should not

"Be noble to myself." (Ant. and Cleop. A. V. S. 2.)

In Macbeth, Word seems to signify little more than an Event.

" Sey. The queen, my Lord, is dead.

" Macb. She should have dy'd hereafter.

"There would have been a time for such a WORD."

Dr. Johnson on this passage observes, "We say, 'We send Word,' "when we give intelligence."

Lye, under Wyrd, explains Wyrde, Wyrdas, plur. by Fata, Parcæ;" and to this he justly refers Werdes, a term corresponding to Fata in Gawin Douglas, and to Wierdes, in Chaucer, the Fates. Hence we have the Weird Sisters, the Witches in Macbeth, who were supposed to be the Dispensers of Destiny. The Commentators on Shakspeare have produced a quotation

quotation from the Glossarist on Gawin Douglas, who properly understands the origin of the word. The old Copy reads in the passage of Macbeth "WEYWARD Sisters," which the Commentators have corrected, as they call it, by reading WEIRD; and Mr. Steevens assures us, that the method in the old Copy "was "merely a blunder of the transcriber or printer." If those, who wrote or printed WEYWARD, supposed it to mean any thing else but that which is sometimes written Weird, Destiny, they certainly committed a blunder: But if by WEYWARD they meant the same as Weird, they committed no blunder, as one mode of spelling is as good as the other. If the original term WYRD be the criterion of the true mode of spelling, the forms Weird, Werd and Weyward, &c. &c. are equally wrong. spelling, as it is called, appears equally to have confounded the understandings of the youngest and the oldest of our Scholars. In Dr. Jamieson's Scotch Dictionary, we have Werd, Weerd, Weird, &c. &c., and Worth, Wourth, "To Wax, to Become." The preceding term to WORTH, in the same Dictionary, is "To " w=ORT, w=ORT up, To dig up," where we are brought to the very action and Spot from which I suppose w=ORTH to be derived. In a passage quoted by Dr. Jamieson, under w=ORT, we have the form "WROOTE or WROUTE, as a swyne doth;" and this Lexicographer has justly seen, that the term belongs to the Saxon WROT-an, Versare Rostro, "To Roote, as the swine doth, to "digge or turne up. Somner." Let us mark, in the Latin explanatory term v=Ers are, another form of these words. In 'ROOTE, the breathing before the R is lost; and let us note in 'Rostrum, the same form, which I shall shew to signify the 'Rooter, or *Router up.
